c. SSAC visits before contracting for contract definition to help in the evaluation of the contractors' management capabilities.

d. SSAC visits immediately before assembling all facts pertaining to the selection of the acquisition contractor.

7. Documentation and Files:

a. Original copies of documents required by ASPR 1–308 will be included in the official contract file. It may be necessary in some cases to include duplicates of these documents in the source selection file to complete the source selection story. The source-selection file will be kept separate from the contract file but will be cross-referenced with the official contract files. It will not be destroyed earlier than the official contract files.

b. The source-selection file will contain:

(1) Copies of all designation and appointment orders.

(2) The Selection Plan (SP).

(3) Source-list screening criteria and their results, in addition to the justification for not issuing the FRP to specific companies, when appropriate.

(4) Evaluation criteria, evaluation criteria weights and standards.

(5) Evaluation reports.

(6) Proposal analysis reports.

(7) Copies of briefing charts.

(8) SSA's source selection decision.

c. The source selection decision document, signed by the SSA per paragraph 5e(11), AFR 70–15, is the authority for the PCO to award the contract(s) to the specified source(s). (See attachment 6.) The original copy will be furnished to the PCO for inclusion in the official contract file. It will contain:

(1) A reference to the authority for conducting the source selection.

(2) A brief justification for the source(s) selected.

(3) The SSA determination that the contractor is responsible.

(4) Instructions to the PCO to award the contract(s).

CHAPTER 2.—PROCEDURES

8. Concept Formulation Activities: A source selection is affected by acts and decisions that occur before the issuance of the authority to procure, or the authority to proceed with Contract Definition (CD). The process ideally begins when a using command submits a Required Operational Capability (ROC). This document leads to appropriate actions that are directed and guided by HQ USAF with one or more Requirements Action Directives (RADs). At an appropriate point in a system life cycle the RAD provides more specific guidance on the ROC, and directs the preparation of appropriate documentation, as a Concept Formulation Package or a Preliminary Technical Development Plan (PTDP). A PTDP, for example, is based on conceptual studies, and translates broad requirements guidance into system performance specifications. It compares alternative approaches, and recommends the optimum structure and configuration of the system, and the requirements for production, logistic support, training and operational concepts. The PTDP is submitted through channels and, when approved, constitutes the proposed technical program requirements baseline. This plan, along with the Advance Procurement Plan (APP), the Selection Plan, and other required documentation, is transmitted to higher headquarters in support of a request for approval to initiate the CD, including the appropriate procurement action. When approved, HQ USAF issues a System Management Directive (SMD). The SMD may be used to designate or delegate the Source Selection Authority (SSA). Among other things, the SMD authorizes the establishment of a SPO sufficiently manned to fulfill immediate management responsibilities. After the CD contracts are completed, a Proposed System Package Plan (PSPP) is prepared and submitted for approval to enter into the Acquisition Phase. This approval is received by the SPO as a revised System Management Directive from HQ USAF.

9. Selection Plan (SP): The SP is prepared by the SPO per AFR 70–15. The SP must be completely staffed within AFSC, and include final inputs from AFLC and other major commands that will have SSAC representation. This plan, including major changes, will be forwarded to the SSA for approval. Since the decisions that must be made and disclosed in the SP dictate the course of subsequent source-selection activities, the SP must be prepared carefully, and be consistent with the PTDP and APP documents. The SP should be prepared and submitted to the SSA early enough in Concept Formulation to permit SSA approval before the SSAC is established. The major issues must be clear and specific. As a minimum, the SP includes the items listed in paragraph 4b, AFR 70–15, as discussed in the following subparagraphs. The content may be modified to the extent appropriate for the particular procurement.

a. *Introduction.* Briefly describe the system and its intended operational mission.

b. *Criteria.* Outline and relate the important performance characteristics to operational effectiveness. State whether performance specifications can be sufficiently specific to attain a predetermined effectiveness level, or whether possible increased performance, above a minimum acceptable level, may obtain desirable effectiveness increments. Show the technique for assessing performance and cost comparisons for maximizing the effectiveness-to-cost ratio, and stipulate the performance characteristics when further cost effectiveness trades may be advantageous: Include proposed trade-off techniques and decisions in the plan, with approval and/or changes required to provide direction for subsequent source selection activity.

(1) *Source List Screening Criteria.* Indicate the method to be used in selecting prospective sources to insure that adequate competition is obtained while limiting the number of requested proposals to an economical and manageable quantity. The recommended source list screening criteria will normally consist of general and specific criteria. Together, they will be used to determine the contractors to whom the Government will issue RFPs.

(2) *Evaluation Criteria.* State the recommended general and specific criteria to be used in evaluating proposals. It will give the SSA and SSAC a summary of items to be evaluated by the SSEB in each area, and the degree of emphasis to be accorded to each.

c. *Source Selection Organization.* Show the SSA, SSAC, and SSEB organizations, recommend key members by name, if known, by position title or by functional area. The plan will specify other Government organizations, departments, commands, and functions that should be represented on the SSAC and SSEB. Special communication channels, if required, will be specified.

d. *Evaluation Technique.* Describe the SSEB evaluation method and scoring, and the SSAC evaluation and analysis technique. Describe in detail the techniques that the SSAC will use in analyzing the SSEB evaluation, and any other factors it will consider in the Source Selection Plan.

e. *Schedule of Events.* Narratively state the source-selection activities within a time framework, in sufficient detail to allow the reviewing authorities to determine the practicality of the planned source selection. AFR 70–15 establishes a target of no more than 18 weeks for the evaluation cycle; that is, from the receipt of proposals to the approval of a definitive contract. Include phasing of:

(1) Dates of RFP review and release dates.

(2) Date proposals will be received.

(3) Date of preproposal conferences (if required).

(4) Date the evaluation will be completed.

(5) Date the SSAC will review the work of the SSEB.

(6) Dates for major SSAC activity—when the SSAC will present its findings to the Air Force commanders concerned, other reviewing organizations, the Air Force Council, and finally to the SSA (see attachment 1 for sample).

f. *Procurement Plan Summary.* Make a direct correlation between the Advanced Procurement Planning documents required by ASPR and the SP. Include in the procurement plan summary a brief but comprehensive schedule of the significant procurement actions concerned in reaching definitive contracts. Indicate in the accompanying narrative the type of contract proposed, the incentives contemplated, and other procurement considerations—for instance, the application of Total Package Procurement (TPP), the breakout structure, synopsis intentions, special clauses, etc.

10. Procedural Modifications: Source selection begins with the preparation of the Selection Plan. The SSA is then designated, the SSAC members are appointed, working groups are formed, the SSEB is organized and all begin their assigned duties. Some of the steps formally taken in a large CD procurement may be combined in a non-CD procurement or a procurement below the thresholds specified in AFR 70–15. The SP, the RFP, the criteria, and the evaluation and analysis will be structured to recognize and adopt the most suitable activities to reach the source selection objectives of the specific program. Attachment 7 shows the steps in a major source selection.

11. Selection of Prospective Sources:

a. It is Air Force policy to obtain maximum competition consistent with the nature of the procurement. Conversely, requesting contractors who are obviously incapable of fulfilling the requirement to prepare proposals, waste dollars and resources, and run up costs that, in most instances, will eventually be borne by the Government. Too many proposals or expensive brochures add little to the process, complicate the evaluation and distract attention from central issues. Thus, selecting prospective sources from whom the Government will request proposals becomes a significant step.

b. ASPR 1–1003 requires a synopsis of procurement far enough in advance of the issuance of RFPs to permit interested firms to respond. Every available means will be used in making up the list of capable prospective contractors. The Air Force Systems Command random access list, advertisements in the Commerce Business Daily, and recommendations from the SPO and functional staffs will be used. All contractors who have the minimum qualifications must be considered.

c. Compiling the source-list screening criteria should be an early order of business for the SSAC. The source-list screening criteria should include past and present experience, performance capability, resources, financial status, and other factors that are necessary elements essential to program performance. Care must be exercised in establishing the criteria to restrict them to the essentials for successfully completing the contract work. These are usually "go/no-go" criteria that will reflect the minimum requirements. The list of prospective contractors will be screened for qualification against SSAC's criteria. The final list will be approved by the SSAC and furnished to the PCO for the issuance of RFPs.

d. If, when the RFP is distributed to the contractors approved by the SSAC, one of the disqualified contractors insists upon receiving an RFP, the SSAC chairman (or someone he may designate) will advise him of the reasons why he was not selected to receive an RFP. If the contractor insists upon receiving an RFP, and has the necessary security clearance, he will be furnished a copy of the RFP. If he submits a proposal, the proposal will be evaluated without prejudice.

12. Request for Proposal: The quality of source selection actions depends largely on the quality of the RFP. In addition to the normal staff reviews, the SSAC must review and approve the RFP before issuance. The preparatory work will be updated to insure that it is compatible with program approval decisions; that all data necessary for source selection, including that for Total Package Procurement (TPP), are included, and unnecessary data eliminated. Since the completed RFP includes data from many sources, the SSAC must review the completed RFP to determine that it is properly integrated and cohesive. ASPR 3–501, 1–330, AFR 80–20, and attachment 2 to this manual cover items to be included in RFPs.

13. Preparation of Detailed Evaluation Criteria:

a. The RFP content and evaluation criteria must be compatible. The evaluation criteria are organized into areas, and further divided into items and factors to reduce such evaluation task to manageable size. The SSAC is responsible for determining the areas and items that will be evaluated. The recommendations in the approved SP will be used for structuring the detailed evaluation criteria. Each evaluation criterion will be explained by a narrative definition that serves at least four purposes:

(1) It identifies areas of overlap and omission.

(2) It tells the SSA what is to be evaluated under each specific criterion.

(3) It guides the evaluators and improves understanding of the specified elements of the proposals.

(4) It assists the proposer in the preparation of his proposal, when listed in the RFP, by directing his attention to matters of major significance to the Air Force.

b. A basic requirement of the source-selection procedure is to evaluate proposals against stipulated, objectively established standards rather than against one another. It is necessary, therefore, to define the standards in quantitative terms or in specific qualitative terms understandable by the evaluators. The standards must be discriminative; that is, directed at all important matters affecting performance and effectiveness, yet they must not force attention to peripheral detail. The standards derived from the criteria must give significance and credence to the SSEB evaluation and the narration and scores.

c. In preparing the criteria, the SSAC must remember that the SSEB in Phase A will be evaluating two proposals: the first, for conducting the Contract Definition Phase B and the second, a planning proposal for the Acquisition (Phase II). Both proposals should be evaluated jointly under a compatible set of criteria. The Phase A evaluation criteria will be established and approved before the Phase B proposals are received. Concurrently, the preliminary Phase C evaluation criteria will be identified to the item level. They should be similar to the criteria of Phase A except that less attention is needed on the evaluation of the contractor's management and general capability areas, and more attention on the system performance, design approach, implementation plan, and costs. Proper weighting of the areas and items will accomplish most of the needed shift from Phase A to Phase C (see paragraph 26e).

14. Receipt of Proposals: The SSAC and SSEB will set up procedures early in the source selection process to insure that the information in the contractors' proposals is safeguarded against disclosure to unauthorized persons. The RFP will contain specific instructions as to when, where, and how proposals are to be submitted. Each member of the SSEB and SSAC should review the proposals and determine whether oral presentations are required of the contractors. This preliminary review should be conducted at the outset to determine the over-all adequacy of the content, and to obtain an early indication of the merits of completing proposals. This review should be thorough enough to disclose matters requiring clarification at the contractor's oral briefing or, conversely, if the proposals as submitted are sufficiently clear, disclose that oral presentations by contractors are unnecessary. If oral presentations are permitted at all, they will be made by each competitor.

15. SSEB Evaluation of Proposals:

a. The primary objective of a specific source selection is to select the contractor(s) whose negotiated commitment(s) provides the greatest likelihood of meeting the Government requirements established by the RFP. A longer range objective is to encourage good proposals. While the evaluation should be primarily the product of the individual area evaluators, coordination within and between areas is encouraged through the team leaders and SSEB chairman. This is especially true in matters of strong and weak points affecting or affected by other interrelated parts of a proposal. While the evaluation is based primarily on the proposals, the evaluators are expected to use other information (e.g., expert knowledge and background) in reaching their evaluation conclusions. The data in contractors' proposals should not be blindly accepted by the evaluators. Technical areas should be evaluated initially without reference to associated costs. However, high risk areas or technical devices, designs, configurations, or methods identified in the technical evaluation as being costly relative to alternatives available in the state of the art and any features leading to high production or operation and maintenance costs must be made known to the appropriate teams so the associated cost impact can be properly evaluated.

b. The SSEB chairman will furnish to team captains, and they will furnish to their team members (evaluators), instructions as to the team's responsibilities. Individual teams will:

(1) Examine each proposal in detail to measure predetermined elements of the proposal against standards derived from the evaluation criterion. Validation is essential to evaluation. Narratives will be prepared and then scored according to the approved scoring system (see paragraph 28);

(2) Submit their reports of the evaluation. Reports will be summarized with the member's evaluation narrative as backup detail. Scores for the several areas of a proposal will represent the collective judgments of the evaluators assigned to rate the specific items. The team captain will review the scores and reconcile or document areas where discrepancies exist in scoring.

c. Costs are not scored by the SSEB. Total cost to the Government (acquisition and operating costs) is of fundamental importance in the source selection decision making process, and will be duly considered by the SSAC and SSA. Costs acceptable to the offeror and the Government are evidenced by target price, ceiling price, incentives, and other provisions of the contract. Thus, cost evaluation serves the program office for contract negotiations and the SSA as a basic consideration for source selection. The SSEB will:

(1) Insure the comparability of costs—that is, the impact of Government-furnished materials and property, the use of Government facilities and tooling, etc., that benefit any particular contractor must be considered, and necessary adjustments made so that contract end item cost and price data furnished to the SSAC are comparable.

(2) Insure that costs relate to the proposed item or work. This may include the insurance, through Defense Contract Audit Agency (DCAA), that the accounting and estimating system are satisfactory; that they are implemented; and for the present proposal have produced accurate results.

(3) Assess cost risk. This concerns the probability of experiencing future cost variances from those proposed. A proposal with a high technical risk, including associated costs that can only be attained if the risk is resolved with no additional cost, should be evaluated and a narrative prepared to amplify the evaluation.

(4) Assist the SSAC in the analyses of the total cost to the Government.

d. Evaluation results are the cost basis for SPO negotiation. Total cost, results of cost effectiveness studies, and other cost matters outside the scope of proposals are analyzed and reported, as appropriate, by the SSAC to form the total price facts the SSA needs for his source selection decision.

e. When the teams have completed their evaluation, the SSEB chairman will usually compile and present the SSEB's over-all evaluation results to the SSAC in two forms: (1) A written evaluation report (see paragraph 28c), and (2) An oral presentation. The SSEB chairman will normally brief the SSAC on the results and significant points of the SSEB evaluations. The SSAC will have an opportunity to question any portion of the evaluation report. These briefings and the evaluation report must fully convey the collective opinions of the evaluators. Brevity is desirable but clarity is essential, since the quality of the evaluation will be no better than what is communicated. The written report presented to the SSAC should include a summary of the evaluation and a detailed narrative of the scored items. There should be separate sections covering cost matters and deficiency reports. Narrative assessments by evaluators are included for all areas, items, and factors, with summaries provided for each area or item to be weighted. Each assessment must be precise and highlight the strengths, weaknesses, and risks of the elements of the proposal. When the SSAC is completely satisfied with the SSEB report, it accepts the report for analysis.

16. SSAC Analysis of Proposals:

a. Under AFR 70–15, the SSAC is required to submit an analysis of each proposal to the SSA which highlights the important findings of the evaluation for the contractor's proposal. The SSAC applies weights to the areas and items scored in the evaluation report. This report includes only source selection considerations presented in the contractor's proposals. Other areas of consideration not obtainable from proposals must be included in the SSAC over-all analysis. The SSAC Proposal Analysis Report will incorporate all price and other matters and considerations that may affect on the source-selection decision.

b. The SSAC Proposal Analysis Report will normally consist of three parts: First, a letter of transmittal that describes briefly the authority for the source selection action, the composition of the council, the procedures used to conduct the evaluation, and the most significant conclusions. (See attachment 5 for a sample of the transmittal letter.) Second, attachments to the letter that summarize each contractor's proposal and highlight the major strengths, weaknesses, and risks to the Government. This part of the report is prepared primarily from a summary of the evaluation report. Third, the SSAC analysis and advice that includes facts considered, and the judgments of the SSAC reflecting its experience and knowledge in military operations, procurement, technology, logistics, etc. The SSAC briefing and report to the SSA must clearly communicate the SSAC's collective judgment. Thus, the facts, matters considered, experience, and judgments relating to contractor's offer and capability to meet the Government's requirements need to be clear and concisely documented. This is particularly important in situations when numerically rated proposals appear to be comparatively close. The reference to judgments is not intended to preclude quantification, when possible, and logically explaining or citing specific, relevant experiences that form the basis for such judgments.

17. Deficiency Reports: The proposals will be evaluated by the SSEB as submitted. During this evaluation, certain deficiencies may be found in the proposals—*e.g.*, elements of the proposals that do not meet stated requirements, or exceed stated requirements but do not yield a desirable product, or failure to respond to the RFP in some respect. Proposal deficiencies will be given special consideration by the evaluators. Evaluation report narratives will include, and the scores will reflect, whether the evaluator considers the deficiency as an overlooked detail, easily correctible, or whether the required correction involves lengthened schedules high risks, or cost changes. Deficiency reports will be prepared as separate documents and in sufficient detail for the SPO negotiation team to use in fact finding with the contractors, and subsequently for debriefing (see attachment 4). The SSAC will have both the summarized deficiencies and the SPO's negotiation results to consider in its analysis of the contractor's receptiveness and capability to make desirable corrections to the proposal.

18. Negotiations: Negotiated contract commitments rather than proposal "promises" are very important prerequisites to the SSA's final source selection decision. Negotiations may be started as soon as the SSEB Deficiency Reports and other prenegotiation data become available. According to ASPR 3–805, written or oral discussions will be conducted with all responsible offerors who submit proposals within a competitive range—price and other factors (including technical quality) considered. The SSAC will

need negotiation results for its analysis; thus negotiations must be substantially complete before the SSAC goes into its final analysis conferences. The negotiation results for each of the competing contractors are to be evidenced by definitive contracts. The complete, signed contracts (lacking only the contracting officer's signature) will be available to the SSA before he makes his final selection decision.

19. Technical Transfusion:

a. By technical transfusion, the Government uses data from at least one of the competing contractors, or data available elsewhere within the Government, to increase the effectiveness of a proposed system. Some of the points of concern when considering technical transfusion are:

(1) Rights to data procured under Phase B contracts, and limited or unlimited rights to other data.

(2) The need to be completely impartial, and to insure that competing contractors will be confident of equitable treatment.

(3) The need to encourage innovation.

b. To the extent provided by ASPR and Air Force Procurement Instruction (AFPI), the correction of proposal deficiencies during negotiation (no matter what degree of technical transfusion is involved) is permitted and expected. Any large change in requirements should be resolved in the functional channels of responsibility, and not as a specific duty of the source selection organization. Even though it is exposed during the source selection activity, a matter of major technical importance should be given staff and command attention, and resolved through program management channels. This may require careful coordination and timing to fit the source selection process. If the impact is sufficiently severe, source selection and contract negotiation may have to be suspended pending the resolution.

20. Reviews: Reviews by higher authority and appropriately constituted bodies are normal and expected. The most significant reason for review is to detect soft spots that may cause less than optimum attainment of the source selection objectives.

21. Special Procedures: The following procedures will apply when the SSA is the Chief of Staff or higher. It is necessary that those advisory elements that have the opportunity to review the source selection presentation *do not* reach any conclusions until all of the questions that will be asked, including those of the SSA, have been answered, and that all available information has been presented to the SSA.

a. The SP will be submitted by AFSC to the HQ USAF office of primary responsibility (OPR) (usually the program element monitor in Deputy Chief of Staff, Research & Development). The OPR will coordinate the SP with the Air Staff offices concerned with source selections (e.g., Director of Production; Assistant for R&D Programming; Director of Procurement Policy; Director of Maintenance Engineering; and Director of Supply and Services) before processing the plan to the SSA for approval. The OPR will forward the approved plan to the major command.

b. The final briefing by the SSAC on the source selection results will be given to the commanders of AFSC, AFLC, and the using command(s) concurrently with the briefing to the Air Force Council. These commanders will submit their advice on the source selection to the Director, the Secretariat, HQ USAF, subsequent to the final briefing.

c. The SSAC will brief the Air Force Council according to the procedure in paragraph 22.

22. Presentations to the Air Force Council: Presentations that are to be made to the Air Force Council must be coordinated through the Director, the Secretariat. The Secretariat will set the precise time and date for the presentation and the need for copies of the charts and the schedule to be used. (See attachment 1.) This presentation includes a list of the major subcontract areas proposed according to the "make or buy" requirements of ASPR section III, part 9.

a. *Time Allotted.* There will be no time limit for presentations to the Council. Ample time will be allotted to allow sufficient information for an informed consideration.

b. *Content.* Too much time spent in complex detail demonstrating technical ease or technical risks is unnecessary unless they are major questions. However, enough backup material should be onhand in the detail to respond to technical questions. The presentation should include a careful discussion of the elements used to judge the contractor's proposal, and the system used in weighting these areas to arrive at individual recommendations.

c. *Formal Notification Action and Review.* Recommendations of the Council may modify the action to be taken by the SSAC. If so, the Director, the Secretariat will notify the SSAC chairman accordingly.

23. Selection and Contract Award:

a. The SSA is given complete information on which to base the selection decision through a properly conducted source-selection process. To the SSEB evaluation report, SSAC proposal analysis report, cost data, contract provisions, HQ USAF, and commanders' advice, the SSA may add advice from any source he deems appropriate. He will prepare a source selection decision (see attachment 6 for a sample). His signature will be the authority for the PCO to execute and distribute the contract(s) to the selected contractor(s).

b. The contract award directs effort into a new phase of the acquisition activity. Contracts with unsuccessful proposers will be closed out. Debriefing (see paragraph 5) will be completed. All informal working papers will be reviewed and disposed of, as appropriate. When record documents have been properly filed the cleanup activity is completed. Finally, any helpful lessons learned should be documented for experience-retention and dissemination.

24. Release of Information: When the SSA is the Chief of Staff or higher, see paragraph 7, AFR 70–15 for the procedures on releasing source selection information. For other source selections, the SSA will comply with the requirements of AFPI section LVII, Part 20.

CHAPTER 3.—EVALUATION AND ANALYSIS

25. General:

a. In previous chapters the processes have been defined, organized, and chronologically described. This chapter includes some of the subjects and expands on them—particularly, how to establish evaluation criteria, determine the shredout of areas, items, and factors, and rate and analyze proposals.

b. The primary criteria of a source selection should be the optimum combination of system performance with economy (cost effectiveness). The RFP should specify the performance desired of the system and encourage proposals based on such optimum combination. Proposed improvements in performance above the desired performance, or degradations therefrom, will be separately priced, so the Government can make a judgment as to their effectiveness in relation to their cost. The judgment here must be rendered in the context of total system effectiveness, and not on the specific feature under consideration.

26. Evaluation Criteria:

a. The evaluation criteria are derived from performance characteristics stated in the RAD and the program management planning in the PTDP. The criteria must cover the performance characteristics which: (1) Will best meet military performance requirements, and (2) provide discriminative capability during evaluation. In establishing the criteria, those performance characteristics, whose incremental variations enhance or degrade the system effectiveness, and thus are susceptible to meaningful evaluations and scores, must be distinguished from those performance characteristics that are critical and thus are fundamental determinants that can be rated only on a qualified or unqualified (go/no-go) basis. For example, a specific size of special-purpose equipment may be required, and neither a larger nor smaller carrier would improve effectiveness. Conversely, with weight, speed, and specific fuel consumption, better than minimum acceptable performance could improve effectiveness and use. The criteria and cost trade techniques disclosed in the selection plan should reflect these considerations. The RFP should be structured to encourage a proposal that would be of the greatest over-all value to the Government.

b. Evaluation criteria must be limited to controlling items that can be clearly identified and measured. The number and duplication of elements in these criteria must be kept to a minimum to effectively manage the evaluation of proposals, and reduce contractors' source-selection information to meaningful data that can be analyzed and compared.

c. Some of the guidelines for selecting evaluation criteria are that they:

(1) Must be determined from stipulated performance characteristics.

(2) Must be defined and understood.

(3) Should have discriminating characteristics.

(4) Peripheral issues should be downgraded or avoided.

(5) Only criteria should be used that can be:

(a) Measured with a high degree of confidence.

(b) Clearly segregated to eliminate overlapping evaluation.

d. From the evaluation criteria, standards are prepared for the lowest order element in each shredout that indicates the performance or compliance needed for desired performance. Thus, the standard is the guide for measuring how well the contractor's approach meets the desired performance and, conversely, shows the difference between desired performance and what his study and design offer. During the subsequent evaluation, each proposal is measured under the evaluation criteria according to the established standard to determine how well the proposed system, subsystem, or project will meet requirements. In addition, the evaluation will assess the probability of success of each proposal.

e. For CD, the evaluation criteria determinants for source selection shift as we progress from Phase A to Phase C, since items of importance to one phase may change in relative importance in the next phase. In Phase A, the most important evaluation areas are the undefined technical approach, and the capability of the firm to define, develop, and ultimately produce. Therefore, the evaluation criteria for logistics, operational and cost areas, etc., should have only general and minimal emphasis unless they importantly affect technical considerations. At this point, operational implications can best be assessed as part of the technical consideration. Greater stress must be placed on matters relating to capability—technical—scientific and management—production areas. In Phase C, since the contractors' capability has already been evaluated before award of a Phase B contract and the management/production area would need little specific evaluation; other areas would receive a more complete and precise evaluation as a greater definition of program requirements is achieved.

27. Areas, items, and factors:

a. The evaluation of a complicated proposal for a system, subsystem, or project is a significant undertaking. It can be made easier by dividing the evaluation criteria into

manageable parts. The terms "areas," "items," and "factors," have been established as orderly divisions of the evaluation criteria. While a continuous interrelationship may exist among the various evaluation criteria, they must be written with clear lines of demarcation to eliminate duplication and overlap in the evaluation process. This is also true when the evaluation criteria are divided into areas, items, and factors. The divisions need to be consistent with the criteria from which they were derived. It is necessary to insure that a singular item or feature of the proposal does not become a major influence, unintentionally, in each area.

b. The Air Force has traditionally structured its system source selection divisions into five major areas: Technical/scientific, operational, logistics, management/production, and cost. This structuring is not mandatory in all procurement situations. Based on the requirements of the program, the SSEB may be organized into teams for each area to be evaluated. When this structuring is appropriate, the operational team may be predominatly from the using command, the logistics team from the AFLC, and the remaining teams from AFSC. It must be recognized that structuring into teams may tend to inhibit the integration and coordination between areas to be evaluated. This tendency must be guarded against by the SSEB chairman and individual team chiefs. It is particularly essential that evaluation data is exchanged when the same features of the proposals are evaluated in more than one area.

28. Rating:

a. The contractor's proposal is to be evaluated by comparing specific parts of the submitted data against standards, not by comparing the elements in the contractors' submissions. To facilitate this task, the evaluation criteria should be segmented into factors, and a description and standard prepared for each.

(1) The description is a guide to the evaluator in determining what specific facets of the data will be evaluated.

(2) The standard that is prepared for the lowest order element in each shredout under the item, indicates the desired performance.

b. Under normal circumstances the evaluation is made by reading the contractor's proposal, analyzing it to determine what is offered, then comparing the offer to the standard. The evaluator must remember that he need not accept, without question, data presented in the proposal. He is expected to use his expert knowledge and background to determine the feasibility, the logic, and the reasonableness of the contractor's commitment. In some instances, he may want to verify certain aspects of the data that are outside his technical skill field. He may do this by discussion with advisers, consultants, or other SSEB members. When the evaluator feels he has an adequate understanding of the proposal, he is ready to proceed.

3. The next major step, the preparation of the evaluator's findings in narrative form, is basic to the total selection action. In preparing the narrative that communicates his findings to the SSAC and SSA, the evaluator must consider that this is the most direct (and sometimes the only) means available to the SSAC and SSA in determining what a contractor offered, and how well it met the established standard. It is not sufficient that the evaluation report states that something is good or bad; the evaluator must show what was offered; how it met the standard; and, in instances where it failed to meet a critical requirement, what, in the evaluator's expert opinion, must be done to remedy the deficiency, and the impact of the correction on the over-all acceptability of the contractor's submission. Clarity is the "touchstone" of all narratives.

d. Generally, some method is needed to portray graphically how well each factor meets the standard. If the 10 points normally assigned to the item are prorated among the factors, the impact of each factor on the item as a whole will depend largely on the number of factors involved. The failure of one of these factors to meet the standard may be overlooked when the proposal meets or slightly exceeds all of the other factors of the item. The number that would be mathematically derived for the total item therefore would not truly reflect a contractor's ability to exceed, meet, or not meet the standard. To avoid this, a symbol is used as a quick device for reference in summarizing the evaluator's findings. If the proposal exceeds the standard for the factor, rate it "+". If the proposal equals the standard, rate it "√". If the proposal fails to meet the standard, rate it "—". These symbols supplement the narrative and are to be used only as quick reference indicators of evaluators' findings. To determine the numerical score to be assigned to the item, prepare a summary indicating the effect each of the factors has on the item. Having recorded this assessment of the element by a narrative, the evaluator must now develop a quantitative designation that reflects his narrative evaluation. This numerical designator is known as a "score." A scale has been devised for the scoring task, as follows: Exceptional: 10, 9; exceeds standards: 8, 7, 6; meets standard: 5; below standard: 4, 3, 2, 1; unacceptable: 0. This scale is applied as follows:

(1) If the contractor's submittal for a particular element meets all standard but does not exceed them from either a performance or approach standpoint, the submittal is to be rated "meets standard: 5."

(2) If the contractor's submittal offers some unique process or approach that, for example, saves time, cost, material, reduces risk, etc. while still offering an excellent solution to a problem the evaluator may rate the contractor's submittal for that element as "exceeds standards," and use a 6, 7 or 8 to show the degree of acceptability as better than standard.

(3) If the contractor offers a rare solution which, in the evaluator's judgment, is exceptional in all aspects, the element should be rated "exceptional," using "9" or "10" to denote the level of the exceptional quality.

(4) If his submittal fails to meet the standard, the element must be rated "4", "3", "2" or "1." To determine which below-standard rating should be assigned, the evaluator must determine what the impact of the deficiency is, what must be done to correct it, and what impact the correction will have. If his deficiency is slight and easily correctible with minimum effort and effect on other elements, the evaluator may rate him a "4". On the other hand, if the deficiency is severe, the impact widespread, and the deficiency correction difficult, the evaluator may judge the contractor to rate "3", "2" or "1," depending on the appraised impact.

(5) If the element being evaluated is presented in such a manner that the approach is unacceptable and requires major reorientation for correction, that element should be rated "Unacceptable: 0."

(6) The numbering system referred to above is to be used only at the item level. Since most items are complex, factoring must be done to effectively evaluate the whole.

e. While the contractor's data pertaining to an element of the proposal are being evaluated, the evaluator must perform another essential task. The evaluator must record, separately, and in addition to the narrative findings, the deficiencies found in each contractor's proposal. For purposes of source selection actions, a "deficiency" is an element of a contractor's proposal that, fails to meet the standard, or is an omission of data needed to compare the proposal with the standard. There must be a quick, accurate way of determining what corrective actions are necessary to insure that known deficiencies can and will be corrected. The deficiency report (see attachment 4) serves this purpose. In addition to its prime use for fact finding leading to the definitive contract, the deficiency report serves as a debriefing guide. Experience in source selection actions has shown that deficiency reports must be prepared at the time an evaluator discovers that a deficiency exists. When evaluators have returned to deficiency reporting after completing other evaluation tasks, many omissions occurred and poorly substantiated reports resulted.

29. SSAC Analysis:

a. The basic policy underlying all Government procurement, and therefore fundamental to the source selection dicision, is to procure what is most advantageous to the United States—price and other factors considered. The selection plan establishes the relative importance of the proposal elements to be evaluated for a particular procurement. The SSAC assigns weights to the items to be used in the evaluation to show this relative importance. Proposals are evaluated, and the items are presented in the evaluation report with unweighted or raw scores. SSAC application of the predetermined weights creates basic source selection decision data. From the procedural standpoint, the SSEB has evaluated proposals submitted by the offerors; however, matters of importance to the objective of best satisfying the Government's requirements lie outside the proposal. The objective of SSAC consideration of these matters is to disclose all facts that the members determine have a bearing on the selection decision; consciously disregarding the ones that are irrelevant; and emphasizing the ones that should affect the decision. Some important considerations in the decision process do not stem from the SSEB's evaluation, yet they are significant to the final results. For example, the following considerations are not usually included in the proposal, yet are significant to the final decision.

(1) *Total Cost.* The environment in which proposals are developed is competitive and prompts offerors to bid the lowest practical price for the end item they expect to deliver. The lowest end item price may not necessarily be the lowest total cost to the Government. For example, a proposal that involves very expensive maintenance and/or spare support may be considerably more expensive to the Government over a period of years than another that may have a higher initial cost but relatively inexpensive maintenance and/or spare support requirements.

(2) *Over-all Effectiveness.* The dividing of a source selection into discrete areas for evaluation produces a functionally aligned report. While every effort must be made to insure intra and interarea coordination, segmentation of the SSEB with homogeneous skilled groups yields a functionally oriented report. The SSAC's task is to determine the cohesiveness of the interfaces presented by these functionally oriented areas so the over-all effectiveness of the proposal to meet the stated objectives of the RFP may be determined.

(3) *Contractors' Capability.* One prime concern is a contractor's capability to deliver to the Government according to the terms of his proposal. To consummate a contract for development that exceeds a contractor's available or obtainable skills, or a production rate that exceeds the contractor's ability to meet, is not in the best interests of the program or the Government. The Department of Defense Contractor Performance Evaluation (CPE) Program maintains a data bank of experience on many contractors. Past performance experience is correlated to expected future performance. While the bank is useful as a tool for screening contractors before issuing RFPs, it also forms a part of the body of data for con-

sideration of contractor capability in final contractor selection.

(4) *Negotiation Results.* Deficiencies in contractor's proposals will have been exposed by the SSEB in its evaluation, and reported to the SPO for fact finding discussions with the contractors concerned. In addition, ratings and scores reflect the SSEB's judgment of how deficiencies can be corrected. The negotiation results and their incorporation into the final contract, as reported by the SPO, may shed significant light on the contractor's responsiveness, and his capability to correct deficiencies. These matters may be significant. The facts, in any case, should be disclosed in the SSAC report.

(5) *Cost Effectiveness.* In its evaluation, the SSEB has rated and scored high the particular items that exceeded standards of performance. Performance increases do not necessarily enhance effectiveness, so ratings should be examined sufficiently to determine that they reflect performance considerations that tend to be economical.

(6) *Other.* For any particular source selection, a number of matters outside the scope of the contractor's proposals, and yet pertinent to the SSA's selection decision, are possible. To the extent that these do exist, they should be included and narrated for SSA consideration.

b. *Communication.* The intended result of SSEB evaluation and SSAC analysis is a total body of facts bearing on the final source selection decision. However, to be useful for their intended purpose, they must be communicated to the SSA clearly and understandably. Written narrations, supplemented with oral briefings, usually accomplish the communication objective.

By order of the Secretary of the Air Force.
Official:

J. P. McCONNELL,
General, U.S. Air Force, Chief of Staff.

R. J. PUGH,
Director of Administrative Services.

ATTACHMENT 1

ILLUSTRATIVE SCHEDULE OF EVENTS FOR SELECTION PLAN

PHASE A

D—120. Selection plan submitted.
D—30. Department of Commerce synopsis and Small Business Administration clearances.
D—30. Data call completed.
D—20. Draft RFP and work statement completed by SPO or program office.
D—6. Staff review of RFP and work statement.
D+0. Receipt of authority.
D+0. Receipt of approved selection plan.
D+1. SSAC formed.
D+3. SSEB cadre formed.
D+7. Screening of sources completed.
D+8. Evaluation criteria weights established.
D+10. RFP reviewed and approved by SSAC.
D+14. RFP to industry.
D+21. Bidders briefing (if required).
D+24. SSAC, SSEB meeting (orientation of members, security matters, etc.)
D+30. SSEB, standards and rating procedures established.
D+44. Technical and management proposals received, evaluation commences.
D+54. Cost proposal received (for smaller procurements, a single submission with 30 days' proposal time may suffice).
D+60. Competing companies' oral presentations (if required).
D+74. Evaluations completed.
D+85. Briefing of SSAC and submission of evaluation report.
D+85. Contract negotiations completed with all in competitive range.
D+90. SSAC analysis of proposal completed.
D+102. Briefing of Air Force Council and Air Force commanders concerned (unless directed otherwise by the SSA or the Chief of Staff, USAF).
D+103. Briefing and presentation of proposal analysis reports to Secretary of Air Force.
D+107. Final Phase B contract execution and reviews completed.
D+107. AF–N23 report submitted.
D+110. Phase B sources announced.
D+115. Phase B contracts distributed.

PHASE B

D+0. Receipt of technical and cost proposals.
D+2. Evaluation begins.
D+7. Acceptance of Phase B contract completion by SPO.
D+10. Presentations by competing contractors.
D+35. SSEB evaluation completed.
D+45. Evaluation report completed.
D+57. Briefing of SSAC and submission of evaluation reports.
D+60. Contract negotiations completed.
D+90. SSAC proposal analysis completed.
D+100. Briefing of Air Force Council and Air Force commanders concerned (unless directed otherwise by the SSA or the Chief of Staff, USAF).
B+107. Briefing and presentation of the proposal analysis report to Secretary of Air Force.
B+114. Final acquisition contract execution and review completed.
B+116. AFN–23 report submitted.
D+119. Phase C contractor announced.
D+125. Contract distributed.

ATTACHMENT 2

ITEMS TO BE INCLUDED IN REQUEST FOR PROPOSAL (RFP)

The SSAC reviews and approves the RFP because of its impact on source selection; it is prepared by the SPO or project officer and is substantially complete by the time the authority to proceed with the procurement is received. ASPR 3–501 and AFR 80–20 list items to be considered for all RFPs. Several items of particular importance to source selections and CD procurements are mentioned here to emphasize their importance.

a. The RFP should:

(1) Include all requirements contained in the approved program guidance.

(2) Include the results of previous studies on feasibility, effectiveness, major tradeoffs, operational analysis, logistics analysis, etc.

(3) State the general basis for contract award and the evaluation criteria, listed in order of importance, to inform bidders of the relative importance of the areas to be evaluated. Mission models, covering primary and secondary missions and spelling out the critical performance requirements for each system and subsystem, can focus attention on critical requirements. Include a listing of areas and items, where possible, to provide a format for proposals. This may assist in the evaluation and analysis.

(4) Provide for competing contractors to submit separate prices and supporting cost data for any deviations in performance from that specified in the RFP as being the desired system performance requirements.

(5) Contain an outline of the plan for systems management, including the identification of pertinent Air Force and contractor reporting and control relationships.

(6) Include documentation requirements defined on DD Form 1423, "Contractor Data Requirements List," and in a data matrix. This is required so documents needed for contractual purposes can be written in proper contractual language to firmly commit the contractor. The data required to be evaluated must have a direct relationship to the evaluation criteria. Unnecessary data must not be requested. Data that can be delayed until after the contract award will be so listed and phased for later delivery. Only significant data that can be evaluated should be requested. Care must be taken to insure that the proposer is not misled as to the importance of items for which data are not requested at the proposal stage. This can happen, for example, in areas of maintenance and spares cost for a system. Though these costs may be difficult to evaluate, failure to request them could cause a proposer to submit a low cost for proposed end items which, in the long run, could be very costly to maintain or replace.

(7) Include Government-furnished property and the identification of any subsystems that must be broken out for subcontracting.

(8) Require that all proprietary items be identified in the proposal.

(9) Eliminate superfluous technical provisions. Specifications incorporated by reference frequently include third and fourth tier specifications that are unwanted, and must be screened out.

(10) Provide for competing contractors to submit separate prices on incremental production quantities; items for which there is a contingency requirement; and, where applicable, option quantities, in a TPP situation.

(11) Require that the competing contractors identify the impact of introducing their proposed system into the Government's operational inventory, on operational facility requirements of the Government, timing of construction, and future Military Construction Programs. However, adequate information on Air Force facilities should be provided in the RFP package to each contractor; thus he need not compile his own data.

(12) State any limit on the number of pages for proposals, in terms of the total proposal or for a specific area or item (*e.g.*, management volume). Care must be exercised in setting any limits to insure that the evaluators have sufficient, but not too much, information to make the evaluation.

b. The minimum proposal time will normally be at least 30 days. To give the proposer more time and not delay the source selection actions, a two-phase submission may be used (*i.e.*, the technical proposal due in 30 days, followed by the cost proposal 7 to 10 days later).

c. The number of copies required for evaluation purposes must be stated, in addition to those required for normal contractual processing.

d. When practicable, model contracts—a very highly recommended technique for the early resolution of contract terms and conditions, should be used.

ATTACHMENT 3

SAMPLE: SOURCE SELECTION EVALUATION CRITERIA—PHASE II

I. INTRODUCTION

The Source Selection process has three related activities—Proposal Evaluation, Validation, and Contract Negotiation. These three activities are interdependent, and all three must be completed before the announcement of the source selected. The evaluation criteria are associated with proposal evaluation. They identify areas and items of concern to the Government in selecting a source for the development and production of the XYZ System. The criteria areas and items, with their descriptions, are intended to show the scope of the evaluation of proposals submitted by the competitors involved in the source selection. Proposals will be evaluated by comparing proposal elements against standards that will be developed by the Government within the framework of the criteria. The standards,

prepared before proposals are received, are consistent with the requirements in the request for proposal or the statement of work (SOW). The standards are divulged only to Government personnel directly involved in the evaluation and source-selection process.

II. GENERAL CONSIDERATIONS

A. *Contractual Considerations.* Validation and contract negotiation will be concurrent with the evaluation of proposals. Validation is a review of all contractual documentation to insure that (1) The SOW includes all elements necessary to comply with established program requirements, (2) Contractors' proposals are consistent with contract and specification requirements, and (3) the contracts are acceptable for fixed-price definitive contracting. In addition, management planning as evidenced by the proposed Program Planning and Control System, Management Controls and Displays, Configuration Management, Data Management, and reporting will be reviewed for program and contractual acceptability. Although this validation does not result in scoring or have an independent impact on the evaluation part of the source selection process, the adequacy of contract terms—terms and conditions, SOW, delivery schedules and price—will be considered in the final selection. Contract Negotiations follow and overlap the final actions in validation, and resolve differences about contract requirements between the Government and the contractors. A minimum of negotiation should be required, since each contractor's proposal, together with the terms and conditions of the model contract should be the basis of a definitive contract. The selected source will not be announced before negotiations are completed and satisfactory definitive contracts are executed by all competitors.

b. *Correction Potential.* Where a proposal element is found to be deficient in the evaluation process, the rating for that element will depend on the effect it has on the over-all proposal—*i.e.,* the extent of revision necessary to correct the deficiency, and the effect of the correction on other elements of the proposal, affecting performance, schedules, or over-all costs to the Government.

III. GENERAL CRITERIA

A. The selection of a source for the award of the Phase II development and acquisition contract will be made by an integrated assessment of the merits of each contractor's proposal in the areas listed below, with appropriate consideration of the contractual provisions of each proposed contract. (1) The capability of the proposed system to satisfy mission requirements in the Request for Proposal, (2) the acceptability of contractual arrangements, including terms and conditions, SOW, delivery schedules, and price, and (3) the cost to the Government to develop and acquire the system, and to operate it during its expected life.

B. The following areas will be evaluated: (1) Design, (2) operational capability, (3) supportability, (4) management/production, and (5) cost to the Government. The first three areas will be scored and considered cumulatively. A separate cost effectiveness calculation will be made.

IV. SPECIFIC CRITERIA

A. Specific criteria are divided into the five basic areas listed under General Criteria (paragraph III B). Each area, except Cost to the Government, is subdivided into items that define the scope or the nature of a particular area. In addition, each item may, in turn, be subdivided into factors or subfactors, as necessary for proper evaluation.

B. In many instances, these areas and items are interdependent, and the results of the evaluation of each area and associated items must be recognized and taken into account in evaluating other areas and associated items.

C. In all evaluations, when performance or cost estimates are used as input information, evaluators will use the performance requirements in the proposed System and Contract End Item Specifications, and contractor-furnished cost estimates as validated or modified by Government engineering, operational, logistics, and cost specialists.

D. *Design.* The technical soundness of the proposed system design and the proposed development plan will be evaluated. In addition to the following specific considerations, the evaluation of each design element will include an assessment of (1) The validity of estimates of the proposed system performance characteristics, (2) the adequacy and validity of evidence furnished the Government, justifying design selections or approaches, and (3) the identification of problem or high risk areas and approaches to solutions. The influence of design choices on reliability, maintainability, safety, vulnerability/survivability, and service life will be considered.

a. *Item D–1, System Design.* The design of each major subsystem will be evaluated separately by performance requirements and design criteria, and the soundness of the proposed design or design approach to satisfy them. The complete system will be evaluated in terms of (1) The soundness of design compromises, and the integration of subsystems and components to provide the complete system design, and (2) the over-all capability of that design to satisfy requirements.

b. *Item D–2, Interface With Other Systems.* Evaluation of the over-all system will include consideration of its interface with other systems, the extent of modifications required, the operational and support limitations imposed by system design features, and the requirements for aerospace ground equipment and training equipment.

c. *Item D–3, Development Planning.* The adequacy of the contractor's plans for engineering development of the system will be evaluated. This evaluation will include the consideration of the plans for systems engineering management and effectiveness analyses that weigh and optimize the total systems engineering development activities. This evaluation will also include consideration of the engineering plans for system safety, maintainability, and reliability, Category I and Category II Test Plans, and the quality assurance portions of specification and design sheets. Consideration will be given to test objectives, test methods, success and failure criteria, number of test items, schedules, instrumentation, Government/contractor participants, data reduction, analyses, and reporting procedures. Consideration of the over-all plan for the engineering development of the system will include examining the adequacy and completeness of the interface analyses of related systems.

E. *Operational Capabilities:*

a. *Item O–1, Effectiveness.* Consideration will be given to the influence on the operational effectiveness of system characteristics such as accuracy, stability and control, reliability, maintainability, and vulnerability/survivability launch envelopes. System characteristics such as loading capabilities, crew procedures, and workloads, will also be considered.

b. *Item O–2, Flexibility.* The impact on flexibility of the operating command in deploying and employing the system will be evaluated. The introduction of a new type of weapon system may impose changes in current concepts; thus, the impact on capabilities to carry and employ other systems, limitations on or degradation of performance envelopes of the related systems, extent of changes or additions to support equipment, requirements for special procedures, equipment or facilities, requirements for specially trained or additional personnel, and influence on vulnerability/survivability and tactics for attack will be considered.

F. *Supportability:*

a. *Item S–1, Logistics.* The proposed logistic considerations will be evaluated for the maintenance, supply and modification support requirements. The evaluation of maintenance requirements will include an assessment of the interplay that system design and component reliability have on maintenance actions. This aspect will be evaluated as to time, manpower, skills, technical data, AGE, and facilities required for necessary actions. The contractor's optimized repair level analysis will be evaluated, as well the proposed initial repair level posture based on operational requirements and economic trade-offs. The supply requirements evaluation will include an assessment of the contractor's logistic analysis for supply support of the operational program. The modification support requirements evaluation will include a review of the workload, facilities, and scheduling necessary to integrate the system with the other systems. The evaluation of transportation and packaging plans will assess the adequacy of proposed plans to meet worldwide environmental extremes, the requirements for shipment by all modes of transportation, and for specialized containers and packaging designs. Emphasis will be given to the dangerous article characteristics of the propulsion units.

b. *Item S–2, Personnel and Training.* The proposed personnel subsystem will be evaluated for manpower quantities and skills required to use the system and perform the logistic support functions. The evaluation of the proposed training program will consider the crew training to be conducted by the contractor and operational readiness training, training locations, schedules, course structures, equipment, facilities, the relationship of anticipated training to existing programs, and the total time-phased training requirements for the system.

G. *Management/Production:*

a. *Item M–1, Management/Production.* The contractor's program planning and scheduling of all program elements will be reviewed for completeness, adequacy, realism, and the correlation of time span with the function to be performed. Proposed Master Schedule, Production Plan, Manufacturing Plan, Tooling Plan, Industrial Facilities Plan, Make-or-Buy Structure, related System Integration and Responsibility Plan will be considered. Consideration will also be given to the contractor's identification of required and available resources, and their proposed methods for obtaining or providing resources that may be required in addition to those already available.

H. *Cost to the Government Area.* This area involves (1) The acquisition price negotiated with each contractor in the competition, and (2) other costs that the Government will incur in acquiring, operating, maintaining, and supporting the system through its estimated useful life. Evaluation standards and scoring will not be used in this area. As to the acquisition price, the evaluation will include an analysis of whether the contractor's proposal reasonably reflects all contract costs that may be anticipated, to permit an assessment of the credibility of the contractor's proposed target cost. Proposed prices, with and without adjustments made by the Government, will become factors in the cost effectiveness analysis. A separate Government cost estimate will be made of each contractor's proposed work.

However, in light of the competitive nature of this program, coupled with the plan to use a fully structured fixed-price incentive contract with long term commitments, it is intended to use price analysis as defined by the Armed Services Procurement Regulation to evaluate this item. If it proves more advantageous to the Government, however, cost analysis may be used and prices negotiated with each contractor, after the proposals have been received.

As to other costs to the Government, the estimated useful life of the system will be assumed to be five years for purposes of evaluation. (This period is selected, even though a much longer life is anticipated, because cost estimates for a longer period would not be sufficiently reliable for evaluation purposes.)

V. COST EFFECTIVENESS

The separate cost effectiveness calculation will be based on the model used by the Air Force for the RAD Prerequisite Studies, modified as necessary to update for realism, and will yield information in the form of resources expended per function accomplished. Costs will include development and acquisition costs for the system, costs of modification of related systems, if any, and estimates of operating and maintenance costs over the system's anticipated life.

Cost effectiveness will not be evaluated or scored. Results of the analysis will be furnished to the Chairman of the Source Selection Evaluation Board and to the Source Selection Advisory Council for their consideration in assessing contractors' proposals over-all.

ATTACHMENT 4

SAMPLE: FORM FOR PREPARATION OF DEFICIENCY REPORTS

The Deficiency Report informs the SSAC and SPO negotiation team of matters disclosed during the evaluation of proposals which were considered to be less than satisfactory. In addition, it serves as a debriefing document, if required. This document is important to the source-selection action, and the data must be accurate and adequate.

DEFICIENCY REPORT

Area: (Scientific & Technical).
Item: (System performance).
Company: (Bravo Aviation).
Nature of Deficiency: (State the nature of the deficiency. Be concise. Include a reference, by company's document, paragraph and page that will quickly identify the company's submission.)
Summary of Effect of Deficiency: (State how the uncorrected deficiency would affect the program, if it were accepted "as is.")
Recommended Correction: (Briefly indicate the action the contractor must take to correct the deficiency.)
Reference: (Indicate what substantiates that the data evaluated are deficient. These may be statements in the request for proposal, statement of work, specifications, etc.)
Area Captain——.
Evaluator——.
Area and Item: (Include # Designator).

ATTACHMENT 5

SAMPLE

Subject: Letter of Transmittal—Proposal Analyses for XYZ Source-Selection Evaluation.

To: (The Source Selection Authority).

1. Under authority set forth in HQ USAF message ——— a Source Selection Advisory Council (SSAC) was established for the XYZ Program. This letter transmits the SSAC Proposal Analyses Reports.

2. The system was approved for contract definition by Systems Management Directive, XYZ. The requirements for the XYZ system are specified in the SMD. This source selection action, identified as the Phase A evaluation, is concerned with the selection of two or more sources to be awarded fixed-price definition contracts.

3. The SSAC was composed of members of the Tactical Air Command, the Air Force Systems Command and the Air Force Logistics Command (see attachment 1). The SSAC mission was to solicit competitive proposals from Industry against formally approved requirements for the XYZ system to insure an impartial, equitable, and comprehensive evaluation of competitive proposals received, and to give the Source Selection Authority weighted considerations, findings, judgments, and advise on strengths and weaknesses of each contractor's proposal. Contractor proposals were evaluated by Source Selection Evaluation Board (SSEB) members, which included engineers, production specialists, procurement specialists, logisticians, cost analysts, auditors, systems management personnel, and operations and training personnel.

4. The SSAC and the SSEB performed this mission according to the policies and procedures prescribed in AFR 70–15 and AFM 70–10. For the evaluation criteria, see attachment 2.

5. The Request for Proposal (RFP) was approved by the SSAC, and reviewed by the SSEB before it was sent to Industry. Two proposals were requested from each competitor. Proposal A covers the contractors' proposed plan for conducting contract definition, and a cost quotation for this work. Proposal B describes the contractors' preliminary system design approach, including management, logistics, and operational aspects. A cost quotation for Proposal B was (not) required.

6. The list of potential sources was compiled from the Air Force Systems Command Random Access Source List, and from the responses received from the synopsis in the Commerce Business Daily on ———. A Small Business Clearance was received. Eight sources were found qualified, and solicited for proposals. Four sources responded, as follows:

The Alfa Aircraft Company, Kokomo, Indiana.

Bravo Aviation, Inc., Las Vegas, Nevada.

The Cocoa Corporation, Green Bay, Wisconsin.

Delta Aircraft Corporation, Portland, Maine.

7. Proposal analyses of the evaluation of each contractor's proposal are in attachment 4. Highlights of the analyses of each contractor's proposal are as follows:

a. Alfa Aircraft
b. Bravo Aviation
c. Cocoa Corporation
d. Delta Aircraft

(NOTE.—On a very selective basis, choose the most significant strengths, weaknesses and risks for the proposal analyses, and include them in a brief summary in the above subparagraphs.)

8. The weighted scores achieved by each contractor's proposal are summarized below:

WEIGHTED SCORES

Area	Maximum score attainable	Contractors			
		Alfa	Bravo	Cocoa	Delta
Technical design	500	460	410	225	255
Contractor experience and resources	300	270	210	195	218
Implementation plan	200	175	200	170	184
Total	1,000	905	820	590	657

9. In the cost area, proposals covered only the cost for contract definition. These cost proposals have been negotiated with each contractor, to finalize definitive contracts for contract definition. Total amounts proposed by, and negotiated with, each contractor are:

	Proposed	Negotiated
(a) Alfa Aircraft	$900,000	$900,000
(b) Bravo Aviation	910,000	900,000
(c) Cocoa Corp	1,200,000	910,000
(d) Delta Aircraft	970,000	920,000

10. The evaluation criteria for the areas to be considered, when selecting contractors for award of contract-definition contracts, are (in order of importance):

a. The soundness and adequacy of the system preliminary technical design to satisfy the requirements contained in the RFP/SOW.

b. Management's ability to insure that the program can be performed satisfactorily.

c. The reasonableness of the contractor's proposal for conducting contract definition.

11. Under this criteria SSAC summary conclusions are presented below:

a. *Alfa Aircraft*—This contratcor's proposed preliminary system design is acceptable for contract definition. The few weaknesses found can be corrected during contract definition. The plan of action for conducting contract definition is satisfactory. The contract definition cost proposal is reasonable and realistic.

b. *Bravo Aviation.*—This contractor's proposed preliminary system design approach is acceptable for contract definition. The system design is well founded in current technology, and is attractive in strong growth potential. Several weaknesses were noted, but all can be corrected during contract definition. A very good plan was proposed for conducting contract definition. The contract definition cost proposal is reasonable and realistic.

c. *Cocoa Corporation*—This contractor's approach to preliminary system design has serious deficiencies. Major deficiencies existed in (identify appropriate deficiencies in very brief form). Thus, to be suitable for contract definition, the proposal would require extensive changes. The contractor's plan for conducting contract definition is satisfactory. The contract definition cost proposal is reasonable and realistic.

d. *Delta Aircraft*—This contractor's approach to preliminary system design is acceptable. It should be noted, however, that this design approach covers many high risk areas. These high risks are (identify nature of risks). Thus, extensive changes will be required in the contractor's approach to the system design, to reduce these risk areas to acceptable levels. The contractor's plan for conducting contract definition is very good. The contract definition cost proposal is reasonable and realistic.

12. The above findings represent the unanimous conclusions of the SSAC, and we therefore advise that contracts for the contract definition be awarded to Alfa Aircraft Company, and Bravo Aviation, Inc.

SPECIAL NOTES

1. Copies of the SSAC Analysis Report will be provided to the Air Force Council and commanders of each command concerned; AFSC, AFLC, using command, the Air Training Command, and heads of other Government agencies and services, as and when appropriate. The report will normally be delivered with the source selection briefing.

2. Letter of transmittal: Attachments: (1) SSAC/SSEB composition. (2) Evaluation criteria, standard and rationale for established weights. (3) The evaluation report. (4) The analysis report.

PROPOSAL EVALUATION AND SOURCE SELECTION PROCEDURES

This regulation establishes Air Force policy, assigns responsibilities, and prescribes procedures for evaluating proposals and se-

lecting systems, subsystems, and project sources. It implements DOD Directive 4105.62, 6 April 1965.

1. Objectives and Policy. The prime objective of the source selection process is the impartial, equitable, and comprehensive evaluation of competitors and their proposals to insure selection of that source which will provide optimum satisfaction of the Government's basic objectives including the required performance and schedule at the best cost. Other objectives are to:

a. Provide that an individual serving in a major executive position of the OSD or the Air Force is fully responsible for the source selection decision in a major procurement action.

b. Insure a balanced appraisal of all factors in the source selection process by deliberately constituting an advisory group of senior military and/or civilian personnel possessing experience in matters concerning systems development and acquisition, systems engineering, military requirements and operations, and logistics and procurement.

c. Apply and to utilize fully the professional skills and knowledge of competent personnel in the evaluation and assessment of competitive proposals.

d. Establish consistent procedures thereby improving the effectiveness of review and approval of proposal evaluation and source selection and to increase Government and industry understanding and acceptance of these procedures.

2. Applicability of Source Selection Procedures (SSP):

a. Use SSP prescribed by this regulation and AFM 70–10 to select sources for:

(1) Each new development contract estimated to exceed $25 million. For those systems and projects requiring a Contract Definition (CD) in accordance with AFR 80–20, use SSP to select source(s) for both the CD and Acquisition.

(2) Each new production, modification or maintenance, or other hardware or service contract estimated to exceed $25 million, except where the contract is to be awarded solely on the basis of price competition.

(3) Other contracts as the Office of the Secretary of the Air Force or HQ USAF may designate.

b. If SSP are not required or designated pursuant to paragraph a, above, select the source(s) for systems, subsystems and projects by procedures established by the procuring agency within its delegated authority.

c. The Secretary of Defense may retain Source Selection Authority (SSA) on those procurements meeting the criteria of paragraph 2a(1) above and on new production contracts estimated to exceed $100 million, except where such production contracts will be awarded solely on the basis of price competition. Normally, the Secretary of Defense delegates SSA to the Secretary of the Air Force, for systems/projects to be acquired by the Air Force.

d. The Secretary of the Air Force may redelegate SSA with power of redelegation not below the level of a systems division commander or an official in an equivalent position. Normally, the security of the Air Force is the SSA on those contracts meeting the criteria of paragraph 2a above.

3. Scope of Regulation:

a. Use the SSP prescribed in this regulation and AFM 70–10 to select sources for proposed contracts meeting the criteria of paragraph 2a above.

b. Follow the procedures set forth under paragraph 5c and 7 for proposed contracts exceeding $25 million whether or not awarded solely on the basis of price competition.

4. Explanation of Terms:

a. *Advisers*—Government personnel officially assigned as participants to the Source Selection Advisory Council (SSAC) or Source Selection Evaluation Board (SSEB), but not to a specific evaluation task or team, who assist SSAC and SSEB members during the source selection process by furnishing advice pertaining to specific matters.

b. *Selection Plan*—A proposed plan for conducting proposal evaluation, contract negotiations and source selection. Specific recommendations on the following shall be included in each plan:

(1) The source list screening criteria.

(2) The evaluation criteria.

(3) The functional areas which should be represented on the SSAC and the functional and technical representation for the SSEB.

(4) The chairman and composition of the SSEB.

(5) The scoring and evaluation techniques to be used.

(6) The schedule of all required actions between receipt of proposals and award of a definitive contract or contracts. The schedule will provide for such actions to be completed in 18 calendar weeks, unless the completion of all actions within this period is initially considered to be unrealistic. A full explanation will be furnished for a planned schedule in excess of the 18 week period, including the considerations given to the conduct of parallel rather than sequential actions where feasible.

c. *Evaluation Report*—A comprehensive report prepared by the SSEB which contains evaluation criteria, detailed narrative assessments of each proposal against these criteria, numerical scores, and summary appraisals of significant strengths, weaknesses and risks of each area of each proposal.

d. *Proposal Analysis Report*—A formal report prepared by the SSAC which contains:

(1) An objective appraisal of each proposal's merits, shortcomings and risks.

(2) The conclusions reached after an over-all analysis of the SSEB evaluation, total costs, over-all effectiveness, cost effectiveness, contractor's capabilities, negotiation results, and other aspects of the source selection.

(3) Advice to the SSA with respect to a selection decision.

e. *Source Selection Advisory Council (SSAC)*—A group of senior military and/or Government civilian personnel appointed by the SSA to act as his staff and advisors in source selection. The members of the SSAC will be selected from organizational levels sufficiently high to insure necessary visibility of all considerations affecting the system, subsystem or project. All concerned functional areas involved in the procurement will be represented on the SSAC (e.g., the user, R&D, logistics, other DOD components and other Government agencies). The senior member from each Air Force command represented is a general officer if the SSA is the Secretary of the Air Force or the Secretary of Defense. The SSA for other source selections determines the level of membership of the SSAC.

f. *Source Selection*—The process wherein the requirements, facts, recommendations and Government policy relevant to an award decision in a competitive negotiated procurement of a system, subsystem, or project are examined and the decision made.

g. *Source Selection Authority (SSA)*—The official designated to direct the source selection, approve the selection plan, and to select the source(s).

h. *Consultants.*—Government or non-Government personnel called upon by the SSAC, SSEB or SSA to furnish expert advice on highly specialized matters and on the solution of particular problems.

i. *Source Selection Evaluation Board (SSEB)*—A group of military and/or Government civilian personnel appointed by the SSAC to direct, control, and evaluate proposals responsive to requirements, and to produce summary facts and findings required in the source selection process. All necessary functional and technical areas involved in the procurement are represented on the SSEB. The chairman of the SSEB normally is the System Program Director (SPD) or official in an equivalent position.

j. *System/Project*—Equipment and/or skills, together with any related facilities, services, information and techniques, that for a complex or an entity capable of performing specific operational tasks in support of an identifiable Defense objective. The term "system" as used herein encompasses weapon systems, support systems, and command and control systems.

k. *Subsystem*—See AFM 11–1.

5. Responsibilities for Source Selection:

a. At the time the system/project is initially approved in the Five Year Defense Program, or, for a CD procurement, at the time CD initiation is approved, the Secretary of Defense decides to retain or delegate SSA for those procurements meeting the criteria of paragraph 2a(1) above and for new production contracts estimated to exceed $100 million, except where such production contracts will be awarded solely on the basis of price competition. If the document which approves the initiation of Contract Definition is silent as to the SSA, the Secretary of the Air Force is assumed to be the SSA. Recommendation for the choice of SSA is included in Program Change Requests, in the memorandum requesting the initiation of CD, or in a separate memorandum, as appropriate.

b. Designations or redelegations of SSA by the Secretary of the Air Force normally are included in System Management Directives or other appropriate documents. Redelegation of SSA is made in time to insure that all actions required of the SSAC, SSEB, SPD, procurement personnel and other officials involved in procurement review and approval may be taken in a timely manner. If the SSA for a procurement, meeting the criteria of paragraph 2 above, is not designated or redelegated in a timely manner, the Secretary of the Air Force is assumed to be the SSA and the selection plan is processed for his approval.

c. For *all* development, production, modification, or other hardware or service contracts estimated to exceed $25 million (*including* contracts to be awarded solely on the basis of price competition) for which selection authority is delegated to, or vests in, AFSC or AFLC, the HQ USAF OPR for the system or project insures that the Office of the Secretary of the Air Force is advised not later than 30 days nor earlier than 60 days before the selection decision is scheduled to be made.

d. The SSA is responsible for properly and effectively conducting the evaluation and source selection. The SSA:

(1) Designates the chairman and membership of the SSAC using the selection plan and the criteria set forth under paragraph 4e.

(2) Is responsive to the guidance and special instructions or review requirements of the official who designated the SSA.

(3) Provides the SSAC and SSEB with appropriate guidance and special instructions as necessary for the conduct of SSP.

(4) Insures equitable and effective actions are taken, consistent with the Armed Services Procurement Regulation (ASPR), to obtain a manageable but competitive number of final proposals for the selection process.

(5) Reviews and approves the selection plan and revisions thereto.

(6) Performs an in-depth review of all information and data furnished by the SSAC and the SSEB and, after consideration thereof, selects the source(s).

e. *The SSAC:*

(1) Establishes the evaluation criteria using the selection plan.

(2) Establishes the evaluation criteria weights in the order of their relative importance.

(3) Establishes the relative importance of the evaluation criteria in a form to be used in the Request for Proposals (RFP).

(4) Establishes screening criteria for the development of a source list.

(5) Approves the RFP and the source list.

(6) Designates the chairman and membership of the SSEB using the selection plan and the criteria set forth under paragraph 4i.

(7) Reviews the contractor performance evaluation program histories and other pertinent records of contractor performance for the contractors involved; and when required, obtains oral briefings from the contractors and inspects their facilities.

(8) Reviews the findings of the SSEB and applies the established weights to the evaluation results.

(9) Prepares the Proposal Analysis Report.

(10) Provides briefings and consultation as directed by the SSA.

(11) After the selection is made by the SSA, documents for his signature the justification for the source selection.

(12) Forms such ad hoc working groups as may be necessary to assist in the administration of the SSAC functions.

f. *The SSEB:*

(1) Reviews and conducts in-depth discussions of the relative merits of each proposal against the requirements in the REP and the evaluation criteria, established by the SSAC. An element in the evaluation of proposals is the proposer's system for planning and controlling contract performance.

(2) Prepares the evaluation report.

(3) Provides briefings and consultation concerning the evaluation as may be required by the SSA or SSAC.

g. *The System Program director (SPD) or the official in an equivalent position:*

(1) Develops and prepares work statements, specifications, schedules, plans, procedures, etc., necessary for a complete and adequate RFP.

(2) Develops and prepares the RFP.

(3) Prepares a source list consistent with the ASPR policies, the SSA's instructions, and the SSAC's source list screening criteria.

(4) Develops and prepares the selection plan according to paragraph 4b.

6. Procedures Applicable to Processing Source Selection Data to the SSA:

a. When SSA has been retained by the Secretary of Defense the following will apply:

(1) The Secretary of the Air Force submits comments and views on the results of the evaluation and selection effort to the Secretary of Defense.

(2) HQ USAF:

(a) Reviews the evaluation data and all supporting documentation.

(b) After the Secretary of the Air Force has reviewed the results of the evaluation, prepares his comments and views, in accordance with his instructions, for his signature and submission to the Secretary of Defense.

(3) The SSAC provides briefings and consultations to HQ USAF, the commanders of AFSC and AFLC, and the commanders of the using commands.

(4) To provide the Secretary of the Air Force with sufficient information for a meaningful review, it may be necessary for the Secretary of the Air Force or HQ USAF to request the SSAC, SSEB, or the SPD to accomplish additional tasks related to the source selection.

(5) Each commander concerned submits comments and views on the results of evaluation and selection effort to HQ USAF.

b. When the Secretary of the Air Force is the SSA, advice from the SSAC, the concerned commanders, and from such other agencies and persons as he deems appropriate will normally be requested. In such instances and when the SSA is an official of HQ USAF:

(1) The SSAC submits advice with respect to the sources to be selected to HQ USAF.

(2) Each concerned commander submits his advice as to the source selection to HQ USAF.

(3) HQ USAF reviews the evaluation data and all supporting documentation and submits advice to the SSA.

(4) The SSAC, SSEB and the SPD (or official in an equivalent position) accomplishes such additional tasks as HQ USAF directs. The SSAC provides briefings and consultations to HQ USAF, the commanders of AFSC and AFLC, and other commanders concerned.

7. Release of Information on Source Selections:

a. No information will be released to the public or to Congressional interests on decisions or recommendations about source selections until released by the Secretray of the Air Force.

b. The chairman of the SSAC notifies the Director, The Secretariat, HQ USAF, of the pending source selection in sufficient time for the Director to initiate preparatory action with the Office of Legislative Liaison and the Office of Information, OSAF.

c. The Director, The Secretariat, HQ USAF, in conjunction with the appropriate staff offices, HQ USAF:

(1) Initiates preparatory action with the Office of Legislative Liaison and the Office of Information, OSAF, as necessary.

(2) When the selection decision is released by the Secretary of the Air Force, insures that a memorandum is prepared for the Office of Legislative Liaison and the Office of Information, OSAF, to include as appropriate;

(a) The designation of the system/project or subsystem being considered and the scope of work to be accomplished by the source.

(b) The name of the source selected and the location where the work is to be performed (if development and production will be performed at separate locations, specifies both locations).

(c) The major subcontractors involved and their location.

(d) The estimated dollar value of any contracts to be awarded citing current year's appropriations.

(3) Upon notification by the Office of Legislative Liaison, arranges with the appropriate staff offices, HQ USAF, to notify the selected source at a mutually agreed time.

(4) Announces a Chief of Staff Decision for Air Staff guidance.

d. The Office of Legislative Liaison and the Office of Information prepare the releases which are coordinated with appropriate Defense agencies for approval. After the Department of Defense approves the releases, the Office of Legislative Liaison establishes the exact timing of the Congressional notification, based upon the SSA's guidance, and notifies the Director, The Secretariat, the Office of Information and the Deputy Chief of Staff who is OPR for the source selection of this timing and any other pertinent details concerning the Congressional announcement.

8. Security and Protection of Sensitive Data:

a. All unclassified documents concerning selection of sources under the procedures prescribed by this regulation are designated as "For Official Use Only" under AFR 11-30. Protection of data submitted or developed during the source selection proceedings is of paramount importance.

b. Information submitted by contractors and information developed during the SSP is of an extremely sensitive nature. Accordingly, under no circumstances will any consultant, adviser, or member of the SSAC, the SSEB or of any ad hoc working group discuss the proceedings with any individual who is not a member of the organizations named, except as authorized under this regulation.

c. Any unauthorized disclosure or release of either classified information or source selection information designated as "For Official Use Only" under AFR 11-30 will be investigated and, as appropriate, will be treated under disciplinary procedures authorized by law or administrative regulations.

d. Data, exclusive of procurement documentation, received and/or developed during and subsequent to the source selection action by the SSAC and the SSEB pertaining to the selection process is maintained separate from normal, everyday files. Release of this data to persons other than the SSAC membership is by specific permission of the SSA for that specific source selection action.

9. Debriefing Procedures. In those cases where the SSA determines that detailed debriefings beyond that required by the ASPR would be of value, unsuccessful offerors may be provided debriefings upon request.

10. Waivers to this Regulation. Waiver of the application of any of the requirements of this regulation, to a proposed contract meeting the criteria of paragraphs 2a(1) and c may be granted only by the Secretary of Defense. Requests for waiver from organizational components subordinate to HQ USAF are submitted in writing to HQ USAF, with substantiating reasons therefor, for appropriate processing.

By order of the Secretary of the Air Force.

Gen. J. P. McCONNELL,
U.S. Air Force, Chief of Staff.

Col. JOHN F. RASH,
U.S. Air Force,
Director of Administrative Services.

THE MILITARY BUDGET AND NATIONAL ECONOMIC PRIORITIES

Mr. PROXMIRE. Mr. President, on Tuesday, June 3, 1969, the Subcommittee on Economy in Government began a major set of hearings entitled "The Military Budget and National Economic Priorities."

The hearings represent a logical continuation of the work of the Joint Economic Committee and the Subcommittee on Economy in Government. No issue is of greater importance today than the level of defense spending and the relative importance of other nondefense priorities.

The question that our subcommittee is attempting to explore is: How can military and civilian needs be balanced?

On Tuesday, we heard from two distinguished scholars and statesmen, John Kenneth Galbraith, former Ambassador to India, and Charles Schultze, the former Director of the Bureau of the Budget.

On Wednesday, we heard from the distinguished and eminent Senator from Arkansas (Mr. FULBRIGHT), chairman of the Committee on Foreign Relations.

Each of the statements delivered by the first three witnesses presented well defined and fully thought out facts and viewpoints to the subcommittee. In my opinion, the testimony of these three men constitutes important reference points in the current dialog of the national budget.

I therefore ask unanimous consent that they be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF JOHN KENNETH GALBRAITH, PAUL M. WARBURG, PROFESSOR OF ECONOMICS, HARVARD UNIVERSITY, BEFORE THE SUBCOMMITTEE ON ECONOMY IN GOVERNMENT JOINT ECONOMIC COMMITTEE, JUNE 3, 1969

Mr. Chairman: I am much pleased to be here this morning to help open this important series of hearings. We are all greatly in your debt, Mr. Chairman, for your effort in winning public attention for the role of the military power in our economic and political life—although perhaps the expressions of gratitude from the Pentagon will be less fervent than one might wish. You can't please everyone. Those of us who have been concerned with this issue over the years have, I believe, a special reason to appreciate your achievement. It is an issue which concerned citizens, including most liberals, have been sweeping under the rug for years. "Ah, yes—something should be done about it, by someone else." Now, thanks to you, it is on the national agenda.

In my brief time this morning, I would like to try to define the problem. Then I will make a few suggestions to guide your search for solutions. Now that concern has been aroused we must be certain that it leads to useful accomplishment. I take the liberty of appending to my remarks the text of a small paper I wrote some months ago on the subject.

It is in the current issue of *Harper's* and about to be published in pamphlet form.[1]

The importance of military spending in the economy—half the Federal budget, about one-tenth of the total economic product, I need not stress. Though much attention is focussed upon it, this bloodless economic side is not, I venture to think, the important feature. The important feature is the peculiar constitutional and bureaucratic arrangements which govern this economic activity.

In our ordinary economic arrangements we think of the individual as instructing the market by his purchases, the market, in turn, instructing the producing firm. Thus economic life is controlled. This the textbooks celebrate. And where public expenditures are concerned, the young are still taught that the legislature reflects the will of the citizen to the Executive. The Executive, in turn, effects that will.

I have argued[2] that with industrial development—with advanced technology, high organization, large and rigid commitments of capital—power *tends* to pass to the producing organization—to the modern large corporation. Not the customer but General Motors tends to be the source of the original decision on the modern automobile. If the consumer is reluctant he is persuaded—to a point at least.

This part of my case has not escaped argument. Dissent raises its head everywhere these days. But where military goods are concerned one encounters little or no argument. Here, it is agreed, the historic economic and constitutional sequence *is* reversed. The citizen does not instruct the legislature and the legislature the Pentagon and its associated industries. No one wants to be that naive. Vanity becomes the ally of truth. It is agreed that the Services and the weapons manufacturers decide what they want or need. They then instruct the Congress. The Congress, led by the military housecarls and sycophants among its members, hastens to comply. The citizen plays no role except to pay the bill. As I say, these matters are not subject to serious dispute, those with a special capacity to believe in fairy tales apart.

The power that has brought about this remarkable reversal—has assumed this authority—has, of course, been well identified. It is the military services acting individually or in association through the Department of Defense and the large military contractors. The latter, an important point, are few in number and highly specialized in their service to the military. In 1968, a hundred large firms had more than two-thirds (67.4 per cent) of all defense business. Of these, General Dynamics and Lockheed had more than the smallest fifty. A dozen firms specializing more or less completely on military business—McDonnell Douglas, General Dynamics, Lockheed, United Aircraft—together with General Electric and A.T. & T. had a third of all business. For most business firms defense business is inconsequential except as it affects prices, labor and material supply—and taxes. The common belief that all business benefits from weapons orders is quite wrong. For a few it is a rewarding source of business. The great multitude of business firms pay. The regional concentration, I might add, is equally high; in 1967 a third of all contracts went to California, New York and Texas. Ten states received two thirds. And no one should be misled by the argument that this picture is substantially altered by the distribution of subcontracts.

One must not think of the military power—the association of the military and the defense firms—in conspiratorial terms. It reflects an intimate but largely open association based on a solid community of bureaucratic and pecuniary interests. The Services seek the weapons; the suppliers find it profitable to supply them. The factors which accord plenary power of decision to the military and the defense plants, and which exclude effective interference by the Congress and the public, are quite commonplace. Nothing devious or wicked is involved. The following are the factors which sustain the military power.

First: There is the use of fear. This, of course, is most important. Anything which relates to war, and equally to nuclear weapons and nuclear conflict, touches a deeply sensitive public nerve. This is easily played on. The technique is to say, in effect, "Give us what we ask, do as we propose, or you will be in mortal danger of nuclear annihilation." In this respect one must pause to pay tribute to Secretary of Defense Laird. He has shown himself, on this matter, to have a very high learning skill.

Second: There is the monopoly, or near monopoly, of technical and intelligence information by the Services, their suppliers and the intelligence community. This monopoly, in turn, is protected by classification. This allows the military power to exclude the lay critic, including the legislator, as uninformed. But even the best scientist can be excluded on the grounds that he is not fully informed on the latest secret technology—or does not have the latest knowledge on what the Soviets or the Chinese are up to. Here too the new Administration has been very apt. If Secretary Laird deserves a special word of commendation on the way he has learned to use fear, Under Secretary Packard must be congratulated on the speed with which he has learned to discount criticism as inadequately informed of the latest secrets.

Third: There is the role of the single-firm supplier and the negotiated contract. These are largely inevitable with high technology. One cannot let out the MIRV to competitive bidding in the manner of mules and muskets. In Fiscal 1968, as the work of this Committee has revealed, sixty per cent of defense contracts were with firms that were the sole source of supply. Most of the remainder were awarded by negotiated bidding. Competitive bidding—11.5 per cent of the total—was nearly negligible. With single-firm supply, and in lesser degree with negotiated supply, opposition of interest between buyer and seller disappears. The buyer is as interested in the survival and well-being of the seller as is the seller himself. No one will enter this Elysium to cut prices, offer better work, earlier deliveries or cry favoritism. That is because there is no other seller. The situation, if I may be permitted the word, is cozy.

Fourth: There is the fiction that the specialized arms contractor is separate from the Services. The one is in the public sector. The other is private enterprise. As Professor Murray Weidenbaum (the notable authority on these matters), as well as others, have pointed out, the dividing line between the Services and their specialized suppliers exists mostly in the imagination. Where a corporation does all (or nearly all) of its business with the Department of Defense; uses much plant owned by the Government; gets its working capital in the form of progress payments from the Government; does not need to worry about competitors for it is the sole source of supply; accepts extensive guidance from the Pentagon on its management; is subject to detailed rules as to its accounting; and is extensively staffed by former Service personnel, only the remarkable flexibility of the English language allows us to call it private enterprise. Yet this is not an exceptional case, but a common one. General Dynamics, Lockheed, North American-Rockwell and such are public extensions of the bureaucracy. Yet the myth that they are private allows a good deal of freedom in pressing the case for weapons, encouraging unions and politicians to do so, supporting organizations as the Air Force Association which do so, allowing executives to do so, and otherwise protecting the military power. We have an amiable arrangement by which the defense firms, though part of the public bureaucracy, are largely exempt from its political and other constraints.

Fifth: This is a more subtle point. For a long period during the fifties and sixties during which the military power was consolidating its position, military expenditures had a highly functional role in the economy. They sustained employment; they also supported, as no other expenditures do, a high technical dynamic. And there was no wholly satisfactory substitute. More specifically, a high federal budget, supported by the corporate and progressive personal income tax, both of which increased more than proportionally with increasing income and reduced themselves more than proportionally if income faltered, built a high element of stability into the system. And the scientific and technical character of this outlay encouraged the expansion of the educational and research plant and employed its graduates. It was long a commonplace of Keynesian economics that civilian spending, similarly supported by a progressive tax system, would serve just as well as military spending. This argument which, alas, I have used myself on occasion was, I am now persuaded, wrong—an exercise in apologetics. Civilian spending does not evoke the same support on a large scale. (Even in these enlightened days I am told that Representative Rivers prefers naval ships to the Job Corps.) And although it is now hard to remember, the civilian pressures on the Federal budget until recent times were not extreme. Taxes were reduced in 1964 because the pressures to spend were not sufficient to offset tax collections at a high level of output—to neutralize the so-called fiscal drag. And civilian welfare spending does not support the same range of scientific and technical activities, or the related institutions, as does military spending. On a wide range of matters—electronics, air transport, computer systems, atomic energy—military appropriations paid for development costs too great or too risky to be undertaken by private firms. They served as a kind of honorary non-socialism.

Sixth and finally: There is the capacity—a notable phenomenon of our time—for organization, bureaucracy, to create its own truth—the truth that serves its prupose. The most remarkable example in recent times, of course, has been Vietnam. The

[1] By Doubleday and New American Library.
[2] In *The New Industrial State*. Boston: Houghton Mifflin, 1967.

achievements of bureaucratic truth here have been breathtaking. An essentially civilian conflict between the Vietnamese has been converted into an international conflict with a rich ideological portent for all mankind. South Vietnamese dictators of flagrantly regressive instincts have been converted into incipient Jeffersonians holding aloft the banners of an Asian democracy. Wholesale larceny in Saigon has become an indispensable aspect of free institutions. One of the world's most desultory and impermanent armies—with desertion rates running around 100,000 a year—was made, always potentially, into a paragon of martial vigor. Airplanes episodically bombing open acreage or dense jungle became an impenetrable barrier to men walking along the ground. An infinity of reverses, losses and defeats became victories deeply in disguise. There was nothing, or not much, that was cynical in this effort. For, for those who accept bureaucratic truth, it is the unbelievers who look confused, perverse and very wrong. Throughout the course of the war there was bitter anger in Saigon and here in Washington over the inability of numerous people—journalists, professors and others—to see military operations, the Saigon government, the pacification program, the South Vietnam army in the same rosy light as did the bureaucracy. Why couldn't all sensible people be the indignant instruments of the official belief—like Joe Alsop? (If I may pay tribute to the Edward Gibbon of the Vietcong.)

An equally spectacular set of bureaucratic truths has been created to serve the military power—and its weapons procurement. There is the military doctrine that whatever the dangers of a continued weapons race with the Soviet Union, these are less than any agreement that offers any perceptible opening for violation. Since no agreement can be watertight this largely protects the weapons industry from any effort at control. There is the belief that the conflict with communism is man's ultimate battle. Accordingly, no one would hesitate to destroy all life if communism seems seriously a threat. This belief allows acceptance of the arms race and the production of the requisite weapons no matter how dangerous. The present ideological differences between industrial systems will almost certainly look very different and possibly rather trivial from a perspective of fifty or a hundred years hence if we survive. Such thoughts are eccentric. There is also the belief that national interest is total, that of man inconsequential. So even the prospect of total death and destruction does not deter us from developing new weapons systems if some thread of national interest can be identified in the outcome. We can accept 75 million casualties if it forces the opposition to accept 150 million. We can agree with Senator Richard Russell that, if only one man and one woman are to be left on earth, they should be Americans. (Not from any particular part of the country, just Americans.) We can make it part of the case for the Manned Orbiting Laboratory (MOL) that it would maintain the American position up in space in the event of total devastation from Maine to California. Such is the power of bureaucratic truth that these things are widely accepted. And being accepted they sustain the military power.

What now should be our response? How do we get the power under control?

Our response must be in relation to the sources of power. Again for purposes of compressing this discussion, let me list specific points:

1. Everyone must know that fear is deployed as a weapon. So we must resist it. I am not a supporter of unilateral disarmament. I assume that the Soviets also have their military power sustained by its bureaucratic beliefs. But we must look at the problem calmly. We must never again be stampeded into blind voting for military budgets. These, as a practical matter, are as likely to serve the bureaucratic goals of the military power and the pecuniary goals of the contractors as they do the balance of terror with the Soviets. And we must ascertain which.

2. That part of the military budget that serves the the balance of terror can be reduced only with negotiations with the Soviets. As Charles Schultze and others have pointed out, however, this is a relatively small part of the military budget. The rest serves the goals of the military power and the interests of the suppliers. This can be curtailed. But it can only be curtailed if there is a vigorous reassertion of Congressional power. Obviously this will not happen if sycophants of the military remain the final word on military appropriations. The Congress has the choice of serving the people in accordance with constitutional design or serving Senator Russell and Representative Rivers in accordance with past habit.

3. Informed technical and scientific judgment must be brought to bear on the foregoing questions. This means that the Congress must equip itself with the very best of independent scientific judgment. And the men so mobilized must not be denied access to scientific and intelligence information. I believe that on military matters there should be a panel of scientists, a Military Audit Commission, responsible only to the Congress—and not necessarily including Edward Teller—to be a source of continuing and informed advice on military needs—and equally on military non-needs.

4. We must, as grown-up people, abandon now the myth that the big defense contractors are something separate from the public bureaucracy. They must be recognized for what they are—a part of the public establishment. Perhaps one day soon a further step should be taken. Perhaps any firm which, over a five-year period, has done more than 75% of its business with the Defense Department, should be made a full public corporation with all stock in public hands. No one will make the case that this is an assault on private enterprise. These firms are private only in the imagination. The action would ensure that such firms are held to strict standards of public responsibility in their political and other activities and expenditures. It would exclude the kind of conspiracy to protect capital gains that was recently uncovered in the Lockheed case. It would help prevent private enrichment at public expense. In light of the recent performance of the big defense contractors, no one would wish to argue that it would detract from efficiency. And the 75% rule would encourage firms that wish to avoid nationalization to diversify into civilian production. Needless to say, the 75% rule should be applicable to the defense units of the conglomerates. Perhaps to press this reform now would direct energies from more needed tasks. Let us, however, put it on the agenda.

5. Finally, it must be recognized that the big defense budgets of the fifties were a unique response to the conditions of that time. Then there were the deep fears generated by the Cold War, the seeming unity of the Communist world, and, at least in comparison with present circumstances, the seeming lack of urgency of domestic requirements. All this has now changed. We have a wide range of tacit understandings with the Soviets; we have come to understand that the average Soviet citizen—in this respect like the average American voter—is unresponsive to the idea of nuclear annihilation. The communist world has split into quarrelling factions. I am enchanted to reflect on the Soviet staff studies of the military potential of the Czech army in case of war. Perhaps, as I have said elsewhere, we have here the explanation of their odd passion for the Egyptians. And as all philosophers of the commonplace concede, we have the terrible urgency of civilian needs—of the cities, the environment, transportation, education, housing, indeed wherever we look. It is now even agreed as to where the danger to American democracy lies. It is not from the Soviet Union, China. It is from the starvation of our public services, particularly in our big cities, here at home.

Mr. Chairman, let me make one final point. Our concern here is not with inefficiency in military procurement. Nor is it with graft. These divert attention from the main point. And this is not a crusade against military men—against our fellow citizens in uniform. Soldiers were never meant to be commercial accessories of General Dynamics. It would horrify the great captains of American arms of past generations to discover that their successors are by way of becoming commercial accessories of Lockheed Aircraft Corporation.

The matter for concern is with the military power—a power that has passed from the public and the Congress to the Pentagon and its suppliers. And our concern is with the consequences—with the bloated budgets and bizarre bureaucratic truths that result. The point is important for it suggests that the restoration of power to the Congress is not a sectarian political task. It is one for all who respect traditional political and constitutional processes.

STATEMENT OF CHARLES L. SCHULTZ, PROFESSOR OF ECONOMICS, UNIVERSITY OF MARYLAND, BEFORE THE SUBCOMMITTEE ON ECONOMY IN GOVERNMENT, JOINT ECONOMIC COMMITTEE, HEARINGS ON "THE MILITARY BUDGET AND NATIONAL ECONOMIC PRIORITIES"

Mr. Chairman, members of the Committee: The Committee's decision to hold hearings on the military budget and national economic priorities is not only welcome but timely. Over the next several years, the Executive and the Congress will be faced with a series of basic decisions on military programs and weapons systems, whose outcome will largely determine not only the nation's security and its military posture, but also the resources available to meet urgent domestic needs. It would be most unfortunate if those decisions were made piecemeal, without reference to their effect on non-military goals and priorities. Moreover, any one year's decisions on military programs—and, in fact, on many elements of the civilian budget—cast long, and usually wedge-shaped shadows into the future. Their cost in the initial budget year are often only a small fraction of the costs incurrent in succeeding years.

For these reasons there are two major prerequisites to inform discussion and decision about military budgets:

First, the benefits and costs of proposed military programs cannot be viewed in isolation. They must be related to and measured against those other national priorities, which, in the context of limited resources, their adoption must necessarily sacrifice.

Second, the analysis of priorities must be placed in a longer-term context than the annual budget, since annual decisions—particularly with respect to large military forces or weapons systems—usually involve the use of scarce national resources, and therefore affect other national priorities, well into the future.

I might also add, parenthetically, that a review of military budgets in the context of a long-run evaluation of national priorities can directly serve the interests of national security itself. In the past year there has sprung up a widespread skepticism about the need, effectiveness, and efficiency of many components of the defense budget. This is a healthy development. But it must be harnessed and focused. In particular it must not be allowed to become a "knee-jerk" reaction, such that any proposed new military program is automatically attacked as unneeded or ineffective. We still live in a dangerous world. Effective and efficient provisions for the national security should rightfully be given

a high priority. I believe that a proper balancing of military and civilian programs can best be achieved by a careful and *explicit* public discussion and evaluation of relative priorities in a long-term budgetary context. Neither the extreme which automatically stamps approval on anything carrying the national security label, nor its opposite which views any and all military spending as an unwarranted waste of national resources, has much to recommend it as a responsible attitude.

In this context I should like to discuss with the Committee three major aspects of the problem of national priorities:

A five-year summary projection of federal budgetary resources and the major claims on those resources.

A more detailed examination of the basic factors which are likely to determine the military component of those budget claims.

Finally, some tentative suggestions for improving the process by which defense budget decisions are made, designed particularly to bring into play an explicit consideration and balancing of national priorities, both military and civilian.

I. THE BUDGETARY FRAMEWORK

By definition, the concept of "priorities" involves the problem of choice. If, as a nation, we could have everything we wanted, if there were no constraints on achieving our goals, the problem of priorities would not arise. But once we recognize that we face limits or constraints, that we cannot simultaneously satisfy all the legitimate objectives which we might set for ourselves, then the necessity for *choice* arises.

There are various kinds of constraints. There is probably some limit to the public "energy" of a nation. Psychologically, the nation and its leaders cannot enthusiastically pursue a very large number of energy-consuming goals at the same time. The psychic cost is too high. Sometimes we face limits imposed by the scarcity of very specific resources. What we can do quickly, for example, to improve the availability of high quality medical care is limited in the short run by the scarcity of trained medical personnel. But the most pervasive limit to the achievement of our goals, even in a wealthy country like the United States, is the general availability of productive resources. If the economy is producing at full employment, additions to public spending require subtractions from private spending—and vice-versa.

From the point of view of public spending, the practical constraints we face are even tighter than this. I think it is a safe political prediction that during the next five years or so, and particularly once a settlement in Vietnam is reached, federal tax rates are unlikely to be raised. Reforms may, and should, occur. But the overall yield of the system is unlikely to be increased. If this judgment is correct, then the limits of budgetary resources available are given by the revenue yield of the existing tax system—a yield which will, of course, grow as the economy grows. And even those who believe that the needs of the public sector are so urgent as to warrant an increase in federal tax rates are likely to agree that an examination of long-term budgetary prospects should at least start with a projection of revenue yields under current tax laws.

Assuming for purposes of projection an initial constraint imposed by existing tax laws, it is then possible to determine roughly how large the budgetary resources available to the nation will be over the next five years, for expanding existing high-priority public programs, for creating new ones, for sharing revenues with the states or for reducing federal taxes. The magnitude of the budgetary resources available for these purposes—the "fiscal dividend"—will depend on *four basic factors:*

1. The growth in federal revenues yielded by a *growing economy;*

2. The budgetary savings which could be realized from a *ceasefire and troop withdrawal in Vietnam.* (These two factors, of course, *add* to fiscal dividend available for the purposes listed above. The next two *reduce* the fiscal dividend.)

3. The "built-in" and "automatic" increase in *civilian expenditures* which accompanies growing population and income. (This expenditure growth must be deducted before arriving at the net budgetary resources available for discretionary use.)

4. The probable increase in *non-Vietnam military expenditures* implicit in currently approved military programs and postures. (This increase must also be deducted in reaching the net fiscal dividend which can be devoted to domestic needs. Needless to say, of course, changes in military programs, policies, and force levels can affect this total.)

The net result of these four factors—the revenue yield from economic growth, the savings from a Vietnam ceasefire, the built-in growth of civilian expenditures, and the probable growth of the non-Vietnam military budget—measures the fiscal dividend available for meeting domestic needs.

Let me summarize the likely magnitude of each of these four budgetary elements five years from now. More precisely, I will attempt to project them from fiscal 1969 to fiscal 1974.

If we assume that economic growth continues at a healthy but not excessive pace, and that—optimistically perhaps—the annual rate of inflation is gradually scaled down from the current 4½ percent to a more tolerable 2 percent, *federal revenues should grow each year by $15 to $18 billion.* This is, of course, a cumulative growth, so that by the end of five years federal revenues should be about $85 billion higher than they are now. It is highly likely, however, that once the war in Vietnam is over, or substantially scaled down, the present 10 per cent surcharge will be allowed to expire. The yield of the surcharge five years from now would be some $15 billion. This must therefore be subtracted from the $85 billion revenue increase, leaving a net $70 billion growth in federal revenue between now and fiscal 1974.

A second potential addition to budgetary resources is the expenditure saving which could be realized upon a *Vietnam ceasefire and troop withdrawal* and a return to the pre-Vietnam level of armed forces. The current budget estimates the cost of U.S. military operations in Vietnam at about $26 billion. As I have pointed out elsewhere, however, this figure overstates somewhat the *additional* costs we are incurring in Vietnam. Even if our naval task forces were not deployed in the Gulf of Tonkin, they would be steaming on practice missions somewhere else. Hence some of the costs of those forces would be incurred even in the absence of fighting in Vietnam. Similarly, our B–52 squadrons, if not engaged in bombing missions, would be operating on training exercises. And the same is true for other activities. As best I can judge, the truly incremental, or additional, costs of Vietnam—which would disappear if a ceasefire and a return to pre-Vietnam force levels occurred—amount to about $20 billion. These savings would not, of course, be available the day after a ceasefire occurred, but would gradually be realized as withdrawal and demobilization occurred.

Within perhaps 18 months to two years after a ceasefire, this $20 billion in budgetary savings would be available to add to the $70 billion net growth in budget revenues—a total gross addition of $90 billion to resources available for other public purposes.

From this $90 billion, we must, however, make several deductions before arriving at a net fiscal dividend freely available for domestic use.

We can expect a fairly significant built-in growth in federal civilian expenditures over the next five years. As the GI's come home from Vietnam, educational expenditures under the GI bill of rights will naturally increase. Even if interest rates rise no further, the roll-over of older debt into new issues will increase interest payments. Expenditures under the Medicaid program will rise, although at a slower pace than in the last few years. A larger population and income almost automatically lead to higher public expenditures in many areas: more people visit national parks and the Park Service's outlays grow; more tax returns are filed and the Internal Revenue Service must expand to handle them; as airplane travel increases, federal expenditures on air traffic safety and control rise; and so on down the list. Social security benefits will almost certainly rise sharply if past practice is followed under which the Congress tends to raise benefit levels more or less in line with payroll revenues. For all of these reasons, I believe one must allow for a "built-in" growth of federal expenditures by some $35 billion over the next five years. Subtracting this $35 billion from the $90 billion additional resources calculated above leaves $55 billion for the fiscal dividend.

But yet another deduction must be made. Barring major changes in defense policies, military spending for *non-Vietnam* purposes will surely rise significantly over the next five years. There are *five* major factors working towards an increase in military expenditures.

1. *Military and civilian pay increases.* There are now 3½ million men in the Armed Forces. In addition some 1.3 million civilian employees, about 45 percent of the federal total, work for the Department of Defense. As wages and salaries in the private sector of the economy rise, the pay scales of these military and civilian employees of the Defense Department must also be raised. The military and civilian pay raise scheduled for this coming July 1 will add some $2.3 billion to the Defense budget. If we assume, conservatively, that in succeeding years private wage and salary increases average 4 to 4½ percent per year, the payroll costs of the Pentagon will rise by about $1½ billion each year.

2. *The future expenditure consequences of already approved weapons systems.* A large number of new and complex weapons systems have been approved as part of our defense posture; the bulk of the spending on which has not yet occurred.[1] Some major examples are:

The Minutemen III missile, with MIRV's; cost, $4½ billion

The Poseidon missile, with MIRV's; cost, including conversion of 31 Polaris subs, $5½–$6½ billion.

The Safeguard ABM system, with a currently estimated cost, including nuclear warheads, of some $8 billion, plus hundreds of millions per year in operating costs.

The F–14 Navy fighter plane in three versions; the 1970 posture statement indicates that the entire F–4 force of the Navy and Marine Corps may be replaced by the F–14. If so, the total investment and operations cost of this system over a 10-year period should be well in excess of $20 billion.

A new F–15 air-to-air combat fighter for the Air Force.

Three nuclear attack carriers at a currently estimated cost of $525–$540 million each

62 new naval escort vessels, at an investment cost of nearly $5 billion.

A number of new amphibious assault ships.

---

[1] For most of the systems listed below, the decision to procure the item has already been made. In a few cases, such as the Navy's VSX antisubmarine plane, procurement has not yet been approved, but development is well along, and official statements of Defense Department officials have already indicated that the system is most likely to be approved.

A new Navy anti-submarine plane, the VSX, at a cost of $2–$2½ billion.

A new continental air-defense system, including a complex "look-down" radar and an extensive modification program for the current F–106 interceptor.

These do not exhaust the list of new weapon systems already a part of the approved defense posture. But they do give some idea of the magnitude of the expenditures involved.

3. *Cost escalation.* The weapons systems costs given for each of the systems listed above represent current estimates. But, as this Committee is well aware, past experience indicates that final costs of complex military hardware systems almost always exceed original estimates.

A study of missile systems in the 1950's and early 1960's revealed that the average unit cost of missiles was 3.2 times the original estimates.

The nuclear carrier *Nimitz*, now under construction, was estimated in 1967 to cost $440 million. One year later the estimate was raised to $536 million. No new estimates have been released, but given the rapidly rising cost of shipbuilding, it is almost certain that this latter figure will be exceeded.

In January 1968 the Defense Department proposed a plan for building 68 naval escort vessels at a total cost of $3 billion. In January 1969 the estimated costs of that program has risen to $5 billion.

The cost of modernizing the carrier Midway was originally given as $88 million, and the work was scheduled to be completed in 24 months. In January 1969 the cost estimate was doubled, to $178 million, and the time estimate also doubled, to 48 months.

The Air Force's manned orbiting laboratory (the MOL) was originally announced by President Johnson at a cost of $1.5 billion. The latest estimate was $3 billion.

In many cases the rising unit costs of these systems forces reevaluation of the program and a reduction in the number purcased. The F–111 program is a classic case in point. Consequently the *aggregate* costs of the procurement budget do not rise by the same percentage as the inflation in *unit* costs. Nevertheless, cost escalation does tend to drive the total military budget upward.

4. *Weapons systems under development, advocated by the Joint Chiefs of Staff, but not yet approved for deployment.* In addition to weapons systems already approved, there are a large number of systems, currently under development, which are being advocated for deployment by the Joint Chiefs. Among these items are:

The AMSA—advanced manned strategic aircraft—a supersonic intercontinental bomber designed as a follow-on to the B–52. President Johnson's proposed 1970 budget requested $77 million for advanced development. Secretary Laird proposed an additional $23 million to shorten design time and start full-scale engineering development. This $10 million will be supplemented by $35 million of carryover funds. The investment cost of the AMSA, if procurement decision is made, are difficult to estimate, but it is hard to see how they could be less than $10 billion.

The new main battle tank is now in production engineering. Depending on the number purchased, a procurement decision will involve investment costs of $1 to $1½ billion.

A new advanced strategic missile in superhard silos is being advocated by the Air Force.

A new attack aircraft, the AX, is under development for the Air Force.

The Navy is proposing a major shipbuilding and reconversion program to replace or modernize large numbers of its older vessels.

A new continental air defense interceptor, the F–12, is being advocated by the Air Force.

A new underwater strategic missile system (the ULMS) is under development for the Navy.

In the normal course of events, not all of these new systems will be adopted in the next five years. But, in the normal course of events, some will be.

5. *Mutual escalation of the strategic arms race.* The United States is currently planning to equip its Minuteman III and Poseidon missiles with multiple independently targeted reentry vehicles (MIRV's). MIRV testing has been underway for some time. The original purpose of MIRV's was as a hedge against the development of a large-scale Soviet ABM system, in order to preserve our second-strike retaliatory capability in the face of such Soviet development. Recently, however, Pentagon officials have indicated that we are designing into our MIRV's the accuracy needed to destroy enemy missile sites—an accuracy much greater than needed to preserve the city-destroying capability of a retaliatory force. Secretary of Defense Laird, in recent testimony before the Armed Services Committee, for example, asked for additional funds to "improve significantly the accuracy of the Poseidon missile, thus enhancing its effectiveness against hard targets."

Putting MIRV's with hard-target killing capabilities on Poseidon alone will equip the U.S. strategic forces with 4000–5000 missile-destroying warheads. Viewed from Soviet eyes the United States appears to be acquiring the capability of knocking out Soviet land-based missile force in a first strike. It might be argued that the difficulties of attaining a hard-target killing capability on our MIRV's are so great that the objective will not be realized for many years, if ever. But without attempting to evaluate this observation, let me point out that what counts in the arms race is the Soviet reactions to our announcement. And, like our own conservative planners, the Soviets must assume that we will attain our objectives.

The United States has announced that in answer to the 200-Soviet SS–9's—which may be expanded and MIRV'd into 800 to 1000 hard-target warheads—it will build an ABM system. What must the Soviet reaction be when faced with the potential of 4000–5000 hard-target killers on Poseidon alone? As they respond—perhaps with an even larger submarine missile force than now planned, or by developing mobile land-based missiles—we may be forced into still another round of strategic arms building. This may not occur. But its likelihood should not be completely discounted.

I have seen several arguments as to why a new round in the strategic arms race will not be touched off by current U.S. policy. I think they are dubious at best. One argument notes that the U.S. development of MIRV's and ABM is being made against *a "greater-than-expected" threat*—i.e., a Soviet threat larger than current intelligence estimates project. Hence, runs the argument, should the Soviets respond to our new developments, this response has already been taken into account in the "greater-than-expected" threat against which we are currently building. Consequently, we would not have to respond ourselves with a still further strategic arms buildup. But this misses the very nature of "greater-than-expected" threat planning. Once the Soviets proceed to deploy a force which approaches the *current* "greater-than-expected" threat, then by definition a *new* "greater-than-expected" threat is generated, and additional strategic arms expenditures are undertaken to meet it. This is the heart of the dynamics of a strategic arms race.

Another argument is often used to discount the mutual escalation threat posed by MIRV's. Multiple warheads, it is argued, make an effective large area ABM practically impossible to attain. Hence, deployment of MIRV's destroys the rationale for a large-scale, city defense, ABM. So long as MIRV's do not have the accuracy to destroy enemy missiles on the ground, this argument might indeed have some validity. But once they acquire hard-target killing capability—or the Soviets think they have such capability—they are no longer simply a means of penetrating ABM's and preserving a second-strike retaliatory force; they provide, in the eyes of the enemy, a first-strike capability, against which he must respond.

Given these various factors tending to drive up the cost of the non-Vietnam components of the military budget, by how much are annual defense expenditures, outside of Vietnam, likely to rise over the next five years? Obviously, there is no pat answer to this question. Any projection must be highly tentative. But assuming the increase in civilian and military pay mentioned earlier, calculating the annual costs of the approved weapons systems listed above, and allowing for only modest cost escalation in individual systems, it seems likely that on these three grounds alone *non-Vietnam military expenditures by 1974 will be almost $20 billion higher than they are in fiscal 1969.* They will, in other words, almost fully absorb the savings realizable from a cessation of hostilities in Vietnam. And this calculation leaves *out* of account the possibility of more than modest cost escalation, the adoption of large new systems like the AMSA, and a further round of strategic arms escalation.

I might note that the 1970 defense budget—even after the reductions announced by Secretary Laird—already incorporates the first round of this increase. From fiscal 1969 to fiscal 1970, the *non-Vietnam* part of the defense budget will rise by $5½ to $6 billion, after allocating to it the Pentagon's share of the forthcoming military and civilian pay raise. In one year, almost 30 percent of this $20 billion rise will apparently take place.

Starting out with an additional $70 billion in federal revenues over the next five years, plus a $20 billion saving from a cease-fire in Vietnam, we earlier calculated a $90 billion gross increase in federal budgetary resources. From this we subtracted the $35 billion growth of "built-in" civilian expenditures and now we must further subtract a $20 billion rise in non-Vietnam military outlays, leaving a net fiscal dividend in fiscal 1974 of something in the order of $35 billion, available for discretionary use in meeting high priority public needs or additional tax cuts. That $35 billion, in turn, is itself subject to further reduction should major new weapons systems be approved, or should another round in the strategic arms race take place.

Let me make it clear, of course, that there is nothing inevitable about this projection of military expenditures. Some of the weapons systems I listed are in early stages of procurement. Other areas in the military budget can be analyzed, reviewed, and if warranted, reduced as a budgetary offset to the new systems. Hopefully, disarmament negotiations if held quickly, may prevent mutual strategic escalation. My projection assumes that no changes in basic policies, postures, and force levels occur. It is obviously the whole purpose of these hearings to examine that assumption, in the context of other national priorities.

II. THE BASIC FACTORS BEHIND RISING MILITARY BUDGETS

While the budget projection summarized above discusses some of the specific weapons systems which are likely to cause the defense budget to expand sharply in the next

five years, it does not address itself to the underlying forces which threaten to produce this outcome. In the first half of the 1960's the military budget ran at about $50 billion per year. With those funds not only were U.S. strategic and conventional forces maintained, they were sharply improved in both quantity and quality. Both land- and sea-based missile forces were rapidly increased. Similarly dramatic increases in the general purpose forces were undertaken. Fourteen Army divisions, undermanned, trained primarily for tactical nuclear war, and short of combat consumables were expanded to over 16⅓ divisions, most of them fully manned. Equipment and logistic supply lines were sharply increased. The 16 tactical air wings were expanded to 21. Sea-lift and air-lift capability were radically improved.

In short, on $50 billion per year in the early 1960's, it appeared to be possible to buy not only the maintenance of a given military capability, but a sharp increase in that capability. By the early 1970's, taking into account general price inflation in the economy plus military and civilian pay increases, it would take $63–$65 billion to maintain the same purchasing power as $50 billion in 1965. Yet, as I have indicated earlier, even on conservative assumptions the non-Vietnam military budget is likely to approach $80 billion by fiscal 1974—$15 to $17 billion more than the amount needed to duplicate the general purchasing power the pre-Vietnam budget had—a budget which already was providing significant increases in military strength. Why this escalation? What forces are at work?

While there are a number of reasons for this increase, I would suggest that four are particularly important.

First, the impact of modern technology on the strategic nuclear forces. During most of the 1960's the primary goal of our strategic nuclear forces was the preservation of an "assured destruction capacity"—the ability to absorb an enemy's first strike and retaliate devastatingly on his homeland. In turn this capability provided nuclear deterrence against a potential aggressor. In general this could be described as a stable situation, in part because of the technology involved. To mount a first strike, an aggressor would have to be assured that he could knock out all—or substantially all—of his opponent's missiles. Since missiles did not have 100 percent reliability and accuracy for this task, more than one attacking missile would have to be targeted on the enemy missile force. For every missile added by the "defender," the attacker would have to add more than one. Hence, it was easy to show that first-strike capability could not be attained, since the opposing side could counter and maintain his second-strike capability as a less-than-equal cost. And, of course, the existence of mobile submarine launched missiles made the stability of the system even greater.

But the development of MIRV's, and more critically the development of guidance systems which are designed to make them accurate enough to "kill" enemy missiles on the ground, changes this balance. Now a single attacking missile, with multiple warheads, can theoretically take out several enemy missiles. The advantage to the first attacker rises sharply. Strategic planners on both sides, projecting these developments into the future, react sharply in terms of the danger they perceive their own forces to be facing. Add to this the development of ABM, which—however initially deployed—raises fears in the minds of enemy planners that it can be extended to protect cities against his submarine launched missiles, and escalation of the strategic arms race becomes increasingly likely.

The impact of changing technology on strategic arms budgets, therefore, is one of the driving forces which changes the prospects of post-Vietnam military expenditures from what they might have seemed several years ago.

The second major factor in driving arms budgets up is the propensity of military planners to prepare against almost every conceivable contingency or risk. And this applies both to force level planning and to the design of individual weapons systems. Forces are built to cover possible, but very remote, contingencies. Individual weapons systems are crowded with electronic equipment and built with capabilities for dealing with a very wide range of possible situations, including some highly unlikely ones.

If military technology were standing still, this propensity to cover remote contingencies might lead to a large military budget, but not to a rapidly expanding one. As technology continually advances, however, two developments occur: (1) As we learn about new technology, we project it forward into the Soviet arsenal, thereby creating new potential contingencies to be covered by our own forces; (2) The new technology raises the possibility of designing weapons systems to guard against contingencies which it had not been possible to protect against previously.

Continually advancing technology and the risk aversion of military planners, therefore, combine to produce ever more complex and expensive weapons systems and ever more contingencies to guard against.

Let me give some examples.

According to Dr. John S. Foster Jr., Deputy Director of Defense Research and Engineering in testimony before the Senate Armed Service Committee last year, the Poseidon missile system was originally designed to penetrate the Soviet TALLINN system—a system originally thought to be a widespread ABM defense. When this system turned out to be an anti-aircraft system, the deployment decision on the Poseidon was not revised. Rather it was continued as a hedge against a number of other possible Soviet developments, including in Dr. Foster's words the possibility that "the Minuteman force could be threatened by either rapid deployment of the current Soviet SS–9 or by MIRV'ing their existing missiles and improving accuracy."

Once the Soviets began to deploy the SS–9 in apparently larger number than earlier estimated, however, this gave rise to the decision to deploy a "Safeguard" ABM defense of Minuteman sites.

In short the sequence went like this: (1) The Poseidon deployment decision was made against a threat which never materialized; (2) despite the disappearance of the threat against which it was designed, the Poseidon was continued, presumably as a hedge against other potential threats, including faster-than expected Soviet deployment of the SS–9; (3) but now a decision has been made to hedge against the SS–9 by building a "hard-point" ABM—so we are presumably building the Poseidon as hedge against a number of possible Soviet threats, including the SS–9, and then building a hedge on top of that; (4) finally, new technology has made it possible to design a hard target killing accuracy into the Poseidon—an accuracy not needed to preserve our second strike capability against either the SS–9 or a Soviet ABM. The technology is available—why not use it! Yet the existence of that capability may well force a major Soviet response.

Another example of hedging against remote threats is the currently planned program of improvements in our continental air defense system. The existing SAGE system cost $18 billion to install but is apparently not very effective against low-altitude bomber attack. Although the Soviets have no sizable intercontinental bomber threat, the decision has been made to go ahead with major investments in a new air defense system. The major reasons given for this decision are these: to deter the Soviets from deciding to reverse their long-standing policy and develop a new bomber; to guard against one-way Kamikaze-type attacks by Soviet medium-range bombers; and to protect those of our missiles which would be withheld in a retaliatory strike. There is admittedly no direct threat to be covered. But a number of more remote threats are covered. And since we cannot defend our cities against Soviet missiles, it gives small comfort to have them protected against as yet non-existing bombers or Kamikaze attacks.

Another case in point is the new F–14 Navy aircraft. Both the F–111B and its successor, the initial version of the F–14, were designed to stand off from the carrier fleet and, with the complex Phoenix air-to-air missile, defend the fleet from a Soviet supersonic bomber plus missile threat, in the context of a major Soviet attack against our carrier forces. But as the Senate Defense Preparedness Subcommittee noted last year, this threat is "either limited or does not exist." Or as Chairman Mahon of the House Appropriations Committee noted, "The bomber threat against the fleet, as you know, has been predicted by Navy officials for some time. It has not, of course, developed to date."

The problem of what contingencies and risks are to be guarded against goes to the very heart of priority analysis. Primarily what we buy in the military budget is an attempt to protect the nation and its vital interests abroad from the danger and risks posed by hostile forces. We seek either to deter the hostile force from ever undertaking the particular action or if worst comes to worst, to ward off the action when it does occur. Similarly, in designing particular weapons systems, the degree of complexity and the performance requirements built into the systems depends in part on an evaluation of the various kinds of contingencies which the weapon is expected to face. Now there are almost an unlimited number of "threats" which can be conceived. The likelihood of their occurrence, however, ranges from a significant possibility to a very remote contingency. Moreover, the size of the forces and complexity of the weapons systems needed to guard against a particular set of threats depends upon whether the threats materialize simultaneously or not. If they do not occur simultaneously then very often forces developed to meet one contingency can be deployed against another. But the probability of two or more remote contingencies occurring simultaneously is obviously even lower than either taken separately.

Clearly we cannot prepare against every conceivable contingency. Even with a defense budget twice the present $80 billion, we could not do that. The real question of priorities involves the balance to be struck between attempting to buy protection against the more remote contingencies and using those funds for domestic purposes. In any given case, this is not a judgment which can be assisted by drawing up dogmatic rules in advance. And, since it is a question of balancing priorities, it is not a question which can be answered solely on military grounds or with military expertise alone—although such expertise must form an essential component of the decision process.

For what it is worth, it is my own judgment that we generally have tended in the postwar period to tip the balance too strongly in favor of spending large sums in attempting to cover a wide range of remote contingencies. And, as I have pointed out, this tendency—combined with the relentless ability of modern technology to create new contingencies and new systems to combat them—threatens to produce sizable increases in the defense budget.

A third important factor which is responsible for driving up the size of defense budg-

ets is "modernization inflation." [2] The weapons system we now buy are vastly more costly than those we bought 10 or 20 years ago. The F–111A and the F–14A, for example, will cost 10 to 20 times what a tactical aircraft cost at the time of Korea. A small part of this increase is due to general inflation. But by far the largest part is due to the growing complexity and advanced performance of the weapons. In the case of tactical aircraft, speed, range, bombload, accuracy of fire, loiter time, ability to locate targets, and other characteristics are many times greater than models one or two decades older. The same kinds of performance comparison can be drawn between modern missile destroyers and their older counterparts, and between modern carriers and their predecessors. We pay sharply increased costs to obtain sharply increased performance. Yet seldom if ever is this advance in "quality" used to justify a reduction in the number of planes or carriers or destroyers or tanks. If bomb carrying capacity and lethal effectiveness is doubled or tripled, then presumably a smaller number of new planes can do the same job as a larger number of old planes. But the numbers generally stay the same or increase. As a consequence, modernization inflation primarily causes a net increase in military budgets rather than providing—at least partially—a reasoned basis for maintaining military effectiveness while reducing the level of forces.

In some cases, of course—for example, Soviet fighter aircraft—rising enemy capabilities may reduce the possibility of substituting quality for quantity. But the same kind of argument is hard to adduce for such weapons as carriers or attack bombers.

The fourth, and perhaps most important, reason for increasing military budgets is the fact that some of the most fundamental decisions which determine the size of these budgets are seldom subjected to outside review and only occasionally discussed and debated in the public arena. This problem is most acute in the case of the budget for the nation's general purpose forces. The fundamental assumptions and objectives of the strategic nuclear forces are more generally known and debated. But the assumptions, objectives and concepts underlying the general purpose forces—which even in peacetime take up 60 percent of the defense budget—are scarcely known and discussed by the Congress and the public. Congress does examine and debate the wisdom and effectiveness of particular weapons systems—the TFX, the C–5A, etc. But choices of weapons systems form only a part of the complex of decisions which determine the budget for our general purpose forces.

Those decisions can conveniently be classified into four types:

1. What are the nation's *commitments* around the world? While our strategic nuclear forces are primarily designed to deter a direct attack on the United States, our general purpose forces have their primary justification in terms of protecting U.S. interests in other parts of the world. At the present time, we have commitments of one kind or another, to help defend some 40-odd nations around the world—19 of them on the periphery of the Soviet-Eastern European bloc and Communist China. Almost all of these commitments were made quite some time ago, but they are still in force. Unless we wish to rely solely on "massive retaliation" as a means of fulfilling our commitments, they do pose a fundamental "raison d'etre" for general purpose forces of some size.

2. Granted the existence of these commitments, against what sort of *contingencies* or *threats* do we build our peacetime forces? A number of examples will help illustrate this aspect of decision making:

Pre-Vietnam (and, barring changes in policy, presumably *post-Vietnam*), our general purpose forces were built to fight *simultaneously* a NATO war, a Red Chinese attack in S.E. Asia, and to handle a minor problem in the Western Hemisphere, a' la' the Dominican Republic. Obviously the forces-in-being would not be sufficient, without further mobilization, to complete each of these tasks. But they were planned to handle simultaneously all of the three threats long enough to enable mobilization to take place if that should prove necessary.

The Navy is designed, among other tasks, to be capable of handling an all-out, non-nuclear, protracted war at sea with the Soviet Union.

The incremental costs of maintaining in-being a force to meet the Chinese attack contingency, probably amounts to about $5 billion per year. When in 1965 the nation decided to begin Federal aid to elementary and secondary education—which has subsequently been budgeted at less than $2 billion a year—a major national debate took place. To the best of my knowledge, there was no public comment or debate about the "Chinese contingency" decision. Yet the decision was not classified—it was publicly stated in the unclassified version of the Secretary of Defense's annual posture statement several years running. This is not to say that the decision was necessarily wrong. Rather, I want to stress that it has a very major impact on the defense budget, yet was not, so far as I know, debated or discussed by the Congress. This lack of debate cannot be laid at the door of the Pentagon, since the information was made available in the defense posture statement.

3. Granted the commitments and contingencies, what *force levels* are needed to meet those contingencies, and how are they to be based and deployed?

The Navy, for example, has 15 attack carrier task forces. The carrier forces are designed not merely to provide quick response, surge capability for air power, but to remain continually on station during a conflict. As a consequence, because of rotation, overhaul, crew-leave, and other considerations, one carrier on station generally requires two off-station as back-up. Thus for *five* carriers on station, we have *ten* back-up carriers. (The "on-station" to "back-up" ratio depends on the distance of the station from the carriers' base. The 2/1 is an average ratio.)

The pre-Vietnam Army comprised 16⅓ active divisions with eight ready reserve divisions. The 16⅓ division force is supported by a planned 23 tactical air wing (only 21 were in-being pre-Vietnam).

The Navy has eight anti-submarine carrier task forces.

Defense plans call for a fast amphibious assault capability, sufficient to land one division/air wing in the Pacific and ⅔ division/air wing in the Atlantic.

The force levels needed to meet our contingencies are, of course, significantly affected by the military decisions and capabilities of our allies. The U.S. situation in NATO, for example, is strongly affected by whether or not the divisions of our NATO allies are equipped with the combat consumables and rapid fire-power weapons enabling them to conduct a prolonged conventional war.

4. With what *weapons systems* should the forces be equipped? Such questions as nuclear versus conventional power for carrier and carrier escorts, the F–111B versus the F–14, the extent to which the F–14 replaces all the Navy's F-4's, must, of course, be decided.

Let me hasten to point out that there is no *inexorable logic* tying one set of decisions in this litany to another. Do not think that once a decision has been made on commitments that the appropriate contingencies we must prepare against are obvious and need no outside review; or that once we have stipulated the contingencies that the necessary force levels are automatically determined and can be left solely to the military for decision; or that once force levels are given, decisions about appropriate weapons systems can be dismissed as self-evident. There is a great deal of slippage and room for judgment and priority debate in the connection between any two steps in the process.

Some examples might help:

There is no magic relationship between the decision to build for a "2½ war" contingency (NATO war, Red Chinese attack, and Western Hemisphere trouble) and the fact that the Navy has 15 attack carrier task forces. In the Washington Naval Disarmament Treaty of 1921, the U.S. Navy was allotted 15 capital ships. All during the nineteen twenties and thirties, the Navy had 15 battleships. Since 1951 (with temporary exception of a few years during the Korean war) it has had 15 attack carriers, the "modern" capital ship.[3] Missions and "contingencies" have changed sharply over the last 45 years. But this particular force level has not.

If one assumed, for example, that the Navy's carrier force should provide "surge" support to achieve quick air cover and tactical bombardment during an engagement, and then turned the job over to the tactical Air Force, the two-to-one ratio of back-up carriers to on-station carriers would not have to be maintained and the total force level could be reduced, even with the same contingencies. The wisdom or lack of wisdom in such a change would depend both upon a host of technical factors and upon a priority decision—does the additional "continuation" capability as opposed to "surge" capability buy advantages worth the resources devoted to it, on the order of $300–$400 million per year in operating and replacement costs per carrier task force.

Similar questions arise in other areas. Does the 16⅓ division Army peacetime force need 23 tactical air wings for support, or could it operate with the Marines' one-to-one ratio between air wings and divisions? Granted the 15 carrier task forces, must all of their F–4's be replaced by F–14's, as the Navy is apparently planning.

In short there is a logical order of decisions—commitments to contingencies to force levels to weapons systems—but the links between them are by no means inflexible, and require continuing review and oversight.

As I mentioned earlier, I am impressed by the fact that the Congress tends to concentrate primarily upon debate about weapons systems to the exclusion of the other important elements of the general purpose component of the defense budget. Many of the elements involved in military budget decision making cannot, of course, be made subject to specific legislation—I find it hard to see how the Congress could, or should, legislate the particular contingencies against which the peacetime forces should be built. But the Congress is the nation's principal forum in which public debate can be focused on the basic priorities and choices facing the country. It can, if the proper information is available and the proper institutional framework created, critically but responsibly examine and debate *all* of the basic assumptions and concepts which underlie the military budget. And it can do so in the content of comparing priorities. The Congress can explicitly discuss whether the particular risks which a billion dollar force level or weapons systems proposal is designed to cover are serious enough in comparison with a billion dollars worth of re-

[2] This is the term used by Malcolm Hoag.

[3] This observation is reported by Desmond P. Wilson, *Evolution of the Attack Aircraft Carrier: A Case Study in Technology and Strategy*, Ph.D. Dissertation, M.I.T., February 1966.

sources devoted to domestic needs to warrant going ahead. By so doing, the Congress as a whole can create the kind of understanding and political climate in which its own Armed Services and Appropriations Committees, the President, his Budget Bureau, and his Secretary of Defense can effectively review and control the military budget.

This brings me to my next point. The size and rapid increase in the defense budget is often blamed on the military-industrial complex. Sometimes it is also blamed on the fact that the Budget Bureau uses different procedures in reviewing the military budget than it does in the case of other agencies.

The uniformed Armed Services and large defense contractors clearly exist. Of necessity, and in fact quite rightly, they have views about and interests in military budget decisions. Yet I do not believe that the "problem" of military budgets is primarily attributable to the so-called military-industrial "complex." If defense contractors were all as disinterested in enlarging sales as local transit magnates, if retired military officers all went into selling soap and TV sets instead of missiles, if the Washington offices of defense contractors all were moved to the West Coast, if all this happened and nothing else, then I do not believe the military budget would be sharply lower than it now is. Primarily we have large military budgets because the American people, in the cold war environment of the nineteen fifties and sixties, have pretty much been willing to buy anything carrying the label "Needed for National Security." The political climate has, until recently, been such that, on fundamental matters, it was exceedingly difficult to challenge military judgments, and still avoid the stigma of playing fast and loose with the national security.

This is not a reflection on military officers as such. As a group they are well above average in competence and dedication. But in the interests of a balanced view of national priorities we need to get ourselves into a position where political leaders can view the expert recommendations of the military with the same independent judgment, decent respect, and healthy skepticism that they view the budgetary recommendations of such other experts as the Commissioner of Education, Surgeon General, and the Federal Manpower Administration.

I think the same approach can be taken with respect to the procedures used by the Budget Bureau to review the Budget of the Defense Department. In all other cases, agency budget requests are submitted to the Bureau, which reviews the budgets and then makes its own recommendations to the President subject to appeal by the agency head to the President. In the case of the Defense budget, the staff of the Budget Bureau and the staff of the Secretary of Defense jointly review the budget requests of the individual armed services. The staff make recommendations to their respective superiors. The Secretary of Defense and the Budget Director then meet to iron out differences of view. The Secretary of Defense then submits his budget request to the President, and the Budget Director has the right of carrying to the President any remaining areas of disagreement he thinks warrant Presidential review.

Given the complexity of the Defense budget and a Secretary of Defense with a genuine interest in economy, efficiency, and effectiveness, this procedure has many advantages. It probably tends to provide the Budget Director with better information on the program issues than he gets from other Departments. I think the procedure might perhaps be strengthened if the practice were instituted of having the Budget Director and the Secretary of Defense *jointly* submit the budget recommendation to the President, noting any differences of view.

But essentially, this procedural matter is of relatively modest importance. The Budget Bureau can effectively dig into and review what the President wants it to review under this procedure or many others. It can raise questions of budgetary priorities—questioning, for example, the worth of building forces against a particular set of contingencies on grounds of higher priority domestic needs—when and only when the President feels that he can effectively question military judgments on those grounds.

In my view therefore, the issues of the military-industrial complex, and of budget review procedures are important. But they are far less important than the basic issue of public attitudes, public understanding, and the need to generate an informed discussion about the fundamentals of the military budget in the context of national priorities.

With this in mind, let me suggest a few tentative proposals for improving public understanding and putting the military budget in a priorities framework.

III. TENTATIVE PROPOSALS FOR IMPROVING MILITARY BUDGET DECISIONS

The proposals I have in mind are addressed primarily to the Congress. As I noted earlier, many of the basic assumptions and concepts which determine the size of the military budget do not lend themselves, in the first instance, to direct legislative actions. But the Congress has another historic function—focusing public understanding and debate on important national concerns as a means of creating the framework within which both the Congress and the President can take the necessary specific actions. It is to this second function that my proposals are addressed.

As you know, each year for the last eight years the Secretary of Defense has submitted to the Congress an annual *posture statement*. This statement contains a wealth of information and analysis, and lays out most of the basic assumptions and concepts on which the military budget request is based. But, as I pointed out earlier, one of the most fundamental determinants of the military budget, particularly the general purpose forces, is the set of overseas commitments in which we have undertaken to defend other nations. Yet the Secretary of State submits no annual posture statement covering his area of responsibility and concern. Because of this lack of a State Department posture statement, the Defense posture statement each year has devoted its lengthy opening sections to a review of the foreign policy situation.

Recommendation 1. The Secretary of State should submit to the Congress each year a posture statement. This statement should, at a minimum, outline the overseas commitments of the United States, review their contribution or lack of contribution to the nation's vital interests, indicate how these commitments are being affected and are likely to be affected by developments in the international situation, and relate these commitments and interests to the military posture of the United States.

The Defense posture statement itself could be much more useful to the Congress and the nation if two important sets of additional information were supplied.

Recommendation 2. The Defense posture statement should incorporate a five-year projection of the future expenditure consequences of current and proposed military force levels, weapons procurement, etc. This need not, and should not, be an attempt to forecast *future* decisions. But it should contain, in effect, the five-year budgetary consequences of past decisions and of those proposed in the current budget request. And not only should this sum be given in total, but it should be broken into meaningful components.

One of the major problems in priority analysis is the fact that the first year's expenditures on the procurement of new weapons systems is very small. Hence it is quite possible in any one year for the Congress to authorize and appropriate, in sum, a relatively small amount for several new systems which, two to five years in the future, use up a very large amount of budgetary resources.

All sorts of technical details need to be worked out if this proposal is to be useful. What is a "decision" about a weapons system? The Defense Department plans, for example, call for three nuclear carriers to be built. Procurement funds have been requested for only two so far. Should the cost of the third be included in the projection? But with a little goodwill on both sides, these questions could be ironed out. Let me also note, that I am aware that the Congress—relying on past experience with cost escalation—may want to increase the official projections of many weapons systems costs in order to get a more accurate idea of the overall total.

Recommendation 3. The Defense posture statement should include more cost data on relevant components of forces and weapons systems. What is the annual cost of the forces we maintain in peacetime against the contingency of a Chinese attack on South East Asia? What is the systems cost of constructing and operating a naval attack carrier task force? What is the cost of buying and maintaining one tactical air-wing? What is the annual cost of operating each of the Navy's eight anti-submarine warfare carriers? These are precisely the kinds of information needed to make possible a rational and responsible debate about the military budget in the context of national priorities.

Given this information, it seems to me that the Congress could organize itself to use it effectively. To that end, very tentatively I would suggest the following recommendations:

Recommendation 4. An appropriate institution should be created within the Congress to review and analyze the two posture statements in the context of broad national priorities, and an annual report on the two statements should be issued by the Congress.

I use the peculiar terms "an appropriate institution" because I am not familiar enough with either Congressional practices or Congressional politics to specify its title more closely. Whether this institution should be a new Joint Committee, an existing Joint Committee, a Select Committee, an *ad hoc* merging of several Committees, or some other form, I do not know. But I can specify what I believe should be the characteristics of such an institution:

It should review the basic factors on which the military budget is based, in the context of a long-term projection of budgetary resources and national priorities.

It should have, as one part of its membership, Senators and Congressmen chiefly concerned with domestic affairs, to assert the claims of domestic needs.

It should not concern itself primarily with the technical details of weapons systems, procurement practices and the like; while these are very important, they are the province of other Committees. It is the "national priorities" of the military budget which should be the essence of the new institution's charter.

Above all, it should have a top flight, highly qualified staff. The matters involved do require final solution by the judgment of political leaders, but in the complex areas with which the new institution would deal, its deliberations must be supported by outstanding, full-time, professional staff work.

The institution I have described would have no legislative responsibilities. But I do not believe that makes it any less important. After all, the Joint Economic Committee has no legislative mandate. Yet in the past twenty-two years, its activities have immeasurably increased the quality and sophistication of public debate and of Congressional actions on matters of economic affairs and fiscal policy. Should an institution such as

I have described be created, I would only hope that twenty-two years from now it could look back on an equally productive life.

STATEMENT BY SENATOR J. W. FULBRIGHT BEFORE THE SUBCOMMITTEE ON ECONOMY IN GOVERNMENT OF THE JOINT ECONOMIC COMMITTEE ON "THE MILITARY BUDGET AND NATIONAL ECONOMIC PRIORITIES," JUNE 4, 1969

Mr. Chairman, I appreciate being given an opportunity to testify at these hearings.

The subject you are considering goes to the heart of what government and our responsibilities as Senators, are all about. Our principal duty, as representatives of the people, is to use our best judgment in charting the nation's course for the future. The principal instrument for charting that course is the Federal budget, which represents the collective wisdom of the two of the three branches of government. The budget reflects the sense of values of the political leaders under whose direction the budget is prepared just as the final appropriation bills reflect the values of the dominant elements of the Congress.

The magnitude and the complexity of the military budget of our country, and the fragmented organizational structure of the Congress, make it difficult for any one Committee to review military spending from the perspective of national priorities, as your Committee is doing. I hope that these hearings will focus attention on the structural problem as well as the basic issue of national priorities. The military budget should be subjected to the same detailed scrutiny of Congress that other Federal programs receive. There should be no special privileges or exemptions from accounting in the expenditure of the people's taxes.

Your hearings focus on the question all Senators and Congressmen should have uppermost in their minds in approaching their responsibilities—what do we want our nation to be? Do we want it to be a Sparta, or an Athens? Do we want a world of diversity where security is founded on international cooperation, or do we want a Pax Americana? Do we as a people place a greater value on trying to mold foreign societies than we do on eliminating the inequities of our own society? I believe that, contrary to the traditions which have guided our nation since the days of the Founding Fathers, we are in grave danger of becoming a Sparta bent upon policing the world. The budget tells the story.

In the next fiscal year, it is proposed that about $81 billion be spent on a defense force of 3,500,000 men in uniform (plus reserves), 895 ships, 35,000 aircraft, and many thousands of long-range nuclear missiles. If past experience is a guide supplemental requests will push the total far higher. And with $8 billion budgeted for research and development on new and more sophisticated weapons next year, the budget demands for the military, if met, will easily more than consume any savings that may come from an end to the war in Vietnam.

With a military strategy based on fighting two and a half wars at once, and preparation geared to meet a "greater than expected threat" the sky is the limit to meet needs, as seen by military planners. In a recent statement of his defense philosophy, Secretary Laird said that his decisions would be based, not on enemy intentions, but on their capability. If the Soviets adopt the same philosophy, both countries will surely spend themselves into bankruptcy.

What does the budget for defense mean in terms of dividing up the pie?

It means that, outside of trust fund spending, about 55 cents out of every dollar the Federal Government spends goes to the military.

It means that 70 cents of every dollar from general revenue will go for paying for the cost of wars—past, present, and future.

It means that over $400 per capita will be spent on the military—an increase of 60 percent in each citizen's bill for the military over the last five years.

It is not until we look at what is left to take care of domestic needs that the full impact of military spending becomes apparent. Members of this Committee, with long experience in studying our nation's economic and social problems, are acutely aware of the many unmet needs of our society.

Education is an example of such a need. Schools from kindergarten to graduate school are overcrowded and underfinanced. Nine billion dollars is *authorized* for the various programs of the Office of Education in the next fiscal year. Only about one-third the amount authorized, $3.2 billion, is included in the budget.

Less is proposed for *elementary and secondary education* than it costs to assemble an attack carrier task force; we have fifteen such carriers.

More is budgeted for chemical and biological weapons than is to be spent for *vocational education.*

More will be spent on the ABM, taking the military estimate at face value, than will be invested in *higher* education.

Five times as much will be spent on a nuclear carrier as will be provided for libraries and other community services.

Six times as much is budgeted for the Air Force's Manned Orbiting Laboratory as is slated for education of the handicapped.

This all adds up to the fact that less than $39 per capita is being invested by the Federal Government in the education and training of our citizens, about one-tenth the amount going to the military. I do not believe this is an accurate reflection of the real desires of the American people, but it does reflect the present distribution of power among the bureaucracies of Washington.

In the midst of our great affluence, poverty is still a way of life for 23 million Americans.

Our cities are going downhill rapidly. There has been much talk, but little action, about how to make cities fit places in which to live again. The Kerner Commission recommendations, so widely hailed a year ago, are still no more than that. The Model Cities program is budgeted for an amount comparable to that allotted for foreign military aid. *Thirteen dollars* per capita is the total for all community development and housing programs, about 3 percent of the per capita bill for military activities. If this nation can afford to pour out $23 billion on missile systems in the last 16 years, and then abandon them, as revealed by Senator Symington earlier this year, surely it can afford to do far more to make the cities liveable.

This list could go on. But it would be but a repetition of the same theme. Our system of priorities is cockeyed.

By the end of the coming fiscal year we will have spent about one thousand, two hundred and fifty billion on the military since the end of World War II. It has been said that the United States and the Soviets between them possess the equivalent of 15 tons of high explosives for every human being on earth. Yet security eludes us abroad—and at home. The greatest threat to peace and domestic tranquility is not in Hanoi, Moscow, or Peking, but in our colleges and in ghettoes of cities throughout our land. The state of our real security is evidenced by the fact that it is no longer an extraordinary event for the National Guard or the Army to be called out to control our own people. The Army now boasts that 680,000 men in the Armed Forces have been trained for riot duty. Largely due to the Congress' failure to put first things first in the budget, this training will most likely be put to use in the long, hot summer ahead.

I believe that the turmoil on the campuses, the unrest in the cities, and the signs of a taxpayer revolt are not unrelated to the distortion in our [national values that seeks world peace and tranquility through the force of arms.] Professor George Wald of Harvard, in speaking of the causes of student unrest put it this way:

"Just after World War II, a series of new and abnormal procedures came into American life. We regarded them at the time as temporary aberrations. We thought we would get back to normal American life someday.

"But those procedures have stayed with us now for more than twenty years, and those students of mine have never known anything else. They think those things are normal. They think that we've always had a Pentagon, that we have always had a big Army, and that we have always had a draft. But those are all new things in American life, and I think that they are incompatible with what America meant before."

He summed the problem up by saying:

"I think I know what is bothering the students. I think that what we are up against is a generation that is by no means sure that it has a future."

Congress has it within its power to give assurance to our nation's youth that they do have a future; a future in which their government puts the happiness and well-being of its citizens above Pax Americana and foreign adventures. I believe there would be far less unrest and divisiveness in our society today if the Congress were as willing to vote $85 billion for rebuilding our cities, and creating a better life here, as it was to finance the disastrous war in Vietnam.

There are signs of a growing public awareness of the problem of runaway military spending and that this awareness is at last being reflected in the Congress. Perhaps this questioning of military programs is the natural result of four years of warfare that brought only a stalemate. If the war serves no purpose other than to make the Congress treat the military budget as any other call on the public treasury, it will not have been a total loss. Congress has been following a double standard when it comes to the military. It would never tolerate, in any other agency, performances such as those by the Defense officials and private contractors that have been revealed in the C–5A and other weapons programs. There should be only one standard, applicable to all government agencies and personnel, when it comes to spending the taxpayers' money. I hope that this year will mark the beginning of an independent review by Congress of the military budget and a re-establishing of national priorities which will give America's young people hope for the future.

Again, I congratulate your Committee for bringing attention to the issue of national priorities. I know that your hearings will make a significant contribution to the public dialogue on this most important subject.

Thank you for allowing me this opportunity to testify. I ask permission to have several tables and articles printed at an appropriate point in the record.

STATEMENT OF HON. J. WILLIAM FULBRIGHT, A U.S. SENATOR FROM THE STATE OF ARKANSAS

Senator FULBRIGHT. Mr. Chairman, I appreciate being given an opportunity to testify at these hearings.

I think the subject you are considering goes to the heart of what government, and our responsibilities as Senators, are all about. I feel that our principal duty, as representatives of the people, is to use our best judgment in charting the nation's course for the future. The principal instrument for charting that course is the Federal budget, which

represents the collective wisdom of two of the three branches of government. The budget reflects the sense of values of the political leaders under whose direction the budget is prepared, just as the final appropriation bills reflect the value of the dominant elements of the Congress.

The magnitude and the complexity of the military budget of our country, and the fragmented organizational structure of the Congress, make it difficult for any one committee to review military spending from the perspective of national priorities, as your committee is doing. I hope that these hearings will focus attention on the structural problem as well as the basic issue of national priorities. The military budget should be subjected to the same detailed scrutiny of Congress that other Federal programs receive. There should be no special privileges or exemptions from accounting in the expenditures of the peoples' taxes. Even though it be for military goods.

Mr. Chairman, I have prepared some further comments primarily consisting of data which has been published with regard to the budget, which I ask the committee to include as a part of my statement, and allow me to make some additional remarks.

Senator PROXMIRE. Without objection, the full statement will be printed.

Senator FULBRIGHT. There are a great many statistics in there, and perhaps the committee and the fine staff have these, but in order to make this a complete statement I brought it together for this purpose.

Mr. Chairman, the point of reference in considering a budget, it seems to me, is what kind of country we wish America to be. It has been well said that "the question if whether America seeks to be a great military empire or a humanistic example to the world."

That quote, it seems to me, is the very center of the discussion which is going on today and has been going on. It went along for four years of the last administration, and among the members of the Foreign Relations Committee in the previous administration. And I predict it will be the very center of discussion which will continue through this administration.

The previous administration's efforts to achieve both, that is, a great military empire and a humanistic example to the world, or as it has been said, to build Sparta on top of Athens, resulted in a confused society and the ultimate predominance of the military, over domestic and civilian needs.

That our society is confused and distracted is daily attested by the violence and turmoil among our youth in the colleges and the poor and neglected in the cities. And now there are even signs of a taxpayers' revolt.

A taxpayer from a large and wealthy northern state recently sent me a copy of the statement he filed along with his tax return. Following some very perceptive comments about the government's policies, he ended with these words:

"Now the government comes to me, the taxpayer, and demands more money in the form of a surtax on my income. But it has so wantonly and shamefully used the money I have already paid it. Shall I provide it more money to continue this outrageous war?"

"In good conscience, I cannot willingly do this. I am, therefore, withholding at this time part of the surtax due to show my deep concern about the tragic Vietnam policy of this government."

Next to the taxpayers, the students are perhaps the most important of our citizens. It is no secret that a great many students are disillusioned with our society. Many adults are puzzled by the attitude of the students, and all of us, deplore the violence of the extremists on the campuses who confuse and obstruct real and serious purposes of the majority of students.

Recently I received a letter, from a young man in one of our fine colleges, with some profound thoughts about why so many students are unhappy and dissatisfied. And I think an excerpt from the letter expresses it far better than I can. And I quote from the student's letter: ". . . these students were educated to value truth"—I may say by way of background he was discussing some of the students who were so dissatisfied that they had emigrated to other countries. And this was not one of them. This man is simply giving me his views: ". . . these students were educated to value truth and justice; and their educators succeeded. Nuremburg taught them that good men do not cooperate with injustice; and they understood and agreed. Now they see their own country is practicing injustice. Now their own country, try as it will, cannot force them to cooperate. They understand that the war is as much the result of folly as of evil, but that is no consolation. They love the nation which taught them the value of truth and justice, and now they feel compelled to turn against their own parent. It is a bitter choice.

"Johnson promised peace and we got war. Nixon promised peace and the generals say, 'at least two more years of war'. When will we have peace? When we are all dead?"

Mr. Chairman, I cite these two examples simply to emphasize, if I possibly can, the seriousness of the questions you are raising in these hearings. Students and taxpayers are puzzled and distressed by the policies of their government.

Discussions of budgetary matters, the enormous sums, so large as to be beyond the comprehension of mortal man, tend to become abstractions and seem to have no relevance to our personal lives. This is one of the reasons why the military budget in particular has never been subjected to the same scrutiny applicable to the civilian activities of our government.

But the way we allocate our resources is the fundamental barometer of our values as a civilized society, over the long run. Our values and our budget have been grossly distorted in recent years by several different influences—some of them inadvertent and others by design.

Personally, I am convinced the great majority of the American people would like for their country to be a humane example to the world, and by the force of its example lead others, as well as our own people, to a better life.

Mr. Chairman, the plans of our military leaders, as revealed in their posture statements and actual operations make it clear that the policy of our government is not—and I repeat, not—to move this country in the direction of becoming an example of an effective society of superior excellence deserving the approval and emulation of others. On the contrary, the objective of the policy planners as revealed by their programs is precisely what so many of our leaders deny—the creation of the greatest military power and the maintenance of a Pax Americana. In short that means the imposition of peace by force of arms, supplied, manned and paid for primarily by the taxpayers of the United States.

It is a well known psychological phenomenon that men and governments often deny categorically the impulses or unconscious purposes to which they are subject. The striking differences between subjective perception and objective reality is one of the most interesting of psychological phenomena. Big and powerful nations are especially susceptible to this kind of aberration.

It is a subject which I hope my committee will look into further in the near future.

When one contemplates the enormous, fantastic outlay of funds to build and maintain the nuclear aircraft carrier task forces—and as you know, we now have 15 of them and the Russians have none—and wonders why, there is one obvious explanation—we are organizing the peace of the world based upon our own military force—we are, in effect, policing and preparing to police the world.

For further confirmation of this view, one may recall the request in last year's budget for fast logistic supply ships to be stationed around the world ready for intervention in nearly any area of the world on a moment's notice.

You will recall, it was deferred, but it reappeared this year. But the notorious C5A airplane is likewise designed to transport troops quickly to any place on the globe. That is the main purpose, so that we can intervene anywhere in support of the fast logistic ships.

Now, Mr. Chairman, I return once more to my original thought, that the point of reference for a discussion of the budget is what kind of country do we want America to be. Until we settle this in our own minds, how can we make wise choices among the many different programs presented to us? In order not to be misunderstood, I wish to add that to be a humanistic example to the world does not require unilateral disarmament, it does not in the foreseeable future mean disarmament, but it does mean a halt to the absurd, wildly extravagant arms race presently being pursued by our government.

And from which presently there is no indication we will even negotiate or talk with other super powers.

To halt this race does not require that we alter the present balance of terror provided by the ICBMs, the bombers and the submarines. It merely means not to proceed with the enormously costly new programs now being considered and proposed by the planners. At the very least, we should not proceed with the MIRV and ABM until we have, in good faith, opened negotiations with the Russians on arms control in accordance with Article 6 of the Non-Proliferation Treaty.

In addition to these measures, we should end the enormous arms sales programs and begin to dismantle many of the surplus and obsolete military installations scattered around the world which are extremely costly and serve no useful purpose.

I think you have already had testimony there. There are estimated to be over 400 of what they call bases, and some 2,000 installations. These distinctions, I may say, are very difficult to be precise about.

Mr. Chairman, I have several tables giving the figures comparing how very little relatively we spend as a community upon such activities as education in all its phases, health, the relief of hunger and abject poverty, the prevention of pollution of our environment. I will not take the time of the committee to read the figures. I will sum up this aspect of the case by simply pointing out that since World War II we have spent roughly ten times as much on warfare and its attendant requirements as we have on the welfare of our people.

The misguided urgencies and unwise priorities revealed in this budget, threaten the essential fabric of our self-governing society.

The essence of a democratic society, in my view, is the voluntary allegiance and devotion of its citizens to the basic values and purposes of the community. If the allegiance is not voluntary, it may be a nation but it will not be a democratic society.

It is in this respect that I am apprehensive about the future of our country unless we change the present objectives and the policies upon which the budget apparently is based.

I am apprehensive about the future of our country because not only are the students and the taxpayers among us disillusioned by our performance, but many of the sensitive and intelligent parents also are questioning the values and purposes of our government.

In conclusion I wish to read a few excerpts from a letter from a concerned and

thoughtful and passionate father, which illustrates this point.

I received it only a few days ago. The letter is dated May 26, 1969. Part of it is as follows—it is a long letter, I won't read it all, but it is available if the Chairman would like to read it all:

"DEAR SENATOR FULBRIGHT: My son David, age 19, died in Vietnam the 20th of May 1969 while serving in the Marine Corps. The funeral will be in Davenport, Iowa, when his body returns home, and burial will be in Rock Island National Cemetery in Illinois.

"I send this to you not advertising my personal love for my son and grief at his loss. Although these things are personal and are not ordinarily expressed, we are not in ordinary times. I send you this, rather, as the only personal contribution I can make, my grief and my anger, in hope that soon no more Davids need occur.

"I send it to a member of the one organization who can control whether this nation goes to war."

I may say I do not know this gentleman, he sent it to me incidentally simply as Chairman of the Committee.

"I sent it as a physician who has spent his adult life, and five years of it in the service, in the world of salvaging lives, and to whom, therefore, killing is a special anathema.

"As a man of integrity, I trust you will use this in the national rather than a narrow political interest. You may extract whatever part, read whatever part you choose, and again I trust you not to subvert its meaning. I am a lifelong Republican and I have no embarrassing connections.

"David will never have sons of his own. He has died before he had a chance to form a family and before he could vote.

"David, and all the Davids, leave a legacy, just the same. But, it is a silent legacy unless we take the trouble to listen to it.

"Are we going to take cynical refuge in the time honored escape clause that war is inevitable, and therefore acceptable, and because it is acceptable, by definition, then, bound to be sane and normal? If this is so, then what lies in my son's coffin is an obscenity, a ghastly joke on dedicated men and their families.

"I submit to you that aggressive warfare, not in direct defense of our nation is not inevitable, not acceptable, and neither sane nor normal behavior. I submit that the good men who have given the ultimate a human being can give will not rest until we stop all such wars we are involved in. And more, that we take the technology we have now and the brains and heart of the good men that are left and devote these to the careful scrutiny of what war is, where it comes from, and how we can substitute other modes of action for it. We already know where war leads. History is largely a chronicle of systematic inhumanity by one man to another. The devastating effect of this on the fabric of nations is commonplace knowledge. All lose. None win.

"If this nation does not act responsibly in this area, it does not deserve the life of my son nor any other man. Nor will the nation itself have long life. It is doomed if it does not devote total first effort to ceasing this horror.

"I believe that the stored combined rage and grief of the parents of all the Davids, and the clear sense of betrayal and anger of the young led away from home like cattle are right now enough to tear this nation asunder if they find concerted expression."

Signed "DCD, M.D."

That paragraph describes more eloquently than anything I can say the anguish of the student, the parent, the taxpayers, yes of all Americans who genuinely love the traditional America of Jefferson and Lincoln, America which has sought truth and justice and the respect of mankind.

And it is to resurrect, to revive, to give renewed life to that America that the members of the Senate today are devoting their efforts. The examination of our priorities by this committee is in my opinion a significant contribution to those efforts.

Thank you, Mr. Chairman.

Senator PROXMIRE. Thank you Senator Fulbright, for a very moving and eloquent statement, and for helping put this whole problem into perspective.

Senator Fulbright, there are those in the country, including some in very high office, who charge that criticism of military spending or reconsideration of the absolute priority given to the military budget somehow constitutes rejection of the military, constitutes an unpatriotic act which can only weaken this country and its ability to meet its obligations.

THE JUDICIAL REFORM ACT—HISTORY AND CONSTITUTIONALITY

Mr. TYDINGS. Mr. President, on October 15, 1965, shortly after I became chairman of the Subcommittee on Improvements in Judicial Machinery, I stated on the floor of the Senate that, although on the whole the general caliber of the Federal judiciary has been extremely high, "the problem of the unfit judge is a serious challenge to our judicial system." I announced, at that time, that the subcommittee was going to undertake an extensive study of the problems caused by disabled judges and by judges whose conduct fails to meet the standard of "good behavior" required by the Constitution.

On February 15, 1966, the subcommittee held its first exploratory hearing on the vital but sensitive problems of judicial fitness. The testimony at that hearing clearly documented not only that there have been sick and corrupt judges on the Federal bench, but also the great harm that such judges do and the inadequacy of the present machinery for dealing with them.

Subsequently, in 1966, the subcommittee held a series of hearings to inquire into the manner in which the States deal with the unfit judge. These hearings concentrated on the New York Court of the Judiciary and the California Commission on Judicial Qualifications, both of which have had success in dealing with these sensitive problems.

The next year was spent in discussion, research, and analysis, all of which culminated in the introduction of the Judicial Reform Act on February 28, 1968. This legislation deals with a wide range of judicial administration issues, including liberalized retirement, selection of chief judges, the composition of judicial councils and judicial survivorship benefits. The primary feature of the act, however, is the establishment of a permanent Commission on Judicial Disabilities and Tenure, composed of five judges assigned to Commission service by the Chief Justice. This Commission would be empowered to effect the retirement of disabled judges or recommend the removal of Federal judges who violate the constitutional standard of "good behavior." Closely related to the removal provisions of the act are provisions dealing with judicial conflicts of interest and provisions requiring each judge of the United States to disclose his financial interests. During the spring and summer of 1968, the subcommittee heard 6 days of testimony on the specific provisions of S. 3055.

The hearings, correspondence, and conferences arising out of the introduction of the Judicial Reform Act in 1968 served to illuminate the problems that the legislation was designed to meet and also to produce important suggestions for the improvement of the legislation. On the basis of those suggestions, a number of revisions were made in the act. On March 12, 1969, I, with a bipartisan group of ten distinguished Senators, reintroduced the Judicial Reform Act as S. 1506. The cosponsors are Senators EAGLETON, GOODELL, HATFIELD, KENNEDY, MAGNUSON, MONDALE, MUSKIE, SCOTT, STEVENS, and YARBOROUGH. I invite the other Members of the Senate to add their names as cosponsors.

The Judicial Reform Act has had a long history, but the events of the past few weeks have made its provisions seem particularly relevant. Today, the Federal judiciary is facing a crisis of confidence, a crisis that threatens to gravely impair its strength and its effectiveness.

To a large extent, the present crisis of confidence stems not only from the absence of effective machinery to investigate accusations of judicial unfitness but also from the judiciary's failure to keep its house in order. Aside from the totally inadequate impeachment process, no machinery now exists for a fair and expeditious evaluation of charges of judicial misconduct. Even when using powers of persuasion and the remedies available under section 372 of the Judicial Code, the judiciary has been slow to encourage the retirement of a disabled or senile judge. An exaggerated view of judicial independence and the customary inertia of the judiciary has deterred the judiciary from meaningful attempts to codify standards of judicial conduct or to require the disclosure of extra-judicial activity and compensation. The one instance of Judicial Conference action—a resolution forbidding judges to be directors. officers or employees of commercial corporations—came only after a series of prize winning press articles on corporate and bank directorships held by various judges, and after the introduction of legislation in the Congress to penalize such extrajudicial activity. Even that resolution can be violated with impunity for there are no effective means of enforcement.

As an independent branch of the Federal Government holding all Federal judicial power under the Constitution, the judiciary has inherent power to police itself. The Judicial Reform Act does no more than create machinery that will assist the judicial branch to exercise effectively its power. In my mind, it represents an idea whose time has come.

I request that the following two memorandums be printed in the RECORD at this point:

First. The History of the Judicial Reform Act.

Second. Constitutionality of a Statutory Alternative to Impeachment.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE HISTORY OF THE JUDICIAL REFORM ACT

OCTOBER 15, 1965

(The Subcommittee on Improvements in Judicial Machinery began its study of the problems of unfit Federal judges)

The Judicial Reform Act which I introduced in 1968 and again this year would require all Federal judges and justices to disclose their financial interests including the sources of their income. It would also create machinery within the judiciary to deal with judges who, through their actions, have failed to meet the standard of "good behavior" required by Article III of the Constitution, or who are unable to perform their judicial duties because of some disabling mental or physical infirmities.

The Act is an extension of the work done over the past three decades by Hatton Sumners, Estes Kefauver, John Biggs, Joseph Borkin, and many other men of conscience and distinction. It is the culmination of over three and one-half years of effort on my part and on the part of the Subcommittee on Improvements in Judiciary Machinery of which I am Chairman.

On *October 15, 1965*, shortly after I became Chairman of the Subcommittee, I stated on the floor of the Senate that although on the whole the general caliber of the Federal judiciary has been extremely high, ". . . the problem of the unfit judge is a serious challenge to our judicial system." I announced at that time that the Subcommittee was going to undertake an extensive study of he problem of the unfit judge with the hope that we would be able to provide helpful legislation. In an initial effort to stimulate discussion, reprints of my *October 15* speech were mailed to the entire Federal bench and to all United States Attorneys.

FEBRUARY 15, 1966

(An exploratory hearing was held on the problems of judicial fitness)

On *February 15, 1966*, the Subcommittee held its first exploratory hearings on the vital, but sensitive problems of judicial fitness. At that time the Subcommittee heard testimony from John Biggs, Jr., the distinguished senior judge from the Third Circuit; Bernard G. Segal, Esquire, now President-elect of the American Bar Association; and Joseph Borkin, Esquire, author of The Corrupt Judge.

The three witnesses graphically described instances of disability and misconduct on the Federal bench. Consider, for example, the startling saga of Judge Davis and Judge Buffington. At the age of 86, Judge Buffington was still on the bench. He was deaf, blind, and senile, and refused to hire a law clerk. Yet, he continued to turn out written opinions in case after case—Judge Davis was writing, selling, and concurring in the decisions that Judge Buffington was signing. Having no other effective remedy available, Judge Biggs and the other judges of the Third Circuit finally directed and insisted that Judge Davis and Judge Buffington should not sit together. Finally, after some years of effort, Judge Davis was indicted and tried, but not convicted.

Bernard G. Segal related the following story:

"One day, the Deputy Attorney General called me in my capacity as Chairman of the ABA Committee on Federal Judiciary and asked for an investigation and report on a prospective candidate for a U.S. district court. . . . we . . . urged that the President not consider the appointment because the lawyer had suffered a drastic heart attack and apparently . . . would not fully recover. Nevertheless, the appointment was made. Within weeks after he got on the bench, . . . the judge suffered a drastic stroke and . . . began to deteriorate.

"It got to a point where I tried to get the lawyers in his district to give statements to me so that we could urge the chief judge of the Circuit to do there what Judge Biggs had done in the Third Circuit in the case to which he referred, but we could not get a lawyer, even anonymously, and on a blank piece of paper, to give us what we needed. Then one day, I received a call from a lawyer at a considerable distance from that state, who said 'Bernie, look at our dilemma. The attention span of this judge is 1 hour per day. Here we are, a large number of counsel from various parts of the country, coming to try an anti trust case before him. Before a judge would sit five days and a sixth morning perhaps a few evenings a week, this case will take four to six months. None of us will live to see the end of the case before that judge.'

"We endeavored to get the chief judge to apply the kind of pressure that Judge Biggs had applied. But for a long time without success. Eventually the pressure of 372(b) was applied and the judge did retire but not until vast discredit had been cast upon the whole judicial system in that community. I shall not burden you with the instances, but his conduct became quite infamous, and entirely as a matter not of bad faith but of bad health."

The testimony at the *February 15, 1966*, hearing clearly documented not only that there have been sick and corrupt judges on the Federal bench, but also the great harm which such judges do and the inadequacy of the present machinery for dealing with them.

Mr. Segal summed it up as follows: "[H]owever high the quality of the vast majority of judges, a few judges, a few bad judges, a few corrupt judges, a few incompetent judges, a few judges physically and mentally unable to carry on their job, can undo the beneficial efforts of the others."

I asked Judge Biggs whether it would be fair to infer from his testimony that he felt that the present machinery for the removal of unfit judges is inadequate. He replied, "In my view there is not the slightest doubt of it." In the same vein, Mr. Borkin, after describing three of the most lurid cases of Federal judicial malfeasance concluded, "[T]he three cases, Manton, Davis, and Johnson, indicate one very serious defect in our judicial fabric; that is, there is no place to go to complain. There was not anywhere to go, not anything to do, not anyone to see, not any device other than the impeachment device that could have been put into operation."

The testimony at the hearing of *February 15, 1966*, convinced me that the subject of unfit judges is one of the most significant issues with which the Subcommittee could concern itself. It also convinced me of the need to bring about a spirited and rigorous dialogue on the problems of judicial fitness and on the possible solutions to the problems. I, therefore, instituted a policy of obtaining the widest possible dissemination of my thoughts on the subject and of the product of the Subcommittee's inquiries.

MARCH 24, 1966

(A letter was sent to all Federal judges requesting their suggestions and comments on the need for legislation to deal with the problem of judicial unfitness. With this letter, the subcommittee instituted the policy of encouraging a rigorous dialogue about the problems of judicial fitness and about possible solutions)

On March 24, 1966, I wrote a letter to all Federal judges setting forth my desire to increase the capacity of the judiciary to police itself and asking for their suggestions and comments on the need for legislation to deal with the problem of judicial unfitness.

Thus began the correspondence and accumulation of relevant material which now fills more than a complete file cabinet in the office of the Subcommittee. Speeches, reprints of hearings and copies of the bills which were eventually introduced flowed constantly to Federal judges, United States Attorneys, law schools, bar associations, members of the bar, court administrators, students, and interested citizens. The recipients responded in depth. I discussed the problems in periodicals, including, among others, the ABA Journal, the American Criminal Law Quarterly, the Journal of the Missouri Bar, and the Tennessee Bar Journal. I spoke to bar associations across the country. [Jacksonville Bar Association, Kansas City Bar Association, Arkansas State Bar Association, Nevada State Bar Association, Utah State Bar Association, and the Virginia State Bar Association.] I also spoke at the Judicial Conferences of the Fourth, Fifth, Sixth, Eighth and Ninth Circuits and at numerous other places. [National Conference of States Bar Presidents, The American College of Trial Lawyers, University of Pennsylvania Law Review Annual Banquet, New York University School of Law Annual Banquet, University of Washington Law School, Maryland Law School Alumni, and Villanova Law School.] In these and other speeches I discussed the problems caused by unfit judges and set forth possible solutions to these problems.

Of course, correspondence and discussions can only supplement the information to be gathered from hearings. Following our exploratory inquiries *February 15, 1966*, the Subcommittee held a series of hearings to study the manner in which the states deal with the pertinant problems.

MAY 9, 1966

(Hearings in New York City to study the New York State Court of the Judiciary)

This series of hearings was designed to concentrate on the two states, New York and California, which have set the pattern in this field. On *May 9, 1966*, the Subcommittee went to New York City and heard testimony on the ad hoc Court of The Judiciary established in New York in 1947. Testimony was received from New York State judges, attorneys, and court administrators, including among others, Bruce Bromley, Esquire, of the New York State Bar Association, and the Honorable Bernard Botein, presiding justice of the First Judicial Department.

JUNE 17 AND JUNE 20, 1966

(Hearings in San Francisco and Los Angeles to study the California Commission on Judicial Qualifications)

On *June 17, 1966*, in San Francisco and on *June 20, 1966*, in Los Angeles the Subcommittee heard members of the California bench and bar, as well as laymen, discuss the California Commission on Judicial Qualifications.

The California Commission is a continuing body, consisting of nine members, five of whom are judges appointed to Commission service by the Supreme Court of California, two of whom are members of the bar appointed by the Board of Governors of the State Bar, and two of whom are laymen appointed by the governor with the consent of the State Senate. The Commission employs an executive secretary and a secretarial employee. It is empowered to examine and investigate complaints against members of the state's judiciary. After an initial investigation, the Commission may, if the case warrants it, proceed to a formal hearing. Following the hearing the Commission either dismisses or recommends removal or retirement to the Supreme Court of California. The case is reviewed by the Supreme Court which enters the final order. The Commission was established in 1960 and has been an unqualified success. The testimony which the Subcommittee heard amply supported the following statement by the Honorable William B. Neeley, at that time Chairman of the Commission:

"Since its inception, the Commission and every member has been motivated by the philosophy that within the limits of its jurisdiction its function is to avert, as promptly and quietly as possible, derelictions by judges. . . . [T]he very existence

of the Commission has had a salutary effect on the judge who is inclined to be lax in keeping court hours; the judge who is intemperate with litigants, lawyers or witnesses; the judge who permits his personal activities to interfere with his judicial duties; the judge who delays unduly in disposing of court business. *Conversely, it serves to protect the judges from irresponsible charges.*

"The existence of an agency to which the public may address its criticisms of the judiciary and receive an answer constitutes a substantial contribution to the judicial process.

"In January 1964, Governor Brown of California, in reply to a letter from the Dean of the University of Colorado School of Law, inquiring about the Commission, gave this evaluation:

" 'The law has been in effect for slightly over three years now, and I am convinced that it is a tremendous success. It is beyond argument that the operations of the Commission have had a marked effect in raising the already high level of our California judiciary, and I feel that as the Commission continues to operate this effect will be multiplied.

" 'In my opinion, the major thrust of the Commission's effect has been not simply in the fact that a small number of judges have resigned after the Commission has investigated their activities and found them wanting in quality. Rather, I note with pleasure the salutary effect which the Commission has had on the vast majority of our hardworking judges.'

"These same favorable conclusions are true today, and would receive the approval of the bench and bar of California." [Emphasis supplied]

JULY 15, 1966

(Hearings in Washington, D.C., to study the removal and retirement provisions of Oklahoma, Michigan, and other States)

Subsequently, on *July 15, 1966,* the Subcommittee took testimony on the removal and retirement mechanisms in Oklahoma and in a number of other states.

The next year and a half were spent in discussion, research, and analysis. Close attention was given to the question of the constitutionality of removing or involuntarily retiring Federal judges in a manner other than impeachment.

FEBRUARY 28, 1968

(Introduction of the Judicial Reform Act, S. 3055)

APRIL 23 AND 24, MAY 1 AND 15, JUNE 6, AND JULY 26, 1968

(Hearings on S. 3055)

Finally, on *February 28, 1968,* I introduced S. 3055, the Judicial Reform Act. The Judicial Reform Act dealt with a wide range of judicial administration issues, including liberalized retirement, selection of chief judges, the composition of judicial councils and judicial survivorship benefits. The primary feature of the Act, however, was the establishment of a continuing Commission on Judicial Disabilities and Tenure composed of five Federal judges assigned to Commission service by the Chief Justice with the power to effect the retirement or recommend the removal of unfit Federal judges. Closely related to the Commission provisions of the Judicial Reform Act were provisions dealing with judicial conflicts of interest and provisions requiring each judge of United States to file an annual financial statement.

In accordance with the policy established two years earlier, the Judicial Reform Act was circulated to interested laymen, to lawyers, federal judges, law professors and court administrators. During the spring and summer of 1968 the Subcommittee held six says of hearings addressed to the specific provisions of S. 3055 and received testimony from, among others, the Honorable J. Edward Lumbard, Chief Judge of the Second Circuit, the Honorable Albert Branson Maris, senior judge of the Third Circuit, and the Honorable Richard A. Chambers, Chief Judge of the Ninth Circuit.

The testimony the Subcommittee received was extremely enlightening. In the following testimony Glenn Winters, Executive Director of the American Judicature Society, succinctly summarized the role that is anticipated for the Commission:

"In conclusion, I believe it is fair to say that the chief purpose and effect of S. 3055 will not be its negative operation in a once-in-a-blue-moon disrobing of a judge who is guilty of reprehensible conduct, and thus sparing a succession of future litigants from finding themselves at his mercy, important though that undoubtedly is. Its greatest value will lie in the constant assurance which it will offer to the profession and the public that there will never again be room on the Federal bench for that kind of person; that the judges as a group are assuming responsibility for their conduct and public image, both individually and as a group; and that they are willing to give an ear to anybody who thinks he knows of a judicial wrong that can be remedied."

Judge Maris, among others, persuasively disputed the complaint that the Commission would interfere with the independence of the judiciary:

Senator TYDINGS. Judge Maris, there are judges across the United States who feel that, once appointed to the Federal bench, they have a "lifetime" position, and that they should not be subject to removal by any group, even a group of their fellow judges as in the case at the commission we have proposed, because it might destroy the independence of the judiciary. They say that a commission might inhibit judges from carrying out their responsibilities in a free and independent way, and that a commission would upset the balance of power between and among the executive, judicial, and legislative branches. Do you have any comments on that?

X-45-14S, Record, June 5

Judge MARIS. All I can say is that I do not share that view to any degree whatever. I think judges, like everybody else, ought to maintain a standard of behavior, and if they do not maintain it, they ought to be removed.

Senator TYDINGS. But do you not think that, if you had a national commission of judges, the members might try to pressure or influence or dominate other judges, and thus weaken the independence of the Federal judiciary as a whole?

Judge MARIS. Well, it is very difficult for me to envisage any such situation as that existing or coming about, when you have a group of five judges appointed by the Chief Justice, rotating in turn, and with definite standards as to matters that they may consider as to what constitutes a lack of good behavior. I think the greater danger is that they would not act, rather than that they would act. The whole problem is to get action in these cases, human nature being what it is and having regard for elderly men, who may have had great powers at one time.

The case that you cite from the District of Maryland is a prime example. I am not afraid of action, I am afraid of inaction.

Senator TYDINGS. But is it not essential that the Federal judiciary be absolutely independent and that the judges be accountable to no one? If this commission were created, even if its members were all judges and even if they operated under the precise standards we have prescribed, is it not possible that some judge might be inhibited in performing his duties to some extent and that the independence and integrity of the Federal judiciary might be therefore upset?

Judge MARIS. Theoretically, it may be possible, but it is not a thing that I fear. I agree completely with you that the judiciary should be independent of the executive and legislative branches of the Government, that the whole basis of our Constitution and the only sure guarantee of our liberties and the rule of law is that the judiciary be so independent. And I would not want to do a thing that would in any way, in any actual way, impair that independence. But I do not believe it. I do not believe it is necessary to have the right to misbehave in order to be independent.

Mr. TYDINGS. Mr. President, Joseph Borkin stated the case for disclosure as follows:

Mr. BORKIN. You see, I think one of the problems that arises here, a man becomes a Federal judge after he has attained a certain eminence and success in his private life. He is not a young man any more, and he has acquired in some cases considerable assets.

Now, when he becomes a member of the judiciary, there is no requirement that he dispose of these assets, and I do not think there should be. But having those assets from time to time may very well raise problems in the cases that come before him or the cases that he may be in some way involved in. I think the solution is light, not prohibition on his freedom of activity, but light, the avoidance of darkness.

Senator TYDINGS. Light; disclosure. What about public or private disclosure?

Mr. BORKIN. As for me, I would like public disclosure. But I see some difficulties with cranks and pests. I know this from my personal experience. When my book "The Corrupt Judge" appeared, phone calls, visits by every kind of known disturbed personality suddenly became involved in my life.

Senator TYDINGS. We have the same problem.

Mr. BORKIN. I think if judges had to disclose their assets and income they might be subject to the same kind of foolishness, let us say.

I would be satisfied with a private disclosure. Actually, the most important thing about disclosure is the fact that a judge has to take pen to paper. He must write it down, and this would be on his mind every time he engages in any possible activity which might be a conflict of interest.

May I give one example?

Senator TYDINGS. Yes; certainly.

Mr. BORKIN. Every one of the judges I investigated, not only those involved in my book, had a very careful understanding of, and respect for, the Bureau of Internal Revenue's income tax requirements, and frequently a portion of the bribe was set aside, to be sure that income tax was paid on it. This was true of the judge and even truer of the corrupter.

The Honorable Richard Chambers, Chief Judge of the Ninth Circuit, was the most outspoken opponent of the Judicial Reform Act. His solution to the problem of the disabled judge who refuses to retire was set forth in the following testimony:

Senator TYDINGS. Let me ask you, yes or no; do you feel that once a man becomes a Federal judge, he should be accountable to no one for his conduct, except the Congress in an impeachment proceeding?

Judge CHAMBERS. My answer to that is really no because I think the judicial council can and ordinarily does the job.

Senator TYDINGS. How? How can a judicial council do the job? What have the councils done? Take the Ohio situation of some time ago. Complaints from Ohio Congressmen and Ohio Senators, bills introduced, newspaper stories—4 or 5 years of charges ranging from intemperance to corrupt dealings with criminals, to sheer nonfeasance. The judicial council had no way to remove him or to

chastise him or to admonish him. Nothing was done until finally, after several years, they succeeded in forcing him to retire. What a spectacle.

What can a judicial council do when, because of intemperance, alcohol, or mental attitude a judge does not meet the minimum standards of conduct the public feels Federal judges should meet? What do you do? What does the judicial council do?

Judge CHAMBERS. But to tell you the first way to have begun on that thing was to have gone out and got a second courtroom right there in the same building and there is nothing that gets a new judge like an empty courtroom yawning for a man's successor or who is eligible to retire.

Senator TYDINGS. You mean as chief judge you would have assigned him to a courtroom and then ordered the clerk to assign him no cases?

Judge CHAMBERS. Oh, no. I would have gotten very long—well, before the problem arose, soon after he was eligible to retire, would have established two courtrooms in the building so that when that man retired he would have no fear of where he would sit down.

Senator TYDINGS. And you think that by providing another courtroom in the building that then he would automatically retire and the problem would be taken care of?

Judge CHAMBERS. Well, you are getting me in terrible trouble across the country, Mr. Chairman, but it has been done more than once.

Senator TYDINGS. Well, I think that technique might have a lot to commend it in certain circumstances.

But suppose the judge refused to retire. I think you know the situation in the 10th Circuit.

Judge CHAMBERS. Well, if I may, let me talk about a situation in the Ninth Circuit, I am in a terrible position here, but I want to be forthright. We had a judge in Arizona District Court who wasn't showing the disposition that he should retire. I had not actually become chief judge, but I knew I was going to be. They were building a new courthouse, Federal courthouse there. We knew we were getting a second Phoenix judge right away. Under the covers, I mean, we knew, and so this district judge had put two courtrooms in the plans in there. We took a hold of the thing, we put in three courtrooms and four sets of chambers and he opposed this. After he got into the new building with two courtrooms there yawning for occupants, he retired, and the price, of course, that I paid was a newspaper editorial about the San Francisco judge that was drunk on Federal money. Our mistake was not putting eight courtrooms in a rapidly growing Phoenix instead of four.

MARCH 12, 1969

(Reintroduction of the Judicial Reform Act, S. 1506)

The hearings, correspondence, and conferences arising out of the introduction of the Judicial Reform Act in 1968 served not only to illuminate the problems that the legislation was designed to meet, but also to produce important suggestions for the improvement of the legislation. On the basis of those suggestions, a number of changes were made in the Act. The revised Act was circulated to every member of the Senate, and when reintroduced as S. 1506 on *March 12, 1969*, was cosponsored by a bipartisan group of ten distinguished Senators. The cosponsors are Senators Eagleton, Goodell, Hatfield, Kennedy, Magnuson, Mondale, Muskie, Scott, Stevens, and Yarborough.

The provisions of S. 1506 creating the Commission are basically the same as those in S. 3055, 90th Congress, second session. The disclosure provisions, however, have been significantly strengthened. During 1968 the Senate passed S. Res. 266 and the House passed H. Res. 1099. Judges can no longer complain that they were being "singled" out for special reporting requirements.*

The disclosure provisions of S. 1506 apply to justices as well as judges of the United States. They are patterned after S. Res. 266. They are, however, broader, and these broader provisions are justified because, unlike Senators and Congressmen, Federal judges are not responsible to any constituency. The disclosure provisions of S. 1506 leave the question of confidentiality in the hands of the Judicial Conference by authorizing, but not requiring, the Conference to regulate the filing of reports so as to ensure confidentiality.

In sum, the Judicial Reform Act has had a long history. It is the product of a great deal of work and thought on the part of many people. It represents an idea whose time has come. The Judicial Reform Act must pass. It must pass this year.

REPORTS OF FINANCIAL STATUS

"The Conference was informed that the Senate Judiciary Committee had requested the views of the Conference on S. 1613, 88th Congress. The bill would establish an office of reports in each judicial circuit and require judges to submit regularly to a registrar complete financial reports which would be open for inspection by any member of the judicial council of the circuit. It was the view of the Committee that regardless of the merits of the proposal, federal judges should not be singled out from other officials of the United States Government to make such reports. Upon recommendation of the Committee, the Conference voted to disapprove the bill."

CONSTITUTIONALITY OF A STATUTORY ALTERNATIVE TO IMPEACHMENT

There are nearly 500 Federal judges in the United States. It is inevitable that among their number there will be some whose conduct, or physical or mental disability precludes effective performance.[1] These cases are relatively rare, but when they do occur, not only is justice denied, but the esteem of the judiciary is undermined.[2] From time to time, Congress has been requested to establish machinery to deal with these instances of unfitness. Such legislative proposals frequently include machinery by which the judiciary itself may remove corrupt and lazy judges, as well as involuntarily retire those who are disabled.[3] This memorandum examines the constitutionality of these procedures.

Constitutional doubts are raised because impeachment is the only method the Constitution expressly provides for the removal of unfit judges.[4] Some conclude, therefore, that impeachment is the exclusive procedure our society may constitutionally employ.[5] The exclusivist argument is based in part on their interpretation of the language of the Constitution.[6] It also claims support from the Federalist papers[7] and from the well-established principle of the "independence of the judiciary."[8] Moreover, impeachment, in fact, has been the only formal mechanism for removing unfit judges. Hence, the argument is advanced that history implies some settled view that any other mechanism would be unconstitutional.[9]

I. THE LANGUAGE OF THE CONSTITUTION

The relevant provisions of the Constitution are:

1. Article III, section 1 provides that: "The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior. . . ."

2. Article II, section 4 provides for impeachment: "The President, Vice President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors."

3. Article I, section 3 defines the consequences of impeachment: "Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and enjoy any Office of honor, Trust or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law."

4. Article I also outlines congressional impeachment procedure. Section 2 provides that "The House of Representatives . . . shall have the sole Power of Impeachment." Section 3 provides that "The Senate shall have the sole Power to try all Impeachments."

It is important to note that no language in the Constitution explicitly provides that impeachment is to be an "exclusive" device. But according to the exclusivist argument, the language used implicitly commands that conclusion.

First, the exclusivists rely upon the principle *expressio unius, exclusio est alterius*, to wit, that the Constitution created "good behavior" as a condition of tenure and established the impeachment machinery for its enforcement.[10] Thus such machinery is exclusive. But Article II, section 4, provides that "The President, Vice President, and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors." There are a number of cases holding that impeachment is not the sole mode of removal of civil officers.[11] These cases indicate that "civil officers"

appointed by the President, with the advice and consent of the Senate are removable by the President. The exclusivists respond, however, that the grant of good behavior tenure to judges differentiates them from other civil officers.[12] That is to say, although other officers may be removed by means other than impeachment, the impeachment forum is the only one in which "good behavior" can be tried.[13] The "good behavior" argument, however, would appear to be directed more to the prerequisites for removal than to the means by which it can be effected. In other words while purely executive officers may be removed *at will*[14] a judge can be removed only upon a *breach of "good behavior."*[15] But that difference in no way requires the conclusion that when judges can be validly removed, the impeachment machinery is the only constitutional means for doing so.[16]

As a second argument based upon the language of the Constitution alone, exclusivists point to the wording of article I, section 2, and article I, section 3 which provide that: the House of Representatives "shall have the sole Power of Impeachment" and that the "Senate shall have the sole Power to try all Impeachments."[17] They contend that the word "sole" defines two sets of exclusive relationships. The first establishes a separation of powers within the Congress.[18] The second excludes from the removal process all other branches of the government.[19] That is to say the House's "sole" power of "impeachment" together with the Senate's "sole" power to try these cases, comprise an exclusive Congressional power to remove Federal judges.

But the Constitution does not say that the House of Representatives and Senate together shall have the sole power to remove.[20] The Constitution provides only that they shall have the sole power to impeach and convict[21] and there is good reason to conclude that removal is not synonymous with the consequences of impeachment and conviction.[22] Article II, section 4 indicates that ". . . all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery or other high Crimes and Misdemeanors." The Framers did not provide for removal "by", but "on" impeachment and conviction. Thus, removal is a result of impeachment and conviction, but it does not follow that it may be effected only through that process.[23] Indeed, Congress has not regarded the impeachment and removal process as coextensive. Civil officers of the United States have been impeached even after leaving office.[24]

The exclusivist argument based upon the language of the Constitution also faces another difficulty—sometimes described in terms of a "gap" between the kind of conduct for which impeachment will lie and the kind of conduct that would seem to be less than "good behavior."[25] The theory that such a gap exists and that therefore some removal machinery, other than the impeachment process, must have been contemplated can be stated as follows: The Framers, cognizant of the broad scope of impeachment in England, limited the grounds for legislative removal to relatively serious offenses.[26] Thus, article II, section 4 provides for removal "from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors."[27] The phrase "high Crimes and Misdemeanors" refers to offenses similar in magnitude to treason and bribery.[28] But the "good behavior" conditions of tenure, article III, section 1, may surely be breached by conduct of a lesser magnitude. No one would contend, for example, that a judge who was persistently lazy exhibits "good behavior."[29] Yet nothing in the language of the clause specifying grounds for impeachment suggests that a lazy judge may be impeached, and consequently removed from office.

The only available argument to the contrary is that the phrase, "high Crimes and Misdemeanors" is comprehensive in its scope.[30] Specifically, it is argued that the term "misdemeanors" includes non-legal misdemeanor such as laziness. It seems unlikely, however, that the Framers would specify "Treason" and "Bribery" and then add "other high Crimes and Misdemeanors" if they intended to cover virtually every form of misconduct.[31] In all fairness, however, there is some support for such an interpretation in Story's *Commentaries on the Constitution*.[32] He indicates that Parliamentary history includes impeachment for many kinds of conduct that could not be called crimes of magnitude. For example, Lord Chancellors and judges were impeached not only for acting grossly contrary to the duties of their office, but for misleading their sovereign by "unconstitutional" opinions. Moreover, others were impeached for giving bad counsel to the King and giving medicine to the King without the advice of physicians.[33]

It would seem likely, however, that since the Framers were primarily concerned with securing an independent judiciary,[34] they intended a narrower definition of the grounds for impeachment in order to curb legislative intrusion.[35] On that theory, "misdemeanors" refers only to serious misdemeanors and a "gap" exists between the impeachment clause and the "good behavior" clause.[36]

A fair appraisal of these arguments surely reveals that they do not lead inevitably to the conclusion that all forms of conduct less than "good behavior" are covered in the stated grounds for impeachment. It is at

[26] *See* Dwight, *Trial by Impeachment*, 15 AM. L. REV. 257, 263–69 (1867); Thomson *Genesis and Growth of the Federal Judiciary Impeachment Clause*, 40 LAW NOTES 24–45 (1936); *cf.* Pergler, *Trial of Good Behavior of Federal Judges*, 29 VA. L. REV. 876–77 (1943).

[27] Article III, section 3, defines "Treason," and the First Congress gave statutory content to "Bribery." Act of April 30, 1790, ch. 9, § 21, 1 *Stat.* 117. This statute provides "That if any person shall, directly or indirectly, give any sum or sums of money, or any other bribe, present or reward, or any promise, contract, obligation or security, for the payment or delivery of any money, present or reward, or any other thing to obtain or procure the opinion, judgment or decree of any judge or judges of the United States, in any suit, controversy, matter or cause depending [sic] before him or them, and shall be thereof convicted, such person or persons so giving, promising, contracting or securing to be given, paid or delivered, any sum or sums of money, present, reward or other bribe as aforesaid, and the judge or judges who shall in any wise [sic] accept or receive the same, on conviction thereof shall be fined and imprisoned at the discretion of the court; and shall forever be disqualified to hold any office of honour, trust or profit under the United States." Notably, the statute does not require an impeachment proceeding. Thus it is arguable that this statute reflects a non-exclusive view of the impeachment clause by the First Congress, and is a precedent for judicial removal. *See* Note, *Removal of Federal Judges*, 31 ILL. L. REV. 631, 639 (1937).

[28] Cf. Simpson, *supra* note 20, at 804.

[29] Indeed there is evidence that "good behavior" at common law had a well-defined meaning, and that laziness was a breach of the requisite "good behavior."

"The grant of an office during good behaviour creates an office for life determinable upon breach of the condition, and behaviour means behaviour in matters concerning the office except in the case of a conviction upon an indictment for any infamous offence of such a nature as to render the person unfit to exercise the office, which amounts legally to misbehaviour though not committed in connection with the office."

"Misbehaviour as to the office itself means improper exercise of the functions appertaining to the office, or non-attendance, or neglect of or refusal to perform the duties of the office." 7 E. HALSBURY, LAWS OF ENGLAND 22–23 (1909), *accord*, 2 A. TODD, PARLIAMENTARY GOVERNMENT IN ENGLAND 857 (2d ed. 1887).

[35] *Compare* Dwight, *supra* note 26, at 263, *with* Shartel, *supra* note 16, at 893–94.

[36] Other arguments based on linguistic niceties are also possible. For example, "high" may modify both "crimes" and "misdemeanors." In that case, it may be that the Framers intended to include as grounds for impeachment, "high crimes" and forms of non-criminal high misconduct, and intended to exclude minor crimes and minor forms of non-criminal misconduct. That construction would obliterate the alleged "gap," but again the most that can be said for it is that the connection is not wholly implausible. Such a construction, however, does violence to the ordinary meaning of "misdemeanor." Again the only fair conclusion seems to be that the meaning of the constitutional language is by no means settled. *See generally* Simpson, *supra* note 20; Simpson, *supra* note 30.

least a reasonable constitutional theory that a "gap" exists, and it is also reasonable to believe that the need for removal machinery other than the impeachment process was anticipated and that the necessary power to provide it is implicit in the Constitution. It certainly cannot be said, as the exclusivists have argued, that the constitutional question is settled.

Moreover, the theory that the constitutional language does not preclude judicial removal machinery is supported by the doctrine of "separation of powers."[37] Although not specifically mentioned in the document, separation of powers is a fundamental principle of constitutional interpretation.[38] At the very least, it creates an interpretive presumption that each of the three branches of the Federal government is separate and has plenary power to implement its own functions. That presumption is overcome only where the Constitution denies plenary power or establishes shared power in the form of cross-checks between two branches.[39] Accordingly, the doctrine of separation of powers implies inherent power within each of the branches to remove its own members, unless there is an express constitutional provision to the contrary.[40] Indeed, that doctrine, and the presumption that follows from it, may well have given rise to the need for a special provision granting the impeachment power to Congress.[41] In the absence of such a provision, it would have been reasonable to conclude that legislative interference with the Judiciary's inherent removal power was prohibited.[42]

The exclusivists point, however, to the constitutional clause permitting the Congress to expel misbehaving members; to wit, article I, section 5: "Each House may . . . punish its Members for disorderly Behavior, and, with the Concurrence of two thirds, expel a Member." This clause, it is argued, leads to the conclusion that if the Framers contemplated similar power in the Judiciary to police its own ranks, they would have so provided.

The rebuttal to this argument lies in the concept of Federalism. The Framers established a Federal form of government[43] and carefully delineated the powers of the national and state governments.[44] Article I, section 4 of the Constitution establishes state authority over elections of Senators and Representatives. "The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof: but the Congress may at any time by Law make or alter such Regulations, except as to the Places of choosing Senators." Had the Framers failed to provide for congressional punishment and expulsion of its own members, the States may have exercised such powers incident to their "election" powers. Since judges are, however, appointed by the President with the advice and consent of the Senate,[45] there is no similar threat of State removal. The absence of a judicial removal provision in article III then, is not conclusive of an intent that the judiciary should have no power to punish misbehaving judges.[46]

II. THE ENGLISH BACKGROUND

The Constitution was written in light of the English legal experience. Accordingly, it may be helpful to examine English removal devices to ascertain the Framers' intent as to the constitutionally permissible means of removing judges. Prior to the Act of Settlement in 1700, judges were appointed by the Crown *durant bene placito*—at the pleasure of the Crown.[47] The judiciary was therefore subject to the will of the King, and judges were readily removed for such acts as rendering decisions adverse to the Crown. Although there were instances where judges were appointed by the King *quamdiu se bene gesserint*—during good behavior [48]—it was not until the Act of Settlement that a King was required to grant judicial commissions with good behavior tenure.[49]

There is some evidence in English legal history that several removal methods existed at the time of the drafting of the Constitution.[50] The case most clearly enumerating the available procedures was that of Sir Jonah Barrington, a Judge of His Majesty's High Court of Admiralty in Ireland.[51] Sir Jonah Barrington was subjected to removal proocedings in the form of an address.[52] because of alleged appropriation of money lodged in the hands of the registrar of that court. The petitioner's counsel, Mr. Denman, later Lord Chief Justice, examined the historical porcedures for removing judges holding office during good behavior: [53]

". . . first, in Cases of Misconduct not extending to a legal Misdemeanor, the appropriate Course appears to be by *Scire facias* to repeal his Patent, 'Good Behavior' being the Condition precedent of the Judges Tenure; secondly, when the Conduct amounts to what a Court might consider a Misdemeanor, then by Information; thirdly, if it amounts to actual Crime, then by Impeachment; fourthly, and in all Cases, by the joint Exercise of the inquisitorial and judicial Jurisdiction of the House of Lords . . ."

This case indicates that the English knew certain judicial proceedings for the forfeiture of office. A trial for breach of the requisite behavior would lie not only in the impeachment forum, but also on *scire facias* in the King's Bench.[54]

There are, moreover, at least two cases in the seventeenth century that indicate the existence of removal on *scire facias*.[55] One involves a baron of the exchequer, appointed with good behavior tenure, and the other, a judge in the Court of Common Pleas. They were judges on a par with those of the two Benches.[56] In each, removal by the King was

[45] U.S. CONST. art. 2, § 2.

[46] Indeed there is some evidence that territorial judges with good behavior tenure could be removed by means other than impeachment. In 1796, Judge George Turner of the Northwest Territory was accused of holding court at a remote and inconvenient place; that he imposed heavy fines and forfeitures; that he denied the rights of the people regarding descent and conveyance of property, and the use of the French language; and that he managed the affairs of intestate persons to the damage of the heirs and creditors. The Attorney General, in response to a query of the House of Representatives, indicated that the charges against Judge Turner were of such a nature as to "require that a regular and fair examination into the truth of them should be made, in some judicial course of proceeding; and if he be convicted thereof, a removal from office may and ought to be a part of the punishment. His official tenure is during good behavior; and, consequently, he cannot be removed until he be lawfully convicted of some malversation in office. A judge may be prosecuted in three modes for official misdemeanors or crimes: by information, or by indictment before an ordinary court, or by impeachment before the Senate of the United States. The last mode, being the most solemn, seems, in general cases, to be best suited to the trial of so high and important an officer; but, in the present instance, it will be found very inconvenient, if not entirely impracticable, on account of the immense distance of the residence of the witnesses from this city [Philadelphia] . . . :" "However, the Attorney-General is of the opinion that it will be more advisable, on account of the expense, the delay, the certain difficulty, if not impossibility, of obtaining the attendance here of the witnesses who reside in the Territory northwest of Ohio, . . . , that the prosecution should not be carried on by impeachment, but by information on indictment before the supreme court of that Territory. . . ."

The House of Representatives declined to impeach, leaving the case to be disposed of by the proper agencies of the Northwest Territory. 3 A. HINDS, PRECEDENTS OF THE HOUSE OF REPRESENTATIVES §2486 (1907). Of course, a reply to this case might be that article I and not article III judges were involved. But this judge had "good behavior" tenure.

[47] *See* 2 A. TODD, PARLIAMENTARY GOVERNMENT IN ENGLAND 855 (2d ed. 1887).

[48] There is some evidence that judges were frequently appointed with good behavior tenure until the reigns of Charles II and James II. T. PLUCKNETT, A CONCISE HISTORY OF THE COMMON LAW 221–22 (2d ed. 1936); *but see* McIlwain, *The Tenure of English Judges*, 7 AM. POL. SCI. REV. 217 (1913).

[49] The Act of Settlement provided that "judges commissions be made *quamdiu se bene gesserint* . . . but upon the address of both houses of parliament it may be lawful to remove them." 12 & 13 Will. 3, c. 2. (1700). Though judges were thereby protected from removal at pleasure, judicial commissions continued to lapse upon the death of the appointing monarch. This was corrected in 1760 by a statute providing for continuation in office at the death of the King. I Geo. 3, c. 23; 2 A. TODD, *supra* note 47, at 856.

[50] *See* 7 E. HALSBURY, LAWS OF ENGLAND 22 & n. (g) (1909).

[51] 62 LORDS JOUR. 599–602, 716–720 (1830). Although this case was heard in 1830, the date appears to be immaterial since Mr. Denman was examining the historical removal procedures in England.

[52] The Act of Settlement provided for removal by address of Parliament—a form of joint resolution of both Houses of Parliament directed to the Crown. 12 & 13 Will. 3, c. 2. (1700); 2 A. TODD, *supra* note 47, at 855, 860. Other methods of removal remained in effect after passage of the Act. *See generally* 2 A. TODD, *supra* note 47, ch. VI.

[53] 62 LORDS JOUR. 602 (1830).

[54] The writ of *scire facias* was employed to revoke a grant of office created by letters patent from the Crown, upon a determination that the grantee had forfeited his office. Blackstone states that "where the patentee hath done an act that amounts to a forfeiture of the grant, the remedy to repeal the patent is by writ of *scire facias* in chancery." 3 W. BLACKSTONE, COMMENTARIES 256 (Christian & Archbold ed. 1825). Todd indicates that some believed that, in order to preserve the independence of the judiciary, Parliament should abstain from all interference with the judiciary except in cases of gross perversion of the law. I A. TODD, PARLIAMENTARY GOVERNMENT IN ENGLAND 574 (2d ed. 1887).

[55] 6 E. FOSS, JUDGES OF ENGLAND 372 (1857); 7 E. FOSS, JUDGES OF ENGLAND 52 (1864); McIlwain, *supra* note 48, at 221, 223.

[56] By 1579, the barons of the exchequer had acquired an equal status with the judges of the other common law courts and shared

successfully resisted by a demand for a *scire facias* proceeding. In each, the judges were relieved of duties, but they retained office and continued to receive fees.[57]

In 1628, Sir John Walter received his patent as Chief Baron of the Exchequer with good behavior tenure. King Charles was later dissatisfied with one of Walter's opinions and ordered him to surrender his patent.[58] Walter refused on the ground that his grant was during good behavior, and that he ought not to be removed without a proceeding on a *scire facias* to determine whether he had failed to maintain the requisite good behavior. Although the King did not remove Walter from office, he forbade him to sit in court.[59]

In 1672, King Charles tried to remove Sir John Archer from the common pleas, but Archer had good behavior tenure and refused to surrender his patent without a *scire facias*. Charles then ordered Archer to forbear from exercising the office of a judge and appointed another judge to fill his place. Archer, however, continued to retain his position and receive his share of the fees.[60]

The exclusivists argue, however, that removal on *scire facias* was such an obscure procedure that the Framers were unaware of it.[61] In the English system, there were three methods of legislative removal.[62] Parliament could remove a judge by Bill of Attainder, by impeachment, or by address to the King.[63] Our Constitution expressly prohibits the Bill of Attainder; [64] impeachment was adopted,[65] and address to the King is obviously inapplicable to our system. Moreover, the Framers, at the Constitutional Convention, opposed a proposal for address to the President.[66] Hence, since the Framers were aware of a wide variety of removal procedures in England, it is at least plausible that they also knew of judicial removal proceedings.

III. THE INDEPENDENCE OF THE JUDICIARY

The exclusivists suggest that the principle of the independence of the judiciary precludes Congressional power to establish judicial machinery for the removal of "unfit" judges.[67] The principle is alleged to be both a corporate and an individual concept.[68] That is to say, not only is the judicial branch independent of the legislative and executive branches, but each individual judge is "independent" within the judiciary, and the creation of additional removal machinery would diminish his independence by increasing the pressure upon him.[69]

The exclusivists additionally point to *Federalist No. 79* for support.[70] Hamilton, therein, wrote: [71]

> The precautions for their [judges'] responsibility are comprised in the article respecting impeachments. They are liable to be impeached for malconduct by the House of Representatives and tried by the Senate; and, if convicted, may be dismissed from office and disqualified for holding any other. This is the only provision on the point which is consistent with the necessary independence of the judicial character, and is the only one which we find in our own Constitution in respect to our own judges.
>
> The want of a provision for removing the judges on account of inability has been a subject of complaint. But all considerate men will be sensible that such a provision would either not be practiced upon or would be more liable to abuse than calculated to answer any good purpose. The mensuration of the faculties of the mind has, I believe, no place in the catalogue of known arts. An attempt to fix the boundary between the regions of ability and inability would much oftener give scope to personal and party attachments and enmities than advance the interests of justice or the public good. The result, except in the case of insanity, must for the most part be arbitrary; and insanity, without any formal or express provision, may be safely pronounced to be a virtual disqualification.

Federalist No. 78, however, suggests that the Framers were primarily concerned with the corporate aspects of the judiciary. They feared legislative and executive interference and, therefore, concluded that the machinery of impeachment was the only legislative or executive intrusion consistent with the necessary corporate independence of the judiciary. *Federalist No. 78* states: [72]

> The standard of good behavior for the continuance in office of the judicial magistracy is certainly one of the most valuable of the modern improvements in the practice of government. In a monarchy it is an excellent barrier to the despotism of the prince; in a republic it is a no less excellent barrier to the encroachments and oppressions of the representative body. And it is the best expedient which can be devised in any government to secure a steady, upright, and impartial administration of the laws. [In view of] the natural feebleness of the judiciary, it is in continual jeopardy of being overpowered, awed, or influenced by its co-ordinate branches; and . . . nothing can contribute so much to its firmness and independence as permanency in office . . . .
>
> If, then, the courts of justice are to be considered as the bulwarks of a limited Constitution against legislative encroachments, this consideration will afford a strong argument for the permanent tenure of judicial offices, since nothing will contribute so much as this to that independent spirit in the judges which must be essential to the faithful performance of so arduous a duty. . . . But it is easy to see that it would require an uncommon portion of fortitude in the judges to do their duty as faithful guardians of the Constitution, where *legislative invasions of it had been instigated by the major voice of the community.*
>
> Upon the whole, there can be no room to doubt that the convention acted wisely in copying from the models of those constitutions which have established *good behavior* as the tenure of their judicial offices, in point of duration; and that so far from being blamable on this account, their plan would have been inexcusably defective if it had wanted this important feature of good government. The experience of Great Britain affords an illustrious comment on the excellence of the institution.

There is, therefore, a strong argument that, in the minds of the Framers, the concept of an independent judiciary was designed to do service against legislative and executive encroachments. [73]

IV. HISTORICAL INACTION

Another argument frequently leveled against alternatives to impeachment is historical in nature. Since impeachment has been from the start the only formal mechanism for removing unfit judges, it is contended that history implies some settled view that any other mechanism would be unconstitutional. Because this argument proceeds from the premise that inaction over the years binds us today, it is surely initially suspect.

But there are strong grounds to reject it in any event. Given the difficulty of amending the Constitution, the Supreme Court has repeatedly taken the position that it will reverse its previous decisions on constitutional questions more readily than decisions on statutory matters.[74] Of course, the Court will

with the justices of the King's Bench and the Common Pleas the duties of going on circuit. T. PLUCKNETT, A CONCISE HISTORY OF THE COMMON LAW 154 (2d ed. 1936); Ross, *Good Behavior of Federal Judges*, 12 U. KAN. CITY L. REV. 119, 121 (1944).

[57] McIlwain, *supra* note 48, at 221, 223.

[58] *Id.* at 221.

[59] *Id.*; 6 E. Foss, *supra* note 55, at 372.

[60] McIlwain, *supra* note 48 at 223; 7 E. FOSS, *supra* note 55, at 52–53. Although there are only a few cases involving an inherent judicial power of removal, there is no contrary authority. Nothing in the Supreme Court of Judicature Act of 1873, nor the 1875 amendment explicitly affects any common law techniques that existed. 36 & 37 Vict., c. 66; 38 & 39 Vict., c. 77.

There is, moreover, an interesting continuity in the literature supporting the existence of judicial power of removal. *See, e.g.*, the *Barrington* case, *supra* note 51; 2 A. TODD, *supra* note 47, ch. VI; 7 E. HALSBURY, LAWS OF ENGLAND 22 & n. (g) (1909); R. JACKSON, THE MACHINERY OF JUSTICE IN ENGLAND 289 & n. 1 (1967).

There are, furthermore, a number of cases that support the existence of judicial removal of lower judicial officers some of whom clearly had good behavior tenure. Rex v. Corporation of Wells, 98 Eng. Rep. 41 (1767) (office of recorder) (specific mention of good behavior tenure); Rex v. Richardson, 97 Eng. Rep. 426 (1758) (involved the portman in the town or burrough of Ipswich for neglect of duty); Lord Bruce's Case, 93 Eng. Rep. 870 (1729) (office of recorder); Rex v. Bailiffs of Ipswich, 91 Eng. Rep. 378 (1706) (nonattendance considered a misdemeanor and grounds for forfeiture of the office of recorder); Harcourt v. Fox, 89 Eng. Rep. 680 (1692) (a clerk of the peace) (specific mention of good behavior tenure); Earl of Shrewsbury's Case, 77 Eng. Rep. 798 (1610) (office of steward); Sir Robert Chester's Case, 73 Eng. Rep. 465 (1562) (an office of receiver); Rex v. Eston, 73 Eng. Rep. 437 (1561), (a sergeant at arms); Rex v. Blage, 73 Eng. Rep. 436 (1561) (a king's remembrancer in the exchequer) (specific mention of good behavior tenure); Rex v. Toly, 73 Eng. Rep. 436 (1561) (an auditor of Warwicke Spencers & Salisbury); Vaux v. Jefferen, 73 Eng. Rep. 251 (1556) (a filacer). There is some evidence that the judicial power to remove these lower officers applied equally to judges where the office was conferred by letters patent. 7 E. HALSBURY, *supra*.

[72] The Federalist No. 78, at 465–66, 469–70, 472 (Arlington House ed. 1966) (A. Hamilton). Hamilton, moreover, states that "insanity, without any formal or express provision may be safely pronounced to be a virtual disqualification." THE FEDERALIST NO. 79, at 474 (Arlington House ed. 1966). This may suggest removal other than on impeachment and conviction.

[73] *See* Comment, *Removal of Federal Judges—New Alternatives to an Old Problem: Chandler v. Judicial Council of the Tenth Circuit*, 13 *U.C.L.A.L.* Rev. 1385, 1397–98 (1966); Note, *Removal of Federal Judges: A Proposed Plan*, 31 *Ill. L. Rev.* 631, 640, (1937).

[74] *See, e.g.*, Smith v. Allwright, 321 U.S. 649, 665 (1944); N. Small and L. Jayson, *The Constitution of the United States of America*, 634 (1964).

do so only when convinced that a previous constitutional view was erroneous. But if the Court feels relatively free to disregard the effect of *stare decisis* in cases where it has previously announced a constitutional provision, it seems absurd to suggest that it would feel bound by the peculiar form of historical "precedent," based upon total inaction, that is said to support the exclusivist argument.

V. CONGRESSIONAL POWER

Some contend that even if the judiciary has inherent power to remove or discipline misbehaving judges, Congress is precluded from establishing machinery to implement this power.[75] The "necessary and proper" clause, however, authorizes Congress "To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Office thereof." [76]

The judicial power of the United States is "vested" by the Constitution in the Supreme Court and the inferior courts,[77] and it seems clear that Congressional action to implement that power would be "necessary and proper." Chief Justice Marshall established the classic formula as to the reach of Congressional powers conferred by the "necessary and proper" clause.[78]

Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional.

The removal of judges who breach the "good behavior" condition of tenure is surely a legitimate end "within the scope of the Constitution." Congressional establishment of judicial machinery to try cases in which a breach is alleged is a means "plainly adapted to that end," and no constitutional clause prohibits such congressional action.

It may be argued, however, that such congressional involvement in the removal process is inconsistent with the "spirit" of the Constitution in that it threatens to promote legislative interference with the courts.[79] But if congressional action is limited to the establishment of machinery otherwise wholly within the control of judges, it is difficult to imagine what interference is threatened. Indeed, even if Congress were subsequently to repeal the Act setting up the machinery, the inherent power of the Judiciary to establish its own removal machinery would remain no less effective than it is today. Legislation and appropriations to implement that inherent power, then, can justifiably be regarded as no more than a "necessary and proper" step to insure that the judicial power can be used effectively.

A question may be raised, however, as to one step in the process by which Congress would enact removal machinery. It would quite likely be desirable, and perhaps constitutionally required [80] for Congress to give statutory content to the "good behavior" clause in order to specify the grounds for removal. Is such statutory definition of a constitutional clause permissible? There is ample precedent for it.[81] Moreover, such definition would always be subject to review in the courts if it were charged that Congress had defined the scope of the "good behavior" clause either too narrowly or too broadly.[82]

VI. CONCLUSION

The arguments that support Congressional enactment of machinery by which judges may police their own ranks are strong. The explicit language of the Constitution presents no barrier. To the extent that English history is clear, it leads to the conclusion that judicial powers of removal existed at common law, and that the Framers were aware of them and assumed their existence in drafting our fundamental document. Neither the constitutional debates nor the Federalist papers affirmatively point to another conclusion.[83] Moreover, the doctrine of separation of powers strongly suggests that inherent judicial power should be assumed in the absence of an explicit Constitutional prohibition. The "necessary and proper" clause then provides an ample basis for Congressional action to implement the inherent power of the courts.

To be sure, arguments exist as well for the opposite conclusion. But constitutional support for congressional action is so substantial that, at the very least, any remaining doubts should be left to the process of judicial review.

[77] U.S. CONST. art. III, § 1.

[78] McCulloch v. Maryland, 17 U.S. (4 Wheat.) 316, 420–21 (1819).

[79] *See* Otis, *supra* note 61, at 42.

[80] The Fifth Amendment requires that no person shall "be deprived of life, liberty, or property, without due process of law." It may, therefore, be necessary to define what constitutes a breach of the "good behavior" condition in order to satisfy the requirements of due process.

[81] Within the judicial fitness area, Congress has already given some statutory content to the word "Bribery." *See* note 27 *supra*.

Congress has given some meaning to "high Misdemeanors," as a statute provides that "any justice or judge appointed under the authority of the United States who engages in the practice of law is guilty of a high misdemeanor." 28 U.S.C. § 454 (1964).

In the area of eminent domain, for example, the Fifth Amendment provides: ". . . nor shall private property be taken for public use, without just compensation." The courts have frequently upheld Congressional power, subject to judicial review, to decide what type of taking is for a "public use." United States ex rel. TVA v. Welch, 327 U.S. 546 (1946); Shoemaker v. United States, 147 U.S. 282 (1893).

COMMENDATION OF SPEECH BY SENATOR PEARSON OF KANSAS ON THE ABM ISSUE

Mr. COOPER. Mr. President, the distinguished senior Senator from Kansas delivered an important speech in Wichita on June 2 concerning the use of the ABM. It is one of the clearest summaries of the ABM issue that I have seen. Senator PEARSON's speech is distinguished by its perspective and judiciousness. Senator PEARSON said:

This is an issue upon which reasonable men may differ. If we are to have a rational debate on the merits of this issue, one must begin by understanding that those who oppose the system are not insensitive to the needs of national security and that those who support the system are not war-mongers or "tools" of the industrial-military complex.

Senator PEARSON goes into the important questions of reliability, necessity, cost, and effect deployment would have on existing nuclear arms balances. An example of the crucial nature of the ABM issue is contained in the following observation by Senator PEARSON:

To put in perspective a recital of force levels and references to a measurement of strength, we should consider the results of an all-out thermo-nuclear exchange. So many of us continue to think of nuclear warfare as a single mushroom cloud over a single city. Nothing could be further from the actual case. In a nuclear war, either side can sustain an all-out nuclear strike and respond. Within a time frame of one hour to one day (considering a Soviet Union population of 250 million and a United States population of 210 million, with greater urban concentration in this country) each side can inflict upon the other 150 million fatalities and destroy 75 per cent of the industrial capacity of the other side. Fire, storms, fallout and the disruption of distribution systems creating starvation and disease would run the fatality figures much higher. Now the really astounding fact is not the total destruction just described, but that this destruction can result from the delivery of 400 one megaton warheads by the Soviet Union and the delivery of approximately 500 one megaton warheads by the United States. Again considering the number of warheads we have on hand, we find the United States has an overkill ratio of 8½ to one while the Soviet Union has an overkill ratio of 2½ to one.

The meaning of all of this is that during the 1960's we can accurately describe the strategic balance of terms of "assured destruction," "mutual deterrent," or "balance of terror." As frightening as these terms may be, they have given the world an element of stability, not only in preventing nuclear conflicts but in keeping the level of conventional warfare from growing into nuclear exchanges.

Furthermore, one can easily understand that terms such as "superiority" and "parity" have lost all meaning. If the forces of the United States and the Soviet Union were doubled or halved, such action would not actually affect the mutual deterrent which now exists. The power of total destruction would remain. Only the overkill capacity would be multiplied or reduced.

I ask unanimous consent that Senator PEARSON's speech be included in the RECORD at the conclusion of my remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JAMES B. PEARSON

The decision on the construction and deployment of the anti-ballistic missile system is important because it is a focal point of several of the great issues that face the nation today. It will determine the allocation of our resources not only between military programs but between military and other programs. It will determine our overall nuclear strategy through the 1970's. It will have a decisive influence on the possibilities of disarmament negotiations with the Soviet Union.

Moreover, the issue is important at this point in time because of the long lead time requirements for modern weapons systems. It normally takes ten years for a system to move from conception to operational deployment. Within this period policy makers are cemented into position and find it difficult, if not impossible, to halt the action-reaction effect of a developing system on the strategic arms race.

We should also recognize that at this point in time there is an opportunity for a national debate free of the election year political pressure which gave rise to the misleading bomber-gap discussions of 1952, the missile-gap claims of 1960 and the denunciation of "parity" and the promotion of "superiority" which was part of the verbal confetti of the 1968 campaign.

We are then at a crossroads of a vital decision.

Let me make my position clear: I favor continued research and development, and I oppose construction and deployment of the ABM system at this time.

I would also make two further points of introduction. This is an issue upon which reasonable men may differ. If we are to have a rational debate on the merits of this issue, one must begin by understanding that those who oppose the system are not insensitive to the needs of national security and that those who support the system are not warmongers or "tools" of the industrial-military complex.

One further point needs to be made clear. The anti-ballistic missile has had many faces. While its components have remained essentially the same over the past twelve years, its purposes and deployment plans have been constantly shifting. The purposes of ABM has changed from protecting our cities to safeguarding our Minuteman missiles, from service as a thin defense against the Chinese, to guarding against the Soviet threat. These differing purposes and plans for deployment each give rise to varying arguments, but I want to direct my remarks here to the most recent proposal, the Safeguard system which the President has recommended.

The following background information seems to me to be most helpful in discussing the ABM issue.

First let me review the strategic force levels as of this date. By strategic force levels I refer to those weapons systems which may be employed in an intercontinental war.

	United States	U.S.S.R.
ICBM's	1,054	1,000
Polaris missiles	[1] 656	[2] 77
Total	1,710	1,077
Intercontinental bombers	646	150
Deliverable warheads	4,206	1,200

[1] 41 submarines.
[2] 5 submarines.

Our ICBM force is made of 1,000 Minutemen using solid fuel and 54 Titans using liquid fuel. All are in hardened silos. In contrast some of the USSR's ICBM's are in "soft" silos. The United States' ICBM and warhead force levels have been constant since 1967. Within the last few years the Soviet Union has shown an accelerated increase in both of these categories.

A recital of these statistics requires some further explanation of how stategic strength is actually measured. For a long time the strength measurement was made by counting the number of delivery vehicles, that is to say the number of missiles or bombers that we have. By this ratio, the United States has a two to one advantage over the Soviet Union (2,356 to 1,227). But this measurement really is invalid in that it does not consider the quality of the systems or the size of the warheads and is opened to further doubt with the advent of MIRV.

One might measure strategic strength by counting the number of warheads. By this measurement the United States would have a three and one half to one superiority (4,206 to 1,200). One might measure strategic strength by considering the total megatonnage of each side. But the best and most accurate test of strength is the number of warheads that can be delivered on target. It is this consideration that brings to bear the important points of our systems' vulnerability and the ability of our forces to reach enemy targets.

To put in perspective a recital of force levels and references to a measurement of strength, we should consider the results of an all-out thermo-nuclear exchange. So many of us continue to think of nuclear warfare as a single mushroom cloud over a single city. Nothing could be further from the actual case. In a nuclear war, either side can sustain an all-out nuclear strike and respond. Within a time frame of one hour to one day (considering a Soviet Union population of 250 million and a United States population of 210 million, with greater urban concentration in this country) each side can inflict upon the other 150 million fatalities and destroy 75 percent of the industrial capacity of the other side. Firestorms, fallout and the disruption of distribution systems creating starvation and disease would run the fatality figures much higher.

Now the really astounding fact is not the total destruction just described, but that this destruction can result from the delivery of 400 one megaton warheads by the Soviet Union and the delivery of approximately 500 one megaton warheads by the United States. Again considering the number of warheads we have on hand, we find the United States has an overkill ratio of 8½ to one while the Soviet Union has an overkill ratio of 2½ to one.

The meaning of all of this is that during the 1960's we can accurately describe the strategic balance of terms of "assured destruction," "mutual deterrent," or "balance of terror." As frightening as these terms may be, they have given the world an element of stability, not only in preventing nuclear conflicts but in keeping the level of conventional warfare from growing into nuclear exchanges.

Furthermore, one can easily understand that terms such as "superiority" and "parity" have lost all meaning. If the forces of the United States and the Soviet Union were doubled or halved, such action would not actually affect the mutual deterrent which now exists. The power of total destruction would remain. Only the overkill capacity would be multiplied or reduced.

It is important also to understand some of the rules for strategic planning, some of the concepts that the war planners on each side must utilize. It is within these rules—necessary as they may be—that one finds a built-in pressure for escalation of force levels. The first rule is that war planners always plan on a "greater than expected risk." Moreover, they assume that the enemy's system will always perform better than anticipated and that our systems will perform at a lower level of efficiency than anticipated. Planning is thus made on the basis of the "worst plausible case." These rules or concepts together with the long lead time (our work on the ABM system has extended over 12 years and $5 billion) required for any system, give rise to an action-reaction cycle leading each side to act to gain some superiority, to alleviate some vulnerability, or to anticipate what the other side may be doing.

Let me offer an illustration of the action-reaction cycle. Several years ago we began the research and development of the B–70 bomber. In anticipation of our deployment of this new bomber, the Soviets reacted by constructing the so-called Tallinn line. When this Soviet action was made known to us through satellite surveillance, our intelligence community believed that the Tallinn defense was an ABM system. We then reacted to this anticipated ABM system by authorizing research and development on the MIRV (multiple warheads, independently targeted) system which would counter, in our view, what we thought was an ABM system. In fact we later scrapped the B–70 program and the Tallinn line turned out not to be an ABM after all but a highly sophisticated anti-aircraft defense. Nevertheless the action-reaction cycle was initiated by each side's anticipation and misjudgment of what the other was doing.

Some explanation of how the anti-ballistic missile operates is in order.

The three main components—radar, computers, and missiles—have always been the principle parts of our ABM development, whether that system was known as Nike X, Nike Zeus, Sentinel or Safeguard.

There are two radar systems, two missiles systems and a computer component. The first radar system is the perimeter acquisition radar (PAR). This radar has a considerable range and will pick up an approaching missile at a range of over 1,000 miles. It incorporates new technology in that it no longer turns around mechanically but electrically scans the sky in a fraction of a second.

The PAR first picks up the incoming missile, which is travelling at a speed of over 15,000 miles per hour, tracks it and determines its course. Upon PAR's acquisition of the enemy's re-entry vehicle, the system has ten minutes in which to defend. PAR's tracking information is fed into a computer which determines the missile's target.

This information is then transferred to the missile site radar (MSR). This radar is located on the missile farm and also tracks the incoming re-entry vehicle and electronically guides the first missile launched. This missile, Spartan, has a range of about 400 miles and is detonated outside of the atmosphere at a range of about 150 to 200 miles. The Spartan's detonation is in the one-to-two megaton range and the X-rays produced should destroy the heat shield of the enemy's re-entry vehicle.

If the re-entry vehicle continues through the Spartan's detonation, a second missile called the Sprint, with a range of about 25 miles, is launched and detonation occurs at a range of 10 to 15 miles, within the atmosphere. The Sprint warhead is of smaller force but creates a shock wave and emits neutrons which heat the nuclear mass of the enemy's re-entry vehicle and destroys its capacity to detonate.

On March 14, 1969, President Nixon announced his decision to deploy the Safeguard system which involved several changes in location and purpose as compared with Sentinel. The location of the missile farms under Safeguard would be remote from the major cities except for Washington, D.C. The objectives would be first to protect our Minuteman ICBM's against the Soviet Union; second to provide an area defense against a future possible Chinese attack; and third, to protect against an accidental launch. The first two sites would be located at Air Force Bases in Montana and North Dakota and would theoretically protect one-third of our Minuteman force. The total system would incorporate 10 additional sites and offer a thin area protection over the entire United States.

All that has been said is meant to provide a background for the arguments I now offer against the construction and deployment of an ABM. Those arguments relate to five principal considerations: Reliability, Necessity, Cost, The Arms Race, and Arms Control.

RELIABILITY

Will the system work?

The proposed Safeguard system is the most complex electronics system ever devised. It has not and cannot be tested. Moreover all components of the system have not yet been built or tested as separate units.

The proposed ABM system or any ABM system would be subject to penetration aids. Twelve years ago when we began development of an ABM we sought not only to construct a defensive system but to understand how any defensive system could be penetrated.

Today several penetration aids are available. Balloons, light in weight, may be released from an attacking missile and by virtue of their thin metallic covering appear to any radar as a re-entry vehicle. In fact, a re-entry vehicle may be enclosed in such balloons.

The use of chaff is most effective. This device involves the release of some 100 million

thin pieces of wire which can create a cloud hundreds of miles long and distorts all radar detection. Even if our radars now or in the future are able to "read" the trajectory of a re-entry vehicle, waves of decoys and fake warheads can easily confuse its findings so as to render them useless.

Our radars are also subject to the very serious problem of blackout. A nuclear detonation creates not only a fireball but the resulting electron cloud can create an area 100 miles in diameter which is "blacked out" from radar for several minutes. This radar blackout may be produced by our own Spartan or Sprint missiles or may be the result of an enemy detonation made for blackout purposes.

The radars are also subject to the effects of electronic jamming equipment that could be carried by missiles or re-entry vehicles. While the radars are the eyes of the system and its most critical component, they are also its most vulnerable component. The missile site radar cannot be hardened and is itself a "soft" target for nuclear attack.

Any defensive system may be subject to mere saturation. If a missile farm contains a total of 40 Spartan and Sprint missiles, given a perfect defense on our part the enemy would need to send in only 41 offensive missiles. With the deployment of MRV (multiple re-entry vehicles) or MIRV the number of offensive warheads can be greatly increased, making quite feasible the saturation of any ABM system presently conceived.

The arithmetic of the nuclear age is quite different from that which we knew and understood during World War II. Then if a bomber force was subject to a 10 percent attrition rate on each raid, the result was a gradual decrease in destructive power of the attacker. In the nuclear age, however, if 100 missiles are launched and we are successful in knocking down 90 percent of them, we have gained little or nothing because the 10 percent that still get through could result in the loss of 10 cities. Thus even a 10 percent failure represents a catastrophe.

NECESSITY

Secretary Melvin Laird testified that the ABM was essential to protect our ICBM's because the Soviet Union was seeking a first strike capability. In arguing that we must protect our deterrent, he made reference to the Soviet's SS–9 missiles which carry a heavy or 25 megaton payload. Other authorities have indicated there may be several other reasons for the large warhead on the SS–9, including the missile's inaccuracy, its possible use against large cities and as a radar blackout weapon. But aside from the purpose of the SS–9, we must consider whether or not the ABM is essential to protect our deterrent against it.

Our Minuteman forces can survive a megaton explosion within a one-half mile range. Several scientists and military authorities therefore have estimated that at the present time it would take two offensive Soviet missiles to be sure of destroying a single Minuteman installation. The Soviets have no such capability. Moreover, it is conceivable that we could launch our Minuteman before Soviet warheads could detonate on their designated targets. Beyond this, the Safeguard system, in the period through 1974, would protect only one-third of our Minuteman forces even if it were fully effective.

Let us assume for purposes of argument that the Minuteman force was destroyed. We still have our Polaris fleet with 656 missiles and a capability of destroying the Soviet Union. Moreover, the Director of Navy Strategic Programs has stated that our Polaris fleet is an invulnerable weapon for the next few years, and he has pointed out that antisubmarine warfare developments lag far behind our ability to keep our submarines hidden from attack.

But assume again for purposes of argument that our Minuteman force was destroyed and that our entire Polaris Submarine fleet was simultaneously put out of acton. We would still have our intercontinental bomber force which can take off with proper alert from our radar and early warning systems.

But for the purposes of further argument assume that our Minuteman force has been destroyed, all Polaris Submarines sunk and our intercontinental bombers destroyed on the ground by the FOBS system or destroyed in flight. And further assume that all of these forces have been destroyed simultaneously. We *still* have our medium range missiles stationed throughout Europe with sufficient power and range to act as a deterrent against the Soviet Union.

COST

Our strength as a nation rests not only on our military power but also on the stability of our economy. Our huge defense budget seriously affects the stability of the economy today, and Secretary Laird has recently confirmed that this budget will continue at its present level even after the end of the war in Vietnam.

While the Safeguard system is estimated to cost $7.8 billion most agree that its initial deployment is only a foot in the door for a thicker system which is to be constructed in the years ahead. No one can really estimate what the cost would actually be. Past performance indicates it would be very high. In the case of the F111, the electrical gear alone now costs as much as the original estimate of the entire airplane. The cost overrun of the C5 transport plane is near $2 billion. The Cheyenne helicopter, after an expenditure of some $875 million, has been cancelled. A new series of Naval transport ships is suffering from a $1.8 billion cost overrun. The Army has poured approximately $1 billion into the development of a new tank which still has serious technical problems.

My concern about the great cost of the Safeguard system is not based on the proposition that I think these sums must be diverted to social or welfare programs. In the years ahead, it will be essential that we maintain strong conventional forces. We desperately need a new fighter bomber and a new Navy fighter, submarines, ships, field tanks, and other systems. If we are to have the complex of forces which will enable us to meet every threat at the appropriate level, allowing us to defend our interest with no greater danger than is necessary, we must maintain adequate conventional as well as nuclear forces. If we fail to do so we shall return to the days of "massive retaliation" and to the days where our power was so unmanageable that it was useless and gave us only the options of nuclear war or surrender.

THE ABM AND THE ARMS RACE

It is essential that the ABM be studied and understood not only as a defensive weapons system but also with regard to the effect it will have on the strategic balance in the world and the related effect on our national security.

Between 1950 and 1960 there was between the United States and the Soviet Union repeated and rival deployment of weapons systems on both sides. Both super powers were constantly seeking a temporary advantage, attempting to repair their vulnerability or acting in anticipation of some move on the other side. By 1960 the power of each nation in terms of numbers and diversity of weapons had reached a plateau which provided mutual deterrence.

Indeed both the United States and the Soviet Union rejected new systems. On three previous occasions the United States has rejected an ABM system. We cancelled a manned bomber program and the Skybolt missile project. The Soviet Union lagged behind in missiles and in other weapons systems without great fear. They gave up mobile launching plans. Thus for the last decade there has been a period of certainty and stability. Today there are disturbing developments on both sides which can create uncertainty and insure instability. The continuing growth of the Soviet ICBM system is alarming. The installation of an ABM system particularly as it relates to the deployment of MIRV's is likewise a factor which can set both powers off on another spiralling arms race. The action-reaction cycle can start again and a defensive versus offensive race will accelerate the arms competition to an even greater pace.

Some mention must be made of the Soviet ABM system. Recognized military and scientific authorities indicate that the Golosh system around Moscow is the equivalent of our early Nike Zeus system. Construction has been halted. The total number of missiles deployed is approximately 70 and constitutes only an experimental or applied research undertaking. But we have reacted to this system by pushing ahead with MIRV research, and so will the Soviets react with more offensive missiles and in turn the United States will be required to undertake the ABM and to provide shelters.

It is essential to our national defense that we not be misled by our defense officials or by ourselves. There is a real danger that the ABM will become an electronic maginot line that will be dangerous in that it will provide an illusion of defense against ballistic missiles which of course does not exist.

ABM'S AND ARMS CONTROL

One last point. The Administration contends it is essential that we proceed with the ABM so they will have a bargaining tool when arms limitation talks begin with the Soviet Union. This concept rests on the theory that "since they have one we must have one too." Yet it is impossible to understand how we could consider ourselves in a weak position during negotiations merely because we do not possess an ABM system. We are superior in every other measurement of military strength.

In considering negotiations of arms limitations we must accept the fact that both sides are going to insist upon maintaining a mutual deterrent. Any agreement therefore will actually be at a very high level of nuclear might. But if ABM's are deployed then the negotiated agreement will have to include a limit on them. How do you limit an ABM? Do you limit the number of defensive missiles? Do you limit the capacity of the computers of the capability of the radar? How can any nation tell whether an ABM system is a thick or a thin system? If such limitations are to be imposed then inspections are mandatory and this simply isn't likely with the Soviet Union.

An ABM system necessitates the development and deployment of MIRV's. This multiple warhead again cannot be limited without inspection. Moreover, if we proceed with the ABM we give the Soviet Union grounds to argue for higher levels of ICBM's, bombers and missile submarines. The ABM will not only accelerate the arms race but push it past the level at which some agreement involving mutual deterrence may be possible.

Someone has written that "the road from the ax to the ICBM seems to run in a single direction and is irreversible." I think that direction is reversible, and I think the time to try is now.

FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969—AMENDMENTS

AMENDMENTS NOS. 36 AND 37

Mr. COOPER. Mr. President on May 26, 1969, I submitted an amendment to the administration's Federal Coal Mine

Health and Safety Act of 1969 (S. 1300). I am a cosponsor of the original bill. The purpose of the amendment which I submitted at that time was to provide greater protection for all miners working in underground coal mines from the hazards of roof, face, and rib falls. The need for the amendment is supported by records of the Bureau of Mines.

These records show that roof falls are responsible annually for more coal mine fatalities than all other causes combined.

Mr. President, today I offer two other amendments to the administration's Coal Mine Health and Safety bill. I do so because of the interest in coal mining and in mine safety in my State of Kentucky. Kentucky today is the second largest producer of bituminous coal in the United States, surpassed only by West Virginia.

When I served as a member of the Committee on Labor and Public Welfare, I was a member of the subcommittee which considered legislation dealing with the problems of coal mine safety. In those years, I helped to develop the only amendments to the Federal Coal Mine Safety Act adopted by the Congress in recent years.

Today I introduce a second amendment to S. 1300 which would retain the classification between gassy and nongassy mines as provided in the present law with respect to the use of permissible equipment. My amendment would not change other provisions of the administration's bill—provisions which I support—which require a greater number of mine inspections and more comprehensive standards for carrying out tests for gas in all underground coal mines than are required under the present law.

My amendment is limited in application to the proposed requirement of S. 1300 that certain types of equipment termed "permissible equipment" must be used in nongassy mines. The law presently provides that this type equipment; that is, permissible equipment, must be used in gassy mines.

To provide some general idea of the character of permissible equipment that is required in gassy mines, I now make the following comments.

All joints must be grounded metal to metal; no gaskets can be used with metal joints, and joints must be at least 1-inch in width; bolts and screws must be within a 4-inch space; all joints have a tolerance of four-thousandths of an inch; starting boxes, switches, and control panels must be designed so as not to ignite gas by electric arcs; openings through which electric wiring enters the machinery shall be so designed that no arc will ignite gas in surrounding atmosphere; cutting bits for continuous mining or cutting machines are designed to make less spark when contacting mineral substances in the coal or sand rock in the roof or floor, or other minerals.

If, as I argue, this specialized equipment is not needed, the effect of this provision of the bill to require permissible machinery in nongassy mines and to require all operators to replace the equipment they now use with new permissible equipment, would be very uneconomical and very expensive for the nongassy mines in my State and throughout the Nation.

Estimates of the cost have been given and I have been informed that the cost of equipping one section of a mine would be more than $260,000; the cost of a cutting machine would be about $80,000; the cost of a 14 B.U. loader is about $54,000, a shuttle, $39,000, a coal drill is $24,000, and a roof drill is about the same.

It has been estimated that the cost of equipping a mine with permissible equipment would be at least double the cost of the equipment now being used in nongassy mines.

It has been estimated by the Bureau of Mines officials in the State of Kentucky that to reequip the mines in one county, Harlan County, which is one of our great coal-producing counties, would be in the range of $10 million.

Mr. President, I do not base my argument today purely on the grounds of economy, nor the fact that it would be costly to the operators of nongassy mines to refit and reequip their mines with permissible machinery. If the danger of gas in these mines, which are now termed nongassy, is so great to require that these mines be reequipped with permissible machinery, then it should be done. However, when one makes this argument he is usually met with the statement that he is more concerned with economics and the economic side of the issue rather than human life and injury.

Under the proposed bill, all nonpermissible equipment would have to be scrapped or reworked to make it permissible. The results of this changeover would not increase production. Without increased production it would be very uneconomical for the operators of nongassy mines in my State and throughout the country.

I wish to compare the incidence of fatalities and injuries which have occurred in gassy and nongassy mines and their causes. As I said, the argument is made that all coal mines are potentially gassy and, therefore, to insure safety in mine operations, the law should make it mandatory for all coal mines, whether gassy or nongassy, to be worked by permissible equipment.

This argument is based on certain statistics gathered and presented by the Bureau of Mines which have been repeatedly referred to in the course of the subcommittee's hearings. On closer examination, however, they do not support this thesis. I would point out that while the statements can be submitted again and again and made a part of the RECORD, no examination has been made for the record to determine what proportion of injuries and fatalities have occurred in gassy mines, and in those mines which are presently classed nongassy.

The Bureau of Mines has cataloged all underground coal mine ignitions and explosions in the United States for the period running from July 1, 1952 to November 20, 1968—over 16 years; identifying the type of mine, the cause of the ignition or the explosion, and the number of fatalities and injuries. The nongassy mines are identified by number in the left-hand column for ready reference.

Mr. President, I ask unanimous consent to have this report printed in the RECORD, as exhibit A.

There being no objection, exhibit A was ordered to be printed in the RECORD, as follows:

EXHIBIT A—U.S. BUREAU OF MINES

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
July 1, 1952		Pennsylvania	Gassy	Unknown	0	3	An accumulation of gas near the face of an airway slant was ignited by an unknown source. Possibly sparks from a pick.
924; Sept. 15, 1952		do	do	Locomotive	0	1	Gas in a roof cavity was ignited by an arc between the trolley wire and the trolley pole shoe of a locomotive.
992; Oct. 7, 1952		do	do	Cable reel locomotive	0	2	An electric arc on the cable reel locomotive ignited gas when a short circuit occurred in the trailing cable on the reel of a loading machine.
1361; Oct. 21, 1952		do	do	Explosives	0	4	Explosion occurred when an accumulation of gas was ignited by firing an unconfined charge of permissible explosives.
1970; Oct. 23, 1952		do	do	Unknown	0	2	Inadequate face ventilation permitted accumulation of gas. The means of igniting the gas resulting in the explosion was undetermined.
1752; Nov. 12, 1952		West Virginia	do	Locomotive	0	1	The explosion occurred when methane was ignited in roof cavity by an arc from the nip of a cable-reel locomotive.
2081; Dec. 9, 1952		Pennsylvania	do	Flame safety lamp or smoking	0	2	Accumulation of methane in a rock hole was ignited by a permissible flame safety lamp or by smoking.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
4612; Jan. 3, 1953	1	Pennsylvania	Nongassy	Open flame	0	1	Methane ignited by match while worker attempting to ignite a blasting fuse.
2397; Jan. 16, 1953		do	Gassy	Flame safety lamp	1	2	Lamp raised into explosive mixture of methane and air while a jet of compressed air was striking the lamp, thus forcing flame through the lamp gauzes.
738; Jan. 29, 1953		do	do	Explosives	0	3	Either an underburdened shot or burning explosives ignited gas released by previous shots.
Feb. 20, 1953	2	do	Nongassy	Open flame lamp	0	1	Presumably an ignition of gasoline fumes from a leaky surface pipeline ignited by a carbide lamp.
3612; Feb. 25, 1953	3	do	do	Electric arc	0	2	Presumably gasoline vapors which entered the mine from a leaky surface pipeline was ignited by arcs from the wheels of a cutting machine being trammed along the haulageway.
12334; Mar. 6, 1953		West Virginia	Gassy	Electric light socket	3	0	Arc from short circuit at light socket in shaft being sunk ignited methane.
10169; Mar. 12, 1953		do	do	Cutting machine bits	0	0	Arc from grounded machine bits touching a roof bolt ignited methane at face.
3563; Mar. 30, 1953	4	Iowa	Nongassy	Black powder	5	0	2 blown-out shots of black blasting powder ignited coal dust.
12902; Mar. 30, 1953	5	Kentucky	do	Explosives	0	0	Blown out shots ignited coal dust.
134; Apr. 28, 1953		Pennsylvania	Gassy	Continuous miner bits	0	2	Sparks emitted when miner bits struck sandstone roof ignited methane from face feeder.
615; May 1, 1953		do	do	Explosives	0	0	Blown out shot ignited gas in the kerf.
11595; May 5, 1953	6	Kentucky	Nongassy	Open flame	0	0	Methane in roof cavity ignited by open-flame (carbide) lamp.
2338; May 9, 1953		West Virginia	Gassy	Matches	0	0	Presumably boys playing near an abandoned shaft ignited gas escaping from mine.
4251; May 12, 1953		Pennsylvania	do	Explosives	2	0	Presumably gas was ignited by underburdened shots.
527; May 29, 1953		do	do	do	2	2	Methane ignited by blasting.
1723; June 3, 1953		West Virginia	do	Locomotive	1	0	Arc or spark from locomotive being used by fire boss ignited methane in roof cavity.
June 4, 1953		Pennsylvania	do	Electric drill	0	4	Methane at face ignited by an arc from hand-held electric coal drill.
1361; June 12, 1953		do	do	Explosives	0	2	An unconfined charge of explosives used to start coal inside battery ignited methane.
169; June 22, 1953		West Virginia	do	Loading machine	0	3	Arc from "blown" trailing cable ignited gas at face.
4187; Aug. 12, 1953		Pennsylvania	do	Match	0	1	Methane ignited by workman when attempting to light a cigarette with a match.
11845; Aug. 14, 1953		do	do	Explosives	0	7	Presumably an underburdened blast shot through into methane and ignited it.
Aug. 26, 1953		do	do	Match	0	1	Methane liberated by a blast ignited when miner attempted to light cigarette with match.
Sept. 9, 1953	7	do	Nongassy	Open-flame lamp	0	2	Methane accumulated while mine was idle and not ventilated; ignited by open flame lamp during inspection by operators.
647; Oct. 3, 1953		Indiana	Gassy	Electric arc or smoking	0	0	Inadequate ventilation permitted methane to accumulate at face of slope and the gas was ignited by arc from locomotive controller or smoking.
918; Oct. 30, 1953		Illinois	do	Trolley locomotive	0	2	Arc from trolley wheel of locomotive ignited gas along haulageway.
169; Nov. 4, 1953		West Virginia	do	Power feeder cable	0	1	Methane in a high spot in roof ignited by arc at defective splice in feeder cable.
11; Nov. 20, 1953		Pennsylvania	do	Power tap	0	0	Arc created when power tap was removed from trolley wire ignited methane.
1666; Dec. 13, 1953		West Virginia	do	Trolley locomotive	0	2	Methane in a large roof cavity was ignited by an arc created when trolley pole contact was removed from the trolley wire.
3954; Jan. 7, 1954		Kentucky	do	Unknown	0	1	A small accumulation of gas was ignited near the face of a developing entry, but the exact cause was unknown; possibly smoking.
832; Jan. 13, 1954		West Virginia	do	Cutting machine bits	0	0	Cutting bits struck rock and sparks ignited gas in the kerf.
12339; Feb. 9, 1954		Colorado	do	Nonpermissible electric drill	0	2	Methane under pressure was tapped by a drill auger and ignited by a nonpermissible electric drill.
325; Feb. 17, 1954		West Virginia	do	Explosives	0	1	Explosion in a shear when gas or coal dust or both were ignited by improperly confined permissible explosives fired in a borehole.
672; Feb. 18, 1954		do	do	Roof-bolt machine	0	0	Gas feeders at the face were ignited while a roof-bolt hole was being drilled. Frame-ground fault, permissible drill.
1363; Apr. 6, 1954		do	do	Loading machine	0	3	A ventilation change left one section inadequately ventilated and methane from bleeders entered a haulageway and was ignited by an arc from "nipping" a loading a loading machine.
0; Apr. 9, 1954		Pennsylvania	Nongassy	Open-flame carbide lamp	0	1	Accumulation of methane in a chute face was ignited by an open-flame carbide light.
2430; Apr. 14, 1954		do	Gassy	Explosives	0	2	Explosion resulted from firing an unconfined charge of permissible explosives to break a large peice of coal that blocked a battery.
2249; Apr. 17, 1954		Colorado	do	Old fire area	0	0	A damaged seal permitted rekindling of an old fire area. Delay in repairing the damaged seal permitted an accumulation of gases which ignited causing an explosion.
745; April 27, 1954		Pennsylvania	do	Locomotive	0	0	Arc between trolley pole slide contactor and trolley wire ignited gas in a roof cavity.
4187; April 28, 1954		do	do	Match or open-type electric drill	0	4	Explosion occurred when an accumulation of methane was ignited when an attempt was made to smoke at the face or by an arc from an open-type electric drill.
1152; May 4, 1954		Indiana	do	Continuous miner bits	0	4	Sparks from continuous miner bits striking roof rock ignited gas.
1152; May 6, 1954		do	do	do	0	1	Do.
2158; May 10, 1954		Tennessee	Nongassy	Matches	0	0	Gas issuing from face boreholes was ignited with matches by members of the face crew.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
1689; May 12, 1954	9	West Virginia	Gassy	Locomotive	1	6	Explosion resulted from gas forced from old workings being ignited by a locomotive.
9439; May 17, 1954	10	Kentucky	Nongassy	Open-flame carbide lamp	0	0	A miner using a carbide lamp for portable illumination ignited gas issuing from a shot hole he was tamping.
3796; May 24, 1954		Washington	Gassy	Nonpermissible electric drill	0	2	Nonpermissible electric drill ignited gas accumulation at a face.
14076; May 28, 1954	11	Pennsylvania	Nongassy	Smoking or arc from signal station.	0	3	The explosion resulted from an attempt to light a cigarette or by an arc produced at a slope signaling station.
2423; June 8, 1954		Oklahoma	do	Cutting machine	0	0	A short-circuit in the cutting machine cable ignited gas issuing under the cut.
7403; July 16, 1954		Kentucky	do	Cutting machine bits	0	0	Gas was ignited when cutting machine bits created sparks when they encountered sulfur streaks in a shear cut.
2336; Aug. 24, 1954		Pennsylvania	do	Explosives	1	0	Explosion resulted when an accumulation of gas was ignited by the firing of an unconfined charge of permissible explosives to break rock in a draw hole.
4; Aug. 27, 1954		do	do	Trolley locomotive	1	0	Trolley locomotive operated by a fire boss ignited gas during a preshift examination.
2101; Sept. 28, 1954		do	do	Explosives	0	8	Explosives were fired in the presence of methane.
1367; Nov. 3, 1954		do	do	Loading machine	0	0	Methane was ignited at the face of a room when the conductors of a trailing cable of a loading machine short-circuited at the point where the cable entered the machine
78; Nov. 13, 1954		West Virginia	do	Explosives	16	0	Major explosion occurred when permissible explosives were fired in a nonpermissible manner to blast pillar stamp in an explosive mixture of air and methane.
535; Nov 17, 1954		Pennsylvania	do	do	0	0	Gas was ignited at the face of an entry by underburdened permissible explosives charge. Four previous shots had dislodged the coal and released gas.
13941; Nov. 30, 1954	12	Kentucky	Nongassy	do	0	2	When blasting with permissible explosives from the 250-volt circuit gas was ignited by an arc at a bare place in the blasting cable.
Dec. 13, 1954		Pennsylvania	Gassy	Match	0	3	Gas at a working face was ignited when one of the workmen attempted to light a cigarette with a match.
2985; Jan. 18 1955		do	do	Drill bit	0	0	Sparks from drill bit striking draw slate ignited methane in a roof cavity.
931; Jan. 28 1955		West Virginia	do	Loading machine or shuttle car	2	5	Arc from short circuit in either the loading machine or a shuttle car, neither maintained in permissible condition ignited methane.
1303; Feb. 14 1955		Utah	do	Mine car	0	0	Arc from grounded car wheel sitting on sand ignited coal dust in suspension.
61; Feb. 25 1955		West Virginia	do	Explosives	0	0	Underburdened shot ignited small accumulation of methane at face of a cross cut.
2397; Mar. 14 1955		Pennsylvania	do	Cutting machine bits	0	0	Sparks emitted when bits struck pyrites ignited methane in the kerf.
615; Mar. 18, 1955		do	do	Explosives	0	0	An underburden shot ignited methane at the face.
----- Apr. 25, 1955		do	do	Smoking	1	1	Presumably a worker attempted to light a cigar and ignited methane.
12350; Apr. 25, 1955		do	do	Explosives	0	2	Shots were fired in the presence of methane.
12343; Apr. 25, 1955		Kentucky	do	Cigarette lighter	0	2	Worker attempted to light a cigarette and ignited methane.
1896; June 9, 1955		Pennsylvania	do	Explosives	0	0	Improper blasting practices permitted flame to ignite methane.
615; June 17, 1955		do	do	Cutting machine bits	0	0	Sparks emitted when bits struck hard material ignited methane in the kerf.
1896; June 18, 1955		do	do	Explosives	0	0	Faulty blasting practices caused methane to be ignited at face.
14431; June 18, 1955	13	do	Nongassy	Electric drill	0	1	Arc from open-type coal drill ignited methane at face.
14535; July 23, 1955	14	do	do	do	0	2	Arc from open-type electric coal drill ignited methane at face.
11538; Aug. 23, 1955		West Virginia	Gassy	Cutting machine bits	0	0	Spark from bits striking steel roof bolt ignited methane at face.
7925; Aug. 29, 1955		Ohio	do	Trolley wire	0	2	Arc created when trolley shoe made contact with wire ignited methane at roof.
4219; Oct. 22, 1955		Pennsylvania	do	Electric drill	0	2	Arc from open-type electric coal drill ignited methane at face.
495; Nov. 8, 1955		Ohio	do	Cutting machine bits	0	0	Sparks emitted when bits struck hard material ignited methane in kerf.
169; Nov. 30, 1955		West Virginia	do	Continuous miner	0	5	Arc from short circuit owing to defective insulation on headlight cable ignited methane at face.
2635; Dec. 9, 1955		Pennsylvania	do	Explosives	1	1	Mudcap shot subsequent to blasting ignited methane at face.
12569; Dec. 19, 1955	15	Maryland	Nongassy	Smoking	0	1	Miner lighting cigarette ignited gas issuing from clay vein 40 feet out by the face.
0; Jan. 4, 1956		Pennsylvania	Gassy	Hand-held electric drill	0	2	Methane accumulation accumulated in a chute and was ignited by an open-type electric hand-held drill resulted in an explosion.
2350; Feb. 3, 1956		Oklahoma	do	Old mine fire	0	0	Methane was ignited by rekindled mine fire. (Mine fire occurred Nov. 17, 1955.)
4761; Feb. 14, 1956	16	Ohio	Nongassy	Carbide gas	0	2	Carbide and black powder stored together in metal container. Open carbide light ignited carbide gas and black powder.
1882; Feb. 20, 1956	17	Colorado	do	Combustible gases of mine fire	0	0	Combustible gases of rekindled mine fire were ignited.
965; Feb. 24, 1956		Pennsylvania	Gassy	Explosives	0	0	Permissible explosives charge in draw slate ignited accumulation of gas in roof cavity at back of the cut.
9412; Feb. 28, 1956	18	Alabama	Nongassy	Open-flame lamp	0	0	Accumulation of gas ignited with open flame (carbide) lamp.
615; Mar. 2, 1956		Pennsylvania	Gassy	Cutting machine bits	0	0	Friction spark from cutting machine bits ignited gas in kerf.
11482; Mar. 14, 1956		Pennsylvania	do	Open-type drill, match or cigarette.	0	2	Gas accumulation ignited by arc from open-type drill, match, or cigarette.

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
615; Mar. 20, 1956		Pennsylvania	Gassy	Cutting machine bits	0	0	Friction sparks from cutting machine bits ignited gas in the kerf.
11010; Mar. 21, 1956	19	Colorado	Nongassy	Open-type hand-held drill	0	2	Accumulation of methane in the face area ignited by an arc from an open-type hand-held drill.
296; Mar. 22, 1956		West Virginia	Gassy	Continuous miner bits	0	0	Cutter bits on a continuous miner struck a sulfur streak, and sparks ignited an accumulation of gas.
3455–A; Apr. 3–4, 1956		Indiana	do	Cutting machine bits	0	0	Six gas ignitions in kerfs from friction sparks or from ground-fault current arcs from cutting chains.
11538; Apr. 6, 1956		West Virginia	do	Loading machine	0	0	Trailing cable of the loading machine shorted and ignited gas feeders along the coal rib.
697; Apr. 12, 1956		Pennsylvania	do	Shuttle car	0	0	Two gas ignitions occurred when gas feeders in the floor were ignited when a shuttle car ran over its trailing cable and pulled it apart.
133; Apr. 13, 1956		West Virginia	do	Flame safety lamp	0	1	Methane ignited in an undetermined manner while testing with a flame safety lamp.
11538; Apr. 24, 1956		do	do	Cutting machine bits	0	0	Gas ignition occurred in the kerf of a topcut being made in the coal face when the carbide-tipped bits of the cutting machine struck a sulfur streak.
615; May 21, 1956		Pennsylvania	do	Locomotive	0	1	Arc from the trolley nip of a cable-reel locomotive ignited an accumulation of gas in a roof cavity in an airlock.
564; May 31, 1956		Alabama	do	Trolley locomotive	2	0	Explosion resulted from a gas accumulation in an inactive area which was ignited by a trolley locomotive operated by a fire boss.
527; June 9, 1956		Pennsylvania	do	Explosives	0	5	The direct cause of the explosion was the ignition of methane by the detonation of an unconfined charge of explosives used to start a flow of material at a battery.
649; July 12, 1956		Kentucky	do	Trolley wire	1	1	Mine personnel carrier being operated by nipping ignited an accumulation of gas which resulted in the explosion.
19050; July 17, 1956	20	do	Nongassy	Open flame bits	0	0	Open-flame carbide lamp ignited gas as mine car was pushed into the face area to be loaded.
133; July 19, 1956		West Virginia	Gassy	Cutting machine bits	0	0	Ignition occurred in a shear cut when the bits of a cutting machine struck a hard substance.
11182; Aug. 31, 1956		Colorado	do	Explosives	0	0	Gas ignited by improperly burdened shot of permissible explosives.
325; Sept. 18, 1956		West Virginia	do	Loading machine	0	0	Gas was ignited by an arc from the nip of a loading machine trailing cable.
11538; Oct. 8, 1956		do	do	Roof-bolt machine	0	0	Ground-fault arc ignited gas when bolting machine contacted a roof bolt.
134; Oct. 20, 1956		Pennsylvania	do	Locomotive	0	1	Methane in a roof cavity was ignited by a trolley-pole locomotive operated by an official on an idle day.
17358; Oct. 23, 1956	21	Kentucky	Nongassy	Explosives	0	0	Small dust explosion was initiated when shooting off an overhanging rib with nonpermissible explosives.
3455–A; Oct. 25, 1956		Indiana	Gassy	Blasting cable	0	0	Arc was caused by moving blasting cable that touched the "nipping" station and ignited gas at the face.
1618; Nov. 2, 1956		Pennsylvania	do	Dust in conveyor belt drive motor.	0	3	Coal dust was thrown into suspension by blowing out a conveyor belt drive motor with oxygen and ignited by dormant fire in the motor casing.
325; Nov. 2, 1956		West Virginia	do	Explosives	0	1	The explosion occurred when unconfined shots were fixed in crevices of fallen roof material in the presence of explosive gas.
245; Nov. 7, 1956		Pennsylvania	do	Acetylene torch	4	0	The explosion was caused by a body of gas that had accumulated beneath a false shaft bottom being ignited with hot metal falling down the shaft or the flame of an acetylene torch which was used to burn holes in a beam.
6342; Nov. 28, 1956	22	do	Nongassy	Open-flame carbide lamp	0	0	Methane was ignited by an open-flame carbide lamp.
20159; Nov. 29, 1956		Tennessee		Open-flame lamp	0	1	Acetylene explosion from carbide stored in a can with blasting caps was ignited by an open-flame carbide lamp which in turn ignited the blasting caps.
366; Dec. 5, 1956		Pennsylvania	Gassy	Explosives	0	0	Underburdened permissible explosives charge ignited gas at the back of a cut.
573; Dec. 14, 1956		do	do	Shuttle car	0	0	Sparks created by shuttle-car trailing cable rubbing against a roof-bolt assembly probably ignited gas in a roof cavity at the shuttle-car ramp.
716; Dec. 20, 1956		do	do	Open-type signal	0	2	Arc from an open-type signal button ignited gas near the face of a chamber resulted in an explosion.
3198; Dec. 20, 1956		West Virginia	do	Trolley locomotive	1	0	Explosion resulted from methane accumulation in a large roof cavity which was ignited by a trolley locomotive operated by a foreman.
15477; Dec. 21, 1956		Colorado	do	Electric drill	0	2	A nonpermissible hand-held electric drill ignited gas issuing from freshly drilled boreholes in the coal face.
20121; Dec. 26, 1956		Utah	Nongassy	Explosives	1	0	Explosion was caused by improperly placed and charged permissible explosives in boreholes igniting excessive coal dust suspended in the air. 2 unemployed boys visiting in the mine also killed—not charged to industry.
12334; Jan. 3, 1957		West Virginia	Gassy	Power wire	0	0	Power wires enclosed in a casing within the shaft became bare through vibration possibly, and an arc occurred which ignited methane in the shaft.
10419; Jan. 11, 1957		Kentucky	do	Smoking	0	1	Presumably, the shot firer was smoking during the preparation of a blast and ignited gas at face.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
3936; Jan. 17, 1957	24	Pennsylvania	Nongassy	Open-flame cap lamp	0	0	Officials making inspection with open-flame lights ignited methane entering mine from old gas well.
Jan. 17, 1957		do	Gassy	Match	0	1	Miner inspecting face after blasting lighted match and ignited methane.
2587; Jan. 18, 1957		Alaska	do	Explosives	5	0	An underburdened shot ignited methane and coal dust.
18003; Jan. 23, 1957		Pennsylvania	Gassy	Electric drill	0	2	Arc from nonpermissible hand-held electric drill ignited methane at face.
1752; Feb. 4, 1957		West Virginia	do	Electric arc	37	0	An arc from any one of four electrically operated machines or their power cables or the "nipping" station could have ignited methane accumulated as a result of a ventilation disruption.
3936; Feb. 5, 1957	25	Pennsylvania	Nongassy	Open-flame cap lamp	0	0	Methane escaping from an old gas well was ignited by an open-flame cap lamp.
535; Feb. 19, 1957		do	Gassy	Shuttle car	0	4	Arc from grounded shuttle car touching frame of continuous miner ignited methane.
2621; Feb. 26, 1957	26	Kentucky	Nongassy	Match	0	0	Miner lighted a match after drilling blast hole and ignited gas issuing from hole.
866; Mar. 10, 1957		West Virginia	Gassy	Mine jitney	0	2	When foreman removed trolley pole from wire the arc ignited methane issuing from feeder in roof cavity.
19840; May 1, 1957	27	Pennsylvania	Nongassy	Open flame cap lamp	0	2	Miner attempting to ignite blasting fuse with carbide lamp ignited methane.
965; May 1, 1957		do	Gassy	Explosives	0	0	Explosive charge ignited methane in kerf owing to crevice in coal extending to the blast hole.
615; May 10, 1957		do	do	Loading machine	0	0	Arc from "blown out" trailing cable ignited methane at face.
17358; May 27, 1957		Kentucky	do	Continuous miner bits	0	0	Sparks created when bits struck boulders in coalbed ignited methane.
8008; June 6, 1957		Ohio	do	Cutting machine bits	0	0	Sparks emitted when bits struck pyrite in the kerf and ignited methane.
2397; June 14, 1957		Pennsylvania	do	Flame safety lamp	3	2	Directed stream of compressed air against safety lamp to clear lamp of methane and forced flame through lamp gauze which ignited methane in the working place.
20015; July 29, 1957		Colorado	do	Loading machine	0	2	Arc created when boom of loading machine broke contact with frame of shuttle car and ignited coal dust in suspension.
8008; Aug. 2, 1957		Ohio	do	Cutting machine bits	0	0	Sparks created when bits struck pyrites ignited methane in kerf.
866; Aug. 6, 1957		West Virginia	do	do	0	0	Sparks emitted when bits struck sandstone ignited methane in kerf.
366; Sept. 23, 1957		Pennsylvania	do	Trolley locomotive	6	5	Fan breakdown permitted methane to accumulate and the gas was ignited by arc from trolley locomotive.
2766; Sept. 25, 1957	28	Illinois	Nongassy	Continuous miner bits	0	3	Sparks created when bits struck rock in the coal bed ignited methane.
2336; Oct. 9, 1957		Pennsylvania	Gassy	Trolley locomotive	0	2	Trolley pole leaving wire caused an arc which ignited methane.
16000; Nov. 16, 1957	29	do	Nongassy	Blower fan or match	0	3	Methane ignited by nonpermissible blower fan motor or a match.
3768; Nov. 20, 1957		do	Gassy	Spark from steel bar	0	1	Presumably the methane was ignited by spark emitted when rock was struck with a steel bar.
2906; Dec. 11, 1957		Arkansas	do	Open flame	4	0	Methane accumulation resulting from disrupted ventilation ignited by open flame. (match or cigarette lighter).
1939; Dec. 27, 1957		West Virginia	do	Electric arc	11	0	Arc or spark from electric equipment or cable ignited the gas.
20058; Jan. 10, 1958	30	Virginia	Nongassy	Open-flame cap lamp	0	0	Methane ignited by open-flame (carbide) lamp used by a miner.
404; Jan. 17, 1958		Ohio	Gassy	Mine jitney	0	1	Arc from trolley of mine jitney ignited gas while official was examining mine.
13296; Jan. 31, 1958	31	Tennessee	Nongassy	Open flame cap lamp	0	0	Methane ignited by open flame (carbide) lamp used by miner.
1885; Feb. 6, 1958		West Virginia	Gassy	Continuous miner bits	0	2	Sparks created by bits striking sulfur balls or iron pyrites ignited methane at face.
14893; Apr. 8, 1958		Virginia	do	Undertermined	2	4	An accumulation of methane in pillared area as a result of discontinuance of the bleeder system was ignited by some means during a heavy roof fall possibly sparks from rock striking rock.
166; May 1, 1958		Pennsylvania	do	Explosives	0	3	Unconfined charge of explosives ignited methane at clogged battery.
551; June 11, 1958		do	do	Cutting machine cable nip	0	4	Methane entrapped between airlock doors was ignited by arc from "stinger" used to move the cutting machine.
2635; June 19, 1958		do	do	Explosives	1	4	Methane liberated by a blast ignited by subsesequent unconfined charge of explosives.
296; June 27, 1958		West Virginia	do	Trolley wire	0	1	Operation of taking down rock forced energized trolley wire against locomotive frame and resulting arc ignited methane in a roof cavity.
2930; July 9, 1958		do	do	Pump motor	3	0	Methane was ignited by an arc when the pump motor was energized.
1579; Aug. 22, 1958		do	do	Flame safety lamp	0	2	Methane ignited when making test for gas with a defective lamp.
1555; Sept. 6, 1958		Pennsylvania	do	Trolley locomotive	0	1	Arc from trolley of locomotive ignited methane.
213; Sept. 18–19, 1958		do	do	Continuous miner bits	0	3	Sparks emitted when bits struck pyritic material ignited methane at face.
1752; Sept. 26, 1958		West Virginia	do	Cutting machine bits	0	0	Sparks created when bits struck sandstone ignited methane in kerf.
832; Sept. 29, 1958		do	do	Explosives	0	0	Underburdened shots in rock ignited methane in area of blasts.
9713; Oct. 2, 1958	32	Tennessee	Nongassy	Open-flame cap lamp	0	1	Coal dust blown from drill hole by compressed air was ignited by open flame (carbide) lamp.
13296; Oct. 17, 1958		do	Gassy	Open-flame cap lamp	0	0	Methane intentionally ignited by open flame (carbide) lamps to get rid of the gas.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
1361; Oct. 27, 1958		Pennsylvania	Gassy	Flame safety lamp	0	1	Attempting to relight a flame safety lamp in jet of compressed air—possibly gas in lamp caused flame to penetrate gauze and ignite gas outside the lamp.
1752; Oct. 27, 1958		West Virginia	do	Blasting	22	0	Shots blasted through into an adjacent place and ignited gas.
2806; Oct. 28, 1958		do	do	Power wires	14	3	Fall of roof forced power wires against return wires or frame of belt and resulting arc ignited methane.
2261; Dec. 5, 1958		Pennsylvania	do	Explosives	0	1	An unconfined charge of permissible explosives employed to take down roof rock ignited gas at face.
25618; Dec. 11, 1958	33	do	Nongassy	Electric drill	0	3	Sparks or arcs created when drill cable was connected to power line ignited methane at face.
1565; Dec. 19, 1958		Washington	Gassy	do	0	2	Arc from a nonpermissible hand-held electric drill ignited methane at face.
12334; Jan. 29, 1959		West Virginia	do	Flame safety lamp	1	0	Methane ignited when miner attempted to relight his flame safety lamp in a canted position about 20 feet from the face. Lamp not defective when examined but had been opened and reassembled previously.
12334; Feb. 5, 1959		do	do	Continuous miner bits	0	0	Sparks emitted when bits struck pyritic inclusions in coal bed ignited at face.
14605; Feb. 6, 1959		do	do	Cutting machine bits	0	0	Arc at bit tips from grounded resistance in machine ignited methane at face.
14411; Mar. 2, 1959	34	do	Nongassy	Explosives	0	1	Improperly confined charge of permissible explosives ignited coal dust in a shear kerf.
495; Mar. 18, 1959		Ohio	Gassy	Loading machine	0	0	Arc from short circuit in trailing cable coiled on top of loading machine ignited methane at face.
6866; Mar. 23, 1959	35	Tennessee	Nongassy	Locomotive or smoking	9	0	An accumulation of methane resulting from intermittent fan operation was forced to a locomotive when fan was started and ignited either by the locomotive or smoking.
157–A; Apr. 16, 1959		Pennsylvania	Gassy	Cutting machine bits	0	1	Sparks emitted when the bits struck hard material ignited methane in shear cut.
17353; Apr. 22, 1959		do	do	Flame safety lamp	0	1	Methane ignited when testing for gas with a defective improperly assembled lamp.
6342; May 5, 1959		do	do	Blower fan	0	2	An arc or spark from the open-type blower fan ignited methane accumulated as a result of disrupted ventilation.
318; June 1, 1959		West Virginia	do	Mine jitney	0	0	Arc created when trolley pole was suddenly displaced from the wire ignited methane.
697; June 4, 1959		Pennsylvania	do	Continuous miner bits	0	0	Sparks emitted when bits struck a pyritic inclusion in coal bed ignited methane at face.
1080; June 11, 1959		West Virginia	do	Electric pump	0	1	When using a bolt as a pry bar the pressure against an electric contact box caused a short circuit and methane issuing from a roof bolthole was ignited by the ensuing arc.
10169; June 22, 1959		do	do	Cutting machine bits	0	0	Sparks emitted when the carbide tipped bits struck pyrite streaks ignited methane in kerf.
17594; June 23, 1959		Virginia	do	Flame safety lamp	0	0	Methane was ignited when testing for gas with an improperly assembled lamp.
20115; Aug. 15, 1959		Colorado	do	Oxy-acetylene torch	0	3	Cutting during repair of fan motor coupling in fanhouse on surface ignited methane and explosion spread throughout the mine.
134; Aug. 20, 1959		Pennsylvania	do	Continuous miner bits	0	1	Sparks emitted when bits struck pyritic streaks ignited methane in pillar split.
10169; Aug. 31, 1959		West Virginia	do	Cutting machine bits	0	0	Sparks created by bits striking pyritic material ignited methane in kerf.
20918; Oct. 8, 1959	36	Pennsylvania	Nongassy	Flame safety lamp	0	2	Restarting a fan caused methane to move over an improperly assembled flame lamp which ignited the gas.
495; Oct. 9, 1959		Ohio	do	Cutting machine bits	0	0	Sparks emitted when bits struck hard material ignited methane in kerf.
2541; Oct 20, 1959		Illinois	do	Continuous miner	0	3	Arc in control panel of continuous miner ignited methane.
17639; Nov. 4, 1959	37	Virginia	Nongassy	Cigarette lighter	0	2	Methane at face ignited by flame of cigarette lighter.
573; Dec. 11, 1959		Pennsylvania	Gassy	Continuous miner bits	0	0	Sparks emitted when bits struck sulfur ball ignited methane at face.
551; Dec. 21, 1959		do	do	Roof bolt drill	0	0	Sparks emitted by a drill bit striking hard roof material ignited gas feeders in roof.
697; Jan. 3, 1960		do	do	Electric arc	0	0	Methane from abandoned area seeped into haulage entry and was ignited by an electric arc from a trolley shoe.
495; Feb. 22, 1960		Ohio	Gassy	do	0	0	Short circuit in the switch case of drill ignited methane from kerf.
8008; Mar. 1, 1960		do	do	Cutting machine bits	0	0	Cutting machine bits struck pyrite band and ignited methane in kerf.
366; May 17, 1960		Pennsylvania	do	do	0	0	Sparks from cutting machine bits ignited gas in the kerf.
14818; July 1, 1960		do	do	Electric arc	0	2	Methane was ignited by an arc or spark from an open-type electric motor on a blower fan.
17651; July 12, 1960		Ohio	do	Continuous miner bits	0	0	Cutter bits of continuous miner struck pyrite in the roof coal and the frictional sparks ignited methane.
256; July 20, 1960		Alabama	do	Flame safety lamp	0	2	Methane at face ignited by flame safety lamp.
10347; Aug. 16, 1960	38	Virginia	Nongassy	Carbide lamp	0	0	Methane at the face was ignited by an open flame (carbide) lamp.
19195; Aug. 23, 1960	39	Kentucky	do	do	0	0	Methane was ignited in a shothole when an attempt was made to light a fuse with a carbide lamp.
10169; Aug. 26, 1960		West Virginia	Gassy	Acetylene torch	0	0	Flame from acetylene torch ignited methane in a top sealed borehole casing as a hole was being burned in portion of pipe extending above ground.
874; Sept. 11, 1960		do	do	Electric arc	1	0	Arc at trolley shoe of portal bus ignited methane that had accumulated during fan shutdown
20115; Oct. 27, 1960		Colorado	do	do	0	0	Arc in open contactor compartment of continuous miner ignited methane.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
25040; Nov. 1, 1960	40	Virginia	Nongassy	Electric arc	0	1	Arc produced when a bare portion of a storage battery cable contacted the metal battery case ignited hydrogen gas trapped in battery case during charging.
1152; Nov. 4, 1960		Indiana	Gassy	Continuous miner bits	0	1	Methane at face ignited by sparks created when continuous miner bits struck pyrite.
9674; Nov. 1960		Pennsylvania	do	Electric drill	0	2	Methane at face ignited by arc or spark from an open-type electric drill.
4; Nov. 8, 1960		do	do	Electric arc or continuous miner bits.	0	0	Methane was ignited by frictional sparks from the bits of the continuous miner or atomized hydraulic oil from a leaking high pressure fitting was ignited by an electric arc.
15888; Dec. 7, 1960	41	do	Nongassy	Electric arc	0	1	Methane ignited by an arc or spark from a nonpermissible electric blower fan.
17,695; Dec. 22, 1960	42	West Virginia	do	Frictional spark	0	6	Arc or spark created when air compressor reservoir ruptured ignited oil vapors.
25,052; Dec. 28, 1960	43	do	do	Lighted match	2	0	Methane was ignited when an attempt was made to light a cigarette with a match.
12359; Jan. 4, 1961		Pennsylvania	Gassy	Electric drill	0	1	Arc or spark from open-type hand-held electric drill ignited methane accumulation resulting from disrupted ventilation.
20115; Jan. 13, 1961		Colorado	do	Continuous miner	0	0	Arc caused when broken shaft severed energized cable ignited methane issuing from floor.
1152; Jan. 16, 1961		Indiana	do	Continuous miner bits	0	3	Sparks emitted when bits struck pyritic boulder in coal bed ignited methane at face.
17491; Jan. 17, 1961		West Virginia	do	Cutting machine	0	0	Sparks emitted when cutter-bar sprocket struck roof bolt ignited methane at face.
2221; Jan. 21, 1961		Pennsylvania	do	Flame safety lamp	0	3	Methane ignited by improper use of a flame safety lamp.
366; Feb. 16, 1961		do	do	Continuous miner bits	0	0	Sparks emitted by bits striking hard draw slate ignited methane at face.
4061; Mar. 2, 1961		Indiana	do	Electric arc or open flame	22	0	Methane accumulated as result of deranged ventilation and was ignited by arc from electric equipment or an open flame.
25484; Apr. 13, 1961		Colorado	Nongassy	Smoking	0	1	Presumably methane was ignited when a miner attempted to light a cigarette.
7836; Apr. 17, 1961		West Virginia	Gassy	Continuous miner bits	0	2	Sparks emitted when the bits struck sandstone roof ignited methane at face.
296; Apr. 18, 1961		do	do	do	1	5	Sparks created by the bits striking sandstone and streaks of pyrite ignited methane at face.
5811; May 8, 1961	45	Indiana	Nongassy	Match	1	1	Gasoline vapor escaping from a gasoline powered pump used to dewater a slope ignited by a match.
20057; May 9, 1961	46	Virginia	do	Open flame cap lamp	0	0	Methane ignited at face by an open-flame (carbide) lamp.
14893; May 16, 1961		do	Gassy	Electric welding machine	0	1	Arc produced by an electric welding machine used to cut off an extended roof bolt ignited methane at a loading point.
132; May 29, 1961		West Virginia	do	Locomotive	2	1	Arc produced by trolley slide moving along wire ignited methane.
28918; May 30, 1961	47	do	Nongassy	Smoking	0	1	Presumably gas was ignited when a workman attempted to ignite smoking material.
22112; July 29, 1961		Virginia	Gassy	Open flame cap lamp	1	2	Coal being loaded from beneath a roof cavity and an exchange of lamps by miners ignited methane collected in cavity.
26555; Aug. 3, 1961	48	do	Nongassy	do	0	0	Methane at face was ignited by an open flame (carbide) lamp.
29631; Aug. 28, 1961	49	Pennsylvania	do	Electric arc	0	3	Arc from nonpermissible electric motor driving blower fan ignited methane at chute entrance.
23453; Oct. 7, 1961	50	do	do	Electric drill	0	1	Arc or spark from an open-type electric drill ignited methane at face.
495; Oct. 20, 1961		Ohio	Gassy	Cutting machine bits	0	0	Sparks emitted when machine bits struck a pyrite band ignited methane in kerf.
134; Oct. 26, 1961		Pennsylvania	do	Continuous miner bits	0	4	Sparks emitted when bits or cutting arm of miner struck pyrites in the roof ignited methane and coal dust.
366; Nov. 24, 1961		do	do	do	0	0	Sparks emitted when bits struck pyritic material ignited methane near the face.
25498; Nov. 28, 1961	51	Virginia	Nongassy	Open flame lamp	0	0	Methane released from loose coal was ignited by a miners' open flame (carbide) lamp.
1395; Dec. 12, 1961		West Virginia	Gassy	Continuous miner bits	0	4	Sparks created when continuous miner bits struck pyritic material ignited methane at face.
15433; Dec. 14, 1961		Pennsylvania	do	Electric coal drill	0	1	Arc from open-type, hand-held drill ignited methane at face.
17849; Jan. 10, 1962	52	Illinois	Nongassy	Electric arc	11	0	Methane ignited at the face by an electric arc from an open panel on a shuttle car.
32873; Jan. 11, 1962	53	Virginia	do	Blown-out shot	0	0	A blown out shot or shots ignited coal dust in suspension.
17651; Feb. 2, 1962		Ohio	Gassy	Continuous miner bits	0	2	Sparks resulting from the carbide-tipped bits of the continuous miner cutting pyrites ignited methane.
92; Feb. 5, 1962		Pennsylvania	do	Blown-out shot	0	1	Blown-out shot ignited methane.
92; Feb. 7, 1962		do	do	Unconfined open blast	0	2	An open unconfined charge of explosive ignited methane.
30386; Apr. 9, 1962	54	do	Nongassy	Lighting match	0	1	Methane was ignited by a lighted match.
573; May 24, 1962		do	Gassy	Undetermined	0	0	Methane emitting from around a roof bolt and fissure in the roof was ignited by an undetermined source.
5257; June 6, 1962		do	do	Electric arc	0	5	Methane was ignited by arcs or flame from defective electrical face equipment.
17609; June 12, 1962		West Virginia	do	do	1	0	Electric arc from an open-type battery powered mine tractor ignited an accumulation of methane.
10707; June 12, 1962		Pennsylvania	do	do	0	0	Arcing from an open type electric pump motor ignited an accumulation of methane.
22719; Aug. 9, 1962		Virginia	do	Match flame	0	1	Methane was ignited in the face area by the flame of a match.
1150; Sept. 7, 1962	55	Utah	Nongassy	Cutting machine bits	0	0	A spark or sparks resulting from cutting machine bits striking a rock split or an Airdox shell ignited coal dust in suspension.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
17592; Sept. 28, 1962		Virginia	Gassy	Electrical arc	0	1	Methane that had collected under the shuttle car was ignited by an electrical arc caused by frame of the car breaking contact with the belt frame.
157–A; Oct. 2, 1962		Pennsylvania	do	Frictional sparks	2	2	Frictional sparks resulting from a pillar fall ignited an accumulation of methane.
17358; Oct. 23, 1962		Kentucky	do	Electric arc	1	0	Electric arc or spark from the controller of a nonpermissible storage-battery, tire-mounted, mine jitney ignited an accumulation of methane.
1303; Oct. 25, 1962		Utah	do	Continuous miner bits	0	0	Sparks resulting from the cutting bits on the continuous miner striking the sandstone roof ignited methane.
25666; Nov. 12, 1962	56	Pennsylvania	Nongassy	Electric drill	0	1	An electric arc or spark from an open-type electric drill ignited an accumulation of methane.
366; Nov. 15, 1962		do	Gassy	Continuous miner bits	0	0	Sparks resulting from the carbide-tipped bits of the continuous miner cutting pyrites ignited methane.
24171; Nov. 21, 1962	57	Virginia	Nongassy	Match flame	0	4	Methane was ignited by the flame of a match while attempting to light a disassembled flame safety lamp.
6367; Nov. 29, 1962		Pennsylvania	Gassy	Electric arc	0	2	Methane was ignited by a short circuit along the firing lines which were to a 100-volt alternating current power circuit.
157–A; Dec. 6, 1962		do	do	Electric arc or friction sparks	37	0	An electric arc or friction sparks from the bits of a continuous mining machine ignited an accumulation of methane.
134; Dec. 14, 1962		do	do	Frictional sparks	0	0	Frictional sparks from a fall of sandstone roof ignited methane in a pillared area.
747; Dec. 24, 3962		do	do	do	0	0	Sparks resulting from the carbide-tipped bits of a continuous miner striking a pyrite streak ignited methane.
17641; Jan. 4, 1963		do	do	Cutting machine bits	0	1	Sparks emitted when bits struck hard rock ignited methane accumulated in kerf.
747; Jan. 4, 1963		do	do	Continuous miner bits	0	0	Sparks created when bits struck pyrites in coal-bed ignited methane at face.
14893; Jan. 8, 1963		Virginia	do	do	0	0	Sparks emitted when bits struck sandrock ignited methane at face.
32165; Jan. 14, 1963		Pennsylvania	do	Match	0	2	Spent matches found after the ignition seemed the most likely source of ignition.
92; Jan. 29, 1963		do	do	Explosives	1	3	A blast at end of long hole ignited methane in a large void.
14893; Jan. 29, 1963		Virginia	do	Mine jitney	0	0	Arc from trolley slide of mine jitney ignited methane in roof cavity.
33099; Feb. 4, 1963	58	Pennsylvania	Nongassy	Flame safety lamp	0	2	Methane ignited by defective lamp.
17743; March 1963		West Virginia	Gassy	Undetermined	0	0	No one interrogated had any idea what caused the ignition or exactly when it occurred.
448; Mar. 13, 1963		do	do	Air compressor	0	1	Failure of relief and unloader valves permitted excessive pressure buildup and relief valve ruptured throwing fine coal dust into commutator of open-type motor where it was ignited by an arc.
535; Mar. 20, 1963		Pennsylvania	do	Continuous miner bits	0	0	Sparks emitted when bits struck pyritic material or sandstone ignited methane at face.
15176; Apr. 8, 1963		Alabama	do	Cutting machine	0	2	Arc from controller of machine ignited methane.
17592; Apr. 12, 1963		Virginia	do	Loading machine	0	0	Sparks emitted when digging arm struck hard sandy shale ignited methane.
17627; Apr. 16, 1963		Pennsylvania	do	Scraper hoist motor	4	8	Arcs or sparks from an open-type hoist motor ignited methane which entered the air when a place "holed through" to old work.
535; Apr. 17, 1963		do	do	Continuous miner bits	0	2	Methane ignited by sparks produced by carbide-tipped bits of a continuous miner striking the sandstone roof.
10169; Apr. 25, 1963		West Virginia	do	Loading machine	22	0	Arcs or sparks from loading machine ignited methane accumulation resulting from prolonged ventilation interruption.
17592; May 14, 1963		Virginia	do	Shuttle car	0	1	Arc created when energized car frame touched belt feeder ignited methane at belt loading point.
1733; May 27, 1963	59	Utah	Nongassy	Explosives	0	0	Overloaded underburdened shots ignited small amount of coal dust but no damage occurred.
31472; July 17, 1963	60	Kentucky	do	Open flame (carbide) lamp	0	0	Methane ignited by open flame carbide lamp Mine had been classed nongassy prior to ignition.
2985; July 18, 1963		Pennsylvannia	Gassy	Loading machine	0	0	Gas liberated from face area ignited when trailing cable on the loading machine short circuited while the machine was being operated.
17651; July 23, 1963		Ohio	do	Continuous miner bits	0	0	Methane was ignited when frictional sparks from cutter bits of a continuous mining machine struck a pyrite streak at the top of the coal bed.
14843; Aug. 17, 1963		Virginia	do	Cutting machine bits	0	0	Methane was ignited when the cutting machine bits struck the sandstone roof during shearing.
14843; Aug. 8, 1963		do	do	Personnel jitney	0	0	Methane in a roof cavity ignited by an arc from the trolley pole slide of a mine jitney or personnel carrier.
1303; Aug. 13, 1963		Utah	do	Arc-welding	0	0	Arc from welding machine ignited methane emitted from fissures in mine floor.
17743; Aug. 17, 1963		West Virginia	do	Continuous miner	0	2	Explosion resulted from methane being ignited by an electric arc from the energized metal frame of a continuous miner or by friction sparks from the bits striking the roof.
17641; Aug. 21, 1963		Pennsylvania	do	Cutting machine bits	0	0	Gas ignited in top cut of kerf when cutting machine bits struck unforeseen clay vein.
134; Aug. 26, 1963		do	do	Continuous miner bits	0	1	Explosion occurred when an accumulation of methane was ignited by sparks from carbide-tipped bits or broken bit arm of a miner struck pyritic material near the roof.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
2985; Sept. 16, 1963		Pennsylvania	Gassy	Loading machine	0	0	Gas was ignited on the floor when the loading machine trailing cable short-circuited about 20 feet out by a solid coal face.
2015; Sept. 27, 1963		do	do	Flame safety lamp	0	2	Evidence indicated that the explosion occurred when methane was ignited by a permissible-type flame safety lamp in nonpermissible condition or from steel bar striking sandstone roof.
14893; Oct. 12, 1963		Virginia	do	Continuous miner	0	0	Methane was ignited from sparks produced when the end of continuous miner trailing cable was touched to a trolley wire. Gas issued from partings in the coal bed.
10169; Oct. 14, 1963		West Virginia	do	Continuous miner bits	0	1	Ignition when continuous miner bits hit a sandstone roll in the roof or because of excess opening in breaker compartment emitted arcs.
157; Oct. 15, 1963		Pennsylvania	do	do	0	0	Carbide bits of continuous miner struck sulphur ball and ignited gas at face.
157; Oct. 24, 1963		do	do	do	0	0	Carbide bits of continuous miner struck sulphur ball and ignited gas at face.
1555; Oct. 31 1963		do	do	Explosives	0	0	Part of a charge of permissible explosives failed to detonate and smouldered slowly then ignited gas being liberated in the freshly shot coal.
747; Nov. 14, 1963		do	do	Cutting machine bits	0	0	Gas was ignited in the kerf of a top cut by frictional sparks from the bits of a cutting machine.
747; Nov. 6, 1963		do	do	Continuous miner bits	0	0	Frictional sparks created when bits of continuous miner struck sulfur intrusions and ignited gas being liberated in the vicinity of clay veins.
20115; Nov. 11, 1963		Colorado	do	do	0	9	Explosion occurred when methane was ignited by sparks from carbide-tipped bits of a continuous miner striking rock.
14644; Dec. 16, 1963		Utah	do	do	9	1	Methane and coal dust ignited by sparks from the bits of a continuous miner cutting in top rock, or by arcs or sparks from electrical equipment that was not in permissible condition. Propagated by float coal dust in the return airway.
33525; Jan. 15, 1964	61	Pennsylvania	Nongassy	Frictional sparks	0	1	Explosion probably resulted from frictional sparks created by steel pick striking sandstone roof.
20115; Feb. 3, 1964		Colorado	Gassy	Loading machine	0	0	Splice in trailing cable on mobile loading machine short-circuited and flash ignited small feeder of gas and air mixture emanating from floor.
9346; Feb. 3, 1964		Pennsylvania	do	Explosives	3	1	Inadequate stemming or insufficient burden caused blown-out shot and resultant open flame ignited methane.
14893; Feb. 24, 1964		Virginia	do	Cutting machine bits	0	0	Cutting machine bits struck sandstone roof and frictional sparks ignited methane in the shear.
17435; Feb. 26, 1964		West Virginia	do	Continuous miner bits	0	0	Methane or coal dust or both ignited by frictional sparks caused by cutter bits of the continuous mining machine striking pyritic streaks in the draw rock.
17435; Feb. 28, 1964		do	do	do	0	0	Do.
3074; Feb. 28, 1964		Kentucky	do	Cutting machine bits	0	0	Frictional sparks created by bits of cutting machine chain ignited gas in kerf.
36384; Mar. 1, 1964		Pennsylvania	do	Acetylene torch	0	0	Gas from bottom feeder was ignited by a spark dropped while continuous miner digging arm was being heated with an acetylene torch during repair work.
4197; Mar. 11, 1964		Alabama	do	Cutting machine bits	0	0	Methane ignited by frictional sparks when cutter bits of cutting machine contacted pyrite band in kerf.
36679; Mar. 19, 1964	62	Kentucky	Nongassy	Continuous miner bits	0	0	Frictional sparks from bits of continuous miner struck sandstone roof and ignited coal dust in suspension.
535; May 7, 1964		Pennsylvania	Gassy	do	0	2	Gas ignited by carbide-tipped bits of a continuous miner striking sandstone in mine floor.
14893; May 8, 1964		Virginia	do	do	0	0	Sparks created by bits of continuous miner striking sandstone roof ignited small methane accumulation.
20115; May 26, 1964		Colorado	do	Continuous miner	0	0	Arc resulting from damaged cable on continuous miner ignited small gas feeder emanating from floor near gathering head.
20970; June 11, 1964	63	Pennsylvania	Nongassy	Propane torch or burning fuse	0	3	Explosion occurred when methane accumulation was ignited by flame of a propane torch and/or by burning fuse. Both were existent sources of ignition.
11538; June 16, 1964		West Virginia	Gassy	Roof-bolting machine	0	0	Carbide-tipped bit of roof-bolt machine encountered sulfur streak and spark ignited gas. Flame burned about 20 seconds.
1885; June 24, 1964		do	do	Continuous miner bits	0	4	Methane ignited by sparks from carbide-tipped bits of continuous mining machine when bits contacted pyritic lenses. Flame of explosion extended 95 feet and forces 225 feet.
14893; June 24, 1964		Virginia	do	Cutting machine bits	0	0	Carbide-tipped bits of cutting machine struck sandstone roof and caused sparks that ignited material while cutting top coal. Whether it was a gas or dust ignition was not determined.
2333; July 15, 1964		Pennsylvania	do	Match flame	0	2	Evidence indicated that a workman struck a match while an accumulation of methane was being moved from a face area with line brattice and compressed air.
35858; July 17, 1964	64	do	Nongassy	do	0	2	Methane accumulated because of inadequate ventilation was ignited by the flame of a match.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
157; July 20, 1964		Pennsylvania	Gassy	Continuous miner bits	0	0	Gas emitting from a small feeder was ignited by frictional sparks or rock heating created by carbide-tipped bits of the continuous miner striking a pyrite intrusion in the coal bed.
4197; July 27, 1964		Alabama	do	Cutting machine bits	0	0	Frictional sparks from cutting machine bits ignited methane in the kerf of the undercut coal face.
4652; July 30, 1964		do	do	Cutting machine	0	2	Ventilation inadequate and open-type cutting machine ignited accumulation of methane in a cross cut.
57; Aug. 5, 1964		Pennsylvania	do	Continuous miner bits	0	0	Gas being liberated at the face was ignited by frictional sparks when the carbide-tipped bits of the continuous miner struck pyrite intrusions in the coal bed.
14893; Aug. 18, 1964		Virginia	do	do	0	0	Methane or coal dust ignited by frictional sparks created by continuous miner bits striking sandstone roof.
12530; Aug. 19, 1964		Pennsylvania	do	Explosives	0	2	Detonation of unconfined nonpermissible explosives ignited methane being moved from mined-out area.
35405; Sept. 3, 1964		Kentucky	do	Continuous miner bits	0	1	Frictional sparks caused by steel-alloy bits of a continuous-miner striking hard draw rock.
747; Sept. 15, 1964		Pennsylvania	do	do	0	0	Gas ignited by frictional sparks from bits of a continuous-miner when a clay vein was encountered.
1579; Sept. 28, 1964		West Virginia	do	Energized trolley wire	3	0	Explosion resulted from methane being ignited by electric arc from energized trolley wire and "nip" of "nip scooter" operated by one of the men killed.
17651; Oct. 3, 1964		Ohio	do	Continuous miner bits	0	2	Ignition was caused by frictional sparks created when carbide-tipped bits of the continuous-miner struck a pyrite streak near the top of the coal bed.
20115; Oct. 5, 1964		Colorado	do	Loading machine	0	0	Arcing between two power conductors at damaged section of trailing cable of the loading machine ignited gas feeders in mine floor.
4195; Oct. 7, 1964		West Virginia	do	Battery-powered utility truck	0	3	Explosion resulted from removal of check curtain and/or temporary stoppings which resulted in methane accumulation that was ignited by utility truck in nonpermissible condition being operated by a fireboss.
28112; Oct. 14, 1964		Virginia	Nongassy	Open-flame cap lamp	0	0	Methane at face was ignited by an open-flame lamp. (Mine nongassy prior to ignition).
450; Oct. 17, 1964		Pennsylvania	Gassy	Trolley pole collector	0	0	Methane accumulation in roof cavity ignited by arc from trolley-pole collector shoe of man-trip bus moved over cut-out switch.
134; Nov. 2, 1964		do	do	Continuous miner bits	0	2	Methane and probably coal dust ignited by frictional sparks created by carbide-tipped bits of a continuous-miner striking pyritic material in the coal near the roof.
697; Nov. 7, 1964		do	do	Locomotive	0	0	Gas feeder in floor was ignited by sparks from the wheels of a locomotive.
36712; Nov. 9, 1964		Virginia	do	Continuous miner bits	0	0	Gas emitting from the coal face and several feeders in the bottom, ignited by frictional sparks created by cutter bits of continuous mining machine striking bottom rock.
17743; Nov. 20, 1964		West Virginia	do	do	0	1	Methane ignited by frictional sparks created by carbide-tipped bits of continuous miner striking sandstone roof.
4197; Dec. 3, 1964		Alabama	do	Cutting machine bits	0	0	Frictional sparks created by cutter chain bits of cutting machine ignited gas in the undercut kerf.
2221; Dec. 7, 1964		Pennsylvania	do	Explosives	0	5	Charge of permissible explosives partially confined in a piece of rock was detonated in the presence of methane resulting in an explosion.
747; Dec. 11, 1964		do	do	Continuous miner bits	0	0	Methane at coal face ignited by frictional sparks when the cutting bits of a continuous mining machine struck rock intrusions in the coal bed.
32829; Dec. 16, 1964	66	do	Nongassy	Electric drill	0	1	Methane ignited by an open-type hand-held electric drill.
11719; Jan. 7, 1965		Utah	Gassy	Acetylene torch	0	0	Methane released by a bump was ignited by an acetylene torch used to cut roof bolts.
15075; Jan. 25, 1965	67	Pennsylvania	Nongassy	Electric coal drill	0	3	An arc or spark from an open-type hand-held electric drill ignited methane.
535; Jan. 26, 1965		do	Gassy	Continuous miner bits	0	1	Sparks emitted when carbide-tipped bits struck sandstone in mine floor ignited methane.
35405; Feb. 3, 1965		Kentucky	do	do	0	1	Sparks created by the bits striking hard roof rock ignited methane at face.
28112; Feb. 11, 1965		Virginia	do	Smoking	0	2	Methane at face ignited when a workman attempted to light cigarette with match.
965; Feb. 18, 1965		Pennsylvania	do	Continuous miner bits	0	0	Sparks emitted when the carbide-tipped bits struck hard pyrite streaks, in a clay vein ignited methane.
34896; Feb. 18, 1965		do	do	Flame safety lamp	0	1	The damaged fount of the lamp prevented lower gauze ring from seating and provided a flame path out of the lamp.
17656; Feb. 26, 1965		do	do	Continuous miner bits	0	2	Sparks emitted when carbide-tipped bits struck sandstone roof ignited methane.
14893; Mar. 3, 1965		Virginia	do	do	0	0	Sparks created by the bits striking sandstone ignited methane.
7056; Mar. 3, 1965		Kentucky	do	Loading machine	0	0	Overheated bearing in gathering area of loader ignited methane near face.
14644; Mar. 16, 1965		Utah	do	Continuous miner bits	0	2	Sparks emitted when carbide-tipped bits struck sandstone roof ignited methane at face.
296; Mar. 25, 1965		West Virginia	do	do	0	0	Sparks created by carbide-tipped bits striking pyrites near the roof ignited methane.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
36712; Mar. 31, 1965		Virginia	Gassy	Continuous miner bits	0	0	Sparks created when bits of miner struck sandstone floor ignited methane.
165; Apr. 13, 1965		West Virginia	do	do	0	4	Arc from defective splice in the power circuit in the connection box touched the frame of the box and ignited.
14893; Apr. 28, 1965		Virginia	do	do	0	0	Sparks emitted when bits struck sandy floor rock ignited methane at face.
78; Apr. 30, 1965		West Virginia	do	Light bulb	4	1	Presumably a falling object broke a burning light bulb suspended near shaft bottom and resulting arc ignited methane.
27335; May 24, 1965	68	Tennessee	Nongassy	Cigarette lighter	5	0	Presumably methane ignited by cigarette lighter found near the origin of the explosions.
157; June 3, 1965		Pennsylvania	Gassy	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits of miner struck pyrite ignited methane at face.
17181; June 8, 1965		do	do	Blower fan	0	0	Methane accumulation caused by stoppage of main fan ignited by arcing when nonpermissible underground blower fan was started by remote surface switch.
134; June 24, 1965		Pennsylvania	do	Continuous miner bits	0	4	Sparks emitted when the carbide-tipped bits struck pyritic material in roof ignited methane at face.
12334; June 24, 1965		West Virginia	do	Continuous miner bits or conveyor chain.	0	1	Sparks created by bits striking pyrite or chain sprocket rubbing chain ignited methane at face.
25344; July 6, 1965		Pennsylvania	do	Flame safety lamp	0	2	Attempting to relight a flame safety lamp in an explosive mixture of methane and air.
762; July 6, 1965		Indiana	do	Electric arc	0	0	Presumably a roof fall had short circuited two bare power wires which were energized from a remote switch and the resulting arc ignited methane.
35405; July 16, 1965		Kentucky	do	Continuous miner bits	0	2	Sparks emitted when bits struck hard rock intrusion in coal bed ignited methane at face.
36458; Aug. 6, 1965	69	Virginia	Nongassy	Smoking	0	1	Workman ignited methane while attempting to light a cigarette with a match.
1315; Aug. 15, 1965		Utah	Gassy	Locomotive	0	1	Methane ignited by arc between trolley shoe and trolley wire.
14893; Sept. 27, 1965		Virginia	do	Continuous miner bits	0	1	Sparks emitted when bits struck sandstone roof ignited methane at face.
11538; Oct. 20, 1965		West Virginia	do	do	0	1	Sparks created when the bits struck pyrite streaks ignited methane at face.
124; Nov. 8, 1965		Alabama	do	Trolley locomotive	0	1	Arc from contact of trolley wheel with trolley wire ignited methane out by face area.
38143; Nov. 19, 1965		Illinois	do	Continuous miner bits	0	0	Sparks emitted when bits struck a pyritic lens ignited methane at face.
165; Nov. 29, 1965		West Virginia	do	do	0	1	Sparks emitted when bits struck bony coal ignited methane at face.
17221; Nov. 29, 1965	70	Virginia	Nongassy	Cable and trolley locomotive	0	2	Arc from transfer switch on cable reel locomotive ignited methane at face.
165; Dec. 15, 1965		West Virginia	Gassy	Continuous miner bits	0	1	Sparks emitted when bits struck rock ignited methane at face.
1719; Dec. 16, 1965		do	do	Trolley locomotive	1	1	Arc from trolley locomotive ignited methane in an abandoned, poorly ventilated area of mine.
1752; Dec. 21 and 23, 1965		do	do	Continuous miner bits	0	2	Sparks emitted when bits struck rock partings in each case ignited methane at face (2 ignitions similar).
20115; Dec. 28, 1965		Colorado	do	Loading machine or shuttle car	9	0	Arc from defective splice in trailing cable of either loading machine or shuttle car ignited methane being liberated from face, ribs, and floor. Coal dust was ignited subsequently and propagated the explosion.
35405; Jan. 24, 1966		Kentucky	do	Explosives	0	0	Presumably methane issuing from the kerf was ignited by a blast as no other ignition source was present.
2221; Jan. 25, 1966		Pennsylvania	do	Electric arc or explosives	0	4	Methane ignited by arc from short-circuited shuttlecar cable or burning explosives.
573; Jan. 28, 1966		do	do	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck sandstone roll in coal bed ignited methane.
573; Jan. 29, 1966		do	do	do	0	5	Sparks created by the carbide-tipped bits striking pyritic material in coal bed ignited methane.
33124; Feb. 11, 1966		do	do	Shot-firing line	0	1	Arc created when the ends of the wires comprising the shot-firing cable energized by 110-volt a.c. current were touched together
747; Feb. 12, 1966		do	do	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck roof rock ignited methane.
35484; Mar. 2, 1966		Colorado	do	Electric arc or smoking	3	0	Methane ignited by arc from controller of battery locomotive, bare spot in battery cable or from smoking.
35405; Mar. 11, 1966		Kentucky	do	Blown-out shot	0	1	Methane ignited by blown-out shot from an overcharged and possibly improperly stemmed borehole—gas tests had not been made.
2; Mar. 28, 1966		West Virginia	do	Continuous miner bits	0	4	A charged oxygen cylinder abandoned during previous mining was ruptured by machine bits and an ignition occurred.
14893; Apr. 19, 1966		Virginia	do	do	0	1	Sparks emitted when bits struck sandstone roof ignited methane.
36712; June 1, 1966		do	do	do	0	3	Sparks created when the bits struck the sandy shale roof ignited methane from freshly exposed feeder at face.
573; June 13, 1966		Pennsylvania	do	do	0	0	Sparks emitted when bits struck pyritic inclusions in coal bed ignited methane from feeder at face.
38800; June 20, 1966	71	West Virginia	Nongassy	Smoking	0	2	Accumulation of methane ignited by cigarette.
157; June 23, 1966		Pennsylvania	Gassy	Falling rock	0	4	Sparks caused by rocks rubbing together during caving in job area ignited methane.
38729; July 20, 1966		Colorado	do	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck sandstone ignited methane at face.
17983; July 23, 1966		West Virginia	do	Shuttle car	7	2	Methane ignited by an electric arc or spark possibly from shuttle car.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
4197; Aug. 4, 1966		Alabama	Gassy	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck hard shale in bottom coal ignited methane.
3216; Aug. 12, 1966		Pennsylvania	do	"Jumper" power cable	0	0	Nip was touched to feeder cable and methane issuing from roof cracks was ignited.
2333; Aug. 31, 1966		do	do	Lighted match	0	2	Since matches were found on a pile of coal after blasting and no other ignition source was evident, it is presumed that methane was ignited by a match.
318; Sept. 1, 1966		West Virginia	do	Locomotive	0	2	An arc created when trolley shoe contacted trolley wire ignited methane near roof.
17435; Oct. 6, 1966		do	do	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck pyrite in roof rock ignited methane at face.
4955; Oct. 27, 1966		do	do	Flame safety lamp	0	1	Although the lamp was the only source of ignition in the area, subsequent tests failed to disclose defects in the lamp.
4197; Nov. 4, 1966		Alabama	do	Continuous miner bits	0	0	Sparks emitted when carbide-tipped bits struck the shale bottom rock ignited methane from feeders.
39378; Nov. 7, 1966	72	Virginia	Nongassy	Electric coal drill	0	1	Arcing from a nonpermissible hand-held electric drill ignited methane at face.
36712; Nov. 30, 1966		do	Gassy	Continuous miner cable	0	0	Arc resulting from short circuit in a previously damaged cable on the miner ignited methane feeders.
14893; Dec. 2, 1966		do	do	Continuous miner bits	0	1	Sparks created when bits struck sandstone roof ignited methane at face.
4197; Dec. 14, 1966		Alabama	do	Cutting machine bits	0	0	Sparks emitted by machine bits striking shale in the bottom coal ignited methane feeders.
20115; Dec. 14, 1966		Colorado	do	Continuous miner bits	0	3	Acetylene ignited when bits ruptured an acetylene cylinder left in the place and covered by the sloughing coal ribs.
40360; Dec. 26, 1966		Pennsylvania	do	Trolley wire	0	0	Roof fall dislodged trolley wire which touched track rail and resulting arc ignited methane accumulated in roof void.
2985; Jan. 10, 1967		do	do	Electric arc	0	0	Insulation failure in drill cable energized drill frame and an arc resulting from energized drill steel touching draw slate ignited gas feeder at face.
42248; Jan. 24, 1967		Virginia	do	do	3	4	Presumably the operation of a feeder-line switch ignited an accumulation of methane.
672; Jan. 30, 1967		West Virginia	do	Continuous miner bits	2	4	Sparks resulting from the carbide-tipped bits of the continuous miner cutting pyrites ignited methane.
17651; Feb. 2, 1967		Ohio	do	do	0	0	Spark caused by the carbide-tipped bits of continuous miner hitting pyrite near roof ignited methane.
1339; Feb. 7, 1967		Pennsylvania	do	do	0	6	Sparks caused by the carbide-tipped continuous miner bits striking sandstone roof ignited methane at face.
36712; Mar. 6, 1967		Virginia	do	do	0	3	Sparks caused by the carbide-tipped continuous miner bits striking the sandy shale roof ignited methane.
4197; Mar. 10, 1967		Alabama	do	do	0	0	Sparks created by carbide-tipped bits striking hard bottom material ignited methane.
11538; Mar. 30, 1967		West Virginia	do	do	0	1	Sparks emitted by carbide tipped bits contacting hard material in roof or coal bed ignited methane.
14893; Apr. 3, 1967		Virginia	do	Roof fall	0	0	Sparks emitted by friction of rocks during roof fall ignited methane in an abandoned area.
1367; April 19, 1967		Pennsylvania	do	Acetylene torch	0	0	Mechanic preparing to use torch to remove broken part of conveyor at long wall face ignited methane accumulated under belt conveyor.
747; May 12, 1967		do	do	Continuous miner bits	0	0	Sparks emitted when cutting bits of continuous miner struck hard floor material ignited methane at face.

35405; June 14, 1967		Kentucky	do	Cutting machine bits	0	0	Sparks emitted when bits of cutting machine struck hard material in coal bed ignited methane.
43803; June 20, 1967		Ohio	do	Unknown	0	1	Mechanic attempted to start pump and methane accumulated in pump room was ignited.
432; June 22, 1967		West Virginia	do	Undetermined	0	2	Shaft at an abandoned mine was being sealed when a succession of explosions occurred. Source of ignition not known.
296; June 29, 1967		do	do	Continuous miner bits	0	3	Sparks emitted when bits of continuous miner struck hard material in coal bed ignited methane.
17344; July 6, 1967		do	do	do	0	0	Sparks created by bits of continuous miner striking pyretic material in clay vein ignited methane.
389; July 28, 1967		Kentucky	do	Electric arc or smoking	4	0	Crew recovering material was "nipping" a hoist into area by touching negative conductor to rail. Either an arc created by "nipping" or flame from cigarette lighter ignited methane.
14893; Aug. 10, 1967		Virginia	do	Friction sparks (pillar fall)	0	0	Sparks created by sandstone rubbing sandstone during caving in pillar area ignited methane.
17627; Aug. 17, 1967		Pennsylvania	do	Friction sparks or smoking	0	2	Sparks emitted by friction between large pieces of rock during massive roof fall, or smoking ignited methane.
157; Aug. 18, 1967		do	do	Continuous miner bits	0	0	Sparks emitted by bits of continuous miner striking roof rock ignited methane or coal dust.
40969; Sept. 6, 1967		Virginia	do	Battery tractor	0	0	Arc in the control box of battery powered tractor ignited methane at face of entry.
134; Sept. 27, 1967		Pennsylvania	do	Continuous miner bits	0	4	Sparks emitted when bits of continuous miner struck roof ignited methane.

U.S. BUREAU OF MINES—Continued

UNDERGROUND COAL MINE IGNITIONS AND EXPLOSIONS, 1952—Continued

BOM file No. and date	Number of nongassy	State	Classification	Source of ignition	Injuries		Cause
					Fatal	Nonfatal	
17435; Oct. 10, 1967		West Virginia	Gassy	Continuous miner bits	0	0	Sparks created by continuous miner bits striking pyrite in roof ignited methane.
10169; Oct. 17, 1967		do	do	do	0	3	Sparks emitted when bits on continuous miner struck pyrite in roof ignited methane.
32300; Oct. 17, 1967		Pennsylvania	do	Possibly smoking	0	1	Presumably miner ignited methane when attempting to light a cigarette.
1367; Oct. 17, 1967		do	do	Circuit breaker	0	0	Arc from a short circuit in trailing cable connector at circuit-breaker box ignited methane accumulated on nearby roof fall.
35405; Nov. 17, 1967		Kentucky	do	Acetylene torch	3	1	The flame of an acetylene torch used to remove (burn) tramp iron and detonator leg wires from the rotary drum of the coal breaker ignited methane in roof cavity above belt feeder.
747; Nov. 27, 1967		Pennsylvania	do	Continuous miner bits	0	0	Sparks emitted when bits of continuous miner was cutting pyretic material ignited pyrite dust.
11538; Nov. 28, 1967		West Virginia	do	do	0	3	Sparks created by bits of continuous miner cutting pyrites in the coal ignited methane.
747; Jan. 13, 1968		Pennsylvania	do	do	0	0	Gas liberated from feeder at coal face was ignited by frictional sparks created when the cutting bits of the continuous mining machine struck hard pyrite intrusion in the coalbed.
76; Jan. 22, 1968		West Virginia	do	Electric arc or trolley wire	1	1	Methane accumulated in high place because of insufficient ventilation and was ignited by an electric arc or sparks between energized trolley wire and trolley slide of locomotive.
965; Feb. 8, 1968		Pennsylvania	do	Continuous miner bits	0	0	Methane ignited by frictional sparks created by the cutter bits of the continuous-mining machine striking roof rock.
1315; Feb. 22, 1968		Utah	do	Power cables	0	0	Methane issuing from the roof through a roof-bolt hole was ignited by arcs and/or sparks from short circuits in power cables of two portable submersible water pumps and resulted in fire in the coal rib.
615; Apr. 9, 1968		Pennsylvania	do	Continuous miner bits	0	0	Methane ignited by frictional sparks created by cutter bits of continuous-mining machine striking hard pyritic material which overlayed draw rock.
42248; May 8, 1968		Virginia	do	do	0	2	Inadequate controls permitted methane to accumulate. Methane-air mixture was ignited by frictional sparks, by continuous-miner bits striking hard pyritic material in the coalbed.
Ndw shaft; June 23, 1968		Oklahoma		Cutting torch	0	0	Cutting torch being used at top of shaft ignited methane in the shaft. (New shaft and not classified as a mine.)
New shaft; June 19, 1968		do		Lightning	0	0	Lightning ignited methane coming out of new shaft. (New shaft and not classified as a mine.)
43832; July 5, 1968		do	Gassy	Continuous miner bits	0	0	Explosive mixture of methane was ignited by frictional sparks resulting from continuous miner bits striking hard sandstone roof.
4197; July 10, 1968		Alabama	do	Explosives	0	0	Incomplete detonation of explosives ignited methane liberated from a fresh blasted fall of coal. Ignition occurred about 5 minutes after.
33582; July 15, 1968		West Virginia	do	Flame safety lamp	0	3	Defective permissible-type flame safety lamp ignited methane accumulation when section foreman was testing for gas on top of roof fall.
43832; July 19, 1968		Oklahoma	do	Continuous miner bits	0	0	Inadequate face ventilation allowed methane to accumulate and then was ignited by sparks created when the bits of the continuous miner struck the sandstone roof.
2929; July 24, 1968		West Virginia	do	do	0	8	Explosion occurred when methane was ignited by frictional sparks from carbide-tipped bits of a continuous miner striking roof rock. Flame extended 620 feet out by the face.
43832; July 26, 1968		Oklahoma	do	do	0	0	Inadequate face ventilation allowed methane to accumulate which was ignited by sparks created when the bits of the continuous miner struck the sandstone roof.
43832; July 30, 1968		do	do	do	0	0	Explosive mixture of methane was ignited by frictional sparks created when continuous miner bits struck the hard sandstone roof.
38613; Aug. 2, 1968	73	Kentucky	Nongassy	Match	0	3	An explosive mixture of methane and air was ignited when an employee attempted to light a cigarette with a match.
42562; Aug. 7, 1968	74	do	do	Explosives	9	2	Explosives on a drill truck were ignited when coal face was blasted, resulting in extensive explosion.
17435; Aug. 27, 1968		West Virginia	Gassy	Continuous miner bits	0	0	Ignition occurred when continuous miner bits struck pyrite streaks under the draw rock.
14893; Aug. 30, 1968		Virginia	do	do	0	2	Accumulation of methane ignited when continuous miner bits struck mine roof.
17651; Sept. 12, 1968		Ohio	do	do	0	0	Ignition occurred when continuous miner bits struck pyrite streaks in the coal beds.
3778; Oct. 21, 1968		Pennsylvania	do	Undetermined, probably smoking.	0	1	Methane in a roof cavity near the face of a working place was probably ignited by smoking or smokers' articles.
43832; Oct. 31, 1968		Oklahoma	do	Continuous miner bits	0	2	Accumulation of methane ignited when continuous miner bits struck mine roof.
42089; Nov. 13, 1968		Virginia	do	Explosives	0	3	Coal dust was ignited when heavily charged improperly confined boreholes were blasted in a thin pillar of coal. Some of the explosives did not pass the tests for permissibility.
78; Nov. 20, 1968		West Virginia	Gassy	Undetermined	78	0	Mine sealed Nov. 30, 1968.
40540; Nov. 22, 1968		Virginia	do	Continuous miner bits	0	0	Accumulation of methane ignited when continuous miner bits struck mine roof.
40540; Dec. 23, 1968		do	do	do	0	1	Ignition occurred when continuous miner bits struck sandstone roof.
4197; Dec. 23, 1968		Alabama	do	Cutting machine bits	0	0	Gas from feeder ignited by frictional sparks created by carbide-tipped bits of Joy 10 RU mining machine striking fossiliferous shale in the bottom coal.

Mr. COOPER. Mr. President, the report records that during this 16-year period, 74 ignitions and explosions occurred in nongassy mines. Of the 74, the Bureau of Mines has determined and concluded that some 52 ignitions and explosions were caused by gas—52 ignitions or explosions in 16 years in nongassy mines. The Bureau then implies that the 52 accidents could have been prevented had the mines been classed gassy and used with permissible equipment.

I ask unanimous consent to have printed in the RECORD a list of the 52 ignitions and gas explosions in nongassy mines, as reported by the Bureau of Mines, as exhibit B.

There being no objection, exhibit B was ordered to be printed in the RECORD, as follows:

EXHIBIT B

TABLE B.—NUMBER OF GAS IGNITIONS OR EXPLOSIONS IN NONGASSY COAL MINES AND NUMBER OF PERSONS KILLED OR INJURED, JULY 1, 1952, THROUGH NOV. 30, 1968

Year	Number of ignitions or explosions	Killed	Injured
1952 (6 months)	0	0	0
1953	3	0	3
1954	5	0	6
1955	3	0	4
1956	4	0	2
1957	5	0	5
1958	3	0	3
1959	3	[1] 9	2
1960	4	2	0
1961	7	0	7
1962	4	[2] 11	6
1963	1	0	0
1964	4	0	6
1965	3	[3] 5	4
1966	2	0	3
1967	0	0	0
1968	1	0	3
Total	52	27	54

[1] No. 1 mine, Philips & West Coal Co., Robbins, Tenn., Mar. 23, 1959, 9 killed, 0 injured.
[2] Mine No. 2, Blue Blaze Coal Co., Herrin, Ill., Jan. 10, 1962, 11 killed, 0 injured.
[3] No. 2-A mine, C. L. Kline Coal Co., Robbins, Tenn., 5 killed, 0 injured.

Mr. COOPER. Mr. President, the record shows that of the 52 ignitions and gas explosions, 27 fatalities and 54 injuries resulted. Examination of the facts and circumstances of each of these 52 ignitions and gas explosions in mines classed as nongassy does not support the argument that they would have been avoided if permissible equipment standards required for gassy mines had been required for these nongassy mines, and if permissible equipment had been in use when these explosions and ignitions occurred.

I now ask unanimous consent to have printed in the RECORD a table, marked as exhibit C, identifying the 52 ignitions and gas explosions and listing the number of fatalities and injuries.

There being no objection, exhibit C was ordered to be printed in the RECORD, as follows:

EXHIBIT C—IGNITIONS IN MINES CLASSED NONGASSY AT THE TIME THE IGNITION OCCURRED

Date of ignition	State	Source of ignition	Number	Fatalities	Injuries
Jan. 3, 1953	Pennsylvania	Match	1	0	0

Aug. 2, 1968	Kentucky	Match	52	0	3
Total			52	27	56

Mr. COOPER. Mr. President, this exhibit describes the actual causes of the explosions and ignitions and is taken from the Bureau of Mines' records.

Mr. President, let us examine the causes of the 27 fatalities.

The disaster at the Tennessee mine classed nongassy on March 23, 1959, resulted in nine fatalities. The cause is reported by the Bureau of Mines as follows:

An accumulation of methane resulting from intermittent fan operation was forced to a locomotive when the fan was started and ignited either by the locomotive or smoking.

I raise the question whether the requirement of "permissible equipment" would have averted this disaster.

On December 28, 1960, two miners were killed in an explosion in a West Virginia mine classed as nongassy. The Bureau of Mines lists the cause as follows:

Methane was ignited when an attempt was made to light a cigarette with a match.

The presence or absence of permissible equipment could have no bearing on the tragic result.

On January 10, 1962, 11 miners were killed in a nongassy mine in Illinois. The cause of the accident is given as follows:

Methane ignited at the face by an electric arc from an open panel on a shuttle car.

A "permissible" type of shuttle car was being improperly repaired when the ignition occurred.

The use of permissible equipment did not avert this disaster.

On May 24, 1965, an ignition in a Tennessee nongassy mine killed five miners. The cause was reported to be "presumably methane ignited by a cigarette lighter found near the origin of the explosions." Reclassification of this mine as gassy under the terms of S. 1300 could not have prevented these fatalities.

Mr. President, the above table indicates that of the 52 ignitions and explosions attributed by the Bureau of Mines to methane, 19 of the ignitions and explosions were caused by an open-flame lamp. In the State of Kentucky, four of the seven reported ignitions were caused by an open-flame lamp.

The amendment which I introduce today would prohibit use of any open-flame lamp in all mines.

The table reveals that some 16 of these ignitions were caused by matches, smoking, or a cigarette lighter. During the same 1952 to 1968 period, the Bureau of Mines reported some 17 ignitions occurred in gassy mines from the same cause; that is, smoking, matches, or cigarette lighters.

From the same chart, nine ignitions were found to be caused by an arc or a spark from nonpermissible electric equipment. Here I must acknowledge that, depending upon individual circumstances, the use of permissible eqipment might have prevented the 11 ignitions. However, there were no fatalities and the number of accidents resulting from these ignitions is small, considering that they cover over 3,000 nongassy mines over a 16-year period.

Mr. President, I will compare the safety record of the gassy mines over this same 1952–1968 period. The Bureau of Mines has reported the number of ignitions, explosions, fatalities, and injuries in gassy mines.

Now I ask unanimous consent to have printed in the RECORD this report as exhibit D.

There being no objection, exhibit D was ordered to be printed in the RECORD, as follows:

EXHIBIT D

GASSY MINES—IGNITIONS OR EXPLOSIONS, JULY 1, 1952–DECEMBER 1968

	Number of ignitions or explosions	Killed	Injured
Year:			
1952	7	0	15
1953	21	9	32
1954	23	19	37
1955	18	4	20
1956	29	8	18
1957	20	66	20
1958	19	42	32
1959	19	1	12
1960	13	1	7
1961	17	26	27
1962	17	41	16
1963	33	36	35
1964	35	6	27
1965	32	14	32
1966	26	10	31
1967	30	12	44
1968	22	79	22
Total	381	374	427

Mr. COOPER. Mr. President, I make this comparison between the number of explosions and ignitions in gassy mines and those in nongassy mines, and the fatalities and injuries which have occurred in these two classes of mines, to emphasize my continuing belief that this bill, of which I am a cosponsor, and most of its provisions which I support, and other bills before the Senate do not go really to the heart of the question of safety in gassy and nongassy mines.

Comparing the accident record for gassy mines with the accident record for nongassy mines during this period, we find that a total of 381 ignitions and explosions occurred in gassy mines resulted in 374 fatalities and 427 injuries, while during this same period in the 3,000 nongassy mines approximately 10 times the number of gassy mines—the record shows 27 fatalities and 54 injured.

This comparison points up my contention that the phrase "gassy mine" and the phrase "nongassy mine" speak for themselves. "Gassy" means the mine is gassy: and year after year, week after week, we have the occurrence of ignitions and explosions in mines that are really gassy, and always the danger of fatalities and injuries.

In the same period of 1952 to 1968, in over 3,000 nongassy mines in the United States, there have been a relatively small number of explosions and ignitions, and a relatively small number, sad as it is, of fatalities and injuries, compared to the number in the gassy mines.

There were seven times as many gas explosions and ignitions in gassy mines as compared with nongassy mines, and 14 times more fatalities.

Rather than reclassify mines now classed nongassy, it seems to me we should examine ways to improve and promote safety in gassy mines—actually gassy—where the danger, based on past experience, is great.

I have had an opportunity to study the official map of consol No. 9 near Farmington, W. Va., where the 78 men were trapped by the November 20 explosion and fire. It appears at pages 6 and 7 in the December 1, 1968, issue of the United Mine Workers Journal. The map indicates numerous abandoned gas wells and the caption states that gas wells abandoned before the year 1900 are not identified on the map.

In his testimony before the Senate Labor Subcommittee, Mr. Cloyd D. McDowell, president of the Harlan County Kentucky Coal Operators Association stated that it was his opinion that there were active gas wells driven through the seam of coal being mined at the time and that anyone of these wells—either active or abandoned—could have caused the initial explosion that killed 78 miners. He further testified that this mine had experienced a similar gas explosion on November 13, 1954, in which 16 men were killed.

The opening and operating of coal mines in the vicinity of producing or abandoned gas wells creates a far greater danger to the men working these mines than mines operating without this added hazard, even though they are gassy mines employing permissible equipment.

My review of State statutes regulating the exploration and production of gas and coal indicates that such laws are designed primarily to regulate the operations of coal and gas producers so that their responsibilities to each other for safety and to the public would be clearly defined, and to establish appropriate administrative procedures for enforcing these obligations.

Mr. President, I ask unanimous consent that the applicable provisions of the Kentucky, Pennsylvania, West Virginia, and Virginia statutes relating to coal and gas exploration be included in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

KENTUCKY

KENTUCKY REVISED STATUTES

352.510 [3766b–14] Mining near oil or gas wells; hearing. (1) Before removing any coal or other material or driving any entry or passageway within five hundred feet of any natural gas or petroleum well, or before extending the workings in any coal mine beneath any tract of land on which such wells are also drilled, or within five hundred feet of any such well or under any tract of land in visible possession of a well operator, the coal operator shall forward simultaneously to the well operator and to the Department of Mines and Minerals, by registered mail, a copy of the maps and plans required by law to be filed and kept up to date, showing on the copy of the map or plan its mine workings and projected mine workings beneath the tract of land and within five hundred feet of its outer boundaries. The coal operator may then proceed with his mining operations in the manner indicated on the copy of the map or plan, but if the conduct of his mining operations nearer than five hundred feet to any such well, whether completed or being drilled, or to any proposed well where a derrick is being constructed for drilling, or proposed well, will endanger the use of drilling of the well, the well owner or operator affected may within five days from the receipt of the copy of the map by him and the department, file specific objections in writing to the mining operations within less than five hundred feet of the well, and if the objection is so filed the department shall notify the coal operator of the character of the objections and fix a time and place for a hearing not more than ten days from the end of said five-day period. At the hearings the coal operator and the well operator, or such of them as are present or represented, shall proceed to consider the objections and agree upon the character and extent of operations to be conducted within less than five hundred feet of the well so as to satisfy the objections raised and meet the approval of the department and, if no agreement can be reached, the department, after a full hearing, shall make a decision defining what coal, if any, is necessary to be left for the safe protection of the use and operation of the well. The decision shall be subject to appeal by either party as provided in KRS 351.040. The department shall keep a complete record of all such hearings.

(2) The coal operator shall, at least every six months, bring up to date the maps and plans required by this section, or file new maps and plans complete to date.

PENNSYLVANIA

PENNSYLVANIA DEPARTMENT OF MINES AND MINERAL INDUSTRIES—OIL AND GAS DIVISION, 1962 EDITION

The operator shall not remove any coal or cut any passageway within 150 feet [radius] of any such well or approved well location until a permit has been issued as hereinafter provided.

VIRGINIA

45.1–127 OF TITLE 45 OF THE MINING LAWS OF VIRGINIA

45.1–127. *Mining operations near wells.*—"Before removing any coal or other mineral, or extending any mine workings, or mining operations within five hundred feet of any well, or under any tract of land in visible possession of a well operator for the purpose of drilling for oil or gas, the mine operator shall give notice by registered mail to the well operator and to the Chief and forward therewith an accurate map or maps on a scale, to be stated thereon, of one hundred to four hundred feet to the inch showing its mine workings and projected mine workings beneath such tract of land or within five hundred feet of such well. Following the giving of such notice and the furnishing of such map or maps, the mine operator may proceed with mining operations as projected on such map or maps, but shall not remove any coal or other mineral or conduct any mining operations nearer than two hundred feet to any completed well or well that is being drilled, or for the purpose of which drilling a derrick is being constructed, without the consent of the Chief.

Application may be made at any time to

the Chief by the mine operator for leave to conduct mining operations within two hundred feet of any such well or projected well on forms furnished by the Chief and containing such information as the Chief may require. Such application shall be accompanied by a map or maps as above specified showing all mining operations or workings projected within two hundred feet of the well or projected well. Notice of such application shall be sent by registered mail to the well operator. The Chief may, prior to considering the application, make or cause to be made any inspections or surveys which he deems necessary, and may, if no objection is filed by the well operator, grant the request of the mine operator to conduct the mining operations as projected, or with such modifications as he may deem necessary.

The operator of the well or projected well affected may, within ten days of the filing of such application by the mine operator, file with the Chief his objections to such projected mining operations, in which event the Chief shall, not less than twenty days nor more than forty days after the filing of the application, set a time and place for a hearing at which he will consider such application, and the objections thereto, of which at lease five days' notice shall be given to the mine operator and the well operator. The Chief shall, after a full hearing, at which the well operator and mine operator shall be permitted to offer any competent and relevant evidence, grant the request of the mine operator or refuse to grant the same, or make such other decision with respect to such proposed further operations in the vicinity of any such well or projected well as in his judgment is just and reasonable under all the circumstances. The Chief shall keep a record of all such proceedings.

From any such final decision or order of the Chief either the well operator or mine operator, or both, may, within ten days, appeal to the circuit court of the county in which the well about which approval of such further operations is involved is located. The procedure in the circuit court shall be substantially as provided in Section 45.1–121. From any final order or decree of the circuit court, an appeal may be taken to the Supreme Court of Appeals as heretofore provided."

WEST VIRGINIA

§ 11. When Coal Operator to File Maps and Plans As Prerequisite to Extension of Coal Operations; Petition for Leave to Conduct Operations Within Two Hundred Feet of Well; Proceedings Thereon.—Before hereafter removing any coal or other material, or driving any entry or passageway within less than five hundred feet of any well, and also before hereafter extending the workings in any coal mine beneath any tract of land on which wells are already drilled, or within five hundred feet of any well, or under any tract of land in visible possession by a well operator for the purpose of drilling for oil or gas, the coal operator shall forward, by registered mail to, or file a copy of the parts of its maps and plans which it is required by law to prepare and file and bring to date, from time to time, showing its mine workings and projected mine workings beneath such tract of land and within five hundred feet of the outer boundaries thereof, simultaneously, with the well operator and the department of mines, accompanying each of said copies with a notice (form of which shall be furnished on request by the department of mines), addressed to the well operator and to the department of mines at their respective addresses, informing them that such plans or maps and notice are being mailed by registered mail to them, or are being filed and served upon them, respectively, pursuant to the requirements of section eleven of this article. Following the filing of such parts of said plans or maps as aforesaid, the coal operator may proceed with its mining operations in the manner and as projected on such plans or maps, but shall not remove any coal or other material or cut any passageway nearer than two hundred feet of any completed well, or well that is being drilled, or for the purpose of drilling which, a derrick is being constructed, without the consent of the department of mines, and the coal operator shall, at least every six months, bring such plans or maps so filed with the department to date, or file new plans and maps complete to date.

Application may be made at any time to the department of mines by the coal operator for leave to mine or remove coal or conduct its mining operations within two hundred feet of any well, by petition, duly verified, showing the location of the well, the workings adjacent to the well and any other material facts, and what further mining operations within two hundred feet of the well are contemplated, and praying the approval of the same by the department, and naming the well operator as a respondent. The coal operator shall file such petition with, or mail the same by registered mail to, the department and shall at the same time serve upon or mail by registered mail a true copy to the well operator. The department of mines shall, forthwith upon receipt of such copy, notify the well operator that it may answer the petition within five days, and that in default of an answer the department may approve the proposed operations as requested, if it be shown by the petitioner or otherwise to the satisfaction of the department that such operations are in accordance with law and with the provisions of this article. At the expiration of such five-day period, the department, whether an answer be filed or not filed, shall fix a time and place of hearing within ten days, of which it shall give the coal operator and the well operator five days' written notice by registered mail, and after a full hearing, at which the well operator and coal operator, as well as the department of mines, shall be permitted to offer any competent and relevant evidence, the department shall grant the request of the coal operator or refuse to grant the same or make such other decision with respect to such proposed further operations in the vicinity of any such well as in its judgment is just and reasonable under all the circumstances and in accordance with law and the provisions of this article. The department of mines shall docket and keep a record of all such proceedings substantially as required in the last paragraph of section three of this article, and from any such final decision or order of the department of mines, either the well operator or coal operator, or both, may, within ten days, appeal to the circuit court of the county in which the well about which approval of such further operations is involved is located. The procedure in the circuit court shall be substantially as provided in section four, the department being named as a respondent. From any final order or decree of the circuit court, an appeal may be taken to the supreme court of appeals as heretofore provided.

§ 12. Supervision by Department of Mines Over Drilling and Mining Operations; Complaints; Hearings; Appeals.—The department shall exercise supervision over the drilling, casing, plugging and filling of all wells and of all mining operations in close proximity to any well and shall have such access to the plans, maps and other records and to the properties of the well operators and coal operators as may be necessary or proper for this purpose, and, either as the result of its own investigations or pursuant to charges made by any well operator or coal operator, the department may itself enter, or shall permit any aggrieved person to file before it, a formal complaint charging any well operator with not drilling or casing, or not plugging or filling, any well in accordance with the provisions of this article, or charging any coal operator with conducting mining operations in proximity to any well contrary to the provisions of this article, or to the order of the department. True copies of any such complaints shall be served upon or mailed by registered mail to any person so charged, with notice of the time and place of hearing, of which the operator or operators so charged shall be given at least five days' notice. At the time and place fixed for hearing, full opportunity shall be given any person so charged or complained to be heard and to offer such evidence as desired, and after a full hearing, at which the department may offer in evidence the results of such investigations as it may have made, the department shall make its findings of fact and enter such order as in its judgment is just and right and necessary to secure the proper administration of this article, and, if it deems necessary, restraining the well operator from continuing to drill or case any well or from further plugging or filling the same except under such conditions as the department may impose in order to insure a strict compliance with the provisions of this article relating to such matters, or restraining further mining operations in proximity to any well, except under such conditions as the department may impose. From any such order an appeal, naming the department as a respondent, may be taken by the operator or operators so restrained, within ten days of notice of entry of the same, to the circuit court of the county in which the well involved is located, and the department or complainant or complainants, or both, may, in case such order is disobeyed, apply at any time to such circuit court for a decree enforcing the same.

Mr. COOPER. A provision common to these statutes is the requirement that the coal operator make application and obtain permission from the appropriate State agency, before mining coal within a prescribed distance of an active gas well. As a general rule, these statutory requirements contain no prohibitions on the mining of coal in the proximity of gas wells but are for the benefit of gas and coal producers in the conduct of their operations. They do not furnish protection to the coal miners nor advance his safety.

To provide greater protection to these men and to promote their safety I send to the desk an amendment which would prohibit the operation of all coal mines in any coal seam within 500 feet of a known gas or oil well whether producing or abandoned. The amendment places the burden on the mine operator to ascertain the location of the gas or oil well. Further, the Secretary of Interior is authorized to promulgate rules and regulations in his administration of this provision.

Mr. President, I offer this amendment to point up the fallacy of the so-called economic and materialistic argument that is made when one objects to almost any provision of a coal mine safety bill presented to the Senate. If it is said, as I have said here, opposition to the requirement that permissible machinery be required in nongassy mines as well as gassy mines is characterized as materialistic and based on economics, then, on the other hand, we are yielding to the materialistic and economic side to permit the continued operation of coal mines in gassy areas where there is known gas and where there are gas wells, both producing and abandoned, which can cause or bring about an ignition or explosion, such as occurred in West Virginia, almost at any time and which might bring a similar explosion in the same mine?

I would like to detail some of the tests

that are made to determine whether a mine is gassy or nongassy.

I know this from my own experience. I am not a coal operator, but I live in eastern Kentucky. I have been in gassy mines, and I know how tests are made to determine whether a mine shall be classed as gassy or nongassy. A test must be made which will, in various ways, determine the presence of gas. One way is the old-fashioned use of an open flame lamp, which in itself has caused ignition and explosions. The test is still in use in some areas of the country.

One amendment I am offering is that use of open flame lamps shall be prohibited in all mines in the United States.

The second way, which is safe, is the use of a safety mine lamp, which is used near the face of the coal or wherever the test must be made, which can indicate the presence of gas.

If it is found in any of those tests that gas is present in the atmosphere in a volume greater than 0.25 percent, the mine must be classified as gassy. And once classified gassy, it may never again be reclassified nongassy.

So the operator of a mine, and the miners themselves, because they have their safety rules, find it important to make these tests and to be certain that the gas does not exceed one-quarter of 1 percent. If gas is found, then, under the present Federal Coal Mine Safety Act and under all State acts, the operators must make adjustments in ventilation to provide better ventilation. I recall that the present law requires that 6,000 cubic feet of air a minute be provided at the face of the coal where the miners are working.

I close with the simplest explanation which I think any person with commonsense can make concerning the difference between a gassy mine and a nongassy mine.

In the first place, there is usually a great difference in topography and geology between these two types of mines. Anyone who has been through a coal area knows the difference between what is called a drift mine and a shaft mine. A shaft mine resembles a well that goes down into the earth. It goes below the water table, and, if gas is present, it is very difficult for that gas to escape or to be released. So there is a constant danger, in drilling down into the shafts and then going off into passageways and entries, that you will encounter gas. Gas is usually found there in large quantities, and greater care has to be taken in the use of permissible machinery, to avoid ignitions and explosions and the release of pockets of gas.

The nongassy mines are usually drift mines, which have an entry driven into the side of a mountain or hill, above the water table, and as they go higher up toward the top of the hill, there is less acreage, less area. The entries are not as deep, and so they are easier to ventilate; but chiefly because they are above the water table, the gas seeps out and is released in the atmosphere. So, over a long period of years, these mines have come to be called nongassy mines, because there is in fact no gas in them.

I have discussed these tables covering a 16-year period to show the difference between the fatalities and injuries from the two types of mines, and to point out that these injuries and fatalities are attributed to other causes, some of them to personal negligence, which could not be averted by the requirement of permissible machinery.

Mr. President, I support the purposes of the bill, of which I am a cosponsor, to provide for greater safety in our coal mines. It would provide greater safety in many respects. I have, prior to today, offered an amendment to provide measures to protect against roof falls, rib falls, and face falls, which cause more than 50 percent of the fatalities and injuries in our mines.

I remember in 1959 I proposed amendments to secure better protection from roof and rib falls. The amendment I submit today is to prohibit the use of open flame lamps in any mine, thus reducing the dangers of ignition or explosion.

But I do ask that the difference in classification as between gassy and nongassy mines remains, because it is based upon sound premises, upon differences in characteristics, topography, and geological considerations, and chiefly because there is no gas in a nongassy mine.

The PRESIDING OFFICER. The amendments will be received, printed, and appropriately referred.

The amendments were referred to the Committee on Labor and Public Welfare.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KENNEDY. Mr. President, I ask unanimous consent that the Senate go into executive session, for action on the nominations placed on the Secretary's desk.

The PRESIDING OFFICER. Without objection, it is so ordered.

U.S. COAST GUARD

The assistant legislative clerk proceeded to read sundry nominations in the U.S. Coast Guard which had been placed on the Secretary's desk.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed en bloc.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

On request of Mr. KENNEDY, and by unanimous consent, the Senate resumed the consideration of legislative business.

ORDER FOR ADJOURNMENT UNTIL 11 A.M. MONDAY, JUNE 9, 1969

Mr. KENNEDY. Mr. President, I ask unanimous consent that, when the Senate completes its business today, it stand in adjourment until 11 o'clock a.m. on Monday next.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Massachusetts? The Chair hears none, and it is so ordered.

Mr. KENNEDY. Mr. President, when the Senate convenes next Monday at 11 a.m., we will consider the nomination of Warren E. Burger, of Virginia, to be Chief Justice of the United States.

I also want to indicate that it is my intention to ask for the yeas and nays on confirmation.

ADJOURNMENT UNTIL MONDAY, JUNE 9, 1969, AT 11 O'CLOCK A.M.

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock a.m. on Monday next.

The motion was agreed to; and (at 3 o'clock and 49 minutes p.m.) the Senate adjourned until Monday, June 9, 1969, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate June 4, 1969, under authority of the order of the Senate of June 2, 1969:

IN THE NAVY

The following-named captains of the line of the Navy for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

John D. Chase	Jon L. Boyes
David M. Rubel	Donald C. Davis
Robert S. Salzer	Donald V. Cox
Narvin O. Wittmann	Herbert S. Ainsworth
Robert C. Gooding	Earl P. Yates
Paul E. Pugh	Donald D. Engen
John L. Butts, Jr.	Oliver H. Perry, Jr.
Charles N. Payne, Jr.	Edward K. Snyder
John L. Marocchi	Spencer Matthews, Jr.
William M. Pugh, II	Dean L. Axene
Ward S. Miller	Clarence R. Bryan
Roger E. Spreen	Patrick J. Hannifin
James Ferris	James W. Nance
John H. Dick	Rembrandt C.
William H. Livingston	Robinson
Howard E. Greer	Worthy H. Bagley

IN THE ARMY

The following-named officers for promotion in the Regular Army of the United States, under the provisions of title 10, United States Code, sections 3284 and 3305:

To be colonel

Fragala, James J., O40583.

The following-named officers for promotion in the Regular Army of the United States, under the provisions of title 10, United States Code, sections 3284 and 3299:

To be lieutenant colonel

Freeman, Arthur L., O83597.
Murnane, James J., O62144.
Nelson, Loyal E., O65714.
Wasco, Joseph, Jr., OF114800.

To be lieutenant colonel, chaplain

Glynn, John P., OF117998.

To be major

Abell, Julian L., O73588.
Abraham, Albert, III, O73016.
Abramowitz, Benjamim L., O73236.
Ackiss, Ernest L., Jr., O72433.
Adair, Billy R., O96941.
Adamkewicz, Edward S., Jr., O94734.
Adams, Richard E., O73589.
Adams, Robert B., O72565.
Adams, Tom, Jr., O72669.
Adsit, John M., O81570.
Agnew, Jack S., O74041.
Akin, Havis D., O72808.
Albright, John E., O72567.
Aldrup, Earl W., Jr., O73542.
Allaire, Christopher J., O73590.
Allen, James B., Jr., O78204.
Alston, Charles A., O99288.

The following-named scholarship students for appointment in the Regular Army of the United States in the grade of second lieutenant, under provisions of title 10, United States Code, sections 2107, 3283, 3284, 3286, 3287, 3288, and 3290:

Olney, Richard K.
Santella, Angelo J., Jr.

The following-named distinguished military student for appointment in the Regular Army of the United States, in the grade of second lieutenant, under the provisions of title 10, United States Code, sections 2106, 3283, 3284, 3286, 3287, 3288, and 3290:

Wolfe, Daniel F.

CONFIRMATIONS

Executive nominations confirmed by the Senate, June 5, 1969:

IN THE COAST GUARD

The nominations beginning Peter Thomas Aalberg, to be ensign, and ending John Vincent Zeigler, to be ensign, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 13, 1969; and

The nominations beginning Frederic J. Grady III, to be lieutenant, and ending Winstead K. Nichols, to be chief warrant officer, W–2, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on May 21, 1969.

HOUSE OF REPRESENTATIVES—*Thursday, June 5, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let the people praise Thee, O God; let all the people praise Thee.—Psalm 67:3

Blessed art Thou, O Lord, our God, who turneth the shadow of night into the light of the morning and giveth to us the glory of another day; we lift our hearts unto Thee in praise and thanksgiving.

Thanks be to Thee for the revelation of Thyself in the light of Thy word, in the beauty of nature, in the orderliness of the universe, and in the splendor of triumphant spirits. Thanks be to Thee for the revelation of Thyself in our own hearts, for moments when Thy presence has been real and we have known Thou art with us and we are with Thee.

Grateful for this day, send us out to do our work as best we can, touching the lives of our fellow men for good. Help us to look at others with the eyes of a brother and endeavor to meet the needs of our people with sympathetic hearts and understanding minds. May we be walking centers of good will in a world of ill will to the glory of Thy name, for the welfare of our Nation, and for the well-being of all mankind. In the name of Him who went about doing good. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 29. Concurrent resolution to correct the enrollment of Senate Joint Resolution 35.

SURTAX SHOULD NOT BE EXTENDED

(Mr. VANIK asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. VANIK. Mr. Speaker, on Monday morning, the Ways and Means Committee will consider President Nixon's request to extend the surtax until June 30, 1970.

As you know, Mr. Speaker, I have taken a position against any extension of the surtax and will continue to do so. The enactment of the surtax last year failed to halt inflation and served instead to fuel and perpetuate price escalation which has most critically affected the retired and those on fixed income. The average American consumer who is not responsible for this inflation has been clobbered by these clumsy efforts to contain it.

I have found little support for the administration's plans for extension of the surtax. Time is drawing close for decisive action. From what I can determine, there is grave doubt that sufficient support exists to extend the surtax under any terms.

Under these circumstances, it would seem prudent for the Nixon administration to scale down the surtax extension request to a more realistic period of 90 days ending the surtax on September 30. This would provide the administration with a balanced budget according to its own figures.

It is presumptuous to expect this Congress to provide the Nixon administration with a surplus which it denied two previous administrations.

A D-DAY TRIBUTE

(Mr. NICHOLS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. NICHOLS. Mr. Speaker, this week marks a memorable occasion in the hearts and minds of those Americans who were privileged to serve their country in World War II and who participated in the invasion of the European Continent on the beaches of Normandy on June 6, 1944.

Peace has come to a wartorn Normandy; cattle again graze in the placid pastures near Avranches; gentle breezes blow through the many crosses in the cemeteries on the quiet cliffs. Children frolic on Omaha and Utah beaches and the waters of the English Channel have reclaimed the rusting hulks of the old LST's. As Americans we simply do not know how very, very much we owe to so very few.

A quarter century has now elapsed and the brave men who jumped in those early dawn hours with the 82d and 101st Airborne Divisions have long since reverted to civilian status. Many of them now have sons a half world away fighting for these same principles that has built a great America.

No one who was there that day will ever forget the Omaha and Utah beaches nor the small towns of Ste.-Mere Eglise, La Haye du Puits St. Ló and others which caught the brunt of the war in Normandy. They will never forget the apple orchard nor the hedge rows which gave some measure of protection to our allied forces as we moved to liberate the French people, for the second time in this century.

Brave and dedicated American soldiers under the command of Gen. Dwight Eisenhower, supreme commander of the allied forces, fought, bled, and died to defeat a German Army under Adolf Hitler which was thought to be invincible.

So it is fitting and appropriate that on this June 6, we pause and pay respect to these brave men and to reflect on the many blessings we daily enjoy as free Americans, made possible because American airmen, rangers, sailors, and plain ordinary foot soldiers loved this country and were willing to defend it with their very lives against all enemies.

We Americans owe much to our men who have worn the uniform of our Armed Forces whether they wore it at Valley Forge in 1777, or at some lonely outpost in Vietnam in 1969 and I would commend for the reading of my colleagues, a D-Day tribute by Gen. Omar Bradley, "That We May Learn To Live as Bravely as They Died."

THAT WE MAY LEARN TO LIVE AS BRAVELY AS THEY DIED

(A D-Day tribute by Gen. Omar N. Bradley)

(NOTE.—Gen. Omar Bradley was commander in chief of all American ground forces participating in that campaign which began on the beaches of Normandy on June 6, 1944. Today, at 76, Omar N. Bradley is the country's only surviving general of the Armies.)

Twenty-five years ago next Friday the largest amphibious assault in history invaded the continent of Europe, denying the designs of aggressors who would covet and destroy the free world. I was there that day. I can recall that mist-shrouded dawn, the camouflaged LST's, the strong bodies that hurled themselves across the sands and into the battle on the Normandy beaches.

Many of those earnest young men who left their homes to defend them returned to those homes to live, work and worship in freedom. Too many never returned. They lie buried on the quiet cliffs overlooking Omaha Beach, beneath rain-whipped elms in our national cemeteries in England, or in a hero's grave in their home communities. Our allies, England and France, gave us land on which to bury our dead. They gave us courage and friendship when our need was desperate. And they gave us their sons to fight side by side with our own.

We honor on this anniversary not only those brave soldiers who died on D-Day, but the generation after generation of young sons who have had to die in conflicts visited upon them by issues remote from their everyday lives, in bitter struggles that have scarred the progress of all mankind, wasting the youth and resources of all nations.

We pause today to take comfort and strength from those of our dead who have already given this nation so much. We pause to learn—if we can—how men might live as charitably together in peace as they die for each other in war. We pause to ask why it is that men cannot live as bravely as they die.

Our lost young sons are partly the victims of your folly, and mine. They are the victims of all peace-loving peoples who turn their backs on the ills of the world. And if the United States ever stoops to expedients to avoid the difficult decisions that come with defense, we shall once again run the dangers of all half-way measures and waste our strength and conscience as a force for good.

If we cringe from the necessity of meeting issues boldly—with principle, resolution and strength—then we shall simply hurdle along from crisis to crisis, improvising with expedients, seeking inoffensive solutions, drugging the nation with an illusion of security which does not really exist.

The United States has matured to world leadership; we must steer by the stars, not by the lights of each passing ship. If we are to scamper from crisis to crisis, fixing principles and policies to the whim of each day, we shall place ourselves supinely and helplessly at the mercy of any aggressor who might play on our public opinion and decimate our resolution at will.

In this 25th anniversary week of D-Day, we pay homage to the strong, the weak, the leaders, the led, the brave, the fearful—to all who perished where only God could witness their charity to their fellow men.

Proudly—but reverently, sadly—we honor them. We pray they will ever rest in peace.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. NICHOLS. I am pleased to yield to my distinguished colleague, the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Speaker, we are at that time of uplifted hearts, bowed heads, and renewed patriotism between Memorial Day and Flag Day, and the distinguished gentleman from Alabama who carries his own scars of Normandy and D-Day, of a bygone day, is to be commended for what he does so beautifully in the remembrance of those who went over the Normandy beaches leading to the conclusion of World War II, and their great and eternal rewards.

It is said that beyond Omaha Beach in the some 9,000 "crosses row on row" of one of the U.S. national cemeteries, there is an inscription left by a parent on the proper cross, simply stating:

Into the great mosaic of victory this priceless jewel is set.

Let all America stop, as the gentleman has so well suggested today, to honor those jewels who were given so that the entire world might be free and that we might have individual liberty still here and around the world.

Mr. Speaker, I thank the gentleman for yielding and commend him for calling this day to our attention.

RED TIDES IN SAN FRANCISCO BAY

(Mr. EDWARDS of California asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. EDWARDS of California. Mr. Speaker, reports of red tides sweeping San Francisco Bay have become more frequent.

These tides, a strange phenomenon, not easily explained, include discoloration of the bay waters and odors, both spreading over many square miles.

The return of these tides is another distasteful reminder of the crisis now facing San Francisco Bay, and all of this Nation's waterways.

Fred Dierker, executive officer of the San Francisco Regional Water Quality Control Board, has outlined what is known about the red tides, and what is not known.

Apparently these tides are caused by minute forms of marine life, and the algae they eat. Mr. Dierker added it is believed the marine life feeds on nutrients, and when nutrients are present in the water in great quantities, the marine life breeds to the point the red tides appear.

These smelly tides have appeared in recent years throughout the bay. They are now surging around the shores of Berkeley, but they more often have been reported in the extremities of the bay in shallow water there, including the South San Francisco Bay.

The tides are a relatively new threat to the bay and their appearance comes at a time when, for at least a short period, the quality of bay waters has been improved. It is clear, however, the improvement of that quality will not last long unless more is done.

In one respect I welcome the appearance of the tides for they give clear warning of the dangers of water pollution at a time when the bay is being endangered by false optimism.

As I speak, the present administration is considering an inadequate scheme to finance water pollution projects.

The scheme would throw an even heavier burden on the already overburdened taxpayers of my district and on taxpayers throughout the Nation.

Simply, the proposal calls for the Federal Government to promise to pay off a portion of the bonds used to finance water pollution projects. At present the Federal Government makes direct grants to the communities involved.

Thus, the taxpayers of my district would have to pay the interest on those bonds, reducing the worth of the Federal money by 50 percent, and through that reduction increasing the cost to the taxpayers with no real savings of Federal dollars.

A representative of the National League of Cities is quoted as saying of this scheme:

We think it stinks.

Even under this scheme the present administration plans to provide an inadequate amount of money for water pollution control projects. Only $750 million per year would be provided to support—not direct payment—the needs of all communities of the Nation.

Experts have estimated the needed direct funding at $2 billion a year for the next 4 years.

The administration plan sidesteps the basic problems of water pollution.

But this crisis, the red tides reminds us of, is even closer to San Francisco Bay.

Legislation authorizing the continuation of the San Francisco Bay Commission is still in danger in the State legislature. One of the bills pending would actually demand approval of fill of the salt ponds around the bay, thousands of acres, after 3 years unless the landowner and the State reach an agreement. It is my view such a provision could only lead to further fill.

I hope the bay will be protected by the legislature. If not, then we here in Congress must do what we can to save this great national resource.

Finally, the red tides point out the danger of the increasing flow of nutrients into the bay. I am requesting the Federal Water Pollution Control Agency to begin immediate studies of the cause of the red tides and to report on possible solutions to the problem.

Only through united and increased efforts can we save the bay and the waters of the entire Nation.

NOT FORTRESS-CHICAGO ISOLATIONISM, NOT MEDDLESOME INTERVENTION, BUT RESPONSIBLE INTERNATIONALISM

(Mr. REUSS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REUSS. Mr. Speaker, I am pleased that yesterday President Nixon, in an address to the graduating class at the Air Force Academy, paid tribute to "responsible critics" who, in his words, "reveal waste and inefficiency in our Defense Establishment, who demand clear answers on procurement policies, who want to make sure a new weapons system will truly add to our defense." And I was greatly encouraged by his further endorsement, in his words, "of those with sharp eyes and sharp pencils who are examining our post-Vietnam planning with other pressing national priorities in mind."

This unequivocal statement of support for the position of an increasing number of us in Congress is welcome. I confess, however, to disappointment with other parts of the President's address. The President appears to reduce the great policy alternatives of this Nation to two: a past that very few would return to, and a present that the great majority wish to move away from.

Certainly, the first of these alternatives—isolationism and unilateral disarmament—as the President quite properly points out, would be a dangerous one for this Nation to take. The fortress-Chicago concept is pretty dead nowadays, even in the President's own party.

But the alternative vision the President offers us is surely the status quo—the meddlesome interventionism which has been our besetting sin in recent years. In setting out his belief "that this Nation shall continue to be a source of world leadership and a source of freedom's strength," the President is reaffirming the course of military adventurism which he advocated in Vietnam as far back as 1954, and which has dogged us in Lebanon, in the Bay of Pigs, in the Dominican Republic, and in the tragic stalemate in Vietnam.

Are we now uncritically to accept the many costly foreign commitments undertaken in past years as vital to our security for the indefinite future? Shall we endlessly prepare for arms talks with the Soviet Union and never begin them, endlessly arm ourselves but never parley?

The President has exhorted us to pride in nation and a "resurgence of American idealism," and has cited the achievements of fifth-century Athens and of Renaissance Italy. It may be worth recalling that the glory of ancient Athens was eclipsed by struggles with its neighbors, and that the splendor of Renaissance Italy was shadowed by internecine warfare between city-states.

In truth, the interventionism our Nation has practiced on a grand scale has become as unacceptable to the vast majority of Americans as isolationism. Fortunately, Americans are not left with a simple either-or choice—between fortress-Chicago isolationism and meddlesome interventionism.

There is the great middle ground that the President has left unexplored—responsible internationalism. Responsible internationalism believes in military strength, but not in an endless overkill capacity that ends up with no security at all. It believes that if we assign all priority to the unattainable goal of decisive military superiority, we shall leave untackled the great tasks of improving international economic cooperation, of eliminating world hunger, of cleaning up our polluted environment. It believes that if we continue on a course of officious military interventionism in every corner of the globe, we will sacrifice our claim to a respected moral and political voice in the world.

In his next commencement address, I hope the President will explore this third alternative of responsible internationalism. That is a standard to which the great majority of Americans will gladly repair.

PERMISSION FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO FILE REPORT ON H.R. 6543

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce may have until midnight, June 5, to file a report on the bill H.R. 6543, to extend public health protection with respect to cigarette smoking, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

FAR EAST AND SOUTHEAST ASIA—ADDRESS OF MRS. ANNA CHENNAULT, VICE PRESIDENT OF INTERNATIONAL AFFAIRS FOR THE FLYING TIGER LINE, INC.

(Mr. McCORMACK (at the request of Mr. ALBERT) was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. McCORMACK. Mr. Speaker, Mrs. Anna Chennault, vice president of international affairs for the Flying Tiger Line, Inc., recently returned from the Far East and Southeast Asia, where she discussed with several Asians their reaction toward contemporary American problems. In two recent speeches, she discussed this matter at length.

These speeches deserve the attention and consideration of Congress and the public. The speeches follow:

REMARKS BY MRS. ANNA CHENNAULT BEFORE THE LOS ANGELES BREAKFAST CLUB, MAY 21, 1969

Good morning, ladies and gentlemen. I am honored to join you this morning to observe

and celebrate "World Trade Week". I notice your theme is "World Trade is a Two-Way Street". I fully agree. I remember not long ago driving in Rome into a one-way street by mistake and was stopped by a policeman. His remark was, "My dear lady, even as pretty as you are, you know you cannot get away with it".

As vice president of International Affairs of the Flying Tiger Line doing business around the world—this is not a commercial—I just want to be sure our president, Bob Prescott is listening—I can think of no better cause in bringing us together. I have heard and read of your organization and consider each one of you here this morning a goodwill ambassador. As an airline executive and a lecturer I have the good fortune to travel and to meet people from all parts of the world. As a resident of the Nation's capital I have the good fortune to observe the practice of politics and the pursuit of power.

One of the many questions asked by my audience in the orient has been, "what is happening in America?" This question expressed their curiosity as well as their hope of America. I have just recently returned from the Far East and Southeast Asia and I can tell you their predominant reaction to our military industrial complex is that they wish they could have one like ours.

We have moved a long way from the Chinese rickshaws to the jet age—from man taking a slow boat to China to man reaching for the moon. Marco Polo traveled a long way and the only thing he brought back to Rome was noodles—today we are still arguing whether the Chinese invented noodles—or the Italians produced the spaghetti.

In the areas where I have traveled, to the people to whom I have talked, the building of a decent world, and the desire for a better tomorrow has become the hope and the dream of the people in all parts of the world. Most of the people in the orient who have experienced totalitarianism are fully convinced the forces of freedom are stronger than the forces of tyranny. This is being demonstrated in Hong Kong, in Taiwan, in Korea, in Singapore, in Malaysia, Japan, Thailand, Indonesia and even in war-torn Vietnam.

In the Orient there is a new horizon. There are many frontiers to be opened. Young leaders with new ideas, progressive businessmen with new enterprises invite the people in the West to work and to share with them the exciting challenge to improve world trade. For the people in the East as well as in the West, both realize in this nuclear age the big powers not only have to share the responsibilities and obligations to establish collective security, but more important, to keep the balance of trade in order to check the balance of power.

Today the free trade between free people is incompatible with world Communism. This is a truth of Asia as it is of Europe. The Communist leaders fear our friendship with free nations and our communication with their captives more than they fear our military strength. Without any doubt economic wisdom on our part sometimes will help accomplish political success.

I came back from the Pacific and Southeast Asia with hope and encouragement. I am much impressed by the show-cases by South Korea, Japan, Free China, Hong Kong, Thailand, Singapore and many others. These free nations in the Orient with their practical and aggressive leaders are making steady progress in their new destiny. Many new hotels are being built in Seoul—the World Fair opening in Osaka—the free port established in Kaohsiung and the tourists in Hong Kong give us the feeling of movement. They might not have our Wall Street or our Hollywood but their willingness to work and their energy and imagination to move forward make us aware of the increasing importance of their trading position with the United States.

To make the trading arrangement between East and West more meaningful calls for new dimensions, new appreciation as well as practical and realistic appraisal. The new dimensions rest in the areas of more education and cultural exchange, rest in the areas of mutual respect and trust between the United States and her friends who are willing and anxious to trade with us.

We Americans need not be ashamed to profess that one reason for our passion for world peace is to protect the materialistic prosperity we have achieved. As intelligent people we are convinced by history that only those who can keep more than enough for themselves are the ones who see to it that the others also will have enough.

Today, we, as a free people have a real function in national security in creating an economic adequacy to support freedom among peoples who are still struggling to be free. That adequate economy can come only from: (1) sound capital; (2) technical know-how, and (3) purchase of products at a trading profit.

As we enter a new era of trade and end a long period of frustration from "aid stage", we as business people are very much aware of the importance of a two-way street. This two-way traffic will help to build a sound foundation of East and West trading for today and tomorrow, and possibly indirectly will help to form important political decisions for this Nation in the future.

All free and sound civilization must be built on the foundation of reality and common sense. And I believe there is a sound basis of common sense in every section of our society. Today the West and the East are both going through rapid changes. Most of the changes are for the better. However, we all realize successful involvement is not through violence or protest to satisfy the minority few but by creative, positive and peaceful actions which benefit the majority many.

We as free people, have the courage to invite the leaders behind the bamboo curtain, behind the iron curtain to be familiar with the system of free enterprise. We challenge them to open their minds as well as their hearts. We challenge them to tear down their curtains. We challenge them to eliminate their walls. We challenge them to dare to experience the practice of individual liberty and political freedom. We Americans are for world peace and we dare to show them world peace can be established through economic development and cultural exchange.

May I ask you to look at the map of the Pacific? For many centuries the Western world has fought against any totalitarian control of the Atlantic by encouraging the nationalistic impulse of their people wanting to be free from the North Sea to the Mediterranean. Today in Asia, Korea is our Norway, Japan our England, Taiwan our Netherlands, and Southeast Asia our Mediterranean. By upgrading the strength of their economy it will be a sound foundation for stability and security for the other parts of the world.

I am most impressed by the performance of the young leaders in Asia with their progressive ideas, and their political wisdom. They have opened new horizons and an exciting era for world trade.

This morning we gather here to exchange information to talk about our common interests on world trade. Let's not be too critical of some of our failures and our disappointments and at the same time not overconfident of our accomplishments and our successes.

The people in the orient need energetic maturity and the people in the west, political wisdom for this new adventure—world trade. Shall we move forward together?

The Asian Mind and the World Crisis

(Remarks by Mrs. Anna Chennault before the Commonwealth Club, San Francisco, Calif., May 23, 1969)

You honor me today to let me speak before this distinguished organization, before which my late husband, General Chennault spoke some years ago. I appreciate this equal opportunity, but I also remind myself it is perfectly harmless to accept a compliment as long as you don't try to inhale.

I have carefully read the information you have sent to me. I noticed you limit the length of the speech to 27 minutes—you certainly know how to stop people from talking. What do you do with some of my politician friends in Washington who take 5 minutes just to say, "hello". I am impressed with all the distinguished speakers who have appeared before this organization. However—I am sure you have never before had a mini skirt appear before you who is not a candidate for anything—not even for president of an airline. I want the President of our flying Tiger Line, Mr. Prescott, to hear—so he will not be apprehensive.

I come to you this morning to talk about the Asians—from Korea to Singapore. I do not claim to be an expert about this—the experts are those who fly around the world in two weeks, return to Washington—and give you a Best Seller!

In this complicated world we all have to become students of international affairs. Continuous awareness, once a luxury for men and women of yesterday, is now a desperate necessity for our own survival as a free people. To contain new forces that are breaking old shells everywhere, we need many new dimensions.

I have recently returned from Asia with the same contrast of hope and concern with which I suppose all well-informed people regard events in this country. My hope is encouraged by a new energy and a modern outlook of Asia. My concern is the help the United States is giving to the Asian Communist's efforts to isolate America, by creating misunderstanding and credibility gaps between the American people and the people of Asia.

Let us make a comparison between the differences of American and Asian psychology. America is a young nation—enjoying glory—strength—and power in an unravaged land. The Asians are much older and homogenous—with much longer traditions. The Asians have known life much longer. They have a more fatalistic acceptance of its tragedy—which we have so far escaped. They know less about applied science, although they invented much of our basic research. They talk less about individual liberty and political freedom, but they are more practical and thoughtful about the nature of man and the pay off of long-term family and group objectives. They still believe in the accumulation of the benefits of work and effort from generation to generation, while we, in this country, believe in quick fortunes and early retirement. They don't have a Los Angeles Times, a Chicago Tribune, or a Wall Street, a Hollywood, a Pentagon, or a military industrial complex—although I am sure they wish they had. They are hard working people and unfortunately their enterprise often has been interrupted by wars and conflicts such as you cannot dream. In substance, the Continent of Asia has been in a continuous war since the British, for opium profit, turned against the Chinese people by using the Chinese's own invention of gun powder. Because of such tragic experiences, the Oriental people are patient—they are used to long wars and patient rebuilding after destruction. I saw that happen in China during the Second World War when I was a little girl—and I saw it happen again in Korea when I visited President Park and Prime Minister Chung of South Korea—and most recently, I saw the rebuilding of Saigon's

destruction after the Tet offensive. Their sense of history runs in deeper currents than ours. They have never substituted short-term solutions for long-term objectives. For that reason, as our enemies, they are always willing to wait us out, and as our friends they are always despairing of our restless itch to cut and run with gains as well as losses.

After talking with leaders from Korea, Taiwan, Japan, the Philippines, and Vietnam, I realize it is difficult for all Asians to understand the confusion and the agony we are going through in the constant reappraisal of our central objective in terms of our mutual interest; namely, freedom and peace in Asia, as indivisible with peace in Europe and the Middle East.

Like all intelligent people—the free people in Asia, in particular—worn by tragedies unbelievable to us—are anxious for peace but they are not willing to settle in terms of "peace at any price"—because they know that isn't peace. They look at Hungary, Czechoslovakia, Korea, with a deeper sense of history that warns them. Specifically, they know in their bones the ultimate difference between a "good settlement" and a "bad settlement" of the Vietnam war. They understand better than we do, that the expansionist Communist objective is to talk, to negotiate a breathing spell with us now and then take over Vietnam and Southeast Asia later, when it will be harder for us to go back. A "good settlement" would discourage further Communist aggression to stabilize a situation in Southeast Asia—the Middle East—the Pacific—or in Europe. A "bad settlement" in Vietnam will not only invite Communist takeover in Southeast Asia in the next couple of years, but might tempt the North Koreans to reopen the Korean war in 1970.

The people in the East who have long experience in dealing with the Communistic power which has been trying to take them over since the Russian revolution in the 1920's understand the "name of the game". To them —"Communism tastes the same—raw or cooked—hot or cold". They point out to me that peace and security are established by demonstrating to the aggressors that "aggressions do not pay."

While we, in this country, are concerned and worried about the world problems, our friends in Asia are deeply troubled by our self-doubt and our lack of confidence. They simply cannot understand why we Americans have become so defensive and apologetic for our actions and our demonstrations to preserve peace, security and justice around the world.

A friend pointed out that "each day, the thousands of people from all over the world, seeking entry into the United States, should be an outstanding testimony for the American people—that we who believe in free enterprise surely have something better to offer, that our democratic system is certainly a better one than that being enforced behind the bamboo and iron curtain." And yet—the people in Asia simply cannot understand why the United States, with her wealth and power is so full of self-doubt. Another friend jokingly said to me, "every time the Communists sneeze, the American people catch cold".

In America a psychology of defeat has brought a new growth of isolationism to our people. This is exactly what the Communists want to happen. The Communist's assumption is this—if the American public talk themselves out of supporting freedom in Vietnam—they most certainly will not support freedom anywhere in the Pacific, and therefore, not in Berlin or in the Middle East. They see Asia as a turning point in all our past policy toward supporting freedom.

The Communists in Asia fully realize they cannot compete with us in military strength but they certainly know how to work on so-called "public opinion" and try to outlast our patience. Hanoi and Haiphong realize they cannot capture Saigon by force. They have tried many times and failed. They know the only way to enter Saigon is to "talk their way in". Unfortunately, for many years the Vietnam war effort has been frustrated by technical decisions based more on the political invention of limited war rather than military practicalities. In Asia people still believe in decorating their heroes and shooting their enemies—while we, in a more comforting position are having difficulty finding the definition of "hero" in our dictionaries. Furthermore, we seem to have entered a space age. We are people in a hurry—we are all so used to instant tea—instant coffee—we are inclined to look for "instant solutions" to the extent we sometimes make the mistake of trying to force our kind of system on other peoples.

Without question, power is a lonely business. But for our own survival, this country cannot afford to be isolated. Hitler of Germany, Tojo of Japan, and Stalin of Russia, have taught us this lesson of history. Only until the other powers who are now feeling their muscles, want peace more than they want power of expansion, will this world be secure from conflicts and threats. The United States' position is to keep the "balance of power" in order to avoid conflict. All our spiritual aspirations will come to nothing if we weaken the physical assurance of our national security—for a stronger national security in this nuclear age is the most effective foundation for freedom and for peace.

At this late hour, it is important for the people of good will and good intentions to have some practical common sense and to be realistic about international problems. We simply have to understand that the aggressors with whom we deal only understand one kind of language—that is, active forces and consistent determination.

I am fully convinced, from my own too realistic experience, that the forces of freedom are stronger than the forces of tyranny. The free people in Asia are making steady progress toward their own destiny. Rising young leaders from Singapore to Korea sincerely believe in promoting political stability and economic advancement. There is new confidence among these young leaders: they are better educated and so more aware of the forces of the future. As the era of colonialism and imperialism comes to an end in East Asia, they know that there is a vacuum—that vacuum cannot be replaced by the most dangerous aggressors. That vacuum must be filled by the free and independent people of Asia with the help of those whose help is welcome because they have no ambitions of territorial expansion. Our consistent—not self-doubting willingness to help—is the message people in this Nation must try to convey to our friends in Asia for our own security.

The leaders of the free people, whether in the west, or in the east, have to accept the burden that successful involvement is not through protest by an uninformed minority to satisfy that minority few themselves, but by creative and progressive actions of an informed minority many, like you, which benefit the majority many. The free Asians do recognize their need for energetic maturity and the west must recognize that without strong friends in Asia there will be no peace anywhere.

As I can see it, our foreign policy has one basic analogy. That is—we try to prevent any single power to mobilize the people and resources of the entire continent—whether it is in Europe or in Asia. Because that single power would have to be totalitarian, therefore against our freedom in America. Foster their hope—help to protect their independence—for the free loving people is our way to encourage the other people not to make land or their resources available to a single totalitarian master. To do this—we have to depend on a sound military defense establishment. Our defense system, whatever its faults, is still the envy of the world. Every other nation only wishes it had one too.

The change in Indonesia, the strength in Korea, the land reform in free China, our improved relationships with Saigon, are fruit of our labor.

Today, few young students of history on college campuses appreciate the sense of history. It is fashionable among them to doubt the worth of loyalties and beliefs. They say that they should live merely to express themselves as if the world began today. Because the future is so unpredictable, they would live as if there were no future, and yesterday was already too late. But Nihilism is a noisy luxury of those who have never known the need of self-preservation. There will never be any way for the very young to understand that need until it catches up with them.

I still think the Bible is worth reading for long-term human wisdom and I remember that Gideon said before Armageddon: "By the three hundred men that lapped I shall save thee, O Israel." Which meant he fought his battle for the Lord with the handful of men who knew their business and sent the incompetent and the faint-hearted home.

From Asia I have watched the United States rise from many disasters. Because of the concern of its strong-hearted and competent, the United States will never completely lose the wisdom of a long-term view—or ever fail to be the rallying point of those all over the world who in a famous phrase are "the aristocracy of those who care."

BERKELEY: TROOPS ARE GONE, EFFECTS WILL LINGER

(Mr. BROWN of California asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. BROWN of California. Mr. Speaker, the physical violence in Berkeley may have ended, but it will take quite some time to end the mental and philosophical damage created there.

To say that the "people's park" incident was the sole cause of recent troubles is rather a grandiose simplification. Of all the major universities in this country, perhaps Berkeley best represents the widening polarizations between youth and adult, between establishment and alienated. The park was no more than a catalyst.

Ever since 1964, and the advent of the free speech movement at the University of California, discontent at Berkeley has ebbed onward; never has there been complete quiet, complete confidence on campus.

In many ways, what happens at Berkeley seems to become a harbinger for other schools across the Nation. It was at Berkeley that outside police first invaded a campus to restore order through mass arrests and violent confrontation—a scene repeated last year at Columbia, this year on many campuses. Student strikes, building occupations, these too resulted from turmoil at Berkeley, and these, too, now have become commonplace.

Since last fall, the Berkeley campus and town have been under an extraordinary emergency proclamation—a proclamation giving State and local officials immense powers in times of crisis. And, then, 2 weeks ago, authorities sanctioned use of firearms and tear gas bombings as the means of repressing the latest demonstrations in Berkeley.

Are these violent reactions also to spread nationwide?

I do not condone irresponsible acts carried out by demonstrators at Berkeley or any other place. But I am also upset by the seemingly thoughtless methods employed by authorities who inflame situations instead of cooling them down.

I am appalled when I hear statements coming from persons such as Governor Reagan and the Alameda County sheriff that not only give countenance to violent reaction but also goad on even further confrontation.

The last troops finally are leaving Berkeley. I pray that the end to this trouble has been reached. But, what about elsewhere? Will Berkeley still be the model for campus unrest? Hopefully, it will not, and the lessons learned at Berkeley—bitter as they are—will not be repeated.

And for another Berkeley not to happen, the onus of responsibility rests heavy upon the alienated youth, upon college administrators, and upon State and local authorities. Violence is no answer, and confrontation should be legal and peaceful. Each side must be willing to hear the other, and both should strive for settlement rather than polarization.

From Berkeley we have also learned that without willingness to completely resolve problems a natural tendency toward escalation follows, with succeeding incidents becoming worse in both instigation and handling.

In the following articles which I am inserting into the RECORD, a vivid picture is painted showing how the latest Berkeley problems arose, and how responses by authorities tended to increase pressures rather than lead to a calm solution. Most of these articles are from the Los Angeles Times, which made a very valuable contribution by its splendid coverage of the Berkeley disturbances.

The articles referred to follow:

[From the Los Angeles (Calif.) Times, May 30, 1969]

THE CONFRONTATION: BERKELEY—BIRTH, GROWTH OF "WAR"

(By John Kendall and William Endicott)

BERKELEY.—"Look out, here comes the jeep!"

That's when Dan E. Porter, 18, was enveloped in the zone of turmoil and violence south of the UC Berkeley campus on the afternoon of May 15.

Porter, recuperating in his home from gunshot wounds in his legs, recalls the warning was shouted by someone who hurried past him and his friend, Fred Campbell. They were on the way to pick up Fred's sister from high school.

"We stopped and turned around and looked," Porter says. "A jeep came toward us, spraying pepper gas. We ran into an alley. I got about half way down the alley when my right leg just came into the air.

"I fell against a wall to my right. I tried to get back to my feet but I couldn't. It was just too painful. Fred came back to help me but by this time the jeep was gone. They just shot and left.

"I didn't see who shot me, but people there said the shotgun was fired by a sheriff's deputy riding in the jeep. I was hit four times in the right leg and once in the left with what I think was double-aught buckshot. The doctor says I may have suffered some nerve damage.

SPRAYING GAS, SHOOTING

"It was really cold. They could have told us to halt but they just pulled up and started spraying gas and shooting."

Young Porter returned home from Albany Hospital last Saturday, 10 days after about a hundred persons were injured, a man was mortally wounded and another probably was blinded in an afternoon of violent confrontation between authorities and Berkeley's radicals, "street people" and students.

Some of the demonstrators who streamed off the UC Berkeley campus toward a "people's park" fenced by the university threw rocks, bottles, and—police say—pieces of steel reinforcing rods.

Helmeted law enforcement officers, wearing flak jackets, heavily armed and looking like a paramilitary unit, responded with shotguns—a new bench mark for violence at the nation's troubled universities and colleges.

For the first time at US Berkeley, cradle of the student movement, and perhaps anywhere in America outside the south, shotguns were used to control student crowds.

For the first time anywhere in the nation, tear gas to control a crowd was delivered, not with grenades or sprays, but from a helicopter.

For the first time, UC Berkeley students went to class watched by national guardsmen carrying gas grenades and rifles with fixed and unsheathed bayonets.

The "people's park" incident is the fifth time since last July that UC Berkeley has been disrupted in one way or another by controversies leading to arrests and—sometimes—to violence.

Next to the campus has grown up a hippie-style youth culture with political activists who talk about "revolution." This, and student differences with the UC administration, produces an atmosphere of simmering controversy.

ALMOST ANYTHING AN ISSUE

Almost anything can be an issue, from the closing of Telegraph Ave. for a dance to the demands for an ethnic studies center by the Third World Liberation Front. The "people's park" seemed tailor-made for the activists.

They believed the "clumsy, inflexible administration" was taking away a spontaneous park built by the "people" for a soccer field. The administration faced the problem of completing plans of a decade and of establishing clear control.

This time, when the predictable demonstrations developed, authorities came down hard with massed police forces, guns, national guardsmen and helicopter techniques more familiar to a war zone than to an American college campus.

The park controversy began April 18 with an announcement in the Berkeley Barb, an underground newspaper.

"Hear ye, hear ye," it said. "A park will be built this Sunday between Dwight and Haste. The land is owned by the university, which tore down a lot of beautiful houses in order to build a swamp . . .

"We want the park to be a cultural, political, freak out and rap center for western world . . .

"The university has no right to create ugliness as a way of life. We will show up on Sunday, and will clear one-third of the lot and do with it whatever our fantasy pleases."

The "people's park" was born at a meeting of Berkeley street activists a few days earlier in a second-floor mod clothing shop just off Telegraph Ave. near the campus. The shop, called the Red Square, is owned by Mike Delacour.

On Sunday, April 20, several hundred of the street people who haunt the fringes of the university campus, aided by many students, turned up dragging trees, plants and rolls of sod.

They produced a rented bulldozer, and a young man in a sporty cowboy hat professionally graded the lot.

By 2 p.m., what had been a rutted eyesore that morning was a shady glen set in a small grove of trees at the northeast corner of the lot. It was an instant "people's park."

All kinds of people were attracted to the park. There were genuine hippies looking for a piece of turf to, as they put it, "do their thing." There were students. There were, in the vernacular of the hippies, "straight people."

There were mothers looking for a place for their children to play.

SCENE FOR CONFRONTATION

And there were radicals seeking a confrontation.

It soon became clear that the park would be the focal point for conflict among a wide range of viewpoints.

The park land unquestionably belonged to the university. It was first designated for university use as long ago as 1956, but there had never been money to acquire and develop it.

In June, 1967, the university finally paid $1.3 million for it with the announced intention of either making it into a soccer field and recreation area or building student apartments and dormitories.

Buildings in the area—most of them older dwellings occupied by students and street people—were demolished last summer, and students began to use the empty lot as a parking area.

On April 30, eleven days after the park came into being, the university issued a statement saying the area would be cleared soon for work on the recreation field.

WAR ON UNIVERSITY

On Thursday, May 8, UC Chancellor Roger Heyns asked his advisory committee on housing and environment, headed by Prof. Sim Van der Ryn, to assist in further modification of the plan and to discuss ideas with students. The following day, a proclamation appeared in the Barb. It promised a "war of retaliation against the university if it begins to move against the park."

Unsigned, it continued, "If the university attempts to reclaim $1.3 million worth of land now claimed by the people, we will destroy $5 million worth of university property."

Art Goldberg, a leader in the park movement and oft-arrested activist in the Free Speech Movement at Berkeley five years ago, called the park effort "the beginning of resistance."

But Van der Ryn maintained that even the hard core activists did not want a confrontation over the park and that with patience everything could be worked out.

NEIGHBORS DEMAND ACTION

Some 48 neighbors had signed a petition, however, demanding that the police and the university put a stop to all-night bongo drumming, shouting, dancing, love-making and alleged dope-peddling at the park.

The university was in a bind.

Heyns had directed Van der Ryn to serve as an intermediary with the park people, primarily to urge them to stop work and produce a representative committee for negotiations.

The committee was not forthcoming, and on Tuesday, May 13, Heyns issued a long, definitive statement that made it clear a showdown was inevitable.

He said discussions with park people had failed because they had refused to organize a responsible committee with which the university could consult.

A fence would be put up, he said, "to reestablish the conveniently forgotten fact that the field is indeed the university's, and to exclude unauthorized persons from the site."

INVOLVEMENT GROWING

A university spokesman said more and more people were becoming involved in the park "and it became clear that eventually, if we waited any longer, the confrontation would become even larger."

Van der Ryn said the park people were reluctant to elect a committee for several reasons:

"First, because their values and philoso-

phies stress individual participation rather than the forms of representative government; second, because they felt that any such committee would be drawn into the routine of campus planning; third, because the people working on the park suspected that a committee might strengthen the influence of the militant political people among them who were accustomed to committees and bargaining."

He also said the chancellor's demand that the people stop developing the site during discussions was similarly unrealistic.

"It assumed that somebody there was . . . in charge and could order everyone to lay down their hoes and stop planting shrubs," he said. "There was, in fact, nobody with that authority."

GETS NEGOTIATING TEAM

On Wednesday, May 14, Van der Ryn had succeeded in putting together an 11-man negotiating team. However, the chancellor had by then left for the East on business, and Van der Ryn said there was no one for the committee to talk to.

Thursday morning, the 15th, the struggle began.

The university had ordered a San Jose fence company to put up an eight-foot Cyclone fence in one day, and security arrangements had been turned over to the chief of the campus police, William Beall.

Expecting trouble, he asked Alameda County Sheriff Frank Madigan for help to protect the construction crew.

An estimated 250 Berkeley and campus police, sheriff's deputies and California Highway Patrolmen approached the park site at 4:45 a.m.

Lt. Robert Ludden of the Berkeley police advised about 75 people sleeping at the park that they were on university property and would be arrested for trespassing if they did not disperse.

There were three arrests. All the others left peacefully and the fence crews went to work.

OFFICERS TAKE OVER

There was no trouble in the morning. Law enforcement officers occupied the park, lounging on equipment and even swinging in the children's swings. Authorities were ready, but relaxed.

However, trouble developed out of a Committee for a Progressive Middle East rally at noon in front of UC's Sproul Hall. The committee relinquished its time to be devoted to observance of Israel's anniversary of independence for a discussion of the "people's park."

About 2,000 to 2,500 students had gathered when the student body president-elect, Dan Siegal, began to speak at 12:36 p.m. from the Sproul steps.

Later, after he had been charged with inciting a riot, the 24-year-old law student said he had not finished his speech when he invited the crowd to "go down and take the park."

But, finished or not, hundreds in the gathering—as if by signal—surged across Bancroft Way, bordering the southern edge of the campus, and flooded south on Telegraph Ave., walking in the street against the one-way traffic going north.

At 12:42 p.m., the marchers chanted, "We want the park. We want the park." The collection of activists, hippies and students walked toward Haste St., on the north edge of the university's land.

Almost immediately, demonstrators turned on a fire hydrant at Telegraph Ave. and Haste, spraying water across the street.

Police reported rocks, bottles and other missiles were being thrown by the marchers and spectators on tops of buildings along Telegraph.

Police used tear gas at Dwight Way and Telegraph Ave. at 12:48 p.m. to drive demonstrators back up Telegraph Ave. to the campus, four blocks north.

During the next 45 minutes, a highway patrolman, Albert Bradley, suffered a superficial knife wound in the chest, a city car was overturned and set afire at Parker St. and Telegraph Ave., police squads had run out of tear gas and were overrun.

And officers had used their shotguns.

FIRST GUNFIRE

The first report of gunfire came at 1:15 p.m.

Exactly where and under what circumstances a shotgun was first used is still not publicly known.

But the results of the gunfire became evident shortly at nearby Herrick Hospital, the city's emergency treatment center.

Hospital authorities received word at 1:15 p.m. to stand by because there had been trouble on the campus. Forty-five minutes later, they realized the usual emergency procedures would not do. They ordered the hospital's disaster plan into effect.

Staff members moved cars from the parking lot behind the emergency entrance and set up folding tables and sawhorses holding litters. Two doctors and several nurses manned the area.

The injured from the eight-square-block area south of the campus arrived on foot, in ambulances, by taxis and in private automobiles.

During the remainder of the afternoon, Herrick doctors treated more than 50 persons, 24 of them for gunshot wounds, including five who had been hit with double-ought buckshot.

One man had the main bone from his knee to ankle shattered with the double-ought. Another had the bones of a hand shattered. Birdshot penetrated the lungs of at least two persons. One had a pellet in his heart.

FORTY-THREE REPORTED HIT

In all, city officials report, 43 persons were hit by gunfire. Scores of others were treated for tear gas irritation, cuts, bruises and other injuries.

"The area was like a battle zone," said Daryl Lembke, a Times reporter hit by birdshot pellets from the rear as he hurried west on Blake St., away from the embattled Telegraph Ave., at about 2 p.m.

Lembke had seen the smoke of the burning city car on Telegraph Ave. and had gone there. When a crowd gathered near the car, police fired tear gas.

Lembke ran north with the crowd one or two blocks to Blake St. and turned west.

"I had gone about 30 to 35 feet from the corner when something went off at my back," he said. "I turned around and saw a policeman in a jump suit with a shotgun pointed at us.

"I tried to flatten against a nearby building, and then I felt something and looked down at my pants leg. It was bloody."

He said he had the impression the police were frustrated in attempts to control the crowd because wind would blow the tear gas away and the demonstrators would come back.

To Vincent Ferrari, 26, a bearded, long-haired free-lance photographer, the police "just blew their cool."

Ferrari, wounded by birdshot, said he was between the police and marchers taking pictures near Haste St. and Telegraph Ave. when police used tear gas against rock throwers.

"A pepper gas bomb went right over my head, and I suddenly became a demonstrator, jeering and cheering and shouting," he said.

MOVED WITH CROWD

"Then I kind of moved with the crowd down Telegraph Ave. to the corner of Dwight Way. It was there that I saw a car driven by a moronic policeman weaving back and forth on Dwight toward Telegraph.

"They were dodging rocks and firing tear gas from the car. The driver would aim his car at people."

Then, said Ferrari, he moved to Parker St. and Telegraph Ave. to watch the overturned car fire extinguished. He saw a crowd there being chased by police.

"The people were extremely frightened," he said. "Some were yelling, 'Guns, they have guns. Watch out.' I ran up Telegraph Ave. to Blake St. and turned left.

"I was about 25 to 30 feet west of Telegraph Ave. I slowed down and turned around. There was a patrolman down on one knee in a military firing position pointing a gun.

"I saw him aim at me. I turned and was shot. When he fired, there was no crowd. I had 48 birdshot wounds in my head, face, legs and arms. A motorist took me to Herrick."

The most deadly effect of gunfire came around the corner on Telegraph Ave. from where Lembke and Ferrari were shot. James Rector, 25, a San Jose carpenter, was fatally wounded. Rector reportedly was on the top of a two-story wooden building at 513 Telegraph Ave. where he was watching the action.

Four persons were struck with birdshot on the roof of the building immediately south. One of them was Allen Blanchard, 29, an employe of the Telegraph Repertory Theater, six store-fronts down. Blanchard was shot in the face.

DESCRIBE HAPPENINGS

The operator of the theater and Blanchard's employer, George Pauley, 30, stood on the top of the building this week and described what happened.

"About 2 p.m.," Pauley said, "there were about 20 or 30 persons on this roof. We had been on the balcony but moved to the roof to watch. Pretty strong winds were blowing the tear gas away and it didn't seem effective.

"Officers were in the street below us when we saw this red-haired kid with a rock. He was standing on that building. (Pauley pointed to a building immediately south of where he was standing).

"We yelled, 'If you throw that rock, they'll shoot tear gas up here.' He threw the rock anyway. It didn't hit any of the officers in the street, but they fired at least three volleys up here."

EYEBALLS PENETRATED

Blanchard fell, holding his face. Doctors found later that each eyeball had been penetrated by a birdshot pellet. Sight in one eye is gone, and doctors say there is only a slim chance for sight in the other.

Next door, Rector was struck just above the left hip by three double-aught buckshot pellets which lodged in his chest. He died four days later of shock and hemorrhage due to multiple shotgun wounds.

Gov. Reagan told a luncheon in Los Angeles Rector had been shot while on a roof from which steel rods and other dangerous objects had been thrown at officers.

Pauley insists, however, that the only one who threw anything at the police was the red-haired youth. "Except for that," he said, "no one up here threw anything at police."

On the street, law enforcement officers moved against groups of demonstrators who broke up into small groups, scurried down side streets and moved into the downtown area. Twenty-two stores in the area reported windows broken.

Berkeley Mayor Wallace Johnson and City Manager William C. Hanley asked that anti-loitering and antistreet rally measures be invoked and agreed with Sheriff Madigan that the National Guard should be called in.

Between Thursday and Friday, more than 2,000 guardsmen from throughout Northern California moved into the city. Helicopters beat the air, blaring news of a 10 p.m. to 6 a.m. curfew ordered by Gov. Reagan.

Reagan had declared a state of emergency in the city Feb. 5 at the height of a crisis over demands by the Third World Liberation Front for an ethnic studies center. He had never lifted it.

TENSE WEEKEND

The guardsmen and police enforced a tense peace through the weekend. There were minor skirmishes. On Monday, May 19, an estimated 2,000 persons marched on the city's main business district but were routed by guardsmen.

Tear gas was more common than fog. The city was under siege. Movements were restricted. Soldiers with unsheathed beyonets patrolled the streets, as did police, sheriff's deputies and highway patrolmen wearing flak jackets.

Then on Tuesday came the helicopter.

When some 2,500 students and street people attempted to march off campus they were turned back by guardsmen and herded into a tight corral near the Sproul Plaza area.

Finally, an H–19 National Guard helicopter made two passes over the central campus area, spraying white clouds of gas on a screaming crowd.

WAFTS ACROSS CAMPUS

It wafted across the campus, into Cowell Hospital and spread to recreation and residential areas in Strawberry Canyon east of the campus.

Gagging, tearful students sought shelter in university buildings.

The helicopter gassing was ordered by Brig. Gen. Bernard Nurre, 55, commanding general of the National Guard's 49th Brigade, because, he said, guardsmen were being threatened by furniture thrown from windows of campus buildings.

"This was a decision he (the general) felt was necessary because his troops were being hurt and were in danger of being more seriously hurt," said a National Guard spokesman.

"This way people got their eyes burned a little, but no one got seriously injured."

Minor demonstrations and rallies continued through the rest of the week, but there were no further violent confrontations. There was a mass arrest of about 500 people on Thursday, May 22, for failure to disperse and illegal assembly.

Guardsmen, however, remained on duty throughout the downtown area, and streets leading to "people's park" were blocked off.

ISSUE UNSOLVED

By the weekend, the curfew had been lifted, but the issue of the park remained unsolved, despite proposals and numerous public and private meetings by city councilmen, citizens' groups, student groups, street people and university officials.

Although the Berkeley City Council called for removal of the National Guard at a special meeting last Saturday, Gov. Reagan has refused.

Guardsmen will remain on duty in the city through this weekend, he said, in anticipation of a massive Memorial Day demonstration today.

By now, the fencing of the park has become a symbol. To some it represents the legitimate, lawful right of the owner to control his property and for authorities to restore order. To others, it repesents oppression by the "establishment" and the overwhelming force to carry out its will.

INVESTIGATION UNDERWAY

Law enforcement officials have been reluctant to discuss their use of shotguns, except to say they were necessary for crowd control.

An investigation is being conducted under the direction of Lowell Jensen, Alameda County assistant district attorney. The Alameda County Grand Jury also has indicated it will conduct an inquiry.

The order to use the weapons came from Capt. Thomas Houchins, the sheriff's field commander here.

He said Thursday, in his first public statement, that officers had been directed to use birdshot, which is much smaller than a BB, but had resorted to buckshot, a round ball about one-fourth inch in diameter, after the birdshot supply was exhausted.

He added that if there are further disturbances "we might use buckshot," thus indicating that the use of guns will be standard operating procedure in future confrontations.

Two weeks after the initial disturbance over the park, the Berkeley Police Assn., representing 236 Berkeley policemen, also issued a statement Thursday crediting Sheriff Madigan with saving them from the attack of a "vicious mob whose intention was to injure or kill the officers and take possession of property that was not legally theirs."

The officers said the use of shotguns was "totally justified."

The Berkeley officers also said there were 98 law enforcement officers injured in the melee—55 highway patrolmen, 39 Berkeley policemen and four sheriff's deputies. None of the injuries was serious, they said.

Madigan defended the use of guns by saying they, along with the appropriate ammunition, are standard equipment of every deputy sheriff.

The guns reportedly were used by sheriff's deputies, units of the San Francisco police, which were called in along with officers from other cities under a mutual aid agreement, and highway patrolmen.

POLICE ATTACKED

Hanley, the Berkeley city manager, defended their use by saying the law enforcement units were "attacked by hundreds of people hurling rocks, stones, bricks, concrete blocks and bars of reinforcing steel."

He said some officers were down on the street, unconscious from injuries. Sixteen eventually were reported injured, four of them bad enough to require hospital treatment, he said.

The field commander, Houchins, decided the guns were "absolutely essential" to prevent police from being overwhelmed, Hanley said.

Johnson, the mayor, offered another explanation: The demonstrators had become immune to gas or had found ways to offset it.

FLAGS FOR MASKS

For example, one pamphlet handed out on the streets advised that small American flags be used for gas masks. It said to use elastic to hold the flags on and to use cotton inside for a filter.

Although most of the firing of shotguns took place off the campus, at least two buckshot were found near the university library.

Members of the criminology department at the university charged the use of shotguns was indiscriminate and unnecessary as a crowd control tactic.

"It has the undesirable effect of escalating the level of violence in this and possible future confrontations," said a spokesman.

There seemed no doubt among many observers that the threshold of permissible violence by law enforcement agencies had been lowered.

[From the Los Angeles (Calif.) Times, May 30, 1969]

BERKELEY POLARIZED BY USE OF GUNS AND GAS—EVEN THOSE UNSYMPATHETIC TO PROTESTS VIEW IT AS OVERKILL, U.S. OFFICIAL SAYS

BERKELEY.—The effect of violence—particularly the use of guns and the gassing of the UC campus by a helicopter—has had a polarizing effect on the city of Berkeley, as well as the university community.

"It was Vietnam in people's minds," said Ray Colvig, UC public information officer. "People unsympathetic with the events on campus still felt this was overkill."

The Rev. Anthony Nugent, a Presbyterian minister assigned to the Berkeley Free Church, saw this effect:

"People on the right continue to be on the right and take a harder line than before. People mildly conservative, moderate or liberal have been radicalized.

"They may not like the kind of young people that are coming to Berkeley, but they realize this massive show of force isn't going to solve anything," he said.

CROP DUSTING

Even Mayor Wallace Johnson, who has not questioned the use of guns and who initially concurred in the call for the National Guard, said he felt it was a mistake "to use a helicopter to spray gas on the campus like a crop-dusting operation."

He said a friend "had his wife and infant daughter at a swimming pool in Strawberry Canyon and that stuff drifted up there and nearly caused a panic."

The mayor also said there was no doubt the use of guns and the helicopter has had a "very definite polarizing effect" of students and faculty and many residents towards public authorities.

At a special Saturday City Council meeting, an elderly man and a middle aged woman were engaged in a heated conversation in the corridor outside the council chambers.

"You've got to have order before you can have law," he was saying. "The faculty and students up there are the villains."

PALE, SHAKING

The woman responded: "No, no. Men with guns are the first villains."

Mrs. Berenice Decker, a 20-year Berkeley resident and mother of three, returned to work in the planning department at City Hall after lunch last Friday, pale and shaking.

She said she had seen a sheriff's deputy arrest a young Negro girl by grabbing her and twisting her arm behind her back.

"That's brutality," Mrs. Decker said. "I don't know what that girl had done, but she didn't deserve that kind of treatment. It's more than frightening, it's horrible.

"What's going to happen to us? How can you govern a city when this kind of thing goes on?"

Mrs. Decker turned up Sunday at a city-wide meeting called by the Citizens Committee to Restore Civic Unity and donated $1 to the bail fund for people who had been arrested during the disturbances.

The atmosphere also has touched children.

Richard Foster, superintendent of Berkeley schools, said "you can see fear" in their faces.

And a substitute teacher in the city schools, Miss Elizabeth Whitaker, said the children at the height of the crisis were in a near state of hysteria.

"Third-graders were wondering when the gas was going to come down on them or if they were going to be shot," she said.

On the university campus, the guns and helicopter have organized students as few issues ever have.

Eighty-five per cent of the 14,969 students who voted in a referendum last week approved of the preservation of the "people's park" which precipitated the current crisis.

Charles Palmer, UC student body president, also scoffs at the theory that students were used by revolutionaries.

"Sure there are a couple of heavies who rub their hands and look for trouble," he said, "but the students are not so naive as to be manipulated."

The 22-year-old Palmer, a political science honors student from Los Angeles, said the long-term effect on the university is "apt to be very bad."

"There's so much distrust. A university should be a community, but in Berkeley people are divided into interest groups. There just isn't a will to solve the problems.

"The park is a symbol of something we built ourselves . . . We were never con-

sulted about whether we wanted an athletic field there.

"Students want to see a university that is flexible, but we're locked in with a university that isn't flexible. The park is just another indication."

A university spokesman offered this observation:

"The park somehow symbolized something for a lot more students than you would realize. It's part of a trend. A lot of nonradical students just like to thumb their noses at the establishment a little bit, and this was a chance."

The question of legal ownership of land doesn't really touch them, he said. "Maybe in 10 years when they are out of school and buying their own home they will feel differently about it."

William Beall, campus police chief and former chief of the Berkeley police said the radicals, students and street people wanted a cause.

"They don't care about the park," he said. "The park is irrelevant. The city has one near it. It's the cause celebre. We've had five blowups in a year. Each one is getting worse. These people want revolution.

"What really is happening," continued the chief, "is that the street people are trying to induce students to join them because they need bodies."

Most observers agree that while the park has become the issue to the emotionally aroused, it is not that simple.

Both sides in the dispute reluctantly concede that the crisis has raised the basic question: Who will control institutions and property and for what purpose?

[From the Los Angeles (Calif.) Times, May 30, 1969]

CHRONOLOGY OF VIOLENCE: WHAT HAPPENED THE AFTERNOON OF MAY 15

12:36–12:40 p.m.: Student Body President-elect Dan Siegal speaks to crowd of about 2,000 to 2,500 gathered before Sproul Hall. When Siegal says "Go down and take the park!" they set off.

12:42 p.m.: Chanting "We want the park! We want the park!" the activists, hippies and students walked toward Haste St., bordering the north edge of the disputed ground.

Rocks, bottles and missiles are being thrown at police.

Fire hydrant turned on at Telegraph Ave. and Haste.

12:45 p.m.: Missiles reported coming from buildings along Telegraph Ave.

12:48 p.m.: Tear gas used at Dwight Way and Telegraph Ave. Officers report they are under missile assault.

12:50 p.m.: California Highway Patrol officer reported knifed and down in street.

12:53 p.m.: Gas being used.

12:55 p.m.: Call for help by citizen.

12:59 p.m.: Police squad overrun. Crowd takes gas equipment.

1:09 p.m.: Officers reported running out of supplies (presumably tear gas).

1:10 p.m.: Nonviolent crowd moving north on Telegraph Ave. toward campus.

1:12 p.m.: "Wild" crowd moving west on Haste St.

1:15 p.m.: Gunfire reported.

Herrick Hospital told to stand by.

1:16 p.m.: Traffic tied up throughout south campus area.

1:17 p.m.: Officers pinned down at Parker and Regent Sts. Assistance on way.

1:26 p.m.: Call for help from officers at Parker St. and Telegraph Ave.

1:27 p.m.: Officer down at Haste St., east of Telegraph.

1:28 p.m.: Car overturned at Parker St. and Telegraph Ave. (city vehicle driven by two reserve policemen, out of auto directing traffic).

1:30 p.m.: Fire in street west of Telegraph Ave. (Presumably the burning car.)

2 p.m.: Herrick Hospital goes on disaster plan. Emergency center set up in parking lot for patients arriving on foot, in taxis, by ambulance and in private cars.

12:40 p.m.–4:40 p.m.: Sixteen officers reported injured, 22 store windows broken, one city vehicle overturned and set afire. All police lines overrun by crowd.

6:30 p.m.: First call goes out for members of 49th Infantry Brigade of National Guard to report.

[From the Los Angeles (Calif.) Times, May 24, 1969]

REAGAN SHARPLY ASSAILS ADMINISTRATORS OF UNIVERSITY OF CALIFORNIA

(By Carl Greenberg)

Gov. Reagan unleashed one of his sharpest attacks so far on the University of California administration Friday.

He said there would be no statewide strike on the University of California campuses next Monday and Tuesday, as has been proposed. "If the university administration would spend less time deploring violence and worrying about police on the (Berkeley) campus, which they had to send for . . . and tell the student body the true facts of the situation . . ."

The governor was referring to police and guardsmen called out last week when violence erupted as chanting crowds of youths demanded control of university land near the Berkeley campus for a "people's park."

"Just sickening, just sickening" was Reagan's reaction when he was told that James Meyer, chancellor-designate at UC Davis, had not opposed a two-day strike against "repression" by police and guardsmen.

"This is the very kind of thing that precipitates more trouble," Reagan told newsmen at the Dorothy Chandler Pavilion of The Music Center, where he addressed the Independent Colleges of Southern California.

"When those in charge and those with the responsibility—adults—can, without apparently any knowledge or understanding of the true facts, further incite this kind of activity, I just can't find the words for my contempt for them and for what they're doing."

Reagan said the UC regents and administration must lay down policy lines and conditions that will provide for automatic punishment if the rules are violated.

In his speech, Reagan said the students have some legitimate complaints about lack of communication and defended "legitimate dissent and ferment" as the "yeast of change and improvement."

But, he continued, "let's not be naive—let's look squarely at those others who hide behind legitimate dissent while they plan riots and orgies of destruction."

A "new phase" of trouble making, said Reagan, is going to be "an assault on the very ownership of property, particularly of land." He did not elaborate.

"Today, too many in the academic community are challenging all the timetested standards. They're telling our young people to make their own rules . . . that the discipline of the past no longer binds us.

"Personally, I am sick and tired of those who on our behalf would assume the collective guilt for all of man's inhumanity to man since the beginning of time.

"The breasts they are beating are not theirs—they're ours. It is time to say to the revolutionaries 'one dose of Hitlerian storm-troopery is enough for this century.'"

[From the Los Angeles (Calif.) Times, May 24, 1969]

AUTOPSY CONFIRMS UNIVERSITY OF CALIFORNIA PROTESTER WAS KILLED BY BUCKSHOT

BERKELEY.—The 25-year-old demonstrator who died Monday of shotgun wounds he received in a disturbance here May 15 was shot with double-aught buckshot, an autopsy report confirmed Friday.

The autopsy, prepared by the Alameda County Coroner's office, said the death of James Rector of San Jose was caused by "shock and hemorrhage due to multiple shotgun wounds with perforation of the aorta."

Alameda County Sheriff Frank Madigan said Thursday that the shot that hit Rector was fired by law enforcement personnel.

Rector and about 70 other persons, including five policemen, were wounded in a clash between police and demonstrators, who were occupying the "people's park," a formerly empty plot of land near the Berkeley campus which student radicals and the nonstudent "street people" of the community had taken over and transformed into a small park.

ATTEMPTING TO CLEAR AREA

Police and sheriff's officers were attempting to clear the property, owned by the University of California, when the shots were fired.

After the incident, Madigan said his officers were authorized to fire shotgun shells loaded with light, fine birdshot as a crowd-control measure.

Madigan added that his officers were authorized to carry buckshot, but he did not give an explanation of how his officers were instructed to use the heavier ammunition. He has issued a statement assuming full responsibility for the use of weapons, but he has refused to see newsmen or answer further questions.

Double-aught buckshot, according to a Los Angeles ammunition producer, is a round ball about one-fourth inch in diameter. There are nine in an ordinary shotgun shell.

Double-aught buckshot, the ammunition expert said, "will kill a man—or an animal as big as an elk."

The kind of birdshot used to hunt quail, he continued, is much smaller than a BB. "It would sting the hell out of a man," he said, "but if he had a coat on, he wouldn't even know he was hit."

A spokesman for the Los Angeles Police Department said officers use double-aught buckshot "only when we're playing for keeps."

An investigative team in Berkeley, headed by Asst. Dist. Atty. Lowell Jenson, reportedly is conducting an inquiry into the use of shotguns in the incident.

The autopsy report said three shotgun pellets lodged in Rector's chest. The point of entry was the left side, just above the left hip.

The coroner's files list Rector's occupation as "laborer," but questions have been raised over the dead man's background.

At a luncheon in Los Angeles, Gov. Reagan said "eletronic surveillance equipment" and a rifle that could be broken down and easily concealed had been found in Rector's car.

He said Rector had been shot while on a roof from which steel rods and other dangerous objects were being thrown at officers.

"It's apparent he must have arrived to participate in this thing that was going on," Reagan said.

Berkeley police Friday confirmed Reagan's report, adding that the electronic equipment was a sophisticated telephone bugging device.

BUCKSHOT MAY BE USED ON UNIVERSITY OF CALIFORNIA DEMONSTRATORS, SHERIFF WARNS

BERKELEY.—The Alameda County Sheriff's office said Thursday if it is faced with further disturbances at UC Berkeley it will use shotguns and "we might use buckshot."

Capt. Thomas Houchins, the department's field commander here, also said sheriff's officers used heavy buckshot in policing "people's park" demonstrators May 15 after the officers ran out of birdshot.

One man was killed by the buckshot, which is about one-fourth inch in diameter, and others were wounded.

Houchins' statement was the first from the sheriff's office that buckshot had been used in the disturbances. He said law enforcement officers were dealing with a "full-blown riot."

Sheriff Frank Madigan said, "We either had to use shotguns or retreat and surrender the city to the mob."

The outbreak occurred after the university fenced in land it owned and which had been occupied by both students and nonstudents for a "people's park."

Madigan also said he would produce witnesses who would testify that James Rector, 25, of San Jose, who was fatally shot while on a rooftop, was hurling objects at officers.

In answer to charges that arrested demonstrators were mistreated at a county jail, he said: "We have young deputies back from Vietnam . . . and they think these people should be treated like Viet Cong."

But he said he had ordered an investigation of the charges.

Meanwhile, the Berkeley City Council Thursday night debated a proposed compromise for ending the two-week struggle over the "people's park."

UC Berkeley Chancellor Roger W. Heyns outlined the suggested compromise at a press conference Thursday afternoon. It calls for the university to lease nearly one-half of the property to the city at a nominal fee.

The city would then presumably allow continuation of "do it yourself" development of the park by residents of the Telegraph Ave. area.

The leasing arrangement would require approval by the UC Board of Regents.

Board of Regents Chairman DeWitt A. Higgs and several other regents met throughout the afternoon Thursday with Heyns, University President Charles J. Hitch, Berkeley Mayor Wallace Johnson and other university and city officials in an effort to reach a settlement in advance of a mass march today on the people's park.

The council listened to a lengthy succession of speakers, some of them warning against "appeasement" of demonstrators and others accusing Gov. Reagan, Heyns and law enforcement officers of repressing the urge of citizens to create something beautiful.

Leaders of the march, in which students from throughout California are expected to participate, emphasized Thursday that it will be well-monitored by its organizers to avoid violence.

Spokesmen for the organizers said the plan is to march to the park, located three blocks from the university campus, and ask authorities to remove the fence around the property. They said that if the fence is not removed, the crowd will form its own "fence" of human bodies around national guardsmen and police guarding the property.

The students voted 12,719 to 2,175 recently to endorse "continued use and development" of the property by citizens of Berkeley and students.

Heyns refused, however, to consider removing the 8-foot fence around the property at this time. He said this would be possible later when management, design and control of the proposed park have been worked out.

Preceding Thursday evening's lengthy deliberations by the council, Mayor Johnson reiterated his opposition to overcoming the crisis by city lease of the land. He called instead for the regents to hold a special meeting within the next two weeks to "recognize the validity of student demands for a user-participation" in developing the park.

LAW ENFORCEMENT AT BERKELEY

Issue: How should authorities respond when faced with deliberate provocations, as in the so-called "people's park" situation?

The vicious battle over the so-called "people's park" in Berkeley has demonstrated again a fact of primary importance: the strength and danger of young radicals lies not in their number, which is relatively small, but in their ability to rally popular support by creating situations that arouse the sympathy and backing of moderates.

Overreaction by police and National Guardsmen on and off the Berkeley campus gave rise to the issue the revolutionaries had really sought. The indiscriminate use of buckshot and tear gas, which victimized the innocent more than those who were violating the law, represented a victory for the radicals in their continuing challenge to authority.

The Berkeley radicals, students and nonstudents alike, wanted a confrontation over the park. They wanted one because, in this instance as in others, their goal was not the achievement of a specific objective, but rather the creating of circumstances that hopefully would breed new revolutionary converts.

To this end they were prepared to—and did—escalate violence to any level that would suit their purpose.

This is something the authorities should have understood and been ready to meet, with a cool and measured response. Instead, they played into the hands of the revolutionaries by a use of repressive force beyond any order of magnitude required. As a result those whom the law was supposed to protect were given cause to distrust and fear the law.

The attempt to thwart the university from reclaiming its private property—the "people's park" area—was undeniably a challenge that had to be met. The land had been illegally occupied and, whatever else was done, converted into a nuisance to the surrounding community. Action was needed to reassert primary rights.

But past experience with the tactics and aims of the radicals should have made clear that such action would have to be most carefully considered and applied. This might have been the university's aim. The situation, however, rapidly went out of control. A riot ensued and, as always, the innocent were done the greatest harm.

A fight over the "people's park" probably was inevitable, given the radicals' deliberate efforts to provoke one. But certainly the authorities should have understood just what the militants were up to, and understanding that, been far more selective in the use of necessary force.

We must face up to the fact that dedicated radicals will continue to foment trouble whenever they can, on whatever pretext. We must also face the fact that authorities will have to be far more discriminating in their response than they have been, to avoid harming those who have done no wrong.

Failure in this area makes constituted authority the unwitting ally of violence-prone militants. When that happens, where does it leave the rest of society?

LATEST BERKELEY BATTLE CALLED CRUSHING LOSS FOR MODERATES

(By Joseph Kraft)

BERKELEY, CALIF.—"Welcome to Prague," says one of the signs protesting students have put up here on the campus of the University of California. And while the comparison with the Soviet rape of Czechoslovakia is farfetched, the sign is not all black humor.

For the latest battle of Berkeley is an event far more grave than generally supposed, particularly back east where it has been grossly under-reported. What is happening here signifies a major intensification in the academic civil war and a crushing loss for the dwindling band of moderate men holding the narrowing strip of ground that is the middle.

The bare bones of the latest conflict are simple. A group of students and local hippies built a "Peoples' Park" on an unused piece of university land. University authorities, to assert their title, fenced off the plot and brought force to bear.

But the amount of force has been absolutely staggering. More than 2500 troops of the National Guard have been bivouacked on and around the campus. They have been carrying naked bayonets, manning machinegun emplacements, and moving around in heavy weapons-carriers.

Police from Alameda County, Oakland, and other Bay area forces have been brought up, tricked out in helmets and flak jackets. Photographs show them firing with pistols and with shotguns loaded with buckshot. One apparently innocent bystander has been killed.

About a thousand students have been arrested and roughly handled. At the Alameda County prison farm in Santa Rida, hundreds were held for several hours facedown on an asphalt pavement before even being booked, among them a reporter for the San Francisco Chronicle.

Helicopter surveillance of the campus has been constant, and because of the damage they might do to the choppers, kites, according to the students, are not allowed to be flown in Berkeley. In the most dramatic episode, heavy tear gas was released over the campus without warning and in a manner so indiscriminate that the gas enveloped the university hospital and a children's wading pool as well as the demonstrating students.

The application of so much force has brought the students together in almost unanimous opposition to the authorities. Last week 15,000 students—as against 10,000 in the best days of last year's Vietnam protests and about Speech Movement of 1964—called for withdrawal of troops and reopening of the park.

Included in that overwhelming majority is every campus organization from the rah-rah boosters to the left-wing hippies. Particularly bitter are the students who in the past have been deliberately moderate in their politics.

Charles Palmer, a senior going on to the Yale Law School and retiring head of the student government who spent most of the past year combatting left-wingers, is a good case in point. "I used to think it was stupid and offensive to call the cops Pigs," he said. "But for the rest of my life, when I see a blue uniform I'm going to feel bitter."

Perhaps saddest of all is the position of the responsible men supposed to run this university. Charles Hitch, president of the whole California university system, and Roger Heyns, chancellor here at Berkeley, are supreme examples of the new breed in college authorities. They are not so much academicians or fund-raisers as experienced and canny politicians, skilled in accommodating a wide range of conflicting interest groups.

Both men understand that coddling left-wingers and hippies could set in motion against the university a wave of right-wing, reaction. Accordingly, they have gone along with Gov. Ronald Reagan and his increasingly conservative Board of Regents in applying disciplinary sanctions to unruly students. In the past, through elaborate procedural maneuvers, Hitch and Heyns were able to isolate the troublemakers. And thus they held faculty support for disciplinary action.

Now the string has run out on that technique. Gov. Reagan and the Regents have the initiative. They, in effect, forced Hitch and Heyns to start the present confrontation by fencing off the park.

As a result, these sensible university authorities find themselves applying overwhelming force, not against a minority of dissidents trying to shut down the university as in the past, but against an overwhelming majority trying to keep open the park. Not surprisingly, the university authorities have,

for the first time, lost the support of the faculty.

Maybe Hitch and Heyns can still come up with a compromise to avert the new and far more bloody violence that is now shaping up. But their position has been irreparably weakened.

They and all other responsible university officials need a far wider range of alternatives than are presently available. They should not have to surrender to radicals and hippies. But neither should they have to go along—or be willing to go along—with men who have as little sympathy for the life of the mind as the Governor of California.

READING OF NAMES OF AMERICAN DEAD IN VIETNAM ON CAPITOL STEPS

(Mr. BROWN of California asked and was given permission to address the House for 1 minute, and to include extraneous material.)

Mr. BROWN of California. Mr. Speaker, yesterday at 12 noon, I and two of my colleagues joined 12 members of a Quaker action group on the steps of the Capitol in reading the names of the honored American dead in Vietnam from the CONGRESSIONAL RECORD. On Memorial Day, I had the honor of paying similar tribute to these brave men at ceremonies conducted by the American Legion post of my hometown of Monterey Park, Calif.

There was a difference in the two events. In my hometown, before an American Legion honor guard and representatives of every civic organization, I spoke of the ideals these men died to preserve, and the responsibility of the citizens, and their elected representatives, to insure that no American soldier died in a cause that was not just, did not protect freedom, did not promote the welfare of the oppressed people of the earth.

On the steps of the Capitol, speaking only the names of the American dead, I was confronted with a platoon of armed policemen who ordered a halt to the reading of the names, and when this illegal order was not obeyed, arrested the 12 members of the Quaker action group and took them to jail. My request to be arrested with them was refused.

I love my country just as much in Washington, D.C., as I do in Monterey Park, Calif. I honor the American men who have died in Vietnam just as much in Washington, D.C. as I do in Monterey Park. I make the same demands for an immediate end of the war while at home in Monterey Park as I do in these Chambers or on the steps of the Capitol. And I will continue to do so.

But in Washington, D.C., there seems to be more fear that these dead, sent to die by the action or failure to act, of the Members of this body, will return to haunt our dreams.

If we sent these men to die in a mistaken cause, as I believe we did, their deaths will not be absolved by sending even more to die with them. Their deaths will be absolved by rectifying the errors of past policy, by confessing that we sinned, and by choosing the path of righteousness in the future.

I urge this course on my colleagues.

I include herewith my own statement issued yesterday in connection with this event:

STATEMENT OF HON. GEORGE E. BROWN, JR., JUNE 4, 1969

I am joining A Quaker Action Group on the Capitol steps today because I share their concern, and I believe that they have an absolute Constitutional right to do what they are doing I have asked the Speaker of the House and the President of the Senate to instruct the Capitol Police not to interfere with the group's efforts to read the roll call of the Vietnam dead from the Congressional Record. I have advised the police that I feel the arrests are unwarranted.

I am in wholehearted agreement with the group's feeling that the Vietnam war is an unnecessary, illegal and immoral war that must be ended. It is a tragic error perpetuated by a stubborn and arrogant bureaucracy.

Over the past five years I have stated many times that I believe there is no chance of a military victory and the 35,000 names of these young Americans who had died bear irrefutable witness to the monstrous cost of this monumental mistake in our foreign policy.

The new Administration is not moving toward peace any faster than the previous Administration. The opportunity to admit past mistakes, with humility, is being lost and the perpetuation of old policies is rapidly making them the new policies, as well—which President Nixon's Administration will be forced to defend.

If we recognize, admit and move to rectify our past mistakes, it would follow that we would have no reason to illegally suppress the efforts of this group. Therefore, I cannot sit idly by and be a party to this suppression by ignoring the arrest and imprisonment of sincere, patriotic and concerned Americans whose only crime is to remind us of the hideous side of the war which we too often tend to forget.

NATIONAL TIMBER SUPPLY ACT OF 1969

(Mr. McMILLAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. McMILLAN. Mr. Speaker, 6 weeks ago, I introduced what I consider to be one of the most urgent measures before Congress—the National Timber Supply Act of 1969. Passage or failure of this measure will in large part determine whether we realize or fail in reaching the national housing goals of 26 million units over the next decade, as established by statute in the National Housing Act of 1968.

Rarely, in my 30 years in this distinguished body, have I seen an agriculture bill which has aroused more fervent and dedicated support among Congressmen representing urban constituencies. In the 6 weeks since I responded to the investigative housing hearings conducted by the gentleman from Texas (Mr. PATMAN) and his Banking and Currency Committee and introduced H.R. 10344 to put our national forests to work to meet the housing goals, 57 other members have cosponsored like legislation. These Members are from the North and the South, the East and the West, the Midwest, and from urban and rural communities alike. They represent both parties and all degrees of attitudes within the parties.

The reason for this cross section of earnest support is obvious. Congress is genuinely concerned with fulfilling its obligations to the people it is designed to serve. Among these obligations is our statutory commitment to meet the need of every American for a decent place to live.

COMMITTEE HEARINGS

The Forest Subcommittee of the Agriculture Committee held 3 days of hearings on H.R. 10034, the Timber Supply Act on May 21, 22, 23. Because so many of the sponsors and cosponsors of the act are members on the Banking and Currency Committee concerned with housing and because these and many other sponsors could not participate in the hearings due to their other obligations, I want to take this opportunity as chairman of the subcommittee to report publicly on my impressions of the hearings.

I think it extremely urgent to report on the many constructive suggestions, to help correct misinterpretations of the intent of this proposal.

I am sure that the many Members of Congress who have publicly expressed endorsement of the Timber Supply Act will be receiving mail expressing the concerns of people that have learned of the hearings. I want to make this report so that a maximum of interested Members and citizens will be fully informed.

I expect that the Forest Subcommittee will hold executive sessions to mark up the bill rather soon and I would like to be sure that there is a maximum of opportunity for accurate understanding of the risks in the alternatives.

It was clearly established in the Banking and Currency Committee hearings in March that the high cost and limited supply of softwood lumber and plywood, which are essential building materials, was the result of limited access to the more than 60 percent of the Nation's total softwood sawtimber which stands on the national forests administered by the Forest Service of the Department of Agriculture. It was further established that failure of these forests to produce their fair share of the Nation's logs to meet present and projected housing and other wood products requirements is due to inadequate funding of timber management and its related activities.

In this instance, correction, of an obstacle to achievement of national housing goals was the responsibility of the Subcommittee on Forests of the House Agriculture Committee. We have undertaken to fulfill this obligation in the most responsible and expeditious way we know how. The Nation requires 2.6 million housing units each year for 10 years. This requirement comes from population growth, from the formulation of new families, from the number of people in dilapidated housing, and from the displacement of families for highways, airports, and other public works. It will not diminish nor go away simply because we might decline to act promptly. To the contrary, delay in providing adequate supplies of raw material for the manufacture of lumber and plywood can only further intensify and prolong the discomfort—and I might add—discontent of our people who are ill-housed or not housed at all.

URGENCY OF HOUSING GOALS

There is no Member of this Body who does not recall the emphasis placed upon lack of housing as a source of civil unrest. People deserve the opportunity to acquire or to occupy a decent dwelling as a renter or even as a public charge. None of us, I trust, will argue with that fact of life.

Nor is this just an urban problem. As a percentage, of all dwellings, there is more substandard housing in rural than in urban communities. Poor housing in rural communities is a major reason for migration to the cities. The urgency of better housing must concern every part of the country.

I might say, therefore, that I was mightily concerned when the Secretary of Agriculture took the position that no legislation influencing the availability of lumber and plywood should be passed until after the President's task force on lumber and plywood price and availability had completed its findings. The earliest date for the completion of that report that I heard was late in the summer and I was also told it could not be prepared before October—5 months away.

Let it be known throughout this House that Republican members of my subcommittee and other Republican Members have contributed as much to the work on this critical legislation as have my Democratic colleagues. There has been unanimity that so far as within our powers we will correct the deficiencies which have plagued management of our national forest commercial timber and thus relieve the building product restraints, affecting accomplishment of our national housing goals.

Any administration must expect to act promptly to carry out a national goal as expressed by statute. I cannot think of any other areas where Congress and the American people are asked to wait 9 months until the administration decides how and whether to meet a national commitment.

Some of us have differed in small ways as to the language of the enabling legislation to put our national forest timber management on a businesslike basis. None of the Members with whom I have discussed the bill, or who have testified in hearings conducted the week before last, have expressed any doubts as to the necessity and wisdom of the concept we have designed to meet the housing goals in terms of timber availability to do the job. It is my considered opinion that we will have a bill reported out promptly and that it will reflect the views of both the Members of the House and and the organizations which testified before our subcommittee so skillfully and so knowledgeably.

NEED FOR NATIONAL FOREST TIMBER

Despite the Administration's preference for delay in the legislative process to accommodate the findings of the task force, I am happy to report that the Department of Agriculture and its principal witness, the Chief of the Forest Service agree with the concept of intensified management of commercial timberlands within the national forests.

They acknowledge the need for more houses, more wood products, and more timber from the national forests. They expressed, however, reservations about certain aspects of H.R. 10344 and submitted a substitute bill. I have examined the bill carefully as I have the testimony before the hearings and have come to the conclusion that the interests of housing for our people might best be served by the introduction of a new bill.

ADMINISTRATION SUGGESTIONS

The Department of Agriculture substitute bill made certain amendatory suggestions while, as I indicated, embracing the worthy purposes of the proposed act. They suggested amendments which would alter the original bill to first, provide that money from the proposed high timber yield fund would be applied nationwide for more efficient development and improved management of national forest commercial forest land; second, add timber management costs, including sales preparation and administration, as a purpose for which the fund may be used; third, we affirm and continue congressional policy emphasis on "multiple use" as the fundamental concept; and, fourth, make permanent the high timber yield fund.

The Department also suggested retitling the bill to "National Forest Timber Supply Act of 1969" since the measure applies only to national forests.

Supporters of the bill in its original form were the vast majority in the testimony heard by the subcommittee. Many Members of Congress either testified personally or submitted supporting statements. The committee is grateful to them all for the tremendous contribution they made to the legislative record since each reflected not only his personal concern for the total national well-being but a complete awareness of the benefits which would be derived either as a consequence of improved timber management or housing availability for his own constituency. These views have been given considerable weight in evaluating the hearings and will have a direct bearing upon the bill which finally emerges from the subcommittee.

While recording the overwhelming support of the bill from the majority of witnesses such as National Association of Home Builders, Home Manufacturers Association, Associated General Contractors, United Brotherhood of Carpenters and Joiners of America, Society of American Foresters, National American Wholesale Lumber Association, National Lumber and Building Material Dealers Association, and American Pulpwood Association, it is important to note the major contributions of two nontimber-related witnesses who also supported the measure.

TESTIMONY OF HOUSING EXPERTS

These were Nathaniel S. Keith, president of the National Housing Conference, and Commissioner Walter Washington of Washington, D.C. Mr. Keith testified that—

> Housing goals set for the next ten years should not be jeopardized because of insufficient management of our national timberlands.

Commissioner Walter A. Washington of the District of Columbia, who appeared as an authority on housing and as chief executive of a major American city with which Congress is intimately familiar, stated:

> I appear not as an expert on the problem of timber yield, but as the Chief Executive of a large urban center whose population desperately needs more housing. This is my urging to this Committee.

Commissioner Washington then ably detailed the residential construction requirements of the District of Columbia over the next 20 years, and indicated that we must not be concerned only with dwelling units to meet rising populations but with the replacement of units removed for other public works purposes. His testimony, based upon his personal experience in housing and in his evaluation of District of Columbia needs over a projected period was most constructive.

With his usual candor, Commissioner Washington interpolated in his prepared testimony:

> I know that there is no doubt but what, if every mayor of every large city had the opportunity, he would be here not only to certify but to speak as I am about the need for wood in relation to the need for added construction of housing.

He added, parenthetically:

> It is possible that many of our poor and needy families that may never be able to get to the scenic beauty of our great trees would be able, rather, to get the exposure by looking at cabinets and walls of wood in a decent home in a decent environment in the cities of America. It appears to me, Mr. Chairman, that this is part of our American dream, and it would seem to join one of our great natural resources with human resources to assure a healthy city and a healthy America.

I was deeply moved by the Commissioner's testimony, Mr. Speaker, because as chairman of the District Committee I am painfully aware of the inadequacy of housing availability in our Nation's Capital City. I was moved as well to know that an essential link exists between the needs of our teeming cities where people must live, and the great forests of our Nation where few people live but where science and technology can convert them to serve the needs of our city dwellers both for houses and for recreation.

National forests, Mr. Chairman, are a rare asset of this great Nation for they can serve so many masters and serve them well. As a renewable crop, forests properly fall within the purview of the Agriculture Committees of Congress; as a national resource to be managed in the interest of all the people they properly fall within the interest and responsibility of all Members of the Congress of the United States dedicated as we are to meeting the national needs. Our national forests afford a means to meet our housing obligations, both present and future. It is our obligation to make certain that they do. It is equally our obligation to make certain that their management will not, for one minute, deny to other citizens, already well housed, or to future generations, the opportunity to use our national forests for their own spiritual and recreational enjoyment.

As anticipated, there are those who oppose certain aspects of the measure. Most significantly, however, no criticism merit to the objective or even the means to attain that objective. It related to anxieties for their own use of the national forests. Our subcommittee is determined to fulfill the basic objective for all the people and at the same time allay the fears of those who support the need for housing but do not want timber requirements to interfere with orderly management of other forest values.

TESTIMONY OF WILDLIFE AND RECREATION WITNESSES

It was heartening to me and to the subcommittee to hear learned testimony from dedicated wildlife, recreation and preservation enthusiasts endorsing the concept of intensified forest management on commercial timberlands in the national forests so that the Nation can fulfill its housing needs. This is positive citizenship of the highest order.

Mr. J. W. Penfold, conservation director of the Izaak Walton League of America, for instance, testified:

> The League for many years has called for an accelerated program for intensified management of national forest resources including the production of timber. . . . We would be happy to see the Congress enact a method of funding which would assure an on-going program, year in and year out, to bring National Forest production of all renewable resources up to full potential on a sustained yield basis.

He expressed concern, however, that the present measure singles out timber production among the several multiple uses of the national forests and thus might be detrimental to the other uses. The subcommittee offered reassurances on that score and indicated that the intent of the measure was to operate the national forests fully within the provisions of the Multiple Use and Sustained Yield Act of 1960, and the final bill would reaffirm that statutory obligation of the Forest Service.

Mr. Penfold also held that solution of the housing problem should not depend wholly upon increased yields from national forest timberlands but, he said:

> Intensified forest management should be applied to all commercial forest lands—Federal, State and private with particular attention to small private holdings which aggregate a substantial portion of our total forest acreage.

The subcommittee is not insensitive to this aspect of increasing national wood product production. It has examined the "Southen Forest Resource Analysis," a comprehensive study of all timberlands in the South with recommendations as to achieving maximum timber management on the nonindustrial private lands. The analysis, privately and cooperatively funded by responsible organizations at considerable expense, is wholly directed to the evolution of precisely the kind of timber management relationship among public and private owners which Mr. Penfold seeks. Legislation enabling Federal participation in this public-private program will undoubtedly be of future concern of the Forest Subcommittee of the House Agriculture Committee. But the current bill must properly concern itself only with the commercial timberlands on the national forests since they are the only ones under congressional management. We cannot wait upon others to do with their forests what we know should be done with public forests.

Further, Mr. Penfold expressed doubts about the allocations of funds from the high timber yield funds to the forest of origin, pointing out that this would deny funds to forests where neglect over the years has reduced their yield. As I indicated earlier, the Department of Agriculture substitute bill suggests that flexibility should be provided for application of available dollars, irrespective of the forest that produced the dollars. I think the subcommittee sense is that this is not an unreasonable approach and several members so expressed themselves during the hearings.

Mr. Penfold also expressed some concern that assignment of timber sale receipts to the high timber yield fund would stimulate the Forest Service to harvest areas which might have higher value for other purposes than timber.

But section 7(1) states clearly that the proposed act is intended to apply only to areas which are classified by the Forest Service as commercial timberlands. Lands so designated are already susceptible to timber harvest and form the basis of existing harvesting rates. Passage of this legislation will not in any way alter the present statutory obligations imposed upon the Forest Service to consider multiple use and wilderness values in its timber management planning. No doubt, the subcommittee will want to further specify that intent by including specific language.

Mr. Penfold further tended to misinterpret, I believe, the intention of section 7 of the bill which might be termed the policy section instructing the Secretary of Agriculture in his responsibilities with respect to administration of the act. The section directs the Secretary to revise allowable annual harvesting rates in National Forests to take into account rotation ages that will produce the most efficient tree sizes at the expected time of harvest. Mr. Penfold and some others I fear, misread the directive referring to tree sizes "appropriate for conversion technology and anticipated market requirements" to mean that the Secretary would be obliged to anticipate future markets and adjust cutting rates to accommodate to them. This is not the intention. The bill stipulates that rotation ages for harvest are variable and that as improved methods of conversion and utilization are developed, it may be desirable to revise the plans in regard to age—size—at time of harvest to accommodate to that change.

It is necessary to explain that revision of allowable harvesting rates would continue to be at the discretion of the Secretary and could be downward as well as upward depending on the effectiveness of regenerative measures.

I am most sensitive, however, to the honest misunderstanding which could occur in the language of the bill and will submit new language to eliminate every possible ambiguity to overcome this difficulty of interpretation.

I have dwelt at some length on Mr. Penfold's concerns because, in sum, they have stated well the basis for opposition by some in this recreation community. The same general tenor was contained in the testimony of the National Wildlife Federation, the Wilderness Society, and the American Forestry Association. It would appear that these groups had given careful cooperative consideration to the bill and had generally agreed on the areas requiring clarification before they could endorse the bill.

I have earnestly considered their valid objections and have, where no violence is done to the basic purpose of providing greater timber yield through better forest management practices, accommodated to them in the revised bill I am about to introduce.

OPPOSITION WITNESSES

Both the Sierra Club and Citizens Committee on Natural Resources were wholly opposed to the bill in its present form. They suggest that pressures for production of timber would result in extensive overcutting on National Forests. The Sierra Club further expressed anxiety that the Forest Service would be obliged to harvest on lands now classified as commercial timberlands and would be constrained from reclassifying such lands as wilderness or primitive areas in the future. This is not the fact, as I have said, since the provisions of existing statutes with respect to management of the national forests would in no way be altered by this bill.

Dr. Edward C. Crafts, former Director of the Bureau of Outdoor Recreation of the Department of Interior, represented the Citizens Committee on Natural Resources and afforded the subcommittee the benefit of his long experience. His presentation was thoughtful and thorough. I believe, however, as in the case of other conservation witnesses and organizations he had read into the language of the proposed bill certain hazards to forest use which are not intended nor contemplated, nor provided for in the original bill.

While I have touched upon many of Dr. Crafts' arguments against the bill in my earlier remarks I think it might be beneficial to analyze his objections in detail since they were so well stated and represent the broad views of those concerned with recreation matters. I trust that my analysis of his statement is sound and that my response to his objections will win the support of his group.

Dr. Crafts stipulated five basic objections: First, he said:

> The bill ignores and appears to override the Multiple Use-Sustained Yield Act of 1960.

He argued that a special fund, for timber management only, places timber in a first priority position and objected to the phrase "optimum timber productivity" as implying a priority of timber use.

Comment: The question raised by Dr. Crafts, rather than relating to the Multiple Use-Sustained Yield Act of 1960, appears to be directed toward the effect of the bill on contests for land use priority. As I stated earlier, the bill makes absolutely no alteration in land-use priority relationships as to timber and other national forest uses. This priority was established in the Organic Act of 1897, and the Multiple Use and Sustained Yield Act

of June 12, 1960. The current bill would establish policies and provide funds to improve yields on lands the Secretary or Congress determines are available for timber production. The determination of the lands thus available resides where it has always resided and is unchanged by the bill. Changes will be made through an entirely separate decision making prices wholly outside the province of this bill.

PRECEDENT OF LAND AND WATER CONSERVATION FUND

Dr. Crafts appeared to have made an unwarranted assumption that the act of establishing a special fund for timber management would therefore place timber in a first priority position. It was Dr. Crafts who basically originated and obtained passage of the Land and Water Conservation Act which established such a special fund for recreation, part of which is used by the Forest Service. I am sure that he would not have argued against the Land and Water Conservation Act on the grounds that such an act would place recreation in a priority position over other values.

While I totally differ with Dr. Crafts as to the impact of H.R. 10344 on multiple use priorities, I see no objection to specifying within the bill that the Multiple Use-Sustained Yield Act is in no way altered, and that the objective of "optimum timber productiivty" would apply to lands available for timber production subject to such constraints as may be determined by the Secretary of Agriculture.

Second. Dr. Crafts also took exception to the policy section, section 7 on the grounds that it "could be used against the Forest Service to pressure it to do things the bill intends even if the money is not appropriated." His thought is that Congress might not appropriate the moneys necessary to grow trees at rates the Department would be pressured to harvest.

Comment: While upward revision of allowable cuts beyond that supported by sound forest management is not intended in this bill, it is possible to conceive the situation as Dr. Crafts suggests. In corrective language, I have drafted an addition to the end of section 7 which will, I believe completely eliminate that eventuality.

Third. Dr. Crafts also raised the concern that—

A special fund for timber purposes will make it harder to obtain regular appropriations for other purposes.

Comment: This bill was developed as a positive means to cope with critical lumber and plywood shortages in the face of national housing commitments over the next decade and, in view of population projections, beyond. It does not detract or borrow from any need or justification for other national forest activities. The suggestion that this provision to increase timber supplies will cause Appropriations Committees to curtail amounts which might otherwise be appropriated for other purposes is, I am certain, a misreading of the responsible approach which characterizes these Committees. I think it further underestimates the power of the recreation, wildlife and preservation lobby efforts.

Fourth, Dr. Crafts took issue with the provision which places money in the fund for only 2 years. He stated:

This means the Forest Service will be under continuous pressure to make the cut as high as possible in order to have money in the Fund for appropriation.

Comment: This method of disposing of unappropriated funds was patterned after the Land and Water Conservation Fund Act and it originated there as an amendment to overcome objections to establishment of a special fund. To my knowledge no difficulties have arisen from it in the administration of that act. It was, frankly, adopted as a means to avoid unnecessary difficulties related to "earmarking." There is no valid reason to expect that this provision will put pressure on the Forest Service.

ALLOTMENT FORMULA

Fifth. Dr. Crafts criticized, as did some other groups as mentioned earlier, and members of the subcommittee as well, the allotment formula for the high timber yield fund. He asserted that it "would interfere with good forest management."

Comment: The provision that allocations from the fund will be made to national forest in amounts substantially proportionate to contributions to the fund from each forest during the preceding 2 fiscal years, as indicated, has been questioned by members, and the department as well as Dr. Crafts. The system in the bill which is criticized is a guide but the critics overlook the fact that a variance is also provided which allows complete discretion in allocation between forests so long as expenditures are in accordance with the purposes of increasing timber growth. A full discussion of why this procedure was specified is contained in Senator SPARKMAN's statement with respect to the bill printed in the CONGRESSIONAL RECORD of April 18. He stated the premise so clearly that I include the appropriate portion of his remarks at this point in my remarks:

EXCERPT FROM STATEMENT OF SENATOR SPARKMAN

Section 6 of the bill specifies that allocations from the fund will be made by national forests in amounts substantially proportionate to contribution to the fund from each forest during the preceding two fiscal years. This provision will put 65 per cent of timber receipts back for expenditure on the forest where they were earned. (Twenty-five per cent of each forest's receipts are turned over to the counties in which the forest is located and ten per cent are available for forest roads and trails within the State in which the forest is located.)

Timber receipts are the product of the volume of timber cut and its average unit price, subject to minor annual variations due to changes in the level of advance deposits maintained by timber purchasers. The provision for use of a two year average will iron out effects from fluctuations in advance deposit levels.

Volume cut and its average unit price are guides to the areas with better rates of growth and better quality species. Hence timber receipts by forests are a simple and reliable index of opportunities and needs to increase timber yields.

Other simple indices, such as commercial forest area or volume cut, would result in some diversion of funds from areas with better growth potential for preferred quality species to areas where unit timber values are low and where intensive management measures would result in less than average yield increases.

The bill establishes allocations in proportion to receipts as a basic guideline, but recognizes that variations may be necessary in a few isolated cases to justify a larger proportion of funds going into a forest that has outstanding potential for increased yield. Thus, if the allocation by receipts formula should fail to meet the needs and opportunities on any forests, it can be modified without amending the basic act.

There were 50 forests which had receipts of less than $100,000 in fiscal year 1967. Forty of these forests are in eastern Montana, the Rocky Mountain and Intermountain states, in southern Arizona and in New Mexico. All of these forests have a low proportion of commercial forest land and their commercial lands are relatively arid and of low productivity. The opportunities and needs for intensive timber management on these forests is roughly proportionate to the low level of receipts they have attained. In addition to this group of 40 forests there are ten other forests with less than $100,000 annual timber receipts. These are: a) the four southern and one east side Sierra forests in California where timber production is minor and incidental to watershed and recreation management; b) three acquired forests in Missouri, Illinois and Indiana-Ohio. Two of these have the two smallest areas of commercial forest land (except for etremely arid western forests) in the national forest system. The Missouri forest is made up primarily of acquired hard cut lands which because of low growth rates have been slow in recovery to full productivity; and the two forests in Alaska. The Chugach Forest is still close to marginal operability and has very limited opportunities for intensive management in the immediate future.

The Tongass forest in Alaska is a special case because under the Tongass Timber Act of 1946, all timber receipts are deposits into a special fund to be held for disbursal until Indian claims on the Tongass forest are adjudicated. Hence there are no deposits from timber cutting into the national forest receipt fund. While the cut on this forest is now close to 500 million board feet annually, the opportunities and need for intensive management measures are neither large or pressing. It is probable that either a portion of the Tongass timber fund will be released to national forest receipts by special authorization or that the Indian claims will be adjudicated before it becomes urgent to have funds available for intensive management measures on this forest.

Mr. Speaker, it appears to me despite the perfectly adequate justification for this method that an acceptable compromise wording of this allotment formula should be included in the bill submitted for floor action.

Everyone agrees that the high timber yield fund moneys should be allotted where needs and opportunities for increasing timber growth are the greatest. I recognize the desire of the agency to have maximum discretion as to where to use this money but Congress knows that without guidelines it will be doubtful if its use will have highest effectiveness in meeting current timber supply problems. It is evident to the subcommittee and to the majority of foresters who testified that our first responsibility is to recently cut areas. That means prompt and full stocking if we are to have high timber yield, plus spacing control. Forest Service Chief Cliff wisely said:

We would expect, as a matter of regular prudent expenditure of funds to complete work on highly productive sites before commencing work on sites of less productivity.

I consider it necessary to include such wording in the act for the guidance of our Appropriation Committee, otherwise I fear the fund in future years there is danger that pressures unrelated to the Nation's wood needs could divert its use to other purposes. I am asking the department to supply the subcommittee with wording that will make clear that the fund will be: first, used only for increasing timber yields; second, used first on cut over areas for quick regeneration and spacing control; third, used on every national forest that sells timber; and, fourth, used on each national forest on the sites that will have the best cost benefit ratio from the standpoint of increasing timber yield.

Actually, the present wording would accomplish the above in my opinion. It has the unique virtue of guaranteeing funds for high yield forestry to each timber selling forest even though it may be less productive than another. Forests are not compelled to compete for funds on the basis of productivity. I don't think critics of the present wording realized its virtues. On the basis of the chief's testimony I have concluded there are no differences in objectives between the timber supply act sponsors and the Department of Agriculture.

Dr. Crafts did the subcommittee the courtesy of suggesting several constructive suggestions for other ways in which to meet the timber supply problem as it influences housing. While these proposals were generally well intentioned the record shows that they were considered in the Banking and Currency Committee hearings. The consensus was that this legislation is the best feasible means to overcome existing restraints on improved management of national forest commercial timber lands.

It is the purpose of this legislation with which I am directly concerned to accomplish this purpose.

REVISED BILL

Therefore, having had the benefit of superior testimony from a number of highly qualified and properly motivated members, private citizens, public officials and other interested parties, it is my intention to within the near future introduce a revised bill entitled "The National Forest Timber Supply Act of 1969." This measure reflects and responds to the many corrective suggestions made by the witnesses including the administration and by the subcommittee members. It adopts the department's new wording for the first five sections and for the title of section 6. It retains the wording of H.R. 10344 for sections 6 and 7 with changes that I have mentioned.

It will, with the concurrence of the subcommittee, be the bill subjected to intensive review and consideration in executive session. As its sponsor, I plan to introduce it within the next few days for myself and for those cosponsors of the original bills who wish to join me on the amended version.

GOVERNMENT ADMITS ILLEGAL WIRETAPPING

(Mr. MIKVA asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, I was dismayed to read in this morning's Washington Post a story which indicates that during 1964 and 1965 the U.S. Government, through the instrumentality of the Federal Bureau of Investigation, was engaged in a deliberate, protracted, conscious course of conduct which it now admits was illegal—tapping the telephone of Dr. Martin Luther King, Jr. What are the citizens of this Nation to think—what is the rest of the world to think—when it is revealed that a winner of the Nobel Peace Prize, a leader of the nonviolent civil rights movement in America, who was respected by blacks and whites alike, a man who had become a symbol of hope and racial reconciliation for an entire nation, had his telephone tapped and his privacy invaded by the Nation's foremost law enforcement agency?

Of all the Orwellian possibilities which race through the mind, in light of these revelations, two observations seem particularly appropriate in light of the mood which seems to prevail in our Nation today. First, the King wiretapping revelations point out once again what civil libertarians have known for years—that there can be no such thing as "a little wiretapping." A little wiretapping is like a little pregnancy. It is then too late to start drawing lines and making nice distinctions. This incident, in short, should serve to point out to Congress once again how big a step was taken when the Omnibus Crime Control and Safe Streets Act, and particularly title III of that act, authorized law-enforcement wiretapping on a broad scale.

An anecdote may serve to illustrate how dangerous the single-minded dedication of confirmed wiretappers can be. It is reported that when Gestapo records from Berlin were captured after the fall of the Nazi capital, those records revealed that on the day Berlin fell, Gestapo agents were still tapping the telephones of German housewives and arresting them for antiregime statements. On the day Berlin fell. Truly such dedication to wiretapping qualifies those who participate in it as, in Justice Brandeis' words, "men of zeal, well-meaning but without understanding." In the face of disclosures such as that made yesterday, we can only question whether the men who authorize and participate in such activities really understand the far-reaching implications of what they are doing. There are societies where all social and political leaders must anticipate that their telephones will be tapped; but they are not free societies. America has never been such a society. But can we be certain, in light of yesterday's disclosures, that it is not becoming one.

A second point deserves to be made about the King wiretapping revelations. We have heard much talk recently of the need for law and order in America. Do these words not turn sour in our mouths when we hear that the Nation's chief law-enforcement agency, the agency which for years has been held up to citizens and other police departments as the shining example of integrity and law enforcement probity, has been guilty of activities which it is now admitted are illegal? It is difficult to talk of law and order to the citizens when the FBI engages in illegal wiretapping. It is difficult to talk of having confidence in one's Government when that Government is illegally invading the privacy of its citizens. It is difficult to ask the black people in America to keep faith with our country and its ability to solve their problems when that country subjects America's foremost black leader to the indignity of having his telephone tapped.

Mr. Speaker, one of the FBI operatives associated with the King wiretapping told the Washington Post that the Bureau "did not follow regular policy on this particular—King—surveillance." What are we to make of this disclosure? Does this mean that the Bureau undertakes wiretapping on its own authority? Does it mean that anyone the Director thinks is a troublemaker or a malcontent is subjected to surreptitious electronic surveillance? Director Hoover and Attorney General Mitchel need to reassure the citizens of this Nation. They should state categorically that no wiretapping is being carried on by the Federal Government except in conformity with existing Federal law. They should state publicly that all the judicial warrant procedures written into law last year are now being complied with in every respect.

Finally, Congress ought to review again the sweeping wiretapping authorizations which were enacted into law last year. These broad authorizations, which give the Attorney General virtual carte blanche in any case which is determined to affect "the security of the United States," will be the source of continuing distrust of the Government by citizens of this country. Until these vague and unduly broad authorizations are reduced in reach and scope, everyone who hears this or reads this has reason to fear an encroachment on their liberties. If Dr. King is the first revelation, there will be others, there will be more—unless we act to restrict the presently almost unlimited authority of the Attorney General to tap telephones upon no more than a belief that national security is involved. I hope soon to introduce for myself and such other Members of Congress as are interested a bill to reduce the scope of last year's broad wiretapping law. In the meantime, I ask my colleagues to contemplate the results of the King wiretapping relevations on our citizen's attitudes toward their police and their Government. Such thoughts cannot be reassuring.

The article referred to follows:

CLAY HEARING REVEALS FBI TAPPED KING

(By Nicholas C. Chriss)

HOUSTON, June 4.—A Federal District Court hearing today into an effort by Cassius Clay to overthrow a 1967 draft-evasion conviction turned into a startling disclosure of FBI eavesdropping methods and secret surveillance reports.

The summaries of four "top secret" and illegal FBI wiretapped conversations Clay had with the late Dr. Martin Luther King Jr. and various Black Muslim leaders in 1964 and 1965 were publicly revealed for the first time over Government objections.

It was also the first time it had been spelled out officially that the FBI actually had eavesdropped on Dr. King.

The revelation of the conversations, the times and places and the introduction of the documents as evidence were made in a six-hour hearing that also produced details on how active the investigative agency was in monitoring the telephone conversations of various Black Muslim leaders.

The former world heavyweight champ's attorneys contend that the wiretap evidence is relevant to the case because it might have been used to prejudice his attempt to declare himself a conscientious objector to the draft. The monitored conversations were not revealed by the Federal Government until the boxer's conviction had reached the U.S. Supreme Court, which ordered the hearing.

Federal lawyers contended the conversations took place in 1964 and 1965 and therefore could not have affected the 1967 draft-dodging conviction against Clay, nor the 1966 ruling exempting him from a conscientious objector status.

Clay's telephone apparently was not tapped in any of the four conversations, but the telephones of those persons who called him or received calls from him were monitored. His lawyers called Clay "the innocent third party."

John S. Martin, an attorney in the U.S. Solicitor General's office and a member of the prosecution team here, said the revelation of Dr. King's conversation was the first time it had been officially revealed that the civil rights leader had been under FBI electronic surveillance. Martin also acknowledged that the four FBI wiretaps were illegal and that the Government did not choose to contest the legality of them.

Most of the information about the FBI wiretapping and surveillance came as Clay's attorney, Charles Morgan Jr. of Atlanta, southern representative of the American Civil Liberties Union, pressed an FBI agent who had once been in charge of monitoring Dr. King's conversation in Atlanta.

Richard Nichols, now based in Valdosta, Ga., testified that the FBI "did not follow regular policy on this particular (King) surveillance." He did not elaborate.

Nichols said two "investigative clerks" recorded the conversations. Then, he said, they either penciled notes on the contents of the tapes or logged a summary and then destroyed the tape. He said all the King-monitored tapes had been destroyed.

The contents of the four conversation summaries included talks with Dr. King, Elijah Muhammad, head of the Black Muslims; Herbert Muhammad, a Black Muslim and Clay's former fight manager; John Ali, Black Muslim national executive secretary, and Chauncey Eskridge, a Chicago attorney who represents Clay. Eskridge, at the time, also represented Dr. King.

Clay was convicted here June 21, 1967, of refusing induction into the U.S. Army. An all-white jury convicted him after deliberating 20 minutes. Judge Joe Ingraham then sentenced him to the maximum penalty—five years in prison and a $10,000 fine.

The most interesting of the four FBI-monitored conversations included a 45-minute telephone talk Clay had with Dr. King Sept. 4, 1964. The conversation was recorded in Atlanta and on the Miami end of the line were—alternately—Eskridge, Elijah Muhammad and Clay. Although the conversation lasted some 45 minutes, according to Eskridge who testified in the courtroom later, the summarized conversation consisted of little more than 12 lines.

The summary stated:

"Chauncey (Eskridge) to MLK (King), said he is in Miami with Cassius, MLK spoke to Cassius, they exchanged greetings, MLK wished him well on his recent marriage, C (Clay) invited MLK to be his guest at his next championship fight, MLK said he would like to attend. Cassius said that he is keeping up with MLK, that MLK his brother, and with him 100 per cent but can't take any chances, and that MLK should take care of himself, that MLK is known world wide and should watch out for them whities (*sic*), said that people in Nigeria, Egypt and Ghani (*sic*) asked about MLK."

Clay had been a guest and visited in the three African countries earlier in 1964.

Other secret conversation summaries introduced in the court took place on Oct. 22, 1964; March 24, 1964, and April 22, 1965.

MEANING OF THE LIFE OF DR. MARTIN LUTHER KING

(Mr. LEGGETT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, on May 28 I addressed myself to the remarks made by my colleague from Louisiana which implied that the late Dr. Martin Luther King was an agent of the Communist conspiracy. At that time I strongly disputed those insinuations. In answer to my remarks, the distinguished Congressman from Louisiana inserted numerous articles in the CONGRESSIONAL RECORD supposedly proving King's Communist connections. For the most part, the insertions were hearsay, gossip, and allegations from dubious sources.

I do not dispute the fact that Communists have attempted to use the civil rights movement for their own purposes. The gross discrimination that has previously existed in this country is a breeding ground for discontent. Martin Luther King and his followers dedicated their lives to the removal of this discrimination, and the fight for equal justice under the law. The Communists seized upon this issue to foment destruction and violence. It is the Martin Luther Kings who have tried to keep the disgruntled minorities within the system and achieve progress within the concept of democracy and freedom. In this respect King was a leader in the fight against communism. Martin Luther King did not fight communism with empty words and spurious denunciations. He fought communism with action. Martin Luther King showed his people that progress and racial justice can be achieved within the American system. King rejected the foreign ideologies that would seek to destroy our country.

I now insert a number of commentaries by Members of this body on the meaning of the life of Dr. Martin Luther King, Jr.:

A statement by Hon. HENRY HELSTOLSKI, April 10, 1968;

A statement of Hon. DON EDWARDS, April 11, 1968;

A statement of Hon. WILLIAM D. HATHAWAY, April 11, 1968;

A statement by Hon. THOMAS P. O'NEILL, JR., April 10, 1968;

A statement by Hon. RALPH YARBOROUGH, April 11, 1968;

A statement by Hon. SEYMOUR HALPERN;

A statement by Hon. PHILLIP BURTON;

A statement by Hon. ROBERT N. NIX;

A statement by Hon. PATSY MINK;

A statement by Senator Gruening, April 10, 1968;

A statement by Senator Long of Missouri;

A statement by Senator JAVITS, April 10, 1968;

A statement by Hon. BERTRAM L. PODELL, April 9, 1968;

A statement by Hon. MELVIN PRICE;

A statement by Hon. WILLIAM D. FORD, April 9, 1968;

A statement by Hon. BEN REIFEL, April 8, 1968;

A statement by Hon. LIONEL VAN DEERLIN, April 9, 1968;

A statement by Hon. VANCE HARTKE, April 17, 1968;

A statement by Hon. WILLIAM S. MOORHEAD, April 8, 1968;

A statement by Hon. FRANK ANNUNZIO, April 9, 1968;

A statement by Hon. THADDEUS DULSKI, April 9, 1968;

A statement by Hon. HASTINGS KEITH, April 9, 1968;

A statement by Senator BROOKE;

A statement by Senator WILLIAMS, April 19, 1968; and

A statement by Senator PROXMIRE, April 19, 1968.

The material follows:

DR. MARTIN LUTHER KING, JR.

(By Hon. HENRY HELSTOSKI, of New Jersey, Apr. 10, 1968)

Mr. HELSTOSKI. Mr. Speaker, a span of 5 years is a very short time in the annals of history, yet in that short span we have seen two assassinations of two great leaders, each in his own field of endeavor. John F. Kennedy and Dr. Martin Luther King, Jr., were the unfortunate victims of what surely must have been a demented mind.

These senseless killings were both American tragedies, and devoid of any meaning. The murder of Dr. Martin Luther King, Jr., in Memphis, is an event of horror and shame to America and a shock to the world.

Martin Luther King dreamed of an America without racial prejudice where each man, woman, and child would be judged by their character and not by the color of their skin.

It is sad, indeed, that the death of Martin Luther King, Jr., a leader of nonviolence in the movement to obtain equality for his people, stirred up so much violent reaction in the cities of our country. If Dr. King could speak, he probably would continue to ask his people to stop this lawlessness and terror, and continue their efforts to obtain equality through peaceful and sensible means.

Many have fallen in the same cause as Dr. King. However, it is a great misfortune that this apostle of nonviolence and a winner of the Nobel Peace Prize, himself became a victim of a violent act which need not have happened.

Although Dr. King spoke of nonviolence, violence often attended his actions. And, at the last, he himself met a violent end.

A great man was taken away from us. This terrible tragedy has removed one of the most inspiring leaders that this country has produced.

STATEMENT OF THE CALIFORNIA FARMER-CONSUMER INFORMATION COMMITTEE HONORING THE MEMORY OF REV. MARTIN LUTHER KING, JR.

(By Hon. DON EDWARDS of California, April 11, 1968)

Mr. EDWARDS of California. Mr. Speaker, all of us feel the shame and despair from the terrible murder of Martin Luther King, a man who deeply and sincerely felt the peace and hope for justice to which we all aspire. His life was an inspiration to the socially concerned who have dedicated their efforts to making a decent world a reality and his death, a shocking stimulus to quickened action.

Such are the sentiments behind the statement I just received from the California Farmer-Consumer Information Committee on the death of Dr. King and I now place this statement in the CONGRESSIONAL RECORD at this point:

"STATEMENT OF THE CALIFORNIA FARMER-CONSUMER INFORMATION COMMITTEE HONORING THE MEMORY OF REV. MARTIN LUTHER KING, JR.

"CALIFORNIA FARMER-CONSUMER
"INFORMATION COMMITTEE,
"Santa Clara, Calif., April 6, 1968.

"Hon. LYNDON B. JOHNSON,
"President of the United States.
"Members of the U.S. Senate and House of Representatives:

"The California Farmer Consumer Information Committee, on the basis of policies which have guided us since our formation in February, 1941,

"Joins all dedicated groups in the United States and throughout the world in honoring the memory of the Rev. Martin Luther King, Jr., *Negro leader of the oppressed of all races.*

"Sacrificed to the unquenched and unrestrained forces of bigotry which betray real 'Americanism', Dr. King's assassination on April 4, 1968, places upon each of us new responsibilities to wipe out forever every form of racial discrimination, north and south, east and west, nationally and internationally.

"This is no time for recrimination nor partisanship. It is time for action: 'a time to lift our nation from the quicksand of racial injustice to the solid rock of brotherhood', as Dr. King stated in Washington, D.C., on August 28, 1963.

"A Nobel Prize Winner, Dr. King moved into the world arena in his quest for *an end to war*, as a means of settling international conflicts, as he stood for *an end to violence* to settle the burning grievances of unshackled slaves, still shackled legally and illegally in this nation their labor unstintingly helped to build.

"Legislation to assure a greater measure of civil rights for all minorities is now before the Congress. It must be vigorously supported and passed at once.

"As our Committee said in June 1944, quoting Justice Robert W. Kenny, then State Attorney General, when he addressed 65,000 San Franciscans on the occasion of the May 21, 1944 'I am an American Day':

" 'The Battle of Americanism is not completely won. It will never be completely won. It is a live thing. It grows. It improves. It wants the children to have a better and fuller life than the parents had.

" 'Like Liberty, Americanism can be had only at the cost of eternal vigilance . . .

" 'The strength of America depends upon conviction. The struggle for Americanism is one of education and example.

" 'The lash, the concentration camp, the book-burning orgies—implements of a Master Race, dare not meet the challenge of thinking men. . . .'

" 'Americanism' today *is at half mast.* During the past quarter century it has deteriorated to a new low.

"Only we, the people, can again raise its banner to its full potential.

"The time is now!

"In the name of the half million members of our Committee's affiliated farm, cooperative, labor, consumer, church, resources, professional and community organizations and individuals, rural and urban.

"Respectfully submitted,

"Mrs. GRACE MCDONALD,
"Executive Secretary."

THE KING IS DEAD

(By Hon. WILLIAM D. HATHAWAY, of Maine, Apr. 11, 1968)

Mr. HATHAWAY. Mr. Speaker, in cities across the country, teams are in the streets to assess the material and physical damage left in the wake of civil disturbances spurred by the tragic death of Dr. Martin Luther King, Jr. In those same cities, teams of distressed, concerned citizens are attempting to make a different, a more difficult assessment—trying to determine the extent of the damages inflicted upon the civil rights movement by the violent death of their nonviolent leader and the violent repercussions.

On April 16, 1963, Martin Luther King wrote from his jail cell in Birmingham:

"Injustice anywhere is a threat to justice everywhere. We are caught in an inescapable network of mutuality tied in a single garment of destiny. Whatever affects one directly affects all indirectly."

Dr. King's words will echo for years as man searches for ways to express his philosophy of brotherhood. Dr. King's words of 1963 emphasize what we fully realize today—no one in the country escaped the sad, agonizing causes and effects of this senseless tragedy. The killing of Dr. Martin Luther King, Jr., has affected all our destinies. It has affected the destiny of the civil rights movement and the brotherhood for which Dr. King struggled. The shape of that destiny lies resting now—not without anxiety—in the hands and the hearts of all Americans.

Reasons failed humanity when Dr. King fell dead. In lieu of reason, emotion took hold and violence erupted. The sting of tragedy is gone but the solace of tragedy remains. The reality of the death of a great American leader is with us—and reason must return. In the aftermath of violence, in the aftermath of the lack of reason, Americans must pull together, come to grips with some grim realities. Americans must reason.

Prior to the death of Dr. Martin Luther King, Jr., there were no curfews in American cities—but all was not well in America. Citizens went normally about their daily lives—but all was not well in America.

On the day before his death, Dr. King was clinging to his efforts toward a nonviolent revolution to equality for American citizens. He faced a court injunction, a new generation of Negro leadership bent on violent revolution; he faced the possibility that the U.S. Congress would not write justice into the law of the land, he coped with the serious lack of funds for urgently needed domestic programs. Dr. Martin Luther King, Jr., 1 day prior to his death knew—all was not well in America.

But it was hope and not despair that King preached as he prophetically spoke of the top of the mountain, the promised land of harmony, peace, respect, and dignity for all Americans. One day following the death of Martin Luther King, agony echoed the truth he had known—that all was not well, indeed not well, in America.

Not long ago, we were reminded by a great American President of a Chinese proverb, "a journey of a thousand miles must begin with a single step." The Nation watched as that President, John F. Kennedy, joined by Martin Luther King, took those first steps toward the brotherhood of man. The Nation watched as John F. Kennedy and Martin Luther King fell from assassins' bullets. Both great Americans gave this country hope. Americans need not despair but cleave to that legacy of hope as we continue the journey.

Eight years ago—when the late President Kennedy took office, the journey looked long. Prior to the historic march on Washington led by Dr. King in 1963, the journey was long. Prior to the passage of the 1964 Civil Rights Act, the journey looked long. Prior to this week's passage of the fair housing law, the journey looked long. Now, we are on the way to the mountaintop.

When every man who wants to work can receive training and subsequent employment, when no man is refused a job because of color or faith, when every man has an equal chance to a share of this economy—then Americans will be closer to the mountaintop.

When we Americans have insured full educational opportunities to every child in this Nation, when we can point to as well as profess that education is the key to understanding—we will be closer to the mountaintop.

When this Nation of plenty has fed the hungry within its own boundaries, when the shame of starvation in the United States of America no longer dons our visage, then we will be nearer the top.

When Americans insist that no baby in this country will die of ratbite, that rats are not a laughing matter, that slums are not for living but for clearing, then we will have sight of the mountaintop.

When Americans say, "This has gone far enough, something must be done"—and you learn they are referring to the injustice of prejudice and not to the civil rights movement, then we will be on the threshold of the mountaintop.

When the conscience of America demands full funding for programs developed to erase the blight spreading as a result of our negligence, we will have stepped on the mountaintop.

When every American is proud of his manhood, when he enters a community without fear of disgrace or embarrassment, when he is described by his character, integrity, and personality, when Americans join hands and walk through open doors together—then we will be on the top of the mountain.

Out of respect for those who could see that mountaintop from a great distance, surely Americans will commit themselves to finish that long journey. Martin Luther King asked for a commitment which began with laws but which must end with love. If out of his dream and his death, we can salvage the understanding and love necessary to shape the destiny he envisioned for all Americans, then Martin Luther King shall not have died in vain.

A MAN FOR ALL SEASONS AND ALL PEOPLE

(By Hon. THOMAS P. O'NEILL, JR., of Massachusetts, April 10, 1968)

Mr. O'NEILL of Massachusetts. Mr. Speaker, the Reverend Dr. Martin Luther King, Jr., has been characterized in many ways. He was called a man of God, a man of peace, a man of love, and a man of right. He was all these things and more.

He had a vision of what America could and should be, and he devoted his life to make our Nation fulfill its own promise and its own heritage. His dream for America was a land where freedom, justice, and equality were not words or slogans, but fact, and a way of life.

He was among the most eloquent of men, for his words came from his loving soul and his brilliant mind. And he seemed to have grasped the truth that so often evades us.

His Eminence Richard Cardinal Cushing and the Honorable Kevin White, mayor of Boston, addressed 30,000 mourners on the Boston Common on Monday. They were there to find comfort and courage, and perhaps some of that faith that served Martin Luther King throughout his life.

Cardinal Cushing and Mayor White provided solace, but more importantly, they charged America with a task and a road to follow toward equal opportunity for all.

His Eminence said:

"Dr. King summons us now to a march that has no ending, to a dream from which there is no waking, to a task that will consume all of the hours of all our days."

Mayor White spoke to all of us when he said:

"Let us pledge ourselves in this holy hour, before God and our neighbor, that we will build a new world of dignity and justice, of hope and opportunity, from which no man will be excluded."

Mr. Speaker, I include the complete texts of these statements in the RECORD:

"[From the Boston (Mass.) Herald Traveler, Apr. 9, 1968]

"ADDRESS OF CARDINAL CUSHING AT CEREMONIES ON COMMON

"Our age may not seem to be an age of saints, but, it surely is an age of martyrs. God's mysterious Providence has now summoned from among us one more of our heroes, leaving the memory of a great soul who sought only the love of his own brother.

"Living men will not forget the rousing beauty of his voice, the courage that disdained all danger, the burning charism of his silent heart. We are bruised and saddened by a loss more profound than we can yet realize, we are bewildered by a cruel act of violence that has snatched from our midst a man of peace.

"We know that Dr. Martin Luther King was not afraid of death; he had faced its threat so many times, he knew its features well. He was a man of God, and so too a man of faith, for whom this world held promise of another where among the blessed he lives this day.

"From his faith came the grace and inspiration that gave meaning to his every action, that made bearable the long and lonely nights, the miles of marching, the days in prison cells, the heaped abuses of the law, and all the troubles of a people scorned.

"This faith in God gave wings to his words, summoned to his side strong Christian souls, rallied the conscience of millions, changed the laws of a land, and gave new meaning to human brotherhood.

"This was a faith that, literally, moved mountains, melting the accumulated prejudice of generations, and making the way straight for justice too long delayed.

"It is this faith in whose promise this afternoon Dr. Martin Luther King finds all his longings fulfilled, all his pains soothed, all his struggles resolved, as he rests eternally in the bosom of God.

"But this was another faith, similarly powerful and moving, which was part of the character of this gentle man of God. As he had an unquenchable faith in God, so too he had an unfailing faith in his fellow man. Like any great leader in human history, he summoned to himself kindred spirits, those who shared his ideals and aspirations, and who were willing also to share his anxieties and trials.

"Even those who watched from afar caught something of the confidence and trust he felt in man's ability to see the right to follow the star, to choose the better path. The 'non-violent way,' which he preached and practiced, saw no merit in forcing the human spirit; man could be brought to goodness by example and persuasion, and one day the righteous would overcome.

"Dr. King has left us a legacy that is rich beyond all counting, it is a new expression of the ancient faith that is summed up in the love of God and love of neighbor.

"Let us challenge what men call impossible, endure what seems unbearble, penetrate what appears to be impassable, and create in this very generation what has been man's dream since the dawn of time. It will not be Camelot, it will not be Utopia; it will be real, and it will be ours.

"We have trifled too long, all of us, with words and admonitions; we have done so little when so much was required. In this dark hour, with our whole nation in mourning, we must judge ourselves, and take the measure of our failings. We were all in Memphis, one way or another, on Thursday night and the violence and death there must touch the conscience of every citizen.

"Nothing that we can do will bring back the life that was lost, but what we can do will assure that it was not spent in vain.

"Dr. King summons us now to a march that has no ending, to a dream from which there is no waking, to a task that will consume all of the hours of all our days.

"Let us go forward together, with God's grace, and conscious of his judgment upon us."

"TEXT OF WHITE'S STATEMENT

"We have come together today to honor the life and work and prophecy of the Rev. Martin Luther King Jr.

"The Boston Common is an appropriate place for our purpose. It is deeply involved in the history of freedom.

"Thousands of memorials like this are taking place—today, tomorrow and yesterday—throughout the nation, indeed throughout the world. Millions of words are being said and sung in tribute and in sorrow—and in the hope that words can somehow make us whole again and better than we were before.

"Words can do some of this. They can give us instruction and insight, faith and hope and charity. But they cannot give us all of what we so desperately need to make Dr. King's dream of equality and freedom come true in this city.

"That will take work and patience and understanding. That will take dedication and personal sacrifice.

"Perhaps the most important work of all is commitment. The right things are being said publicly and privately, personally, and in gatherings like these. But the right things must be done, and that will take commitment of the highest order. What must be done cannot be accomplished in a day or two, a month or two, even a year or two. Good works cannot come as immediate and miraculous acts of will. They must come through the long, hard processes of man and his government on earth.

"There is no excuse for delay. There will be days ahead when, weary of the stress and bitter with the struggle, shrill voices will grow prominent again, preaching hate and revenge—attempt once again to kill Dr. King's dream of love and redemption.

"Then as now, we, black and white alike, must ignore those voices. We must keep to our tasks. We must do our work.

"Tomorrow the right thing must be done.

"It is to this work that I pledge this city and our generation in it.

"But he also left us a dream. And now we must make that dream come true. Bought in his own blood, paid for with his own life, it can no longer be denied. Let us pledge ourselves in this holy hour, before God and our neighbor, that we will build a new world of dignity and justice, of hope and opportunity, from which no man will be excluded."

TRIBUTE TO DR. MARTIN LUTHER KING, JR.

(By Senator RALPH YARBOROUGH, of Texas)

Mr. YARBOROUGH. Mr. President, when any man dies, all mankind is diminished, but that is especially true of the death of Dr. Martin Luther King, Jr.

The conduct of his life gave an added dignity to this Nation, because he so trusted our maturity and justice that he chose to strive for change through non-violent means. Violence cannot end an injustice; it can only bring scars and harden injustices. Nonviolence not only brings justice to those who patiently endure; it ennobles all those involved in the effort. Dr. King paid our Nation a great compliment by expecting the best of us.

Our people sincerely feel the loss of this American, and tributes have been and are being paid across the land. The flags in my home state, considered by most to be a Southern State, flew in half-mast in unprecedented tribute to a civil rights leader. I have asked the Postmaster General to order issuance of a stamp which would symbolize the fact that Dr. King now occupies the status that has been reserved for our Presidents and philosophers, military leaders, and artists, writers, explorers, and scientists.

Mr. President, on Thursday, April 9, I was in the Ebenezer Baptist Church at Atlanta, Ga., at the funeral services for Dr. Martin Luther King, Jr. It was my privilege to march in the funeral procession from the Ebenezer Baptist Church to Morehouse College in Atlanta, Ga., and there to be a witness to the great outpouring of humanity which paid tribute to Dr. Martin Luther King, Jr.

Though I have been in many cavalcades of Presidents, in great campaigns with hundreds of thousands present, the throng that gathered to pay last respects to Martin Luther King was larger than any other throng that I have ever seen at any other place in my life.

The occupant of the chair [Mr. MUSKIE] was there and was a living witness as we marched the 4½ miles side by side from Ebenezer Church to Morehouse College, over the rolling hills of the beautiful city of Atlanta. From the top of the hill one could look back at the successive waves of humanity rolling down valleys and up hills, from sidewalk to sidewalk, in a massive movement such as I have never before witnessed, though I have witnessed vast throngs of people and movements of history in America and overseas.

I think any account I have seen of the number of people present wholly underestimates, by hundreds of thousands, the number of people participating, and the many hundreds of thousands who stood on the sidewalks but did not actually engage in the march.

Dr. Martin Luther King died at the age of 39, but before he was 35 he had already written the classic "Letter From the Birmingham Jail" which ranks with Thoreau's and Mahatma Gandhi's expositions on the dignity of nonviolence, of civil disobedience in opposition to discrimination or wrongs to a portion of the population.

Dr. Martin Luther King's beautiful oration, "I Had a Dream," given at the freedom march in Washington in August of 1963 from the steps of the Lincoln Memorial, will rank with the alltime great orations in American history. This oration and this classic essay on the right of man to protest an injustice in the law itself, his winning of the Nobel Prize, all mark him as an American whose reputation will live through the ages.

The civil disobedience expounded by Dr. Martin Luther King did not preach or create anarchy. It is not born of a disrespect for law or a belief that any man is above the law. Dr. King felt that when a law was unjust, one could show his respect for the legal process by disobeying that law in a nonviolent way and then willingly accepting the penalty of that infraction to demonstrate the injustice. He worked within our system of laws. He carefully tried not to injure anyone. And he did not claim he was above the law by refusing to abide by its penalty.

Those who do not understand this concept of justice do not understand the bases of the nonviolence protest. Dr. King once wrote:

"I have almost reached the regrettable conclusion that the Negroes' great stumbling block in his stride toward freedom is not the White Citizen's Council or the Ku Klux Klanmen, but the white moderate, who is more devoted to order than to justice."

At this time of civil disorder, some argue we must delay any further actions until order is completely restored. But continuing delays are what have caused the disorders. Justice delayed becomes justice denied.

Civil disorders cannot be tolerated. Neither can we tolerate indifference to the racial problems that threaten our future as a nation. After the Birmingham march, Dr. King said that the ultimate tragedy was not the brutality of the bad people, but the silence of the good people. We will compound the tragedy of this recent assassination if we do not attack complacency and silence with the truth. As John F. Kennedy put it in 1963:

"We are confronted primarily with a moral issue. It is as old as the Scriptures and is as

clear as the American Constitution. The heart of the question is whether all Americans are to be afforded equal rights and equal opportunities. Those who do nothing are inviting shame as well as violence."

It is time for us to do something—not just by passing legislation on such matters as open housing which is long overdue, but by recognizing the right of every child to an education, and the right of every man to a job.

The finest brief sketch of Martin Luther King, Jr.'s life that I have read was published in this week's National Observer. I ask unanimous consent to have printed in the RECORD the sketch of the life of the late Dr. Martin Luther King, Jr., entitled "My Man, Be Sure To Sing 'Precious Lord' Tonight, and Sing It Well," ably written by Jerrold K. Footlick, and published in the National Observer for Monday, April 8, 1968.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"'MY MAN, BE SURE TO SING "PRECIOUS LORD" TONIGHT AND SING IT WELL'

"One spring day in 1965, the Rev. Martin Luther King, Jr., led his group of marchers into the Negro quarter of Montgomery, Ala. He turned a corner to stride down a dirt street past decrepit little shacks. Old women stood on their tiny porches or in their grassless yards, sort of half-smiling, half-crying, holding their hands in front of them, prayer-fashion, clapping like little children. For the first time in their lives, perhaps, they knew pride. And ecstasy shone on their faces.

"No one could have shaken these people from their certain belief that a prophet walked among them.

"A prophet is what Dr. King was often called. Sometimes it was by his friends, who expected to follow him to the promised land. Sometimes it was by his enemies, who mocked his grandiose dreams of a better society and his methods for reaching it.

"Dr. King believed he was a prophet. And it may be true. For he fulfilled the criteria. In the Old Testament sense, he was a man driven by an inner fire, the conscience of his people. He railed against injustice. He held out hope of a better life. He trusted in God to bring this about. He preached that this would happen through love, not hate; through witness, not violence.

"And like other prophets, he was derided for fomenting the evils—violence, for example—that he preached against. Like other prophets, he was not an organizer; his campaign often depended on his mystical presence and faded to nothingness without him. He failed in specific projects as often as he succeeded. He aroused hatred in many.

"Finally, like other prophets, he died a martyr, almost predictably so, when he was felled by a single bullet on April 4, in Memphis, Tenn. He died within an hour.

"Dr. King had won the Nobel Peace Prize and he died while preparing to lead a protest march on behalf of garbage collectors. He already had led one such march and it had degenerated into violence. He was ready to lead another, despite threats to his life and a court prohibition, although nonviolence and law and order were what he preached.

"He looked to a Higher Law. So, probably, did the man who shot him.

"The immediate reaction to Dr. King's death, besides that of shock and horror 'among all Americans of good will,' as President Johnson put it, was violence in some places. In scores of cities, looting, arson, and rioting took place.

"It is a measure of Dr. King's impact on the nation and of our times that the nation was not merely shocked but frightened. It was shocked at the senselessness of it all, at one more illustration of the hatred that seems to lie so near the surface of American society. It was frightened by the reaction, the possibility that his death could set off new violence by Negro militants.

"Here was a hand-delivered weapon for the vicious among them. 'Get the gun, baby,' they chanted. 'King said, "turn the other cheek," and look what it got him.'

"But the Rev. Walter Fauntroy, Dr. King's chief aide in Washington, D.C., and the vice chairman of his city's Council, pleaded with tears in his eyes: 'To use this as an excuse for violence is to dishonor the memory of Dr. King.'

"Not that Dr. King was a stranger to violence. He was arrested dozens of times and spent weeks in various Southern jails. His home in Montgomery had been bombed; a motel in which he was staying in Birmingham had been bombed; he had been stabbed by a Negro woman in a New York department store; he had been struck by a hurled rock in Chicago. And he had seen his followers bitten by police dogs, belted by clubs, drubbed by streams from fire hoses, and pummeled by fists.

"To the cries that violence must be met by violence, he shouted, by firelight, in Yazoo City, Miss.: 'I'm tired of shooting. I'm tired of clubs. I'm tired of killing. I'm tired of war. And I'm not going to use violence, no matter who says so.'

"To the fears for his own safety, he said, in Memphis, with 24 hours to live:

"'I don't know what will happen now. We have got difficult times ahead, but it doesn't matter with me because I've been to the mountain top. Like anyone else I would like to live a long life. But I'm not concerned with that.

"'I just want do God's will, and He has allowed me to go up the mountain. I see the promised land. I may not get there with you, but I want you to know tonight that we as a people will get to the promised land. I am happy tonight that I am not worried about anything. I'm not fearing any man. Mine eyes have seen the glory of the coming of the Lord.'

"Those words were spoken by a minister who was the son of a minister and a school teacher, born to relatively comfortable circumstances in Atlanta on Jan. 15, 1929. Skipping three grades, he completed high school at 15 and was graduated from Morehouse College in Atlanta at 19. At Crozer Theological Seminary in Chester, Pa., he was valedictorian of his class and earned his bachelor of divinity degree at 22. At Boston University's Methodist seminary, the nation's largest he earned his Ph.D. at 26. There were always those who smirked at the 'Dr.,' unaware of his brilliant academic record.

"While in Boston, he met Coretta Scott, who had grown up near Selma, Ala., and who was studying for a concert career at the New England Conservatory of Music. They were married in 1953; they had four children, the oldest now 12, the youngest 3.

"Upon graduation, Dr. King was offered three college teaching positions and three pastorates. He accepted a call to the Dexter Avenue Baptist Church, on the main street of Montgomery, Ala., two blocks from the state Capitol where the Confederacy was born. The man who first befriended him there was another Negro Baptist minister, the Rev. Ralph Abernathy. He became Dr. King's closest friend and chief adviser, and has now succeeded him as president of the Southern Christian Leadership Conference.

"Dr. King's pastorate was uneventful until Dec. 1, 1955, when a Negro seamstress named Rosa Parks refused to give up her seat to a white man on a Montgomery bus. ('I don't know why,' she said later. 'I was just tired.') Dr. King called a mass meeting of the complacent Montgomery Negroes. He told them:

"'If you will protest courageously, and yet with dignity and Christian love, when the history books are written in future generations, the historians will have to pause and say, "There lived a great people—a black people—who injected new meaning and dignity into the veins of civilization." This is our challenge and our overwhelming responsibility.'

"The boycott was called for one day; one day led to another, and it was met by stubborn refusal to compromise, with arrests, firings, and bombings. It ended 382 days later with the U.S. Supreme Court declaring this kind of racial segregation unconstitutional.

"No Negro boycott had ever been so successful, and Dr. King became a national figure. He spoke around the country, all the while searching for some new approach to his cause, without success. He made a pilgrimage to India to visit the grave of his hero, Mahatma Gandhi, the apostle of nonviolence and the victim of an assassin.

"In 1962, he chose as a desegregation target the city of Albany, Ga. His campaign lasted a year; hundreds, including Dr. King, were arrested, but the authorities keep cool, and Dr. King retired with no trace of achievement.

"The contrast with Montgomery was clear. And the pattern in Dr. King's career was outlined, never to change where whites resisted blindly and violently, he succeeded. Where they maintained order without violence or offered a modicum of co-operation, he failed.

"The lesson was not absorbed by Eugene 'Bull' Connor, police commissioner of Birmingham, Ala. His answer to a King demonstration in the spring of 1963 was police dogs, cattle prods, and fire hoses; others unknown bombed a church, killing four Negro children in Sunday school. The nation's answer to Connor and the others was the Civil Rights Act of 1964.

"Between those two events, Dr. King's stature as a spokesman against injustice was sealed in history. On Aug. 28, 1963, the March on Washington drew 200,000 people from all over the nation, 60,000 of them white, who blanketed the Mall from the Lincoln Memorial to the Washington Monument. They, and millions more watching on television, were electrified with his phrase, 'I have a dream,' which is sure to live in Americana. Then he offered another phrase, 'Let freedom ring,' and closed his oration:

"'And when that happens, and when we allow freedom to ring, when we let it ring from every village and every hamlet, from every state and every city, we will be able to speed up that day when all of God's children black men and white men, Jews and Gentiles, Protestants and Catholics, will be able to join hands and sing in the words of the old Negro spiritual:

"*'Free at last, free at last. Thank God Almighty, we're free at last.'*

"The next year, already an international symbol, Dr. King was awarded the Nobel Prize in recognition of his nonviolent efforts to secure human rights. He was the third Negro, the twelfth American, and the youngest man ever so honored.

"Not long afterward, Dr. King moved to Selma, Ala., to begin a voting-rights campaign. Here for the first time—and still far beyond what anyone could expect—divisiveness permeated the Negro movement.

"Already in Selma was the Student Non-Violent Coordinating Committee (Snick) organized by young people in 1961 as an outgrowth of the sit-in movement and with the blessing of Dr. King, who felt that Negro students should take a more active role in civil rights. Snick had struggled for months in Selma with little success. Dr. King's entrance drew national support and considerable money; the militant Snick leaders, James Forman and Stokely Carmichael among them didn't like it. Dr. King spent as much time negotiating with them as he did with white authorities.

"But again Dr. King's success was assured by white authorities. Dallas County Sheriff Jim Clark made hundreds of arrests in two months, and when a protest march was first attempted toward the capital, Alabama state police checked it with flailing clubs, tear gas, and trampling horses.

"That inspired the historic march from Selma to Montgomery. Thousands of whites and Negroes, many of them prominent Americans, flocked from around the nation to join. Fifty miles in four days, it culminated in the gigantic parade up Dexter Avenue, past the church of Dr. King's first pastorate, to the Capitol. And he shouted again and again, a new phrase: 'We are on the move now.'

"Selma produced the Voting Rights Act of 1965.

"Never again was Martin Luther King to know such a triumph. He was, indisputably, a national leader. But there were no more such victories.

"Dr. King moved his efforts to Chicago in 1965 and 1966. But he discovered, 'Religion does not exercise the same restraining influence in the Northern ghettos as it does in the South.' And in Chicago he was faced with the savvy of Mayor Richard Daley. Every program, from job training to low-income housing, that Dr. King proposed, Chicago already had or suggested it could develop. The campaign died with a whimper.

"In these days, too, the civil-rights movement, if such it still was, took on a new, uglier tone. The ghettos of New York City, Rochester, and Philadelphia exploded in 1964, and in 1965 the Watts section of Los Angeles was in flames.

"The young militants were listening to the different drummers. Dr. King came to Rochester to preach about Jesus, and a young voice at the rear yelled, 'What is this Jesus crap?' He went to Watts to calm the community and they laughed at him.

"In 1966 James Meredith was shot on the second day of his Freedom March through Mississippi, and Dr. King arrived to take over. But his presence was all but forgotten when a handsome young Jamaican named Carmichael stood in the eerie light of a Grenada bonfire and screamed, over and over and over again: 'Black power! Black power!' Here was an addition to the lexicon that Dr. King could not eradicate.

"Dr. King and other Negro leaders of his persuasion openly disavowed the calls to violence, but they were aware that their diminishing influence could be wiped out if they spoke too harshly. Not only was this a dilemma that endured to his death, but the very fact of his death added fuel to the militant fires.

"What is often overlooked is that this man, Martin Luther King, civil-rights leader and Nobel Peace Prize winner, was also a learned and devout Christian minister. Out of his studies of Christian doctrine emerged many of the principles that guided him in the civil-rights movement.

"It has been said that Dr. King perverted the Christian message for his own purposes. It has been said, too, that he captured the very essence of the teachings. He always insisted that his actions were based on Christian convictions.

" 'The essence of the Christian gospel is love,' he once told Lee Dirks, a news editor of The National Observer. And that word, love, flowed freely in his conversations. For him the traditional issues of theology—sin and salvation, the divinity of Christ, His virgin birth, His bodily resurrection—were peripheral. Love was central.

"By love, Dr. King meant neither romantic love nor love for friends, but good will and understanding for all men. The Greek New Testament, he once noted, uses three words for love: *eros*, romantic or esthetic love; *phila*, affection between friends; and *agape*, a redeeming good will that 'cleanses' both the person who is loved and the one who loves.

"*Agape* is the highest form of love, Dr. King maintained. 'It's completely unselfish; it seeks nothing in return.' To illustrate, Dr. King would cite the experience of Christ on the cross. 'Father, forgive them, for they know not what they do.' This was real redemptive love, Dr. King would explain. 'Here was a symbol of crime, the cross. Yet redemptive love transformed it into a symbol of salvation.'

"Dr. King shied from some other beliefs of the fundamentalist Baptist tradition in which he was reared. He rejected, for example, the idea that men are innately sinners. He insisted that men have potentialities for both bad and good.

"Many of Dr. King's religious ideas were not original. He wasn't a creative theologian but a clergyman, not an originator of ideas but a messenger of them.

"Dr. King conceded that the ideal of Christian love might never be completely fulfilled. 'Men have a tragic inclination to yield to selfish impulses,' he said. 'But one always has the capacity to strive for love. It remains the regulating ideal.'

"He took this ideal from Christ's words on love. 'This is my commandment,' John reports Christ as saying. 'That ye love one another, as I have loved you.' Luke quotes Jesus: 'Love your enemies, do good to them which hate you.' In Matthew's account of the Sermon on the Mount, Jesus tells His disciples: 'Resist not evil: But whosoever shall smite thee on thy right cheek, turn to him the other also.'

"These words Dr. King took quite literally. In doing so, he made what many clergymen consider a singular contribution to modern religious thought. Using the words of Christ and the example of Gandhi, he was the first to really articulate the concept of nonviolent resistance for Christianity in America.

"With such convictions, it was not surprising last year that Dr. King voiced strong opposition to the Vietnam War. What was surprising, even to his colleagues and friends, was the vehemence of his criticism. In unfriendly circles, it was suggested that Dr. King latched onto the Vietnam issue to steal the thunder from the fast-rising advocates of black power in the civil-rights movement. But his colleagues, rejecting the notion of opportunism, had their own worries. They feared that Dr. King's activity on the Vietnam issue would divert his attention from the main cause and that it would alienate many friends of the civil-rights movement, which it did.

"Dr. King's most recent efforts were directed toward his projected Poor People's March on Washington this spring. He planned to bring thousands to the capital, where they would live in a shantytown and would remain indefinitely to lobby in Congress for job help, better low-cost housing, open-housing legislation, and improved welfare plans.

"Whatever the burdens on his time, however, Martin Luther King was not too busy to answer a call from desperate friends in Memphis, who feared that without a gentle word the bitterness engendered by the long garbage strike would erupt into violence. In preparation for his next march, as was his style, Dr. King planned a rally for last Thursday evening to inspire his followers. As he prepared to go to dinner, he stepped onto the balcony of his motel for fresh air. He turned to his music director:

" 'My man be sure to sing *Precious Lord* tonight and sing it well.'

"They were his last words; seconds later a bullet crashed into his neck.

"This is the hymn the Rev. Martin Luther King, Jr., who was 39 years old, who wanted to live but who feared no man, would have heard:

" '*Precious Lord, take my hand, Lead me on, help me stand;*
I am tired, I am weak, I am worn;
Through the storm, through the night, Lead me on to the light;
Take my hand, precious Lord, lead me home.
When my way grows drear, precious Lord, linger near;
When my life is almost gone;
Hear my cry, hear my call, Hold my hand lest I fall;
Take my hand, precious Lord, lead me home.

" '—JERROLD K. FOOTLICK.' "

A TRIBUTE TO DR. MARTIN LUTHER KING, JR.

(By Hon. SEYMOUR HALPERN, of New York)

Mr. HALPERN. Mr. Speaker, during the past few days, from one end of this earth to the other, Dr. Martin Luther King has been memorialized in a manner befitting the life he led and the cause for which he strove. The senseless act of murder that stilled his voice cannot kill his words nor dim his dream.

Applying his symbolic philosophy of nonviolence to attain goals of equal justice for all, Martin Luther King was a champion of justice, a revered leader whose vision and indomitable spirit gave profound meaning to the cause of human rights.

From the moment he first led the Montgomery bus boycott in 1956—through the Albany, Ga., demonstrations, the renowned 1964 March on Washington, the march from Selma to Montgomery, the jail terms in Birmingham and Albany—through all this Dr. King counseled peace and justice—and in so doing served not only the cause of equality but the American cause as well.

Out of the intensity of Dr. King's crusade sprang the civil rights bill of 1957, 1960, 1964, and 1965, proclaiming the equality of opportunity as it affected voting rights, public accommodations, employment, and education.

In tribute to his work for justice, coupled with his appeals for peace, in 1964 Dr. King was awarded the Nobel Peace Prize. The tribute was well deserved, for if ever a man had fought for reform, in defiance of those favoring oppression on the one hand, and those favoring revolution on the other, it was Dr. Martin Luther King.

It is ironic, tragically ironic, that the memory of a man who lived and died dedicated to achieving reform by nonviolent means, should be used as a mask for the violence that has swept the country these past 6 days. Let those who have defiled and who would defile the greatness of Dr. King, know that they act in their own name and not in his.

Yesterday, I was among those who journeyed to Atlanta to pay our last respects to Dr. King. It was one of the most moving experiences of my life, one I shall never forget. From every walk of life, every color, every religion, came people to do homage as much to a single principle as to the man who so eloquently gave voice to it—the principle of justice.

Let it be our hope that true brotherhood among all men will be the most lasting memorial to Martin Luther King.

TRIBUTE TO DR. MARTIN LUTHER KING, JR.

(By Hon. PHILLIP BURTON of California)

Mr. BURTON of California. Mr. Speaker, I, too, would like to add my word of commendation to our distinguished colleague, my friend, the gentleman from Michigan (Mr. CONYERS). His efforts made it possible for the congressional delegation, some 70 or so members, to attend the most moving and impressive services for Dr. King in Atlanta yesterday.

I was happy to join with him and my colleagues in this personal expression of sympathy to Dr. King's family and of respect for all that this heroic man stood.

Dr. Martin Luther King, Jr., a man of peace, a man of God, a leader of his people and of this Nation is dead. He was taken from among us cruelly and stealthily by an assassin's bullet. Yesterday, I was in Atlanta, Ga., where he was laid to rest "free at last."

Our Nation mourns him but we do not despair because his words of hope still ring in our ears.

Our Nation is touched again by tragedy and loss but his courage binds us together and leads us on.

Our Nation's sight is blurred with tears and sorrow but his vision is clearly before us, summoning us to the cause for which he gave his life.

Our Nation is sleepless in its grief and shame because his dream is still to be accomplished.

Martin Luther King spoke of that dream on the steps of the Lincoln Memorial in 1963. His words rang out then and the echo of those words can be heard even now.

"Let us not wallow in the valley of despair.

"I say to you today, my friends, even though we face the difficulties of today and tomorrow, I still have a dream. It is a dream deeply rooted in the American dream. I have a dream that one day this nation will rise up and live out the true meaning of its creed: 'We hold these truths to be self-evident that all men are created equal.'"

Martin Luther King would not have us mourn, "as those who have no hope." He would have us carry on the quest for peace, for human dignity, the quest to fulfill his dream. The first step toward fulfillment of that dream must come now with the speedy enactment of the Civil Rights Act of 1968, but more must follow. Jobs, education, training, better housing, expanded public assistance, and health services administered with concern for human dignity must follow.

More than that, the quickened conscience of the Nation must harken to the words of Dr. King and understand the motivation of this heroic figure. He said:

"More than ever before, my friends, men of all races and nations are today challenged to be neighborly. The call for a worldwide good-neighbor policy is more than an ephemeral shibboleth; it is a call to a way of life which will transform our imminent cosmic elegy into a psalm of creative fulfillment. No longer can we afford the luxury of passing by on the other side. Such folly was once called moral failure; today it will lead to universal suicide. We cannot long survive spiritually separated in a world that is geographically together. In the final analysis, I must not ignore the wounded man on life's Jericho Road, because he is a part of me and I am a part of him. His agony diminishes me, and his salvation enlarges me."

Dr. Martin Luther King could not ask the Biblical question, "Am I my brother's keeper?" For him, the answer was as obvious as it was forcefully affirmative.

He was involved in mankind. He was concerned and that concern extended from collective bargaining rights for sanitation workers in Memphis where he gave his life to the right of Negro men and women to sit on buses in Montgomery where the cause of human dignity first propelled him into the national spotlight.

His concern for humanity and the dignity of the person made his advocacy of the nonviolent confrontation inevitable. A man of reason, he challenged men to act reasonably. A man of justice, he challenged men to act with justice. A man of God, he saw clearly and challenged others to see the spark of divinity in each man which makes sacred human life and gives dignity to our humanity. This concern caused him to be jailed. It also caused him to be honored with the Nobel Peace Award.

It was natural that this man of peace who sought justice at home should speak out so clearly and eloquently against the injustice and brutality of the war in Vietnam. Dr. King lived the Sermon on the Mount and lived the words, "Blessed are the peacemakers."

Martin Luther King was the apostle of nonviolence and peace, and his life, his words, his deeds and his martyr's death gave witness to his creed. He is no longer with us but in the forefront of every struggle for human dignity, for peace, his spirit will march on.

Men will continue to dream his dreams and in the words of the song of the movement:

"Black and white together,
We shall overcome!"

We shall overcome injustice and enslaving poverty.

We shall overcome bigotry and prejudice.

We shall overcome the vestiges of hatred which have led us to tragedy.

LET US WALK TOGETHER—TRIBUTE TO REV. DR. MARTIN LUTHER KING, JR.

(By Hon ROBERT N. C. NIX, of Pennsylvania)

Mr. NIX. Mr. Speaker, last week, for the first time in modern history, the world witnessed the extraordinary death of a distinguished American of African descent, Rev. Dr. Martin Luther King, Jr.

As an advocate of one of the basic principles of a society of law and order—nonviolence—he nonetheless died in the advocacy of that creed.

While many may have disagreed with the tenacity of his faith and its uncompromising pursuit, his death did command for 5 full days the undivided attention of one of the most powerful nations in the world. For 1 full day, the smoothly lubricated wheels of government creaked to a halt. The anguish of millions was carried to Atlanta by hundreds of thousands who left a multiplicity of occupations from janitor and sharecropper to Vice President and millionaire to make their pilgrimage of respect.

All were there—U.S. Senators, U.S. Congressmen, Governors, mayors, foreign dignitaries alongside the unnamed, the lowly and the unemployed. Indeed the measure of this slightly built blackman's greatness is calibrated by the thousands of messages of condolences and public expressions of grief from heads of state, His Holiness Pope Paul VI and citizens of the world.

And why did they all pay tribute?

In my judgment, this was the first time in this century or any century when an Afro-American, by what he said, by what he lived for touched the conscience of America. By his advocacy of nonviolence and the quality of his life, he even touched the hearts of his enemies who disagreed with his tactic, but respected his sincerity.

As Members of this highest and most respected legislative body, we are to consider today the 1968 civil rights bill.

I ask no one to vote for this piece of legislation or any piece of legislation solely out of the public notice and affectionate esteem accorded Rev. Dr. Martin Luther King, Jr.

Rather, I would ask my distinguished colleagues to examine their consciences. Can they espouse the same principles by which Reverend King lived? The love of all races, the forgiveness of your enemies and the oneness of the family of man?

Or are they prepared to abandon these principles and instead permit the unreasoned laws of the jungle to engulf us all?

This is not a threat, but an invitation to each man to determine himself what steps we shall take or what steps we shall not take to preserve the United States of America.

Whatever steps we do take must be based upon the law of reason.

For we cannot expect reason to triumph in the streets of this Nation unless reason survives in the Halls of this Congress.

And this particular law is an appeal to reason. As that great jurist, Sir Edward Coke, once wrote:

"Reason is the life of the law; nay, the common law itself is nothing else but reason . . . The law . . . is perfection of reason."

We who would appeal to all Americans to accept the law of reason and forgo the call of the violent—are we prepared to take that first step?

Reverend King took more than that first step. In heeding the injunction of another man of fellowship that "whosoever compel thee to go a mile, go with him twain," Reverend King walked that last mile to give his last breath of life for a country in which he believed, a country which he loved, and a country in which he never lost faith.

TRIBUTE TO DR. MARTIN LUTHER KING, JR.

(By Hon. PATSY MINK, of Hawaii)

Mrs. MINK. Mr. Speaker, tribute to a great man like Dr. Martin Luther King, Jr., is difficult to express in mere words. Yesterday I participated in the funeral procession in Atlanta, Ga., to express my esteem and respect for this great religious and spiritual leader and to underscore my own personal determination to make his life's dream of freedom and equality for our fellow Americans a reality.

Our Nation is not likely to see soon the emergence of such a leader among men who by the sheer strength of his teachings and the magnetism of his words could capture the conscience of all men of good will and dramatize the work that we must do in order to make real the American's creed of freedom from oppression.

His words stung deep into the hearts of Americans, and we must now rise to his challenge to create a society where all men may enjoy the blessings of liberty and opportunity.

An eloquent voice for justice has been silenced. Those who will now count among the living will be those who will be willing to transform their regard for him into actions which will achieve the goals to which this Nation has been since its inception dedicated.

The tragedy is that men must still die to win freedom and equality in America. Dr. King is dead; so long as he lived he bore the cross of our conflict, of our conscience and of our guilt. Sad that he should have died before his dream came true. Sad that his dream had to be only that, when America's pride was in its ideals of liberty and justice for all.

The time has come for America to free its soul of hate and begin to rewrite the chapters of our noble history so that human dignity can be the basis of our mode of life and the creed of our country.

UNITY: THE LEGACY OF MARTIN LUTHER KING

(By former Senator Ernest Gruening)

Mr. GRUENING. Mr. President, slightly more than 4 years and 7 months ago—on August 28, 1963—it was my privilege to be present at the Lincoln Memorial at ceremonies marking the conclusion of the march by 200,000 Americans for jobs and equality of opportunity. One speaker on that historic occasion was Dr. Martin Luther King.

Those listening—and we numbered millions—remember his description of the America he sought—the America in which the words "free" and "equal" mean the same for every American.

Last Friday, in Alaska, I made a statement I never wanted to make when I commented on the assassination of the Reverend Dr. Martin Luther King. This is the statement. It is very brief.

"This is one of the most tragic events in all of American history. This is a tragedy comparable in scope to the assassination of Abraham Lincoln and John F. Kennedy. The loss is irreparable. We can only hope that the mission of Martin Luther King in life—of seeking to assuage passion and hate with kindness, dignity and principle in pursuit of his great objectives of equality and fairness, regardless of race—will in some way live on stronger in death.

"This tragic event should call for implementation of the recommendation of the President's Commission on Civil Disorders and an application of the recommendation made some time ago by Hubert Humphrey of a Marshall Plan for our cities in order to get rid of civil strife and all the other

underlying causes of discrimination, poverty and degradation."

Dr. King, in 1963, spoke of the need to transform the "jangling discords of our Nation" into what he described as "a beautiful symphony of brotherhood."

His words apply not only to our land but to all lands. During his brief 39 years on earth, he communicated, perhaps better than any other individual, the real meaning and the real need for the brotherhood of man—our common goal.

Violence of any kind—a bombing in Birmingham, a murder in Angola, or a napalm burning in the denuded hills of Vietnam—saddened him, because he realized that peace and civil rights are also brothers.

Martin Luther King watched the noble goals of the Great Society eviscerate as our tragic involvement in Vietnam deepened. As he wrote:

"I knew that America would never invest the necessary funds or energies in rehabilitation of its poor so long as Vietnam continued to draw men and skills and money like some demonic, destructive suction tube. So I was increasingly compelled to see the war as an enemy of the poor and to attack it as such."

Part of the tragedy of April 4 in Memphis is that the destructive act by the sniper has prevented Martin Luther King from being here to help the President in his renewed quest for peace.

Martin Luther King marched in the mantle of nonviolence. He led a peaceful attack. If we believe in the brotherhood of men, we must make certain that his peaceful attack continues. To do less is to destroy everything he has built as well as ourselves.

Let us now prove beyond doubt that the peaceful approach is the correct approach. Let us make certain the goals he sought are attained by the utmost speed.

We have made some progress today.

Congress has approved, and sent to the President, amendments to the Civil Rights Act which include a fair-housing section.

Newspapers this morning carried the welcome announcement by Levitt & Sons that it was eliminating segregation "any place it builds, whether it be the United States or any other country in the world," and that its policy was "effective at once." Levitt & Sons made clear that this was its tribute to Dr. King.

And the Senate has indicated its desire to fund such worthwhile programs as Headstart by its vote today on the conference report on supplemental appropriations.

We will, I believe, find new ways during this coming Easter recess which will enable us to build a living memorial to the man who, more than anything else, thought of himself as a drum major for justice, peace, and righteousness.

Throughout the executive and legislative branches of Government, men and women are working right now to put together the ingredients for the peaceful marching band of enlightenment which our fallen drum major sought.

The instruments of that band must include jobs, houses, schools, food, funds, and equality and compassion for our fellow men. That band will exclude bigotry, fear, sorrow, illiteracy, pestilence, and hunger.

That band will create the music Martin Luther King called a beautiful symphony of brotherhood.

These views, Mr. President, I have held for some time. They are likewise expressed in the two leading editorials in today's New York Times. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

"THE VISIONS OF DR. KING

"The heart of the city and of the nation stood still for a little while yesterday morning. The normal pace of life visibly slowed; the thinly peopled streets, the shuttered stores, the silent schools of this metropolis gave token to the fact that there was just one place toward which the eyes of the American people were turning: to a simple brick church in Atlanta, Ga.

"To this church had come many of this country's distinguished leaders; to it had come some of its humblest citizens; to it had come a widow, whose poignant dignity masked her sorrow, with her four young children, whose father had just given his life for the American dream. To this church came the thoughts and the prayers of the American people.

"Seldom in its history has this country been so deeply moved, so shamed, so shocked, as it has been by the death of Martin Luther King. Seldom in its history has this country had a leader of such transcendent spirit combined with iron will, of such integrity of purpose combined with a magnetic appeal, of such devotion to a great cause combined with the courage to pursue it.

"Martin Luther King, the man of peace, evoked the very best in Americans of every race and creed; and the tremendous outpouring of silent and spoken grief that centered yesterday in Atlanta gave expression to the overwhelming sentiment of a stunned and united nation. United? It must be united.

"This is the legacy of Martin Luther King, as it was his vision. The people of this country cannot fail him now. The concept of racial inferiority and racial discrimination is intolerable if the United States is to survive. It is the fundamental question, and Dr. King, apostle of brotherhood, understood it as such. In all its power and all its majesty these United States must move to make his vision a reality."

"THE NEEDED COMMITMENT

"What is most needed in this hour of national trial is a program that offers realistic promise of swifter advance toward a society of equal opportunity. The dimensions of that program are clearly set forth in the report of the National Advisory Commission on Civil Disorders; the absent factor is a long-term commitment by the American people to make the sacrifices necessary to assure good schools, housing and jobs for all.

"It is obvious that no full commitment is going to be made while the Vietnam war is raging and higher taxes are required merely to keep the dollar from collapse. But the apparent imminence of talks to seek a beginning to an end of that wasting conflict provides both an opportunity and an obligation to demonstrate to the millions now shut out of any real participation in American society how genuine is this country's resolve to give substance to the guarantees of equality that are their birthright.

"When President Johnson makes his deferred address to Congress what more constructive monument to Martin Luther King could be suggested than a pledge that every dollar released through a scaling down of the Vietnam war will be committed to the monumental tasks of social regeneration in urban and rural slums?

"For the first time there seems a simultaneous disposition in Washington and Hanoi to undertake exploration of ways of halting the conflict, with its staggering cost in blood and money. In any event, military spending is not likely to taper off quickly, and certainly the attack on poverty and the horrors of the ghetto must not languish while the search for disengagement in Vietnam goes forward.

"But a great contribution to restored faith in America's humanitarian tradition can be made by coupling such immediate forward steps with a permanent undertaking to use for human betterment the vast sums currently applied to instruments of destruction, just as quickly as the military situation eases. That is the road to true internal security as well as social justice."

DR. MARTIN LUTHER KING

(By former Senator Edward V. Long, of Missouri)

Mr. LONG of Missouri. Mr. President, our Nation has lost an important leader. The St. Louis Post-Dispatch, the St. Louis Globe-Democrat, and the Kansas City Times have spoken eloquently of his life and service on their editorial pages. Dr. Martin Luther King will live on as a part of our Nation's history. His devotion to nonviolence should be an inspiration to us all. He made it clear that even if all his supporters advocated violence he would stand alone for nonviolence. Such dedication to peace and justice cannot be forgotten.

Mr. President, I ask unanimous consent that the editorials referred to be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

"[From the St. Louis (Mo.) Post-Dispatch, Apr. 5, 1968]

"A NATIONAL TRAGEDY

"'Martin Luther King had more faith in America than America has in itself,' Whitney Young of the Urban League said sadly after the assassination of his old friend in Memphis.

"It is true. The Rev. Dr. Martin Luther King Jr. spoke for the best in this nation. He spoke for the continuing process of securing liberty and freedom of individuals, and he spoke for this in the context of nonviolence. Those should not be aspirations of Negroes only. They should be the aspirations of the American people.

"The trouble is that America has been too often a violent nation. What a spectacle our form of civilization must seem today to many peoples not blessed with it. The most powerful, the richest nation, steeped in abundance; the nation that early spurred the world to ideals of democracy; the nation in which only too short a time ago was killed a President to whom even other nations looked hopefully; the nation which now has seen the senseless destruction of a man to whom the world looked up as rightful winner of the Nobel peace prize. And a nation which continues to spend far too much of its wealth on a war in a little Asian country, rather than spending anywhere near enough to repair its racial ravages at home.

"Still, it needs to be said that this nation grieves for the Rev. Dr. King, and this is true for whites as well as Negroes. The atmosphere of violence is not one which most individual Americans welcome; it is one which increasingly troubles them.

"They are more troubled now. Troops have been moved into Memphis, too late to protect Martin Luther King. Clearly they are there to protect the city against Negro wrath. What of that righteous wrath? Is it now to take the form of the violence, already indicated in some cities, that the Rev. Dr. King despised and that would undo the great progress he brought to his people and to all Americans?

"What of the eventual reaction of the white majority? Is that majority to heed its prophets of doom and be heedless of the growing despair of the minority? A greater tragedy than the death of the Rev. Dr. King would be the transformation of the United States into a garrison state, sealing off the Negro ghettos, creating apartheid by counter-power and counter-violence.

"The nation faces a choice now, a choice no different from the one it has confronted all along, but heightened by the effects of tragedy. Grief is not enough, and when it passes, what then?

"Then there is only one way for this country to atone, not for the death of one man, but for all the wrongs that have been done for centuries to too many Americans. That is for the President and the Congress and the public to resurrect the report of the

National Advisory Commission on Civil Disorders and to act on it.

"That means creating millions of new jobs, providing substantial compensatory public assistance to schools for children handicapped by their cultural history, and sweeping out an outmoded and often inhumane welfare system to replace it with one that guarantees every citizen a decent living. That certainly means quick House acceptance of the Senate's civil rights bill, including open housing.

"That means spending billions for social reconstruction instead of for war. So be it. The alternative would be a greater calamity than the one the nation has now suffered. It would signify a more depressing lack of faith in America. If Martin Luther King had faith in his people and their ideals, it is time for the people, white and black, to have faith in themselves."

"[From the St. Louis (Mo.) Globe-Democrat, Apr. 6, 1968]

"LEGACY OF MARTIN LUTHER KING

"The brutality of an assassin has struck down Dr. Martin Luther King, the most effective leader Negroes had in their difficult drive for equal rights, equal citizenship. No man exerted more influence for racial justice during the last dozen years, among his own people and throughout the nation.

"All America is shocked and deeply distraught that such savagery could happen, and to such a man. The act was utterly senseless, an outcropping of violence that has spread its malignancy in a democracy we assume to be civilized.

"Dr. King was a compassionate and dedicated spokesman for the rights he sought. A magnetic personality, he possessed a compelling eloquence, especially in the earlier days of his demonstrations, such as the Montgomery bus boycott which raised him to national prominence.

"Modeling his philosophy and leadership on India's Mahatma Gandhi, he became the apostle of non-violence in the Negro cause. What an ugly irony that violence destroyed him. It was because of his non-violent successes that he received the Nobel Peace Prize.

"The last few years, hectored by young Negro militants who often preached mayhem and shooting, Dr. King became more emotional in his appeals and his demonstrations brought violence. He became an outspoken opponent of the Vietnam war, which alienated other Negro leaders who felt such an attitude harmed the rights movement.

"But his voice never lost magic for his people. Crowds centered wherever he went. He sacrificed all to the cause of his minority's rights—in the end himself.

"His martyrdom must not be lost in a resentment of his people, stirred to blind anger. It would be a great tragedy if the death of Dr. King were to spark extremist uprisings—a repudiation of his life teaching.

"The killing of Dr. King is lamented and mourned by the millions of white folk as well as Negroes. This assassination was certainly not an act of the white community which has been as stricken with revulsion as any of his supporters.

"Just as in the murder of President John F. Kennedy, the shot that killed Dr. King was from the hand of a mad or very sick man. Against such an assassin there is really no protection. Martin Luther King knew this as his public words indicated the night before his death.

"The aftermath of the King tragedy must not be a national rash of new violence, steeped in murder, looting, arson and rioting.

"President Johnson, who has done more than any other White House incumbent for Negro needs and equality, has asked 'every American citizen to reject the blind violence that has struck down Dr. King, who lived by non-violence. We can achieve nothing by lawlessness and divisiveness among the American people.'

"There is no such thing as national guilt for such an act as the slaying of Dr. King. But the fact such bloody things recur must give pause to our people—including minorities—to sift out causes of the violence cancer, then seek remedy.

"Martin Luther King became known worldwide not simply because he was a leader of Negro disadvantaged. He will hold a niche in history because of his philosophy of activist non-violence. That is his legacy to his race and to his country. What a tragic pity were this legacy to be dissipated."

FUNERAL SERVICES FOR DR. MARTIN LUTHER KING

(By Senator JACOB K. JAVITS)

Mr. JAVITS. Mr. President, during the most impressive services yesterday at the Ebenezer Baptist Church in Atlanta, Ga., for Dr. Martin Luther King, and then the long march to Morehouse College, where the afternoon services were held, and the very impressive services which took place there, a number of things were said which would be very worthwhile to have before us.

I ask unanimous consent that a very impressive statement by the mentor of Dr. Martin Luther King, who was Dr. L. Harold DeWolfe, dean of Wesley Theological Seminary, which was made as a tribute, at the Ebenezer Baptist Church, together with the eulogy delivered by Dr. Benjamin Mays, retired president of Morehouse College, be made a part of my remarks.

There being no objection, the eulogies were ordered to be printed in the RECORD, as follows:

"THE TRIBUTE BY DR. L. HAROLD DE WOLFE

"This is our prayer. Grant us thy gracious benediction.

"It was my privilege to teach Martin Luther King, to march with him in Mississippi, agonize and pray with him in the midst of the worst violence at St. Augustine, to spend many hours counseling with him, to go through great volumes of his private papers organizing them, to spend many days and nights in his home. I know the innermost thoughts of this man as deeply as I know that of any man on earth. It has been the highest privilege of my life, this personal friendship.

"Martin Luther King spoke with the tongues of men and of angels. Now those eloquent lips are stilled. His knowledge ranged widely and his prophetic wisdom penetrated deeply into human affairs. Now that knowledge and that wisdom have been transcended as he shares in the divine wisdom of eternity.

"Lighthouse of hope

"The Apostle Paul has told us that when all other experiences and virtues of humanity have been left behind, faith, hope and love remain. But the greatest of these is love.

"Martin exemplified all three in the rarest intensity. Amid the tempestuous seas and treacherous storms of injustice, hate and violence which threatened the very life of mankind, his faith was a solid, immovable rock. He received hundreds of threats upon his life, yet for 13 years he walked among them unafraid. His single commitment was to do God's will for Him; his trust was in God alone.

"On that rock of faith God raised in him a lighthouse of hope. No white backlash nor black backlash nor massive indifference could cause him to despair. He dreamed a dream of world brotherhood and unlike most of us he gave himself absolutely to work for the fulfillment of this inspired hope. In that lighthouse of hope God lighted in Martin a torch of love. He loved all men. Even the hate-filled foe of all he represented he tried sympathetically to understand.

"He sought to relieve the slavery of the oppressors as well as that of the oppressed. While overborne by incredible pressures upon his time and energy he yet had time to bring comfort and counsel to a bereaved boy he had never seen before or to park a car for a confused woman who was a complete stranger.

"What a legacy of love is left to his faithful and gifted wife and these four dear children. They now share his dream, his faith, hope and love. They and the faithful little band of nonviolent crusaders who have been unfailingly with him from Montgomery all the way to Memphis. They are too few, they who have already made such a costly sacrifice.

"It is now for us, all the millions of the living who care, to take up his torch of love. It is for us to finish his work, to end the awful destruction in Vietnam, to root out every trace of race prejudice from our lives, to bring the massive powers of this nation to aid the oppressed and to heal the hate-scared world.

"God rest your soul, dear Martin. You have fought the good fight. You have finished your course. You have kept the faith. Yours is now the triumphant crown of righteousness. Your dream is now ours. May God make us worthy and able to carry your torch of love and march on to brotherhood. Amen."

"THE EULOGY

"Members of the bereaved family, distinguished citizens of the world, ladies and gentlemen.

"To your great delight I'm cutting about five minutes off of this eulogy.

"To be honored by being requested to give the eulogy at the funeral of Dr. Martin Luther King is like asking one to eulogize his deceased son, so close and so precious was he to me.

"Our friendship goes back to his student days here at Morehouse. It is not an easy task. Nevertheless I accepted with a sad heart and with full knowledge of my inadequacy to do justice to this good man.

"It was my desire that if I predeceased Dr. King he would pay tribute to me on my final day. It was his wish that if he predeceased me I would deliver the homily at his funeral. Fate has decreed that I eulogize him. I wish it might have been otherwise for after all I am three score years and 10 and Martin Luther is dead at 39.

"How strange.

"God called the grandson of a slave on his father's side and the grandson of a man born during the Civil War on his mother's side and said to him—Martin Luther—'Speak to America about war and peace. Speak to America about social justice and racial discrimination. Speak to America about its obligation to the poor and speak to America about nonviolence.'

"Let it be thoroughly understood that our deceased brother did not embrace nonviolence out of fear or cowardice. Moral courage was one of his noblest virtues. As Mahatma Gandhi challenged the British empire without a sword and won, Martin Luther King Jr. challenged the interracial injustice of his country without a gun. He had faith to believe that he would win the battle for social justice.

"Courage is hailed

"I make bold to assert that it took more courage for Martin Luther to practice nonviolence than it took his assassin to fire the fatal shot. The assassin is a coward. He committed his dastardly deed and fled. When Martin Luther disobeyed an unjust law, he suffered the consequences of his action. He never ran away and he never begged for mercy.

"He returned to Birmingham jail to serve his time. Perhaps he was more courageous than soldiers who fight and die on the battlefield.

"There is an element of compulsion in their

dying. But when Martin Luther faced death again and again, and finally embraced it, there was no external pressure. He was acting on an inner urge that drove him on, more courageous than those who advocate violence as a way out, for they carry weapons of destruction for defense. But Martin Luther faced the dogs, the police, jails, heavy criticism, and finally death, and he never carried a gun, not even a pocket knife to defend himself.

"He had only his faith in a just God to rely on and his belief that thrice is he armed who has his quarrels just—the faith that Browning writes about when he says: 'One who never turned his back but marched to press forward never doubted that clouds would break, never dreamed that right, though worsted, wrong would triumph. . . .'

"Belongs to Posterity

"Coupled with moral courage was Martin Luther Jr.'s capacity to love people. Though deeply committed to a program of freedom for Negroes, he had a love and a deep concern for all kinds of people. He drew no distinction between the high and the low, none between the rich and the poor. He believed especially that he was sent to champion the cause of the man farthest down. He would probably have said: 'If death had to come I am sure there was no greater cause to die for than fighting to get a just wage for garbage collectors.'

"This man was suprarace, supranation, supradenomination, supraclass and supraculture. He belonged to the world and to mankind. Now he belongs to posterity.

"But there is a dichotomy in all of this. This man was loved by some and hated by others. If any man knew the meaning of suffering, Martin Luther knew—house bombed, living day-by-day for 13 years under constant threat of death, maliciously accused of being a Communist, falsely accused of being insecure, insincere and seeking the limelight for his own glory, stabbed by a member of his own race, slugged in a hotel lobby, jailed 30 times, occasionally deeply hurt because his friends betrayed him.

"And yet this man had no bitterness in his heart, no rancor in his soul, no revenge in his mind, and he went up and down the length and breadth of this world preaching nonviolence and the receptive power of love.

"He believed with all of his heart, mind and soul that the way to peace and brotherhood is through nonviolence, love and suffering.

* * * * *

and to the war in Vietnam. It must be said, however, that one could hardly expect a prophet of King's commitment to advocate nonviolence at home and violence in Vietnam.

"Nonviolence to King was total commitment not only in solving the problems of race in the United States but in solving the problems of the world.

"Surely, surely this man was called of God to his work. If Amos and Micah were prophets in the eighth century B.C., Martin Luther King Jr. was a prophet in the twentieth century. If Isaiah was called of God to prophesy in his day, Martin Luther was called of God to prophesy in his day. If Hosea was sent to preach love and forgiveness centuries ago, Martin Luther was sent to expound the doctrine of nonviolence and forgiveness in the third quarter of the twentieth century.

"If Jesus was called to preach the Gospel to the poor, Martin Luther was called to bring dignity to the common man. If a prophet is one who interprets in clear and intelligible language the will of God, Martin Luther Jr. fits that designation. If a prophet is one who does not seek popular causes to espouse but rather the causes which he thinks are right, Martin Luther qualifies on that score.

"Not ahead of time

"No, he was not ahead of his time. No man is ahead of his time. Every man is within his time. Each man must respond to the call of God in his lifetime and not somebody else's time.

"Jesus had to respond to the call of God in the first century A.D. and not in the twentieth century. He had but one life to give. Jesus couldn't wait. How long do you think Jesus would have had to wait for the constituted authorities to accept him—25 years, 100 years, 1,000 years, never? He died at 33. He couldn't wait.

"Paul, Copernicus, Martin Luther, the Protestant reformer, Gandhi and Nehru couldn't wait for another time. They had to act in their lifetimes. No man is ahead of his time.

"Abraham staying with his country in obedience to God's call, Moses leading a rebellious people to the Promised Land, Jesus dying on a cross, Galileo on his knees recanting at 70, Lincoln dying of an assassin's bullet, Woodrow Wilson crusading for a League of Nations, Martin Luther King Jr. fighting for justice for garbage collectors, none of these men were ahead of their time. With them the time is always right to do that which is right and that which needs to be done.

"Too bad, you say, Martin Luther Jr. died so young. I feel that way, too. But as I have said many times before, it isn't how long one lives but how well. Jesus died at 33, Joan of Arc at 19, Byron and Burns at 36, Keats and Marlowe at 29 and Shelley at 30, Dunbar before 35, John Fitzgerald Kennedy at 46, William Rainey Harper at 49 and Martin Luther King Jr. at 39.

"It isn't how long but how well.

"PEOPLE RESPONSIBLE

"We all pray that the assassin will be apprehended and brought to justice but make no mistake, the American people are in part responsible for Martin Luther King's death. The assassin heard enough condemnation of King and Negroes to feel that he had public support. He knew that there were millions of people in the United States who wished that King was dead. He had support. The Memphis officials must bear some of the guilt for Martin Luther King's assassination.

"The strike should have been settled several weeks ago. The lowest paid man in our society should not have to strike to get a decent wage a century after emancipation and after the enactment of the 13th, 14th and 15th Amendments. It should not have been necessary for Martin Luther King Jr. to stage marches in Montgomery, Birmingham, Selma and go to jail 30 times trying to achieve for his people those rights which people of lighter hue get by virtue of the fact that they are born white.

"We, too, are guilty of murder. It is a time for the American people to repent and make democracy equally applicable to all Americans.

"What can we do? We and not the assassin, we and not the President, we and not the apostles of hate, we represent here today America at its best. We have the power to make democracy function so that Martin Luther King and his kind will not have to march.

"Did not die in vain

"What can we do? If we love Martin Luther King and respect him as this crowd surely testifies, let us see to it that he did not die in vain. Let us see to it that we do not dishonor his name by trying to solve our problems through rioting in the streets.

"Violence was foreign to his nature. He warned that continued riots could produce a Fascist state. But let us see to it also that the conditions that cause riots are promptly removed as the President of the United States is trying to get us to do. Let black and white alike search their hearts and if there be any prejudice in our hearts against interracial or ethnic groups let us exterminate it and let us pray, as Martin Luther would pray if he could: 'Father forgive them, for they know not what they do.'

"If we do this, Martin Luther King Jr., will have died a redemptive death for which all mankind will benefit. Morehouse will never be the same because Martin Luther came by here and the nation and the world will be indebted to him for a century to come.

"It is natural, therefore, that we here at Morehouse and Dr. Foster would want to memorialize him to serve as an inspiration to all students who study in this center.

"I close by saying to you what Martin Luther King Jr. believed: 'If physical death was the price he had to pay to rid America of prejudice and injustice nothing could be more redemptive.' And to paraphrase words of the immortal John Fitzgerald Kennedy, permit me to say that Martin Luther King Jr.'s unfinished work on earth must truly be our own."

Mr. JAVITS. Mr. President, one thing that was said, in a most modest way, by the assistant pastor of Ebenezer Baptist Church, Rev. Ronald English, and when I say modest, I mean it; the capacity of that church is under 250, and it has a relatively small congregation—I shall never forget. Listen to what this very fine young assistant pastor said. I hope I never forget the words, and I hope the Senate never forgets the words.

He said:

"He who would blaspheme the name of Martin Luther King will do violence in the streets."

I repeat:

"He who would blaspheme the name of Martin Luther King will do violence in the streets."

I have hardly in my lifetime ever heard anything so well put, carrying so much meaning, as that. Indeed, this was the whole life of Martin Luther King, and the assistant pastor said it in a way that, it seems to me, all the world can understand. I think it deserves to rank in modern terms with, "Love thy neighbor as thyself," and other short, famous expressions, as, in my faith, "Behold, I have given you a good doctrine. Forsake it not," and many statements of the same kind. I repeat it on the Senate floor so that somewhere it may be preserved, I ask that the full text of Reverend English's prayer be printed in the RECORD.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

"PRAYER BY ENGLISH

"Let us bow our heads in a moment of solemn utterance.

"Eternal and everlasting God Our Father.

"The height of our aspirations, the depth of our existence, Thou who are the giver and sustainer of life, from Whom all things have come and to Whom all things shall return we beseech Thy comforting presence in this hour of deepest bereavement.

"For our hearts are heavily laden with sorrow and remorse at the removal of one of history's truest representatives of Thy will and purpose for mankind.

"While we pray for comfort we pray for wisdom to guide our thoughts aright at this hour. For we, oh God, in our limited vision cannot begin to comprehend the full significance of this tragic occasion.

"And so we raise the perennial question of Job: 'Why?' as we weep for the moment.

"Yet we are reminded by the best of the Christian tradition that in the total economy of the universe good will ultimately triumph. Though sorrow tarries for the night, joy comes in the morning.

"We know, oh God, that even in this little while of sorrow we need not weep for the deceased, for here was one man truly prepared to die.

"No fear of death

"In his last hours he testified himself that he had been to the mountaintop, that his eyes had seen the glory of the coming of the Lord. We know he had no fear of death.

"Help us to find consolation in the fact that his life was a gift given to us at this crucial juncture in our history out of the graciousness of Thy being.

"And so we had no real claims upon him. In the fullness of time he came and in the fullness of time he has gone. He knew where he came from and he knew where he was going.

"And so as we abide in this knowledge our gratitude will abate our sorrows.

"We know, oh God, that life is but a moment in eternity and that he who lives for the moment will surely die, yet he who lives for eternity and dedicates his life to those ultimate principles of truth, justice and love as this man has done will never die.

"Inspire us to accept the imperative that his life so fully exemplifies—that we would not judge the worth of our lives by their physical longevity, but by the quality of their service to mankind.

"He has shown how to live, oh God. He has shown us how to love. Yet the manner of his teaching and the manner of his being was so strange and unfamiliar in our world, a world that abounds in war, hatred and racism, a world that exhausts the wicked and crucifies the righteous, a world where a word of condemnation is familiar while a word of kindness is strange.

"So this man was a peculiar man. He taught a peculiar teaching. So he was not of this world. So in the course of human events the forces of time, faith and the hopes of the oppressed converged upon a single man.

"Though once in a century the midwife of oppression snatches from the womb of history a child of destiny, the record of events testifies to fact that history cannot bear the truth.

"We have witnessed the life of the crucified Christ and we have seen the slaying of Martin Luther King. So like a wild carniverous beast that turns upon and devours them, history has turned once more upon its own because it could not bear the truth that he spoke or the judgment that he brought.

"Challenge status quo

"And so, like Jesus, not only did Martin Luther King challenge the status quo, but he challenged our mode of existence. Therefore, like Jesus, he had to die as a martyr for a cause that challenged the world's assumed posture of security.

"The light came into the darkness but the darkness knew it not.

"Oh God, our leader is dead. And so now the question that he posed during his life finds us in all its glaring proportions: 'Where do we go from here? Chaos or community.'

"We pray, oh Merciful Father, that the removal of this man will not nullify the revelation given through him.

"Undergrid our feeble efforts with Thy strength and renew our courage to devote the full weight of our being to the ideas that he has thus far so nobly advanced.

"Deepen our commitment to nonviolence so that this country will not be run asunder by a frustrated segment of the black masses who would blaspheme the name of Martin Luther King by commiting violence in that name.

"Grant that the Congress and President of this nation who have been so generous and gracious in their memorial tributes will be guided by the memory of this suffering servant and return to the legislative halls determined to pass without compromise or reservations legislation so vitally needed to preserve domestic tranquility and prevent social disruption.

"Prayer for peace

"Grant, oh lover of peace, that we will effectively negotiate for a peaceful settlement in Vietnam to end the brutal slayings and communal atrocities committed in the name of democracy.

"Turn our hearts, oh God, to hear and respond to the echoes of this undying voice of the ages, a voice of love and reconciliation in the present, a voice of hope and confidence in the future.

"Grant that in response to his sacrificial death we will work toward that day when the long and tragic tune of man's inhumanity to man will resolve into a chorus of peace and brotherhood. Then love will tread out the baleful sighs of anger and in its ashes plant a tree of peace."

A TRIBUTE TO MARTIN LUTHER KING, JR.

(By Hon. BERTRAM L. PODELL, of New York, Apr. 9, 1968)

Mr. PODELL. Mr. Speaker, there is tragic irony in the circumstances that at the very moment when America glorified in its brightest hopes for peace in Vietnam, it was plunged into the depths of despair by alarms of civil disorder.

The insensate violence, arson, and looting, which erupted across the Nation in the wake of the execrable assassination of Dr. Martin Luther King, demonstrate the fragile character of the strands which knit the fabric of a peaceful social order. On the other hand, the death and destruction wrought by wanton riots in our National Capital, in Baltimore, Pittsburgh, Chicago, and in other cities fall far short of justifying descriptions, by many public spokesmen, of America, as a "sick society."

The health of a society cannot be measured by the abberational conduct of those to whom the killing of Dr. King has been an excuse, rather than a cause, for lawlessness. Those who participated in the violence of arson and looting are those who have not been touched by the preaching and teaching of Dr. King. The target areas of these apostles of violence were liquor, clothing, and appliance stores, and the guiding impulse of these looters was burglary of products offered for sale in these establishments, not vengeance for the death of a beloved leader. On the contrary, the toll of death they have caused, the homeless refugees they have created, desecrates the memory of Dr. King and affront his philosophy.

Our social health should, in fact, be measured by the millions of people in America from all walks of life who responded to President Johnson's designation of Sunday as a day of prayer and dedication, by the thousands of black and white people who joined in prayer at the Central Park Mall, by the special services conducted in churches, synagogues, schools, and other institutions throughout the land, by the millions of countless and unsung ways that our people have demonstrated their profound grief and dismay. Indeed, the gentle threnody composed by our flags at half staff waving in the breeze more profoundly expresses the mood of our people than the raucuous violence in the streets. In the critical days ahead, America will be guided by the simple message brought to his congregation by Dr. King's father:

"Don't lose your way, and don't ever let it get so dark that you can't see a star."

Ideas that move men and nations have an organic quality that sustains them beyond the span of life to their creator, and Dr. King's ideal for progress through nonviolence, will inspire those who survive him. His dream of a society of social justice, a society that knows no bigotry and prejudice, a society that knows no hunger, no poverty, no war, is the essence of the Judea-Christian ideal to which civilization has aspired for 2,000 years.

In the critical days ahead, we shall miss his inspiring leadership. Through the sheer force of his personality and dedication, he bridged the chasm between those who envision America as a united people and those who contend for racial separatism; between those who seek progress toward attainable goals through creative protest and those who proclaim violence, rather than liberty, throughout the land. As a student of the Bible, Dr. King spoke in simple, vivid Biblical imagery and through his words touched the finest instincts of people throughout the world.

Dr. Martin Luther King has now taken his place in the history of our Nation and in the history of civilization. There is perhaps no better way to express our loss than in the gentle, moving words of Shelley's elegy to Keats:

"And thou, sad Hour, selected from all the years to mourn our loss, rouse they obscure compeers and teach them thine own sorrow; say: With me died Martin Luther King; till the Future dares forget the Past, his fate and his fame shall be an echo and a light unto eternity.'"

REV. MARTIN LUTHER KING, JR.

(By Hon. MELVIN PRICE of Illinois)

Mr. PRICE of Illinois. Mr. Speaker, an apostle of nonviolence, Dr. Martin Luther King, is the victim of a wanton act of violence. This cruel twist of irony will not be erased from our Nation's history, nor easily forgotten.

As in the tradition of his mentor, Mahatma Gandhi, who fell victim to the venom and hatred he worked so hard to extinguish, Dr. King has been denied seeing the fruition of his efforts. His personal tragedy is a national loss. We deeply mourn his death.

"I have a dream," he once said. That dream of racial harmony in America has been shattered temporarily by a cowardly assassin's bullet. But the vision of which Dr. King spoke will endure and will one day be fact. His legacy to this Nation will sustain its people in these trying times.

We must heed his plea for nonviolence, as we must follow President Johnson's call for national unity. It speaks ill of this Nation that Dr. King has been slain. But his martyred spirit will prevail.

DR. MARTIN LUTHER KING, JR.

(By Hon. WILLIAM D. FORD of Michigan Apr. 9, 1968)

Mr. WILLIAM D. FORD. Mr. Speaker, I join today with my fellow Americans, and with people of good will throughout the world, in mourning the tragic death of the Reverend Dr. Martin Luther King, Jr.

To his family, to his friends and to his associates, I offer my heartfelt sympathy. It is they who bear the brunt of the grief that is shared by so many millions of people.

Columnists and commentators have already pointed out the great irony of his death—that this good and sincere man, who preached love and nonviolence, should be struck down by an act of hatred and violence.

We must go beyond this to appreciate the full tragedy of the assassination. To people of good faith in both races, Dr. King had held out the hope of a peaceful end to the prejudice and intolerance which have shackled this Nation and kept us from achieving the American dream of true freedom for all.

The real tragedy of Dr. King's death will come if Americans of both races use his assassination as an excuse to continue the hatred and violence against which he fought and preached, and because of which he died.

Dr. King would be the first to plead for the better alternative—that his death should hasten the day when all Americans share in the dreams and visions that he saw from the mountain top.

The assassination of Abraham Lincoln brought a reaction of hatred that racked this Nation for a decade, and cursed the already anguished South with the agonizing period known to history as the Reconstruction.

The assassination of John F. Kennedy, by contrast, ushered in an era of hope. The legislation and social progress for which he fought and died became a reality in part because of his death.

This would be a more fitting memorial for Dr. Martin Luther King.

It is not important or significant that the assassin was a white man. This was an accident of fate. It is more significant that he was an evil man, whose mind had been warped by the very hatred that Dr. King sought to eliminate.

There are both white and black Americans who preach violence as the answer to our Nation's problems. In the first angry reaction to Dr. King's death, these people had their way. Death and destruction, grief and ashes, stand today as eloquent testimony to this senseless venting of hate.

A counterreaction to this violence would only pile tragedy upon tragedy.

Dr. King's death will not have been completely in vain if we let this grievous week launch a new day of hope for the United States and for the world.

Let us pray that all Americans, black and white, will recognize the true wisdom and hope of Dr. King's philosophy. Let us strive together that his dreams may be realized, and that hatred based on the color of skin may be erased from our way of life.

Dr. King's Spirit Can Be Kept Alive

(By Hon. Ben Reifel, of South Dakota, Apr. 8, 1968)

Mr. Reifel. Mr. Speaker, South Dakotans have never been troubled with the type of civil rights agitation and discord that has befallen many States in recent years.

South Dakotans believe that a man should be judged upon his character and integrity rather than on the color of his skin or the church he attends. Were it otherwise, I as a member of a minority group—the American Indian—never would have had the opportunity to serve this body.

Living in such a State, it is difficult for many to comprehend the type of conditions which the Reverend Dr. Martin Luther King was trying to correct. Yet, I believe most South Dakotans held a deep respect for what Dr. King was trying to accomplish and particularly for his insistence upon the principle of nonviolence in moving toward those objectives.

One of the finest newspaper tributes to Dr. King that I have seen came from the contributing editor of the Sioux Falls, S. Dak., Argus-Leader, Mr. Fred C. Christopherson.

The editorial follows:

"DR. KING'S SPIRIT CAN BE KEPT ALIVE

"While Dr. Martin Luther King was alive, he was an articulate and effective spokesman for the Negro. His memory and the nature of his death can be even more instrumental in promoting the welfare of his race if his followers respect his spirit and his attitude.

"But it can be the other way if the occasion of his assassination becomes the spark that ignites riots and destruction. In that case, he will have died in vain.

"As the record clearly demonstrates, Dr. King warrants deep and earnest respect for all who subscribe to the principle of human equality without regard to creed, color or race. His efforts in this field were extensive and productive. He was constantly at work doing what he believed should be done. But always he sought to stay within the framework of dignity and non-violence. That is one reason why he accomplished so much and why he was so widely accepted as a constructive leader in a humanitarian endeavor.

"He was conscious of the risks involved in what he was doing—fully aware that he might be struck down at any moment by an individual with a warped mind, as was President John F. Kennedy. He realized, too, that there was strong organized opposition in some areas to his programs and that this could result in a violent reaction. Such considerations, however, didn't alter his course. He did what he believed should be done and did it very well.

"The finest tribute to his memory will be a continuance of his program in the manner he advanced it. That, one may hope, will be the prevailing response."

Martin Luther King, Jr.

(By Hon. Lionel Van Deerlin, of California, Apr. 9, 1968)

Mr. Van Deerlin. Mr. Speaker, a young San Diego girl has captured, in a short but lovely poem, the essential meaning of the life—and death—of Dr. Martin Luther King, Jr.

Liz Clarke's touching poem was brought to my attention by her classmate, Mary Ruth Jarrell, president of the junior class at Our Lady of Peace Academy in San Diego.

Miss Jarrell has asked me to help disseminate the poem, believing it should be "shared by all men, black and white."

I agree, and I also feel that Miss Clarke's untitled eulogy is an especially appropriate tribute to Dr. King on this, the day of his funeral.

The poem follows:

(By Liz Clarke)

"It was growing;
It was growing so well,
That someone thought it would overrun his garden.
So he cut it down.

"It was a beautiful ebony flower.
Dark as the night and the ground it came from.
But he cut it down.

"It was so hard for it to survive.
So many hated its dark color.
So many tried to stifle it.
Finally he cut it down.

"His garden doesn't need that ebony blossom.
His garden doesn't want that ebony blossom.
His garden is of weeds.
So he cut it down.

"But that blossom hasn't died.
It's sprouting again.
Its beautiful ebony blossom has flowered—again.

"The roots are deep and firmly entrenched.
It has the determination and vigor.
It will grow and destroy the weeds by its love."

A Memorial Sermon in Tribute to Rev. Dr. Martin Luther King, Jr.

(By Senator Vance Hartke, of Indiana, April 17, 1968)

Mr. Hartke. Mr. President, for several years I have known and been associated with a fine young minister who is also employed by the Senate Post Office. He has held that employment during student days, including work at the Wesley Theological Seminary here in Washington. I know that many others here in the Senate know Ron Winters, although perhaps many who know him here are not aware of his dedication to service in the ministry of a small Baptist congregation in Floris, Va.

Mr. Winters, on April 7, preached a memorial sermon in tribute to Dr. Martin Luther King, Jr. I ask unanimous consent that this sermon, entitled "What Price Freedom?" may appear in the Extensions of Remarks.

There being no objection, the sermon was ordered to be printed in the Record, as follows:

"A MEMORIAL SERMON IN TRIBUTE TO REV. DR. MARTIN LUTHER KING, JR.: WHAT PRICE FREEDOM?

"(Delivered by Rev. Ronald Winters, Sunday, April 7, 1968, Mount Pleasant Baptist Church, Floris, Va.)

"In the stirring language of the Declaration of Independence of the United States of America, we are reminded 'that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are Life, Liberty and the Pursuit of Happiness'. Next to life itself, man has always listed freedom as a prime motive and goal for living a happy, secure and meaningful existence. In the history of every great nation of the world, and at an appointed time when freedom and social justice were threatened, someone would cry out with a voice that could be heard around the world: 'I'd rather die than lose my freedom.' In the memorable words of that distinguished statesman and orator of our country, Patrick Henry, men still say 'give me liberty or give me death'. In the fight for political, social and economic freedom in India, Mahatma Gandhi demonstrated that freedom was more dear to him than life itself. In the story of America, men like Abraham Lincoln and John Fitzgerald Kennedy gave their lives in the pursuit of freedom. Once more in America and in our time, the voice of another, that of Martin Luther King, Jr., was raised in the struggle for social justice and freedom for all men. Again the supreme price for freedom was required—his life. What is freedom? What price is further required if we are to realize this eternal truth?

"Freedom implies the absence of hindrance, restraint or confinement. Freedom of speech and religion are among our most cherished rights in America. In his book, *Strength to Love*, by Dr. Martin Luther King, Jr., we find these words:

" 'Man is man because he is free to operate within the framework of his destiny. He is free to deliberate, to make decisions, and to choose alternatives. He is distinguished from animals by his freedom to do evil or do good and to walk the high road of beauty or tread the low road of ugly degeneracy.'

"The price of freedom is more than enjoying the right to act and move in one's own way. The price of freedom is not looting, rioting, killing or pitting man against man. We need to go to the inspired teachings of the Bible for the correct meaning of freedom and its price to mankind.

"Psalm 8: 4–5 states: 'What is man, that Thou are mindful of him? And the Son of Man, that Thou visitest him? For Thou has made him a little lower than the Angels, and hast crowned him with glory and honour.'

"Christ as a free agent for God freely came to earth and freely gave so that we might become joint heirs with Him. Nevertheless, Christ was despised and rejected of men, for men love darkness rather than the twinkling of a candle light. Since the time of Christ, the history of mankind will attest to this fact. The world has come to realize that America must take a good long look at her dark blot on the pages of history—her growing cancer—her stigma of assassinating a man of peace, non-violence and freedom. How long can America continue to assassinate great men of history in her attempt to assassinate truth?

"Dr. Martin Luther King, Jr., was the most noted Civil Rights leader this nation has ever known. Winner of the Nobel Peace Prize in 1964, he was the very symbol of peace and non-violence in America and the world. He believed deeply in freedom and justice and in obtaining them through non-violent means, yet he died violently.

"His life was pricked by the modern day

Judas, an assassin who sold out himself to the anger of an unguarded moment.

"Dr. King stated on last Wednesday night in Memphis, 'Well, I don't know what will happen now. We've got some difficult days ahead. But it really doesn't matter with me now because I have been to the mountain top, and I don't mind.'

"God grant that we may go forth from this day with new hope, new love, new awareness, new understanding and new forgiveness. Let us go forth from this day not with hostility but with holiness in our hearts. May our prayer of petition be to let the spirit of the Living God fall afresh on us. Let these words ring out within our souls today: too long have we, in America, sat on the side lines and watched injustice subdue justice. Too long have we reaped the fruit from the tree after it has fallen simply because we were too unconcerned to nurture and cultivate the seeds of justice, freedom and equality. How long will the seeds of hate and violence continue to erode the principles of human rights and freedom? How long, oh Lord, how long? How long? Too long.

"But one day we shall scale the mountain top and see the glory of a nation fully clothed in love, brotherhood, freedom and righteousness. We know that if we walk not in the counsel of the ungodly, we shall be blessed. Like Dr. Martin Luther King, Jr., we shall be like a tree planted by the rivers of water that bringeth forth his fruit in his season.

"What price, freedom? The price is whatever man is willing to pay—it's whatever *you* can afford to pay. Yes, even if one's very life is required in exchange for freedom. Dr. King once said, 'A man who is afraid of dying doesn't deserve to live.'

"In Proverbs 29:25, these words of wisdom may be found: 'But who so putteth his trust in the Lord shall be safe.'

"Yes, the King is dead—the Rev. Martin Luther King is dead, long live freedom's holy light; protect us by Thy might, Great God, Our King!"

MARTIN LUTHER KING, JR.

(By Hon. WILLIAM S. MOORHEAD, of Pennsylvania, Apr. 8, 1968)

Mr. MOORHEAD. Mr. Speaker, not since November 22, 1963, has our Nation been so shocked by a senseless, a mindless, an insane assassination. Dr. Martin Luther King, Jr., symbol of peace and nonviolence, equality and brotherhood among men has been taken from us by violence.

Martin Luther King had a dream for America and as he said, it was "a dream deeply rooted in the American dream."

America should rededicate itself to Martin Luther King's dream. As a symbol of that rededication, I am today introducing a bill which would direct the striking of a medal honoring this great American, Martin Luther King, Jr. and the presentation of this medal to his courageous widow.

I first met Dr. King and heard his eloquence at a Freedom Now rally at Forbes Field in Pittsburgh. In later years and on many occasions I worked with him and the Southern Christian Leadership Conference on civil rights legislation. He became my friend.

I have often marveled at his eloquence but particularly in August of 1963 at the Lincoln Memorial here in Washington. The March on Washington for Jobs and Freedom will live long in the memory of those who participated in it and those who saw so much of it on television. It was, perhaps, the single greatest demonstration of unity for justice that this Nation has seen.

Unquestionably the outstanding event that day was Dr. King's speech, "I Have a Dream." The text of that stirring and prophetic speech follows:

"I HAVE A DREAM

"(By Martin Luther King, Jr.)

"I am happy to join with you today in what will go down in history as the greatest demonstration for freedom in the history of our nation.

"Five score years ago, a great American, in whose symbolic shadow we stand today, signed the Emancipation Proclamation. This momentous decree came as the great beacon light of hope for millions of Negro slaves who had been seared in the flames of withering injustice. It came as the joyous daybreak to end the long night of their captivity.

"But one hundred years later the Negro still is not free. One hundred years later, the life of the Negro is still badly crippled by the manacles of segregation and the chains of discrimination. One hundred years later, the Negro lives on a lonely island of poverty in the midst of a vast ocean of material prosperity. One hundred years later, the Negro is still languished in the corners of American society and finds himself an exile in his own land. So we have come here today to dramatize the shameful condition.

"In a sense we've come to our Nation's Capital to cash a check. When the architects of our republic wrote the magnificient words of the Constitution and the Declaration of Independence, they were signing a promissory note to which every American was to fall heir. This note was a promise that all men, yes, balck men as well as white men, should be guaranteed the unalienable rights of life, liberty and the pursuit of happiness.

"It is obvious today that America has defaulted on this promissory note insofar as her citizens of color are concerned. Instead of honoring this sacred obligation, America has given the Negro people a bad check, a check which has come back marked 'Insufficient Funds.' But we refuse to believe the bank of justice is bankrupt. We refuse to believe that there are insufficent funds in the great vaults of opportunity of this nation. So we have come to cash this check, a check that will give us upon demand, the riches of freedom and the security of justice. We have also come to this hallowed spot to remind America of the fierce urgency of now.

"This is no time to engage in the luxury of cooling off or to take the tranquilizing drug of gradualism. Now is the time to make real the promises of democracy. Now is the time to rise from the dark and desolate valley of segregation to the sunlit path of racial justice. Now is the time to lift our nation from the quicksands of racial injustice to the solid rock of brotherhood. Now is the time to make justice a reality for all of God's children.

"It would be fatal for the nation to overlook the urgency of the moment. This sweltering summer of the Negro's legitimate discontent will not pass until there is an invigorating autumn of freedom and equality. Nineteen sixty-three is not an end but a beginning. Those who hoped that the Negro needed to blow off steam and will now be content will have a rude awakening if the nation returns to business as usual. There will be neither rest or tranquility in America until the Negro is guaranteed his citizenship rights. The whirlwinds of revolt will continue to shake the foundations of our nation until the bright day of justice emerges.

"But there is something I must say to my people who stand on the warm threshold which leads them to the palace of justice. In the process of gaining our rightful place we must not be guilty of wrongful deeds. Let us not seek to satisfy our thirst for freedom by drinking from the cup of bitterness and hatred. We must forever conduct our struggle on the high plane of dignity and discipline. We must not allow our creative protest to degenerate into physical violence. Again and again we must rise to the majestic height of meeting physical force with soul force.

"The marvelous new militancy which has engulfed the Negro community must not lead us to a distrust of all white people, for many of our white brothers, as evidenced by their presence here today, have come to realize that their destiny is tied up with our destiny. They have come to realize that their freedom is inextricably bound to our freedom. We cannot walk alone.

"And as we walk we must make the pledge that we shall always march ahead. We cannot turn back. There are those who are asking the devotees of civil rights: 'When will you be satisfied?' We can never be satisfied as long as our bodies, heavy with the fatigue of travel, cannot gain lodging in the motels of the highways and the hotels of the cities. We cannot be satisfied as long as the Negro's basic mobility is from a smaller ghetto to a larger one. We can never be satisfied as long as our children are stripped of their self-hood and robbed of their dignity by signs stating: 'For Whites Only.' We cannot be satisfied as long as the Negro in Mississippi cannot vote and the Negro in New York believes he has nothing for which to vote. No, no, we are not satisfied and we will not be satisfied until justice rolls down like the waters and righteousness like a mighty stream.

"I am not unmindful that some of you have come here out of great trials and tribulations, some of you have come fresh from narrow jail cells, some of you have come from areas where your quest for freedom left you battered by the storms of persecution and staggered by the winds of police brutality. You have been the veterans of creative suffering. Continue to work with the faith that unearned suffering is redemptive.

"Go back to Mississippi, go back to Alabama, go back to South Carolina, go back to Georgia, go back to Louisiana, go back to the slums and ghettos of our northern cities, knowing that somehow this situation can and will be changed. Let us not wallow in the valley of despair.

"I say to you today, my friends, even though we face the difficulties of today and tomorrow, I still have a dream. It is a dream deeply rooted in the American dream. I have a dream that one day this nation will rise up and live out the true meaning of its creed: 'We hold these truths to be self-evident that all men are created equal.'

"I have a dream that one day on the red hills of Georgia the sons of former slaves and the sons of former slaveowners will be able to sit down together at the table of brotherhood.

"I have a dream that one day even the State of Mississippi, a state sweltering with the heat of injustice, sweltering with the heat of oppression, will be transformed into an oasis of freedom and justice. I have a dream that my four little children will one day live in a nation where they will not be judged by the color of their skin but by the content of their character. I have a dream today.

"I have a dream that one day down in Alabama with its vicious racists, with its Governor having his lips dripping with the words of interposition and nullification—one day right there in Alabama, little black boys and black girls will be able to join hands with little white boys and white girls as sisters and brothers.

"I have a dream today.

"I have a dream that one day every valley shall be exalted, every hill and mountain shall be made low, the rough places will be made plain and the crooked places will be made straight, and the glory of the Lord shall be revealed, and all flesh shall see it together.

"This is our hope. This is the faith that I go back to the South with. With this faith

e will be able to hew out of the mountain f despair a stone of hope. With this faith e will be able to transform the jangling iscords of our nation into a beautiful symhony of brotherhood. With this faith we ill be able to work together, to pray toether, to struggle together, to go to jail ogether, to stand up for freedom together, nowing that we will be free one day.

"This will be the day when all of God's hildren will be able to sing with new meang:

" 'My country 'tis of thee,
Sweet land of liberty,
Of thee I sing:
Land where my fathers died,
Land of the pilgrims' pride,
From every mountain-side
Let Freedom ring.'

"And if America is to be a great nation, this ust become true. So, let freedom ring from he prodigious hill tops of New Hampshire. et freedom ring from the mighty mountains f New York. Let freedom ring from the eightening Alleghenies of Pennsylvania. Let reedom ring from the snowcapped Rockies of olorado. Let freedom ring from the curvaeous slopes of California. But not only that, t freedom ring from Stone Mountain of eorgia.

"Let freedom ring from Lookout Mountain Tennessee.

"Let freedom ring from every hill and molehill of Mississippi. From every mountainside, t freedom ring. And when we allow freeom to ring, when we let it ring from every illage, from every hamlet, from every state nd every city, we will be able to speed up hat day when all of God's children, black len and white men, Jews and Gentiles, Protstants and Catholics, will be able to join ands and sing in the words of the old egro spiritual: 'Free at last! free at last! hank God almighty, we are free at last!' "

The apostle of nonviolence has gone. What ust we now do? I submit that this Congress ust pass the civil rights bill, with the open ousing amendment intact, as a memorial Dr. Martin Luther King. We must not do his, however, because we have been intimiated, cowed, frightened or out of expedincy. We must do it because it is the right ning to do; we must do it because it is our sponsibility to help make Dr. King's dream me true.

In Bob Dylan's words:

How many roads must a man walk down
before he's called a man?
How many seas must a white dove sail
before he sleeps in the sand?
How many times must the cannon balls fly
before they're forever banned?
How many years can a mountain exist before it's washed in the sea?
How many years can some people exist before they're allowed to be free?
How many times can a man turn his head
and pretend he just doesn't see?
How many times must a man look up before
he can see the sky?
How many ears must one man have before
he can hear people cry?
How many deaths will it take 'til he knows
that too many people have died?"

(By Hon. FRANK ANNUNZIO, of Illinois)

TRIBUTE TO DR. MARTIN LUTHER KING

Mr. ANNUNZIO. Mr. Speaker, the wanton, utal, and senseless assassination of Dr. artin Luther King, Jr., is another dark ge in the history of America. These meangless slayings in our free society must be ought to a halt.

Every American, regardless of race, color, creed has the right to protest, has the ht to petition his Government, has the ht to equal justice under the law, and the ht to be heard when an injustice is being rpetrated against him.

Our Founding Fathers were aware of the need for these inalienable rights and incorporated them in our Bill of Rights in order that our Government should remain free and strong for posterity. We no longer can tolerate mob rule—we no longer can tolerate rule by the gun. We want a government based on law and the orderly process of the ballot box. Either we wholeheartedly believe in and stand behind these fundamental principles, or our Government is doomed to failure.

I represent the Seventh Congressional District of Illinois which is an integrated district where people of all nationalities, all races, all colors, and all religions reside, and I have an understanding of the problems that confront all of them.

Is it asking too much to give them the right to live in decent housing? Is it asking too much to provide a decent education for his children? Is it asking too much from the greatest democracy on earth that human rights be respected before property rights?

I share the grief and shock felt in the hearts of millions of Americans across the Nation over the brutal slaying of Dr. King. This great tragedy denies the very principles which our Founding Fathers espoused in establishing our democratic form of government.

Dr. King's brilliant elocution, his international renown, his great courage on the firing line of civil rights have established him as a powerful force for sanity in race relations. He was universally hailed by almost all men and he had become for a broad mass of Americans the symbol of hope for reconciliation.

Dr. King had become the bridge of communication between whites and blacks alike in the United States, and his tragic assassination has struck grief, shock, numbness, and above all, a great sense of emptiness into the hearts of all of us. Together we mourn the passing of a great man whose life, though short, for he died at 39, has changed for the better the face of our social structure in the United States. Our country is a far different and better place today than when Martin Luther King first began his crusade for equality a little more than a decade ago in Montgomery, Ala. His death shall lead perhaps to even greater change. I am confident that we shall yet win the battle he courageously began for equal rights and equal economic opportunity.

It is expected that the civil rights bill will reach this Chamber for action on Wednesday. This bill would strike down racial barriers in housing. It would provide Federal protection for Negroes and civil rights workers, and it would make countless other improvements in our civil rights laws. By insuring the prompt passage of this landmark legislation, we keep faith with Dr. King's dream of unity, nonviolence, and social justice.

President Johnson has urged this Nation to "move with urgency, resolve, and new energy." Our opportunity to do so will come tomorrow, and I hope my colleagues will vote unanimously for the civil rights bill. Dr. King's death must be the unifying force we need as a Nation, and the best tribute that can be paid to him is for all of us to exert every possible effort toward wiping out discrimination, inequality, and the ravages of poverty.

By international consensus, Nobel Prize winner Martin Luther King was a symbol of racial peace in the world and his passing is a great loss not only to all Americans but to a world that had come to love, honor, and respect him.

On behalf of the residents of the Seventh Congressional District, I express my heartfelt condolences to his widow and to his family. I know that we shall always remember his courageous fight and the great cause for which he has given his life.

Under unanimous consent I insert into the RECORD the following editorials about Dr. King from the Washington Post and the Chicago Sun-Times.

"[From the Chicago Sun-Times, Apr. 6, 1968]

"HE SAW THE PROMISED LAND

"In his last and eerily premontory speech, Dr. Martin Luther King Jr. envisioned a promised land of equality and social justice for all American Negroes. But, he said, 'I may not get there with you.' He talked of threats from 'some of our sick white brothers.' Within 24 hours the premonition came true; he was dead, the victim of a white assassin.

"There is in this last sermon a message for all Americans and particularly those of both races who reject his credo that Christian brotherhood can and must be achieved in peace.

"The promised land he saw cannot be reached by his people through violence. Nor can violence such as that which struck him down Thursday night prevent America's Negro citizens from inevitably reaching the promised land he now will never see.

"More violence has followed the wanton act of violence that has put the entire world in mourning for this man who believed deeply that his dream of equality could never be achieved through violence. Stokely Carmichael has urged bloodshed in the streets in retaliation for the assassination of Dr. King. This is the road away from Dr. King, away from his promised land. He will have died in vain if sanity does not prevail in our cities.

"A warning against violence has come from the man who has stepped into Dr. King's post as head of the Southern Christian Leadership Conference. The Rev. Ralph Abernathy was with Dr. King when the assassin struck. Dr. Abernathy cradled the fallen leader's bloodied head in his lap.

" 'While he lived,' said the new leader, 'he taught us we should not let violence turn us around. . . . We (have) determined to continue down that road . . . in support of the dream he left with us.'

"Later he told a crowd at the Memphis airport, gathered around a plane in which Mrs. King sat, 'Let us not do anything at this time to discredit Dr. King.'

"President Johnson spoke for all reasonable men when he called on people of all races 'to stand their ground to deny violence its victory.'

"The killer of Dr. King must be found quickly and brought to justice. But neither the ends of justice nor the great goals of Dr. King are served if the hate and sickness the killer personifies rage across America.

"Let all Americans work toward that promised land that Dr. King saw so clearly. Let his death bring that land closer—and not its destruction."

"[From the Washington Post, Apr. 6, 1968]

"MARTIN LUTHER KING, JR.

"To each generation of mankind is given one or two rare spirits, touched by some divinity, who see visions and dream dreams. Committed to something outside themselves and beyond the orbit of ordinary lives, they serve their fellow-men as the movers and leaders of social change. Dr. Martin Luther King Jr. was one of these, a man whose extraordinary gifts were committed to humanity. Perhaps his tragic death was the means requisite to make real the purpose of his life.

"An apostle of nonviolence, Dr. King was, nevertheless, a militant activist. He thought of nonviolence not as mere abstention from strife but as a vital mode of action. 'We need an alternative to riots and to timid supplication,' he once said. 'Nonviolence is our most potent weapon.' There was something at once mystical and pragmatic about his conception of nonviolence. In that great and moving letter he wrote from the Birmingham jail, Dr. King said: 'Just as Socrates felt that it was necessary to create a tension in the mind so that individuals could rise from the bondage of myths and half-truths to the unfettered realm of creative analysis and ob-

jective appraisal, we must see the need of having nonviolent gadflies to create the kind of tension in society that will help men rise from the dark depths of prejudice and racism to the majestic heights of understanding and brotherhood.'

He was a pacific man but an impatient one; and his impatience was the mark of his humanity. He burned with indignation at the indignities and humiliations and injustices that were the common lot of Negroes in the South and at the frustrations and inequalities and poverty that were their portion in the North. And he knew that 'we have not made a single gain in civil rights without determined legal and nonviolent pressure. History is the long and tragic story of the fact that privileged groups seldom give up their privileges voluntarily . . . We know through painful experience that freedom is never voluntarily given by the oppressor; it must be demanded by the oppressed.'

And he added to this a bitter, painful truth—a truth no less opposite today than when he uttered it five years ago: 'For years now I have heard the word 'Wait!' It rings in the ear of every Negro with a piercing familiarity. This 'wait' has almost always meant 'never' '

"Yet, somehow, impatience and indignation were married in this man to gentleness and compassion. Hate was altogether alien to him. The dream he dreamed embraced his white as well as his black brothers. For he recognized that 'the Negro needs the white man to free him from his fears. The white man needs the Negro to free him from his guilt. A doctrine of black supremacy is as evil as a doctrine of white supremacy.'

"His dream, so stirringly recited at the Lincoln Memorial at the time of the great March on Washington of 1963, was the oldest and noblest of man's dreams—the dream of universal brotherhood among the children of God. 'I refuse,' he said then, 'to accept the idea that man is mere flotsam and jetsam in the river of life which surrounds him. I refuse to accept the view that mankind is so tragically bound to the starless midnight of racism and war that the bright daybreak of peace and brotherhood can never become a reality.'

"So he has been struck down by the very bigotry he sought to exorcise—and before the dream could become a reality. If the dream embraced both white and black, the grief and bereavement are shared by them as well. It is meet that there should be mourning in the land. The flags belong at half-staff for the loss of a great American. The schools ought to be closed on the day of his funeral in remembrance of one who so loved little children that he gave his life to set them free.

"But the joining of hands in sharing sorrow must be more than ceremonial, more than momentary. The only true tribute to Martin Luther King, lover of life and lover of mankind, is a renewed dedication to his dream. He belongs now to all of us. The rich legacy he leaves can be enjoyed only as it is shared by all men alike. The legacy lies in his faith that 'unconditional love will have the final word in reality.'

" 'The only way we can really achieve freedom is to somehow conquer the fear of death. For if a man has not discovered something that he will die for, he isn't fit to live.

" 'Deep down in our non-violent creed is the conviction that there are some things so dear, some things so precious, some things so eternally true, that they are worth dying for.

" 'And if a man happens to be 36 years old, as I happen to be, and some great truth stands before the door of his life, some great opportunity to stand up for that which is right and that which is just, and he refuses to stand up because he wants to live a little longer and he is afraid his home will get bombed, or he is afraid that he will lose his job, or he is afraid that he will get shot . . . he may go on and live until he's 80, and the cessation of breathing in his life is merely the belated announcement of an earlier death of the spirit.

" 'Man dies when he refuses to stand up for that which is right. A man dies when he refuses to take a stand for that which is true. So we are going to stand up right here . . . letting the world know we are determined to be free.' (Dr. Martin Luther King Jr., in a 1965 speech.)"

Dr. Martin Luther King, Jr.

(By Hon. Thaddeus J. Dulski, of New York)

Mr. Dulski. Mr. Speaker, a leader of his people has fallen. Words are inadequate to express the grief of each of us at the assassination of Dr. Martin Luther King.

President Johnson has spoken on behalf of our Nation. Many others, too, have spoken out publicly on this tragedy of our times. Some have elected to express their dismay and sadness privately, often in silent prayer at home or at church.

The common council of my home city of Buffalo, N.Y., is not meeting in regular session this week. But Councilman Horace C. Johnson of the Masten district has filed a formal adjournment resolution to be used at the meeting on April 16.

Following is the text of the resolution which Mr. Johnson has adapted from the prayer of St. Francis of Assisi:

"The Lord made Martin an instrument of his peace.
Where there was hatred, he sowed love.
Where there was injury, pardon.
Where there was doubt, faith.
Where there was despair, hope.
Where there was darkness, light.
Where there was sadness, joy.
He did not so much seek to be consoled as to console.
To be understood as to understand.
To be loved as to love.
For it was in Martin's giving that he received.
It was in his pardoning that he was pardoned.
And, it was in his dying that he was born to eternal life.

"Be it therefore resolved: That when this Council adjourn today, that it adjourn in loving memory of a great man, a loyal American and a true and faithful child of God—Martin Luther King."

Slaying of Dr. King

(By Hon. Hastings Keith, of Massachusetts)

Mr. Keith. Mr. Speaker the senseless slaying of Dr. Martin Luther King has deprived America of one of its great leaders. Dr. King preached a philosophy of nonviolence. While it is true that violence often followed this man of peace, he would have been horrified and dismayed by the rioting and looting that broke out upon the news of his assassination. He would have been the first to point out that such violence hurts rather than helps the cause to which he was so devoted. Dr. King taught us all, white and black, the precept of nonviolence in achieving social progress.

We should not tolerate nor condone the criminal lawlessness which is scarring our Nation. It is vicious, destructive, and totally alien to the great traditions of this country and to the teaching of the man in whose name it is being done. There may be reasons for the looting and rioting—but there can be no excuse or justification for them.

On the other hand, Mr. Speaker, there should be no further delay in the passage of legislation designed to achieve social progress through the lawful processes of government. Martin Luther King believed in America and its promise. He knew and taught the power of peaceful change. Prompt passage of this civil rights legislation is another step in realizing Dr. King's "dream" that no one b judged by the color of his skin.

Senate Joint Resolution 159—Introduc tion of Joint Resolution Designatin January 15 of Each Year as Marti Luther King Day

(By Senator Edward W. Brooke)

Mr. Brooke. Mr. President, the renewe outbursts of civil disorder in the cities c America are costly and futile counterpoint to the profound sense of grief which ha swept across this Nation since last Thurs day. The lasting imprint on this country conscience and behavior will not be made b the misguided and reckless participants i these disturbances, however vividly we ma remember the ugly scenes of these few day The lasting impressions will be those etche in our memory by the good life and goo works of the man whose death last wee bound the great majority of Americans to gether in outrage and mourning.

All over the land people are seeking ap propriate ways to express their bereavemen at the passing of Martin Luther King, Jr. I these first days of our loss proper tribute ha been paid to Dr. King, not in the streets, bu in the churches and chapels, the schools an homes of the United States. And I am con fident that the greater and lingering tribut will come in further action toward th glorious goals of brotherhood and justice s diligently pursued by Martin Luthe King, Jr.

As Americans, individually and collectively rededicate themselves to these ends, it woul be fitting to pay our respects to this nobl figure by enduring public commemoration o his life and philosophy.

For this purpose I believe the Congres should declare January 15, the birthday o Martin Luther King, Jr., an annual occasio of recognition for this man and his missio To accomplish this I am today submittin the following joint resolution:

"S.J. Res 159

"Whereas the United States of America deeply grieved by the vicious and senseles act which ended the life of the Reveren Doctor Martin Luther King, Junior, thi country's apostle of nonviolence;

"Whereas the United States of America and its Senators and Representatives in Con gress, recognize and appreciate the immens contribution and sacrifice of this dedicate American;

"Whereas the American people are deter mined that the life and works of this grea man shall not be obscured by violence an anger, but rather that they shall remain shining symbol of the Nation's nonviolen struggle for social progress;

"Whereas it is incumbent upon us to rec ognize the violence, hatred, and national di vision do no honor to the man who ha been taken from us;

"Whereas mutual respect and a firm com mitment to the ideals of nonviolence fo which he labored will be the most lastin memorial to the life of the Reverend Docto Martin Luther King, Junior;

"Whereas it is fervently hoped that hi death may serve to reconcile those among u who have harbored hatred and resentmen for their fellow Americans, to the end tha our country may at last realize the ideal o equality set forth in our Constitution Therefore, it is hereby

"Resolved, That, in honor of the Reveren Doctor Martin Luther King, Junior, who wa born on January 15, 1929, January 15 of eac year is hereby designated as "Martin Luthe King Day". The President is authorized an requested to issue a proclamation each yea calling upon the people of the United State to commemorate the life and the service t his country and its citizens of the Reveren Doctor Martin Luther King, Junior, and t observe that day with appropriate honor ceremonies, and prayers."

This proposal is not one I make lightly, but in the earnest conviction that we need to do all that we can to perpetuate the spirit and example of Martin Luther King, Jr. It is already evident that he occupies a unique place in American history. The values he epitomized are the very values which this country needs to sustain it on the march toward a more humane and equitable society.

I make this suggestion fully mindful of the fact that very few Americans have been so honored. No Negro American has yet been added to that small company of distinguished patriots who have received such tribute. At this time, more than any other, this Nation needs to raise up for itself and its posterity the image of reconciliation encompassed in the person of Martin Luther King. Approval of this resolution would be one measure of our commitment to do so.

Honor is not enough, but it is due. Symbols are not the substance of action, but in the long and complex paths of social evolution, symbols are also necessary. Dedication of a day each year to commemorate Martin Luther King, Jr., and his legacy to our Nation would symbolize in fitting manner our reverence for the man and our devotion to his principles.

Mr. COOPER. Mr. President, I hesitate to speak at all following the eloquent statement of the distinguished Senator from Massachusetts.

I merely rise to say that I believe that, better than anyone else, the Senator from Massachusetts clearly states the situation and the problems which face this country today.

I had the opportunity to listen to him yesterday on a television program. And it seemed to me that if our Government and its leaders and the people of our country follow the counsel and advice he gave on yesterday, our country could move from this growing alienation of the two great groups in our country and could move to that of equality which our Constitution promises, and, into a reconciliation of the two great peoples and fellow citizens of our country.

Mr. BROOKE. Mr. President, I thank the distinguished Senator from Kentucky for his very kind and very generous remarks relative to my appearance yesterday on "Face the Nation."

AFTERMATH OF DR. KING'S DEATH

(By Senator HARRISON A. WILLIAMS, JR.)

Mr. WILLIAMS of New Jersey. Mr. President, 3 weeks have passed since the awful act that took Dr. Martin Luther King's life. The violence and destruction that followed in its wake has abated. Once again the Nation has been witness to the spectacle of a majestic mass funeral for a fallen great. As the shock and numbness of those first days wore off, the Nation again turned to its everyday affairs.

But the crisis facing the United States, and the dangers, have not disappeared. We, as a nation, are in the midst of convulsive revolution. Not since the period following the Civil War has the United States faced such a domestic crisis.

Full equality under law, now guaranteed all citizens through legislation, must be met by true equality of opportunity. The United States must decide which course it is to follow: whether it will be one of increased violence, further distrust among whites and blacks, and greater polarization of the races. Or one of progress, reconciliation, and hope for the future.

The ideals of Dr. King will be sorely tested in the months to come.

In a series of editorials published earlier this month in the Bergen County Record, the legacy of Dr. King is eloquently described. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

"[From the Bergen County Record, Apr. 5, 1968]

"A LEGACY IS OURS

"He had a dream, he said, speaking slowly in that rich deep baritone of his, and a quarter of a million people spread on the lawn that day in Washington listened, rapt.

"The vision he had was so simple, so guilelessly uncomplicated, that one wonders now as then: is it really all that impossible?

"He talked of things as human and natural, as Christian, really, as having little black boys and girls play as equals with little white boys and girls. Is this utopian?

"He spoke of the sons of former slaves and the sons of former slave owners breaking the bread of brotherhood together. Is that as inconceivable as it sounds?

"He first came to national attention, did Martin Luther King Jr., as the organizer of a campaign to let the Negroes in a sun-baked little city in Alabama ride in the front of the local buses. Did that constitute a revolution?

"One would scarcely think so, looking back on Montgomery after 12 years of civil rights struggle. And today even Alabama has grown used to the idea.

"Now it is proposed that Congress pass as a memorial to Dr. King a bill to guarantee black men the right to compete on an equal footing with whites in the private housing market.

"Such a law is needed, as a matter of simple justice. This is why it should be enacted—not because the freshly turned grave of a soft-spoken young minister is in need of a monument.

"He was the least vain of men; but he will be remembered long years after our grandchildren have gone their way.

"To say his death is tragic, to say it's shameful is to demonstrate the feebleness of words on such an occasion. Yet, it is tragic, and sorrowful and hurtful too, a cause for the sort of bone-deep grieving we last knew as a nation Nov. 22, 1963.

"Justice requires that his murderer be found, tried, and held to account, of course. We hope the authorities in Memphis will acquit themselves better in their crisis of law enforcement than the police of Dallas did in theirs.

"The punishment of one lunatic blackguard won't bring Martin Luther King back to us. But he left something behind, something important that with a little cherishing could prove imperishable.

"It's this singularly utilitarian idea he had of brotherhood, a concept drawn partly from his Bible studies, partly from his life model, Mohandas Gandhi, the apostle of nonviolent resistance. It's awfully hard to turn the other cheek when provocations are as thickly bunched and inflammatory as they are in American life today, Dr. King would say. It takes strength to endure, but steadfastness can crumble walls that repel direct attacks.

"Martin Luther King Jr. had strength enough for ten. He endured. And he advanced, too, and he took us with him, a farther way than we perhaps recognize in the bitterness of today's sorrow. We shall overcome."

"[From the Berger County Record, Apr. 10, 1968]

"THE BELLS NEXT TIME

"The somber stillness of that Tuesday in Holy Week spoke for a nation more eloquently than could hymns or tears or tolling bells. What the stillness testified was that at last a whole people understands what Dr. Martin Luther King, Jr., lived for and what he died for. The passionate cry of Walt Whitman, prophet of brotherhood, sprang to mind unbidden:

" 'This dust was once the man,
Gentle, plain, just and resolute, under whose cautious hand,
Against the foulest crime . . .
Was saved the union of these states.'

"It is not untimely now to speak humbly of transfiguration, and it is not naive to suppose the Episcopal bishops of the archdiocese of Newark spoke for all of us, excepting none, when they said, 'Our best memorial to him will be to stand where he stood and to do what he did, to look again at the society for which he died to root out those evils which keep us all in bondage.'

"So be it, but winged words and mute reverence are not an adequate substitute for action.

"In an unescapable way, we are what we do, and the world is what we make it. What remains to be done—and we may as well resign ourselves gladly to the clatter and clamor of it—is to make radical, major, fundamental changes carrying equality beyond the constitutional and statutory guarantees into economic and social certainties: to lift equality out of our books and anchor it in the way we live.

"We know what needs to be done. Next time the bells ring in memory of Dr. King, let them make a joyful sound.

"We have a long way to go. We are on our way."

"[From the Berger County Record]

"DR. KING'S BEQUEST TO EACH MAN

"There are two mankinds. Within the skin of each man, regardless of its color, there live two men. One is the animal, governed by its appetites and glands and nameless glimmering fears and hatreds. The other is he, a little less than angels, who lets himself be governed by his strange God-given mind.

"Between these two stood Martin Luther King, Jr., rejecting the animal Man, appealing to the reason which tells the new man that brotherhood and peace are the way of the future and the only safe way to the future.

"He stands pleading still. It remains to be seen which Man will emerge triumphant from the silent struggle within us, each of us. It remains to be seen how each, black and white alike, resolves the secret inward crisis which in its totality is the outward public crisis of our time.

"It is quite a responsibility Dr. King has bequeathed to us. Have it your way."

AMERICAN TRAGEDY

(By Senator WILLIAM PROXMIRE)

Mr. PROXMIRE. Mr. President, the death of the Reverend Martin Luther King, Jr., as we are all only too sadly aware, has created an enormous void in the ranks of those in this country who symbolize moral leadership and hope. His death is an American tragedy of unfathomable dimensions.

As an editorial in the Milwaukee Journal on April 5 said so eloquently:

"Spiritual leader, orator, man of letters, organizer, national symbol of the civil rights movement, Nobel peace laureate, he helped to poke and pry the nation down the road to greater racial equity—not gently but nonviolently, always within the shadow of the first amendment right to freedom of speech."

There is hope that Dr. King's death, as he himself often predicted, will be a redemptive death; that out of the ruins of his death and our sorrow will come progress toward the goals he so effectively and eloquently articulated.

Quoting again from the Milwaukee Journal's excellent editorial:

"The life of Martin Luther King can be snuffed out, but his ideas cannot; they are immune to jails, cattle prods and snipers' bullets. And ideas are Mr. King's legacy to America."

I ask unanimous consent that the Journal

editorial be printed in the RECORD, as follows:

"AMERICAN TRAGEDY

"The obituary of the Rev. Martin Luther King, Jr., was written Thursday by an assassin's bullet. The nation and the world are sickened and saddened by the outrage. His death is an American tragedy and the guilt is shared by us all.

"Spiritual leader, orator, man of letters, organizer, national symbol of the civil rights movement. Nobel peace laureate, he helped poke and pry the nation down the road to greater racial equity—not gently but nonviolently, always within the shadow of the first amendment right to freedom of speech.

"The model of his nonviolence was Mahatma Gandhi, and Mr. King died as the great Indian leader died 20 years ago, cut down by an assassin's bullet.

"Mr. King could speak with the voice of angels or with the fire of evangelism; in the thunder of outrage or the whisper of eloquence. Perhaps his greatest speech was delivered during 1963's historic civil rights march on Washington:

"'I have a dream that one day, on the red hills of Georgia, sons of former slaves and the sons of former slave owners will be able to sit down together at the table of brotherhood,' he said. 'I have a dream today that one day every valley shall be exalted, every hill and mountain shall be made low. The rough places will be made plain and the crooked places will be made straight. . . .

" 'That dream must come true, or life becomes a living nightmare.'

"He walked often with death, and he knew it. He was reviled, stoned, repeatedly jailed, most recently last year. Yet he could say: 'Again and again, we must rise to the majestic heights of meeting physical force with soul force.'

"The life of a Martin Luther King can be snuffed out, but his ideas cannot; they are immune to jails, cattle prods and snipers' bullets. And ideas are Mr. King's legacy to America.

"Mr. King aimed his message not just at the overt bigot but at the apathetic bystander, black or white. In a remarkable letter from Birmingham jail in 1963 he declared: 'We will have to repent in this generation not merely for the vitriolic words and actions of the bad people but for the appalling silence of the good people. . . . I have almost reached the regrettable conclusion that the Negro's great stumbling block in the stride toward freedom is not the White Citizens councilor or the Ku Klux Klanner but the white moderate who is more devoted to order than to justice.'

"Even as Mr. King was cut down in Memphis, he was repeating this theme in form letters he had mailed to homes across the nation as president of the Southern Christian Leadership conference.

" 'We cannot condone either violence or the equivalent evil of passivity,' he wrote. Again he prodded America's white majority to do its duty and help the Negro 'wrest from government fundamental measures to end the long agony of the hard core poor.'

"The letter added: 'A prosperous society can afford it; a moral society cannot afford to do without it.'

"Mr. King's death puts a dual burden on the nation. It cannot, in bitter and frustrated reaction, avenge him 'by drinking from the cup of bitterness and hatred,' as he put it five years ago in Washington.

"It would be the supreme tragic irony if the reaction to the death of this man of nonviolence were to be a new wave of violence; this way lies civil strife and the massive repression of everybody's rights.

"But it would be a like calamity if the meaning of his life, and his cause, were to be ignored and forgotten by the nation. Essential now is a positive and vigorous effort by America's white majority, from the halls of congress to the city halls, to make this country what it proudly proclaims itself to be—a land of equal opportunity, under law, for all men."

FINANCIAL DISCLOSURE

(Mr. TAYLOR asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous material.)

Mr. TAYLOR. Mr. Speaker, today I introduced a bill which would require Congressmen, Federal judges, and policymaking officials of the executive branch of the Federal Government to report annually the sources and amounts of their outside income.

Citizens across our country are now questioning the integrity of public officials and are asking for such reports. I believe that public disclosure of sources and amounts of income should increase and restore public confidence. In my opinion, the present legislative requirements concerning income reporting are inadequate and legislation of the type I introduced today should be enacted into law. It is imperative that we take action at once to reestablish the faith of the American people in their national leadership.

In line with this thinking, I desire to make public the sources and amounts of all outside income that I have received while in Congress. When becoming a Member of Congress in 1960, I gave up all law practice in order to devote my full time to congressional duties. I never charge for public speeches.

The property that my wife and I own represents some inheritance and modest savings and investments made during a period of over 35 years. The stocks and bonds were purchased in western North Carolina at market value and most of them represent investments in North Carolina industries. None of my outside income is dependent in any way on my being a Member of Congress. It all comes from property investments, and not from the use of my time, all of which is devoted to congressional responsibilities.

For the calendar year 1968, the total income received by my wife and me, in addition to my salary as a Member of Congress, was as follows:

From a family-owned dairy farm in Leicester Township of Buncombe County, N.C.	$1,890.09
From dividends from a variety of stocks and taxable bonds (most belong to me, some are owned by my wife)	2,368.20
From capital gains on installment sale of Black Mountain, N.C., real estate	739.29
From interest on purchase money real estate notes; savings deposits; and Swannanoa, N.C., Baptist Church development bonds	986.66
Total	5,984.24

For the calendar year 1967:

Dairy farm	$2,645.76
Dividends	2,007.75
Capital gains	127.40
Rent	322.71
Interest	1,096.20
Total	6,199.82

For the calendar year 1966:

Dairy farm	$2,175.0
Dividends	1,743.7
Rent	435.0
Interest	655.1
Total	5,008.9

For the calendar year 1965:

Dairy farm	$2,192.5
Dividends	1,283.9
Capital gain	158.5
Rent	538.0
Interest	873.2
Total	5,046.3

For the calendar year 1964:

Dairy farm	$1,966.0
Dividends	1,483.0
Liquidation dividend of interest in Spanish Castle Estates, Inc., a real estate company of Black Mountain, N.C.	1,482.8
Rent	317.3
Interest	893.5
Total	6,142.8

For the calendar years 1961, 1962, an 1963, and the portion of 1960 that I wa a Member of Congress, outside incom came from the same sources mentione above, that is farm, interest, rent, an dividends, and amounted to less tha $4,000 each year.

PRESIDENT NIXON SPEAKS OU FOR A STRONG AMERICA

(Mr. FISHER asked and was given per mission to address the House for minute, and to revise and extend his re marks.)

Mr. FISHER. Mr. Speaker, in his ad dress at the Air Force Academy yester day, President Nixon very properl warned the Nation about the mountin criticism that is being heard of every thing military. As stated by the Presi dent, this practice can, if not abated endanger the security of our country at very critical time in our history.

Much of this ill-considered criticism goes beyond expressions of concern abou the size of the military budget or doubt about our involvement in Vietnam. Man of these verbal assaults are against ou Military Establishment itself and di rected at those segments of our industr that fulfill military requirements.

It goes without saying that every right thinking person hopes for the time whe we can safely afford to reduce militar expenditures and divert more of such outlays for other uses—or give it back t the people in reduced taxes.

But this is not the time to cut essen tial defense expenditures to the exten that has been suggested. The fact is tha we are not living in a Garden of Eden we live in a time of grave peril when w cannot afford to lower our guard and ris becoming a second rate power. Yet policies recommended by some woul lead us down that road.

President Nixon is to be commende for his timely and forthright warning. I my judgment he said the right thing, a the right time, in the right place. Th American people will, I feel sure, hee this advice and rally behind thos policies which will maintain our strengt in this great struggle for peace an survival.

CALIFORNIA WATER PROBLEMS ARE NOT SOLVED

(Mr. SISK asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. SISK. Mr. Speaker, one of the leading conservationist voices in the State of California is the McClatchy Newspapers, which publishes the Fresno Bee, the Modesto Bee, and the Sacramento Bee, in California.

Because of their long-standing record of support for strong conservation policies, it may be assumed that their views would be worthy of some attention on the part of everyone who is interested in preserving our land and water resources.

For this reason, I believe it is pertinent to bring to the attention of the Members an editorial which appeared in the Fresno Bee on May 23. It deals with the proposed Dos Rios Dam in northern California, which is badly needed in order to provide additional water supplies for our State.

I insert in the RECORD the full text of the editorial:

STATE WATER PROBLEMS ARE NOT SOLVED

The setback handed state water planners by Gov. Ronald Reagan's order to give more study to water project alternatives to the proposed Dos Rios Dam in Mendocino County places a serious challenge before the conservationists of the state.

They have hailed the Reagan decision against Dos Rios as a victory. But it will not remain a victory if the future needs for more water in California are not met. Conservationists would suffer in such an event along with those who have been promoters of the Dos Rios Project.

Gov. Reagan, in an apparent attempt to modify the impact of his ruling, declared, "I want to make clear that the state will meet its commitments to furnish water under State Water Project contracts."

This is the crux of the matter. The water planners became convinced, after three decades of detailed study of all potential developments, the Dos Rios plan was the best method of making sure the water contracts would be fulfilled.

John Teerink, deputy director of the State Department of Water Resources, said the effect of the governor's directive is to force water planners to re-evaluate plans which were discarded several years ago in favor of Dos Rios.

This re-study should be undertaken with speed because the need for future water supplies to meet the requirements of the State Water Project will not abate. Water shortages could become critical throughout the state if new sources are not developed soon.

It most often takes 20 to 25 years between study of a project and delivery of water, including time for authorization, financing, engineering and construction.

Thus, if the conservationists have the good of all of California at heart, they should be assisting in any way they can to bring the alternative water project surveys to early completion.

COMMUNICABLE DISEASE CONTROL AMENDMENTS OF 1969

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, I am today introducing legislation to amend section 316 of the Public Health Service Act—42 U.S.C. 264—to provide financial assistance to the States to prevent the introduction, transmission, or spread of communicable diseases in the United States from foreign countries and from interstate and intrastate sources.

Grants would be awarded by the Secretary of Health, Education, and Welfare to States and to political subdivisions of States, with the approval of the State health authority, to assist in financing communicable disease control programs.

The grants would finance the purchase of vaccines or other agents for those population groups determined to be epidemiologically important to the control of communicable disease as well as for personnel and program operating expenses needed for epidemiological activities.

There would be $60 million authorized to be appropriated for fiscal year 1970, $75 million for fiscal year 1971, and $90 million for fiscal year 1972.

Mr. Speaker, I am concerned that Congress has, for the past few years, been harboring a false sense of security about communicable diseases.

There seems to be a feeling that we have conquered polio, German measles, and tuberculosis. The diseases which appear to be of more concern today are cancer, and heart disease.

I do not suggest that cancer and heart disease are not serious, but what I do suggest is that we have become too complacent about communicable diseases which are still very much with us, and which will reach epidemic proportions very soon if we do not keep our control programs operating at the necessary levels to realize results.

Each year about 50,000 cases of German measles—rubella—are reported although the actual incidence is estimated to be approximately 2.5 million. This is a disease that brings mild discomfort to children, but when transmitted to pregnant women, it carries with it the risk of death, physical disability, and mental disorder to the unborn child.

It is estimated that approximately 25 percent of the women who have German measles during the first trimester of pregnancy give birth to infants with severe congenital defects.

During the 1964 epidemic, 20,000 children were born with congenital abnormalities. A major German measles epidemic is predicted for 1970–71 and it is estimated that there are now some 50 million children who need protection. This bill would make that protection possible.

Still another communicable disease that can be controlled is tuberculosis. Control has been improving, particularly under project grants under section 314(e) of the partnership for health law—Public Law 89–749.

But, under the administration's proposed budget amendments for fiscal year 1970, $18 million in project grant money would be eliminated and $18 million added to formula grants under section 314(d) of the law.

The problem with this approach is that the project grants for TB control were concentrated in States with the highest incidence of tuberculosis, but the formula grants by law must be allocated on the basis of population and financial need without regard to the extent of the TB problem. Many States with the most severe TB problem will lose substantial sums of money in the shift from project grants to formula grants.

The same problem faces those States with a high incidence of venereal disease, polio or diphtheria.

The bill that I am introducing today would give recognition to the geographical incidence of communicable diseases in the allocation of funds for their eradication. In addition, the project grant would be awarded only after the Secretary has given consideration to the extent of the communicable disease problem and to the levels of performance in preventing and controlling the disease. For example, the Secretary would consider the number of vaccinations performed and the number of cases under control when making the award.

Mr. Speaker, if we fail to act soon to meet the serious problems represented by communicable diseases, we will again have epidemics facing us, and the health gap will have widened, and widened unnecessarily.

PRESIDENT NIXON'S SPEECH BEFORE THE GRADUATING CLASS AT THE AIR FORCE ACADEMY

(Mr. ADAIR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADAIR. Mr. Speaker, I rise today to salute the President of the United States for his statesmanlike speech of yesterday before the graduating class at the Air Force Academy.

I salute him for articulating for all to hear the combination of idealism and realism that should guide our country in its role as leader of that portion of the world that still remains free, though threatened by the forces of aggressive international communism.

The President's speech was a clear-cut statement of America's objectives. It was a statement around which all reasonable men can gather. It was a statement of which the late President Dwight David Eisenhower would have been proud, for it called to the attention of those who belabor the general's warning against the military-industrial complex, his further warning that—

We must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite.

I am glad that President Nixon emphasized the need to maintain a strong defense force. If we let our guard down, Mr. Speaker, our mistake could be fatal. The men who count in the Kremlin—if their actions in Czechoslovakia and elsewhere are any measure—are not the kind of men who will give us a second chance. As I said on April 21 in a speech on the floor of the house regarding the Soviet takeover of Czechoslovakia, the man in the Kremlin, "respect only force and the willingness to use it, not wishful thinking, no matter how sincere, and unilateral disarmament."

In conclusion, I would like to say a word about Vietnam. Since the Presi-

dent's speech, a number of eminent politicians have violently criticized the President for not having settled the Vietnam war since he took office on January 20. It is interesting to note that many of them were closely associated with the policies of both President Johnson and President Kennedy which led to our deep involvement in Vietnam for reasons with which they themselves were at least at one time in agreement. Yet, now, they expect President Nixon to settle in 6 months a war that has not been settled in 6 years. If such critics really want peace, a real peace and not a surrender, a peace that is honorable and will serve to prevent future Vietnams, then they should show Hanoi that they support the President of the United States. They should demonstrate a national unity, so that Hanoi will negotiate seriously in Paris, instead of prolonging the war and the killing in the hope that its propaganda battle in the frontlines of America will bring them the victory they could not win against American and South Vietnamese boys in Vietnam.

H.R. 10566—A BILL TO PROTECT CITIZENS' RIGHT OF PRIVACY FROM GOVERNMENT QUESTIONNAIRES

(Mr. BETTS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BETTS. Mr. Speaker, modern government today depends on information-gathering technology to formulate and implement public policy and to promote many worthwhile humanistic needs. Much of this information is calculated on data submitted by private citizens on various Government-sponsored questionnaires. The search for information is frequently carried out with best intentions and is conducted in a reasonable prudent fashion. Yet, all too often the American citizenry has become subject to requests for data which appear to be, on closer analysis, of questionable relevancy and of a highly personal nature. Moreover, as Prof. Arthur R. Miller of the University of Michigan Law School has noted, people are losing control over the flow of information about themselves. In his words:

> The value on an individual's informational spigot is now in the custody of an indeterminate and unidentifiable number of administrators and computerniks.

It is becoming increasingly clear that Americans are resenting forms of legal coercion to surrender rights guaranteed in the Bill of Rights.

To cite a case in point, I was recently informed by a constituent that upon the death of her mother she received a questionnaire entitled, "National Mortality Sample Survey," from the Public Health Service of the Department of Health, Education, and Welfare inquiring of her mother's smoking habits. She ignored the questionnaire since her mother did not smoke and because she was disturbed by some of the questions asked. However, soon thereafter she received a second questionnaire by certified mail. Although she did note on this questionnaire that her mother was a nonsmoker, she refused to answer those inquiries she felt were of a personal nature and completely irrelevant to the questions regarding smoking habits. Among those were included:

First. What was the total money income of the deceased's family during 1965?

Second. What would you judge to be the total value of things owned by the deceased person after any debts or mortgages were paid off?

A third letter was soon forthcoming advising her to fill out the remaining questions. At no time was she advised that the questionnaires were voluntary and in fact by the time she received the third letter she felt it best to seek legal advice. I suggest that the case clearly represents an unwarranted invasion of personal privacy and by the very nature which it was conducted implied threats of coercion.

The omnipresence of government at all levels and their insatiable need for statistical data and information should not be used as an excuse to harass and overburden citizens with surveys prompted by some bureaucrat's desire for information that is justifiable only as far as he or his agency is concerned.

Indeed, we must seek to establish a balance between the individual's desire to be left alone and the Government's need for information.

With this concern in mind, I have introduced a bill, along with Messers. MCCULLOCH, WALDIE, MESKILL, and KYL, to protect the constitutional rights of the individual citizen by placing limitations on the executive branch in its quest for personal data. This bill is a companion to S. 1791, which was introduced by Senator SAM J. ERVIN, Jr., on April 14, 1969.

H.R. 10566 provides that the only mandatory questionnaires the Government may distribute to individuals for statistical purposes must be a result of a specific constitutional provision. It also provides that questionnaires distributed on a voluntary basis must be specifically authorized by Congress through statutory law and that such questionnaires advise the individual that disclosure is voluntary.

In April the Senate Judiciary Committee, Subcommittee on Constitutional Rights, under the chairmanship of Senator SAM J. ERVIN, Jr., continued extensive hearings on individual privacy and constitutional rights with respect to Federal questionnaires. This subcommittee has provided a national forum from which concerned citizens of all walks of life have been able to testify regarding their personal experiences in confronting these questionnaires. Also participating have been noted legal scholars who have spoken out against the use of Federal criminal and civil sanctions in order to acquire personal information from individuals. It has been readily apparent that there is little legal precedence in this area and the executive branch has been allowed a free reign to gather information on the personal habits of the American people. This subcommittee is to be commended for its diligent efforts to delve into the complex and relatively untouched subject area of personal privacy and individual rights in supplying information to the Federal Government.

Citizens of this country have a responsibility to disclose reasonable amounts of personal data in the public interest. What I believe the American people are asking this Congress to do is to strengthen the privacy side of this issue and to minimize the burden of questions requested of the public through the multitude of inquiries generated by Government agencies. Must we accept benignly the words of a high official in the Census Bureau, the largest collector of data in the United States, who stated recently that—

> We must lose some privacy as we (the country) grow.

Acknowledging today's trend toward information collection, Dr. Conrad F. Taeuber, the Associate Director of the Census Bureau, made this comment:

> We've got to limit the freedom that American pioneers had . . . and a nation has to adjust to differences that exist in a country with 4 million people or 200 million.

Dr. Taeuber's statements are cause for serious concern and are particularly disturbing in light of a letter I received from a Census Bureau employee who resigned "for reasons of conscience" because of the intrusive nature of a program he was associated with. The letter, a résumé of this person's experience with the Bureau of the Census, is intended to shed light on the scope of the Bureau's activities. It accomplishes more than this; it sounds an eloquent warning that should strike responsive chords of disquietude in all of us. Let me provide actual extracts from this statement:

> Few realize that the Census Bureau no longer works on a 10 year population survey basis. Instead, they have *continuous* inquiries into every phase of America's homes and businesses.
>
> A plan has been set up dividing the entire nation into theoretical areas of 1,000 addresses. Ten addresses are selected in a given group of homes to be interviewed repeatedly for eight months in a 12 month period. Then 10 more addresses are selected in that same area. It was pointed out to us, that with this schedule, in ten years' time, every family and individual in the U.S.A. will be thoroughly surveyed and investigated. Actually, the family is interviewed for 4 consecutive months, is allowed to rest for 4 months, then interviewed again for 4 more months. In this way, a family's fortunes, misfortunes, and activities are covered for a full year.
>
> As I got further into the program, I saw that this invasion of privacy was reaching appalling proportions. Though the number of questions asked each month was essentially the same, they varied slightly and became more searching until they seemed designed to break down the individual's sense of dignity and a family's normal right to the protection of its privacy.
>
> We told the people that the interviews were entirely confidential, that their identity was of no importance, and that their answers were for statistical purposes only. However, the respondent's name and social security number and those of each member of his household—relative or otherwise—were entered on a large control card with his address and other identifying information while all of the other interviewing forms carried his same control card number so that all of these papers could be kept together in government files, discrepancies checked out, etc. Interviewers were asked to return to homes where answers to questions were in disagreement

with answers in previous months. *This type of recording cannot be merely statistical.* (The records are kept at Jeffersonville, Indiana.) The printed questions, tho prying, may seem innocuous at first reading, but after eight months of repeated questioning, we would ultimately find out everything concerning the family for five years back. To explain a period of unemployment, particularly if employment had not been actively sought, we would learn if a husband, a son, or daughter had spent time in a mental institution, a prison, or reformatory, or if the family had had marital problems or some deep trouble which made it advisable for them to move from one state to another. We didn't ask such questions per se, but with the oft repeated question, "What were you doing?", "What was he doing?", "Why?" brought to light many things that people have a right to conceal or forget.

Some people looked at me aghast and said "Good Lord! Is this Russia?" One woman requested a set of forms to turn over to her attorney. Some women wept because their husbands had stormed at them for having revealed family finances and personal activities in answer to questioning by an interviewer. One male interviewer was pushed down the stairs by an irate householder. For the most part, however, in probably 98% of the cases, people answered all questions resignedly though unwillingly knowing they couldn't fight Big Government. It seems to me that this is the most tragic aspect of the program. People are gradually submitting to all sorts of surveys and investigations if the questioner carries a government identification card.

I could cite pitiful cases where I found elderly, crippled people making out as best they could on small pensions. One was even caring for a deaf mute girl that had been abandoned. But the schedule required that I return month after month to ask if they had sought employment ("Don't you want to work?" "Wouldn't you like more of an income than you have now?") or if they had exhausted all avenues of reeducating themselves to make them more employable, etc., etc. This sort of harassment practiced by an agency of the American government is really shameful.

Mr. Speaker, an individual's right of privacy transcends the rapid growth of technological sophistication in our country and is forever connected with our basic right of liberty. It must never be compromised in favor of well-meaning but nonetheless impersonal intentions of convenience, value, and efficiency.

FEDERAL GOVERNMENT ASSISTANCE TO AMERICAN INDIANS

(Mr. STEIGER of Arizona asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STEIGER of Arizona. Mr. Speaker, in a recent speech on the Navaho Reservation, the junior Member from Massachusetts, of the other body, made the flat statement that the Indians would get no more money from the Federal Government until the Vietnam war was over. His total disregard for the facts is genuinely shocking. In fiscal 1969 the approximately 300,000 American Indians will receive $498 million from the Federal Government, and they are budgeted for $525 million for fiscal year 1970. These programs involve nine agencies of the Federal Government, and probably some have been overlooked by me. One must draw the parallel of the undermining of the morale of the Indians and the obvious weakening of the morale of our U.N. fighting forces by the same man for what appears to be raw political profit.

That the statement with regard to the Indians is completely without validity, is also paralleled by the lack of validity of the gentlemen's "Hamburger Hill" statement. The complete lack of accuracy in the passionate pursuit of political profit is not limited to the gentleman from Massachusetts, but he certainly is one of its more obvious proponents. Hopefully, the American people will not be deceived.

PERSONAL EXPLANATION

(Mr. SEBELIUS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SEBELIUS. Mr. Speaker, on June 2, 1969, while I was unavoidably detained at an important meeting with constituents in my district, and personally moving my family from Kansas to Washington, the House took two rollcall votes on H.R. 763 to provide for a study of State laws concerning the governing operations of youth camps, and on H.R. 693 to provide that veterans 72 years of age shall be deemed unable to defray hospital expenses.

I request that it be made a matter of record that had I been present, I would have voted in opposition of H.R. 763 and voted in the affirmative on H.R. 693.

TAX REFORM MEANS RELIEF FROM TAXES

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, tax reform is not a dead issue. The public is deeply concerned about the proposals that have been made by the administration and the Ways and Means Committee. I share that concern, for it appears to me that there has been a psychological letdown since April 15, and now one hears more about the problems connected with a meaningful tax reform than about the subject of tax reform itself.

Such a letdown is natural—we have experienced it in past years but I submit that this year is different and the public is expecting the Congress to act rather than just promise. The issue of a taxpayers' revolt is very much alive as the people of Philadelphia can tell you. In the recent election, a school bond issue was defeated and the reason, according to the Inquirer, should be of great interest to Members of Congress. In an editorial following the election, the paper noted:

> We believe the overriding factor in the bond issue's defeat was the growing wave of revulsion by hard-working, law-abiding people against high taxes and big spending that have become a way of life for government bureaucrats who provide generous pay and pensions for themselves, who dole out money left and right to pressure groups, but show precious little concern for the ordinary wage earner trying to pay his bills, live within his budget and keep his head above the ever-rising waters of the inflationary tide. That was the big message in the "No" vote on the school bond issue, and it reflects a feeling widespread not only in Philadelphia but throughout America. Public officials who refuse to believe it do not want to see the handwriting on the wall.

At the national level the handwriting spells out a loud and clear demand from the overburdened middle-income taxpayer: provide tax reform, reduce tax rates.

I am heartened by outward appearances indicating a major tax reform bill will be brought before us this year. However, I have been in this House long enough to know that the tax reform tune has been sung before without the middle-income taxpayer benefiting from the music. I do not believe that the American taxpayer is in the mood to suffer a disappointment on tax reform this year. The handwriting on the wall reads "revolt," and no one in this House can view with equanimity the prospect of a massive demonstration against the Government by those now carrying the heaviest burden of taxation.

We are talking about the plight and patience of the middle-income taxpayer. Based on projected statistics for 1969, that is the group that will report between $7,000 and $20,000 in income. They will file 33 million of the projected 78 million returns in 1969, and after you exclude the untaxable returns, the middle-income group will end up filing 50 percent of the returns with taxable income. In terms of numbers of returns filed, and in terms of the total amount of dollars reported, it boils down to this: the middle-income group which will report adjusted gross income in the amount of $351 billion, will carry the low-income group and the high-income group.

Chairman MILLS of the Ways and Means Committee said that he "very definitely" believed the middle-income people were taxed too heavily, but rather than hold out any hope for the burden on this group, he said:

> Frankly, I doubt that we will be able to develop sufficient revenues by removing preferences to lower their (middle-income group) tax rates. My recommendation to people who feel they are being taxed too heavily is to insist that some curb be placed upon expenditures of the Government. Not until we do that can we expect significant tax relief for middle-income taxpayers.

Mr. Speaker, it is a statement like that, coming as it does from the powerful chairman of the Ways and Means Committee, that prompts my concern about the fate of the plans for tax reform. Whatever the term "tax reform" means to the economists and bureaucrats, it means "relief from taxes" to the middle-income taxpayer. A tax reform that does not grant significant relief to the middle-income taxpayer is not tax reform in my opinion. And I believe I am speaking for the vast majority of America's middle-income taxpayers.

Tax reform should mean many changes in our tax system. Recently a "trial balloon" was sent up stating that our tax system should be changed to the extent that all exemptions, deductions, and

preferences were disallowed, while the tax rates were substantially reduced.

I have long believed that such a revolutionary change is feasible and I am again heartened that a study is underway to gather the statistical and other data necessary to determine if such a change in our tax laws is practical. My own guess is that under such a revolutionary concept more money would flow into the Federal Treasury rather than less. Until recently there has been a reluctance on the part of many to fully explore the possibilities of such a major revision of our tax system. Because of this we have lacked the facts upon which a decision could be made on whether or not to proceed with such changes. My hope, and I am sure it is the hope of all Members, is that the results of the study will be made available to us in the very near future in order that we may consider even more substantial tax reforms than those presently under discussion.

Another change that I believe must be in any tax reform package that comes out of the Ways and Means Committee is our recognition that the middle-income group is made up of more than just married American taxpaying families. The results of a Brookings Institution study made last year revealed that the present law discriminates heavily against single persons. It is long past time for this inequity to be rectified and the easiest and simplest way would be to extend head-of-household benefits to other than married persons who maintain their own homes.

Mr. Speaker, for the past several years I have introduced a bill to rectify this deplorable situation and again in this session I introduced H.R. 2507 which attacks the problem of tax discrimination against the single person.

An excellent article on the subject of the single taxpayer recently appeared in the Washington Star, written by the syndicated financial columnist, Sylvia Porter. Her article, "Single Taxpayer Needs Help," is a very powerful argument in behalf of the kind of change in the law that my bill would bring about, and I am including the article in my remarks because of its timeliness:

SINGLE TAXPAYER NEEDS HELP

(By Sylvia Porter)

Single taxpayers have almost no chance of relief from discrimination in the initial installment of the tax reform bill. The administration did not offer any such proposal in its reform package. And there is no sign that the House Ways & Means Committee is considering this aspect.

In the second installment, there is reason for single taxpayers to expect adjustments in the rates and personnel exemption rules which so heavily discriminate against the never-married, the widow and the widower. A Treasury spokesman says, "The need for this reform is very much recognized." A powerful congressman adds that "heavy pressures" from representatives of the single taxpayer "are being felt."

In fact, it could be that if the tax package is delayed until 1970–71, this reform might be part of it. Here, therefore is a progress report.

The discrimination against the single taxpayer is obvious, harsh—and apparent not only in the tax rate structure but also in the system for personal exemptions. To be specific:

1. Rates. The married couple has the enormous advantage of being able to split income for tax purposes. If you are married, you pay taxes at substantially lower rates than if you are single. There is no logic to this and it is unfair.

2. Personal exemptions. The single taxpayer has one personal exemption of $600. The married couple has a minimum of two, or $1,200. Again, the logic is questionable; it is nonsense to assume that it costs twice as much for the married couple to live as it does for the single person—and the more children, the more exemptions and the bigger the inequity.

3. Dollar totals. The $600 exemption was voted in 1948. Relentlessly rising living costs since then have reduced it in effect to under $400. That is pitifully outmoded—and especially for the single person with few other deductions to claim.

When you get to the details, the injustice is even clearer. To illustrate, an unmarried woman supporting an elderly aunt who raised her in a separate household is taxed at a much heavier rate than an unmarried woman supporting her elderly mother in a separate household.

To illustrate further, the personal exemption system was created to protect very low income people and couples with many children; it ignores the middle-income single person. Income splitting was adopted in 1948 to equalize the situation between community property and non-community property states; it also ignores the single person.

The most popular proposals to erase the inequity would broaden the head of household status, with particular reference to the single individual 35 years of age and older.

But a more intelligent approach might be through the system of personal exemptions. By varying personal exemptions according to marital status and income level, the discrimination might be automatically wiped out.

What should a single taxpayer do? Join a group which already has organized to lobby for this reform or organize one on your own. Sign petitions if you prefer this approach. Mail your protests to your congressmen and senators—and keep mailing. Send copies of your protests and/or petitions to the House Ways and Means Committee and the Senate Finance Committee. Make your voice heard!

This is what other groups lobbying for tax laws do, and their success may be measured by the extent to which the tax laws favor them. You deserve to win this relief—and if you fight, you will.

You will note that Miss Porter quotes a Treasury Department official as agreeing that such a reform is very much recognized by the Department, but not just yet—maybe later. And with a similar approach, Chairman MILLS has said:

The loss of tax revenues probably rules out such relief for now.

Frankly, Mr. Speaker, I do not see how Congress can afford to rule out tax relief to over 22 million Americans of whom over 16 million are women.

A further relief reform which is a "must" for this year is our recognition that it takes more than $600 per year for any one person to live on, and thus the personal exemption deduction must be raised. I do want to point out, in light of my previous statements that I am in favor with doing away with all deductions, that we are now talking about those reforms that must be initiated this year. Several of our colleagues have suggested that the personal exemption be doubled or more, but to be realistic, I have proposed a bill this year that would raise the personal exemption to $750. This amount, in my opinion, is attainable in this year's tax reform considerations and is one of those items with which the public is most concerned—and rightly so.

Another thing that should be done at once is to bring the standard deduction up to date. It is now set at 10 percent of adjusted gross income and it should be made to conform to the itemized deductions claimed by the average taxpayer. Fifty-seven percent of the taxpayers use the standard deduction; our goal should be 90 percent.

Mr. Speaker, before April 15, comment on tax reform was generally based on the necessity for such reform; the "taxpayers' revolt" it was called.

There is a momentum for change and it is urgent for us to move while this momentum exists and not after the taxpayer has forgotten what he paid last April 15.

Since that date, comment on tax reform has revolved around the issue of where the money is to come from to make up for the estimated losses to the Treasury from such reforms. I believe the taxpayer is going to remember his tax bill this year. I also believe that all the talk in the world about the amount of money it takes to run the Government is not going to mollify the taxpayers' demand for a substantial tax reform. The calls for reform have centered on numerous tax loopholes, or preferences that have been built into the system for one reason or another. There is no single source that I can find that can with certainty predict the exact amount of revenue to be gained or lost by the various combinations of reforms versus preference eliminations.

However, there is general agreement that the investment tax credit is one of those preferences that should and could be taken out of the system now, with a substantial gain to the Treasury. The investment tax credit was intended to induce industry to make investments; there is no question that it did the job, but the tax credit was not intended to be a permanent subsidy and it is time it was repealed. I am very happy to note in this regard the results of a poll of businessmen taken at the recent 57th annual meeting of the U.S. Chamber of Commerce wherein 43 percent of the respondents favored repeal of the investment credit while 26 percent were opposed to its repeal—13 percent opted for repeal of the tax credit with liberalized depreciation provisions, 12 percent called for a reduction of the tax credit, and 6 percent had other suggestions.

Naturally, there are many other potential sources of revenue that would be gained if longstanding preferences were closed. I have seen estimates on potential revenue ranging from a low of $3 billion to a high of $20 billion. It seems apparent to almost anyone that there are enough sources of taxable income, presently untaxed, that could offset any or most of the tax reform proposals that are of most interest to the middle-income taxpayer.

Mr. Speaker, I want to conclude these remarks with a comment on what I feel was the single issue which created the atmosphere for a taxpayer's revolt, and thus the flurry of activity by the administration and the Ways and Means Com-

mittee on tax reforms. That was the previous administration's 10-percent income tax surcharge. That extra burden, coming as it did on top of generally higher taxes paid to local and State governments last year, was the straw that broke the camel's back. And after the camel's back was broken, Members of this House added insult to injury by allowing the unconscionable 42-percent congressional pay raise to go into effect. Moneywise, the latter action of this House was not as costly to the taxpayer as the surcharge, but the flagrancy of the pay raise rightly added fuel to the tax reform fire lit by the income tax surcharge.

I voted against the surcharge last year and I will vote against any extension of the tax this year. We cannot, in good conscience ask the taxpayer to shoulder more burdens when we have not made every effort to eliminate the need for Federal spending which raises the national budget. Last month, the vote on the spending ceiling told the American public that we intend to hold the line on Federal spending. If that is what it takes to get a substantial tax reform measure passed this year, then we should take another look at the remaining budget to see where more Federal spending can be trimmed.

It is beyond my comprehension how we can talk about tax reform in one breath and discuss the size of the income tax surcharge in the next breath. We should face the fact that the surcharge must be repealed. Going back to that chamber of commerce poll I mentioned before, I am sure you will be happy to note that 56 percent of the businessmen polled agreed that the surtax should be repealed.

There is talk of extending the 10-percent charge for 9 months, or a 7-percent extension for 6 months, and any number of other combinations. What this must look like to the middle-income taxpayer who is the one that shoulders the burden, is that Congress is trying to figure out a way to get back the money it estimates the Government would lose from a tax reform ostensibly designed to benefit him. Such hypocrisy will not wash with the American taxpayer this year—nor should it.

RICKOVER VIEWS ON ARMS DEBATE MERIT ATTENTION

(Mr. HOSMER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HOSMER. Mr. Speaker, I shall be happy when the great ABM debate of 1969 is finally over. Then we can look forward to hearing similarly profound and knowledgeable views from many who are engaging in it about other subjects in which they become instantly expert.

For instance, they can second-guess the brain surgeons about how their work should be done and the instruments they should have to do it. They can fill the rest of us in on all the mistakes the computer people are making and tell us why computers will never work. We can be made aware of the threat to the country from the surgery-computer complex.

Having explained why we do not need the ABM, they can turn to telling us why we do not need Minutemen or Polaris, either. Then we will be able to sell the Minutemen for scrap and lay up all the Polaris submarines. After that we can get down to talking disarmament effectively with the Soviets, because we shall be such experienced practitioners of the art.

Meanwhile, one of the world's foremost noninstant experts in nuclear strategy has some views about the ABM which possibly should not go unnoticed. He is Vice Adm. H. G. Rickover, U.S. Navy. A recently syndicated column by James J. Kilpatrick discusses his views:

RICKOVER VIEWS ON ARMS DEBATE MERIT ATTENTION

(By James J. Kilpatrick)

Several weeks ago, Sen. John O. Pastore wrote to Adm. H. G. Rickover. The senator asked for the admiral's views on where the nation is going and what needs to be done in a military way at a time of national debate on preparedness.

Rickover responded with a letter that merits the widest possible reading. Let me give him the floor:

"The first point I would like to make," Rickover wrote, "is that in judging between conflicting views on this matter, the deciding factor must be their relevance to the world as it is, not as we would wish it to be. Granted the hideousness of modern war, can we deduce therefrom that mankind is now wise enough to forego recourse to arms? A look at history should put us on guard against those who claim that humanity has now reached a state where the possibility of armed aggression can be safely disregarded in formulating national policy.

"I am reminded of the intense opposition to the Navy's 15-cruiser bill in 1929. It was argued by many that with the signing of the Kellogg Peace Pact the year before, it was no longer necessary to build new warships. And this in light of the lessons of World War I which erupted despite the various Hague Peace Treaties! These ships were of inestimable value in helping us to win World War II. The war itself was prolonged because the Congress—heeding the 'merchants of death' argument—in 1939 prohibited shipment of war materials to Britain and France.

"Then, too, weight must be given to the credentials of those propounding opposite views. Are they public servants, charged with the awesome responsibility to secure our country against foreign conquest? Or are they private individuals not accountable for the consequences of their opinions, who feel free to express their personal abhorrence of war and to agitate for a reduction of the financial burden military preparedness imposes on the taxpayer?

"Would the majority of the electorate accept their argument that, given our unmet domestic needs, we cannot afford an effective defense position vis-a-vis our potential adversaries? Or that war is so horrible that it is better to suffer defeat than to fight?

"As for the high cost of preparedness, it is in fact no greater proportionally to total U.S. output than 10 years ago—8.8 percent of total U.S. goods and services. Omitting the costs of the Vietnam war, and allowing for inflation, our armed forces have less buying power today than a decade ago.

"In the Soviet Union, on the other hand—according to the annual report of the congressional subcommittee on foreign economic policy issued last June—resources have been diverted from the farm sector to defense, where outlays rose dramatically in 1966–67, after remaining static since 1962. . . .

"If history teaches anything, it is surely that weakness invites attack; that it takes but one aggressor to plunge the world into war against the wishes of dozens of peace-loving nations if the former is militarily strong and the latter are not. . . .

"As a lawyer, you are familiar with Blackstone's statement that security of the person is the first, and liberty of the individual the second 'absolute right inherent in every Englishman.' Just so, the first right of every American is to be protected against foreign attack, and the first duty of government is to keep our nation alive. Given the world situation, this calls for maintenance of a defense capability which is adequate to discourage potential aggressors. . . .

"There can surely be no doubt that the overwhelming majority of the American people are opposed to relinquishment of our defense capability, recognizing full well that there will then be no one left to prevent the takeover by Communist power. Whether one takes the optimistic view that a permanent East-West detente can be negotiated, or the pessimistic view that ultimately we shall have to fight for our liberties, this nation has no future if it allows itself to be outmatched militarily."

PAYDAY FOR POSTAL EMPLOYEES WILL DEPEND ON PASSAGE OF THE SUPPLEMENTAL APPROPRIATION BILL

(Mr. STEED asked and was given permission to address the House for 1 minute.)

Mr. STEED. Mr. Speaker, 14 days from today, on June 19 to be exact, the Post Office Department has a payday for 730,000 employees, and has no funds to meet it. It will not have funds to meet it unless the supplemental appropriation bill becomes law before that time.

I just wanted to remind our colleagues that although the supplemental appropriation bill has passed the House it still must pass the other body and go through conference and be signed by the President. We must hope that this can be accomplished in the next 14 days, else we are going to have chaos in at least the Post Office Department and probably in other Government agencies.

If nothing happens by that time, I think the Postmaster General may be faced with the necessity of shutting down the American postal system.

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. STEED. I am happy to yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. I join my chairman Mr. Speaker, in urging the other body to act promptly on this proposal so that we will not have a chaotic situation in the Post Office Department. The passage of the supplemental bill is warranted, and I believe prompt action is very neccessary.

NIXON AND MUSKIE WARN AGAINST ISOLATIONISM

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PUCINSKI. Mr. Speaker, yesterday, President Nixon delivered an excellent address at the U.S. Air Force

Academy in which he quite properly denounced those who would force America into a return to isolationism.

Mr. Nixon's courageous warning to those who would have America put its head in the sand and remain oblivious to the problems of the world was most timely.

It is the tragedy of our time that prominent voices in this country have refused consistently to see the uninterrupted danger of Soviet colonial expansion.

I congratulate President Nixon and hasten to add that another impressive voice in this Nation who has demonstrated the same good judgment of understanding the drift toward isolationism in this country is Senator EDMUND MUSKIE of Maine.

It is a most interesting coincidence that a day before President Nixon spoke out so eloquently against the dangers of isolationism, Senator MUSKIE delivered a similar speech in Providence, R.I., but one that got substantially less coverage from the national press.

Senator MUSKIE told the graduating class at Providence College that the real challenge of our time is "how can we absorb the painful lessons of Vietnam without an excessive swing of the pendulum back to isolationism."

Senator MUSKIE told the graduating class and, in effect, all of America that—

This question will tax your imagination for the remaining third of this century.

It should be a source of great satisfaction to all Americans regardless of their political affiliation that there are at least two strong voices here in Washington warning against the drift toward isolation—the same kind of drift that we saw in the middle 1930's in America and which ultimately plunged this Nation and the world into the costly and brutal World War II.

I feel a great deal more confident about the future when I see on the Republican side the impressive voice of President Nixon warning against isolation and, on the Democratic side, the highly respected voice of Senator MUSKIE cautioning likewise against isolation. This could be the beginning of a real bipartisan foreign policy which could restore to America true leadership in foreign affairs.

I include in the RECORD the Associated Press report of Senator MUSKIE's speech:

PROVIDENCE, R.I.—Sen. Edmund Muskie, D-Maine, said today the war in Vietnam marks the end of an era in which the United States sought to maintain international stability by supporting Regional Military Alliances.

"In this sense, the Vietnam war is a watershed in American history," Muskie said in a commencement address at Providence college.

"It marks the end of the post-war era in which we sought to maintain international stability through regional defense alliances support primarily by American military strength," Muskie said.

He said the success of that program in Europe led to its application in Asia.

"There, however, we have learned to our increasing sorrow that the conditions which led to our success in Europe no longer exist," he said.

He said this has led to deep division in America.

"How can we absorb the painful lessons of Vietnam without an excessive swing of the pendulum back to isolationism?" He asked. "That question will tax your imagination for the remaining third of this century."

LEGISLATIVE PROGRAM

(Mr. ARENDS asked and was given permission to address the House for 1 minute.)

Mr. ARENDS. Mr. Speaker, I take this time to ask the distinguished majority leader to advise us on the program for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker in response to the question asked by the distinguished minority whip the program for next week is as follows:

Monday is District day, but there are no District bills.

On Tuesday we have H.R. 11271, authorizing appropriations to the National Aeronautics and Space Administration, under an open rule with 2 hours of debate.

For Wednesday and the balance of the week, H.R. 6543, Public Health Cigarette Smoking Act of 1969, which is subject to a rule being granted.

Thursday is Flag Day. Pursuant to a previous order of the House, appropriate ceremonies will be conducted in the Hall of the House of Representatives.

This announcement is made subject to the usual reservations that conference reports may be brought up at any time and that any further program may be announced later. We may have a further program to announce later depending on the disposition of the bills on the program.

ADJOURNMENT OVER TO MONDAY, JUNE 9

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next, June 9, 1969.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule may be dispensed with on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

TRIBUTE TO ROBERT F. KENNEDY

The SPEAKER pro tempore. Under previous order of the House, the gentleman from New York (Mr. RYAN) is recognized for 10 minutes.

(Mr. RYAN asked and was given permission to revise and extend his remarks.)

Mr. RYAN. Mr. Speaker, 1 year ago today Senator Robert F. Kennedy was struck down by an assassin's bullet in the midst of his campaign for the Democratic nomination for the Presidency. The loss suffered on that tragic day—by his family, by his friends, and by the fragmented and confused Nation which he sought to lead—is incalculable. Not only did it deprive us of the leadership of an extraordinarily compassionate and farsighted man, but it laid bare the violence that has become such a prominent feature of our society.

As I said 1 year ago in commenting upon the consequences of his assassination on our political processes:

What is to become of our democratic form of government if candidates for office, civil rights leaders, and Presidents of the United States continue to risk assasination when they seek a dialogue with the people? What is to become of our democratic form of government if those who dare to dissent risk physical annihilation?

The loss of Robert F. Kennedy is no less diminished today. He was a man deeply stirred by the injustices and inequities in our society; and he was in deep dissent with the ruinous policies in Vietnam which have resulted in over 35,000 American deaths and the division and disintegration of our own society. Had he lived, Senator Kennedy might well have been our President today. Were that the case, we would certainly be on the road to ending our ill-advised involvement in Vietnam and toward righting the injustices which minorities in this country have so long endured. We would also be on the road toward reallocating national resources to that sector of our society most in need of immediate Federal assistance; namely, our large metropolitan cities.

Robert F. Kennedy understood that the real threat to national security comes within our own borders. Pollution of our environment, dilapidated housing, outmoded and overcrowded transportation systems, inadequate educational opportunities, penurious social security benefits, an inadequate and dehumanizing welfare system, racial discrimination—all were issues to which he addressed himself and for which he was ready to offer solutions. All were issues which, if allowed to fester and grow to still larger proportions, he knew, would continue to breed discontentment and resentment. Senator Kennedy offered leadership that promised to turn the resources of this Nation toward reinvigorating our cities and securing the equal opportunity that all our citizens—black and white—deserve.

Perhaps the full weight of his loss will only be measured over the next few years. For today, one year after his death, we are more sorely in need fo the leadership he promised than ever before. The war in Vietnam, which was throughly repudiated at the polls last year, continues to rage on with undiminished fury, daily increasing its awful toll of death and destruction. The crisis in our cities to which Senator Kennedy addressed himself continues to fester as still more money is allocated to the military. Arms limitation and disarmament, which Robert Kennedy es-

poused, continue to take a back seat to the development and deployment of a counterproductive anti-ballistic-missile system.

In short, 1 year after Senator Kennedy's death nothing has changed.

I supported Robert F. Kennedy's candidacy in New York when he won a seat in the Senate in 1964, and I was the first public official to publically urge him to seek the Presidency in 1968. As his friend, I was deeply grieved of his death. As one who shared his determination to reorder our national priorities to secure peace in Southeast Asia and justice at home, I mourn the loss of his leadership.

As great as the loss of Robert Kennedy is, the cause he represented and the issues he articulated must not die with him. As he assumed responsibility for leadership upon the death of his brother, President John F. Kennedy, so we must assume responsibility for leadership. If the administration will not act to reorient the priorities of this Nation toward the growing domestic crisis, then it is up to Congress on its own to effect that reorientation. Until we face up to that crisis, no amount of weapons and no amount of rhetoric will heal the divisions and hatreds which are tearing the fabric of our society asunder.

As we praise Robert F. Kennedy today, let us not forget what the man stood for, for that is no doubt what he himself would have wanted most to have remembered. Let us not forget that he believed that the crisis of poverty and racism, of inadequate housing and employment opportunities was the real threat to America and that he believed that we must abandon the antiquated assumptions underlying our foreign policy to obtain a lasting and just peace in the world. Congress could no nothing greater to honor his memory than by turning the resources of this Nation toward securing a prompt end to the war in Vietnam and toward resolving the domestic problems which Robert F. Kennedy was so committed to solving.

Mr. LOWENSTEIN. Mr. Speaker, will the gentleman yield?

Mr. RYAN. I shall be delighted to yield to my distinguished colleague from Long Island.

Mr. LOWENSTEIN. Mr. Speaker, I appreciate the generosity of the gentleman from New York (Mr. RYAN) in yielding to me on this very difficult day for us all, and for our country.

This is one of those times when it is particularly gratifying to be here, to be able to say a few words that will reflect the feeling of so vast a number of people for whom the wound at the heart, inflicted a year ago today, has not eased with the passage of time. I think Senator Kennedy would in fact be surprised if he could know I am here to say these words. He died before he could help in my campaign or I in his, so I speak independent of political ties. But it is impossible to sit here as if this were just another sad day on the long calendar of sad days in recent American experience. Like so many others who were touched by his prophetic life I wonder every day what he would think I should do, wonder how best to push on toward his goals—goals that are the hopes of all Americans of good will, goals that came to be personified for millions of Americans in this man as in few others in our history.

The horror of his absence grows worse as the national crisis deepens. The loneliness of his absence deepens as we see each day how inadequate we are to console and inspire as he consoled and inspired, to lead as he led, to pull together and get things done as he pulled things together and got them done.

I will speak more about these things and about Robert Kennedy on Monday, when this House will sit for the first time after the anniversary of his death.

Meanwhile, a stricken nation will mark another weekend in grief, still seeking its bearings and mourning its loss.

We think especially at this moment of two of the most gallant women of our land, Mrs. Rose Kennedy and Mrs. Ethel Kennedy, of Senator Kennedy's father, of his children, of his brother and sisters. We glimpse how total is their loss, because we know it is incalculably greater than ours, and ours seems total to us. We pray for them, for ourselves, for our country, and for this tormented planet.

Mr. RYAN. Mr. Speaker, I want to thank the gentleman from New York for his contribution, and to commend the gentleman for his keen insight into the many problems to which Senator Robert F. Kennedy addressed himself during his life.

Mr. BIAGGI. Mr. Speaker, we mark with great sadness today the anniversary of the loss of Senator Robert F. Kennedy, who loved his Nation so well that he consciously risked his life, day after day, in order to work for her improvement.

Robert Kennedy stood for brotherhood and for love. He stood for an America free of the plight of poverty, free of hate, free of violence. He stood for world peace. He combined an ambition to set things right in America with a full heart, tolerance, and compassion.

Today, as we remember Robert Kennedy—as Attorney General, mourner for his slain brother, loving husband and father, dedicated Senator from the State of New York, and idealistic candidate for his party's nomination for President—our pain and sadness are magnified by the fact that those things which he wanted to correct in American society have not yet been rectified.

The sincere and concerned Americans who loved him, and who met his death with shocked sorrow and feelings of personal loss must recognize that, 1 year later, we have not come much closer to Robert Kennedy's hopes for his country. On this first anniversary of his murder, we can best honor his memory by pledging that a year from today we will have at least taken a few steps toward the realization of that dream, as he might have expected of us.

GENERAL LEAVE TO EXTEND

Mr. RYAN. Mr. Speaker, I ask unanimous consent that all Members may have 10 legislative days in which to extend their remarks in the RECORD on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

AGRICULTURAL WORKERS

(Mrs. MINK was granted permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, today I introduce legislation to give agricultural workers the right to organize and bargain collectively with their employers. It is scandalous that these workers are still denied rights given to other workers in nearly all aspects of commerce and industry.

The continued denial of collective bargaining rights to agricultural workers explains in large part why they are among the lowest paid groups of workers in our Nation. While workers in such fields as manufacturing and building trades have fought for and won reasonable increases in their wages, farmworkers continue to exist at the bottom of the economic ladder. Moreover, they have been prevented from effectively demanding rights accorded other workers in such matters as work hours, medical treatment, retirement, and other employment benefits. The shocking treatment of migrant workers shows how far employers will go in exploiting unorganized workers.

Agricultural workers are excluded from participation in the standard of living enjoyed by other Americans because of a clause in the National Labor Relations Act of 1935 which specifically denies coverage to persons employed as agricultural laborers. Thus, the act deliberately makes these worthy Americans second-class citizens by barring them from the ranks of those who can unite to demand improved pay or working conditions from their employers.

As agriculture has evolved to an industrial-type operation dominated by large corporations, the need for removing this exclusion has become obvious. Just as an individual factory worker is powerless to apply pressure on management without joining collectively with his peers, so is an agricultural laborer prevented from bettering his low financial state—unless he can organize with other workers. Not only should he be able to join a union, but employers should be required to cooperate with unions in hiring and dues collections.

We have given the factory worker these rights to take collective action; now we must do the same thing for the agricultural laborer. My bill would amend the National Labor Relations Act to include agricultural employees among those empowered to bargain collectively with employers.

There has been considerable sentiment in this session of Congress for the adoption of national legislation giving farm laborers rights they now enjoy in Hawaii. The relatively high standard of living and other favorable farmworking conditions in Hawaii are evidence of what could happen in other States if this legislation is enacted.

Because of the pressing need for action

in this area, I join my colleagues who have already introduced similar bills and ask that the House give swift and favorable consideration to this legislation.

YOUTH CAMP SAFETY ACT

(Mrs. MINK was granted permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, I regret that on Monday, June 2, 1969, the House failed to pass H.R. 763, the Youth Camp Safety Survey Act, under suspension of the rules. The vote was 151 to 152.

From the debate on this measure, it appeared that the basic reasons for its failure to obtain the necessary two-thirds vote were the cost and a belief that the matter is more properly the subject of State and local action.

Mr. Speaker, all that this bill does is to provide for a study of all State and local laws and regulations governing the operation of youth camps. It does not provide for Federal intrusion into this field, but rather for the gathering of nationwide information which can be the basis for State action. Thus, to a large degree, it would eliminate what could otherwise become a need for direct Federal regulation of camps.

The hearings on this bill provided ample evidence of the need for a comprehensive survey of the adequacy of safety standards. They showed that substantial shortcomings exist in the operation of at least some camps, and that States have hitherto done little to correct the deficiencies.

Children have been killed or seriously injured through the inept management of inexperienced or untrained camp personnel. Defects in equipment or facilities have also caused accidents. Disease is a common problem, and many camp staffs lack adequate knowledge or training to effectively combat it.

A few States have attempted to correct the conditions which can permit such hazards. We know that 26 States have regulated sanitation of youth camps, and 15 States have some safety legislation. But only three or four States even make reference to camp personnel. Other States have absolutely no legislation covering these camps. On the whole, it is obvious that much more should be done.

We could simply assume Federal control over camps in the absence of effective State regulation, but I feel that it would be much wiser to allow local levels full opportunity to act before considering such a step. The bill does not attempt to set standards, but seeks to gather the information so that States can be better advised on the steps that need to be taken.

One reason for the lack of State action is that not enough information exists on the conditions in summer camps. Many States simply do not know enough about the deficiencies to legislate knowledgeably in this field. After all, the proliferation of summer camps is a fairly recent thing. Until now, the extent of participation was not so sizable as to create a demand for new camps whose operators lack the experience and knowledge of long-time camp owners.

Our hearings brought out that some 7½ million children are attending approximately 11,500 camps this summer. This large, nationwide industry will continue to grow as more families become affluent and are able to send their children to such facilities.

Now that the industry has grown to such an extent, there is a greater need for closer scrutiny of the conditions at the camps. I wish that we had a "Ralph Nader" overseeing this important activity, for, as the "consumers" in this case, parents need to know more about these camps to which they send their children. Lacking such protection, however, Congress should at least act to gather full information on this subject.

The Youth Camp Safety Survey Act would provide for a study of all State and local laws and regulations governing the operation of youth camps to determine the extent of such laws, and the effectiveness of their enforcement. The purpose of the bill is to stimulate State action on youth camp safety so as to protect the health and lives of millions of children.

In view of the serious nature of this problem, I strongly recommend House approval of this much needed legislation.

ATLANTIC UNION RESOLUTION

The SPEAKER pro tempore (Mr. EDMONDSON). Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 30 minutes.

Mr. FINDLEY. Mr. Speaker, the Atlantic Union delegation resolution, which calls for the exploration of federation as the answer to the mounting problems confronting free world nations, has been introduced today in the House of Representatives by a bipartisan group of 70 Members.

Four identical bills were introduced with DONALD M. FRASER, Democrat of Minnesota; MORRIS K. UDALL, Democrat, of Arizona; F. BRADFORD MORSE, Republican of Massachusetts, and myself as chief sponsors.

It makes the same proposal embodied in a resolution on which extensive hearings were held in the 89th Congress, and which was favorably reported by the Committee on Foreign Affairs in the last days of the 90th Congress.

Hearings included statements of strong endorsement by Richard M. Nixon, former President Eisenhower, and many other prominent citizens. One of the group of bipartisan House sponsors at that time was Robert F. Ellsworth, since selected by President Nixon as U.S. Ambassador to NATO.

Because the man now President of the United States so recently indicated his support, and because intervening events have strengthened the case he made, sponsors of the new resolution are hopeful of early and favorable action.

Cosponsors of Atlantic Union resolution are: JOSEPH P. ADDABBO, Democrat of New York; GLENN M. ANDERSON, Democrat of California; THOMAS L. ASHLEY, Democrat of Ohio; MARIO BIAGGI, Democrat of New York; JOHN A. BLATNIK, Democrat of Minnesota; EDWARD P. BOLAND, Democrat of Massachusetts; RICHARD BOLLING, Democrat of Missouri; GARRY BROWN, Republican of Michigan; GEORGE E. BROWN, JR., Democrat of California; DANIEL E. BUTTON, Republican of New York.

SILVIO O. CONTE, Republican of Massachusetts; EMILIO Q. DADDARIO, Democrat of Connecticut; CHARLES C. DIGGS, JR., Democrat of Michigan; THADDEUS J. DULSKI, Democrat of New York; DON EDWARDS, Democrat of California; JOSHUA EILBERG, Democrat of Pennsylvania; MARVIN ESCH, Republican of Michigan; LEONARD FARBSTEIN, Democrat of New York; PAUL FINDLEY, Republican of Illinois; DONALD M. FRASER, Democrat of Minnesota.

RICHARD FULTON, Democrat of Tennessee; BARRY GOLDWATER, JR., Republican of California; GILBERT GUDE, Republican of Maryland; SEYMOUR HALPERN, Republican of New York; RICHARD T. HANNA, Democrat of California; JULIA BUTLER HANSEN, Democrat of Washington; KEN HECHLER, Democrat of West Virginia; MARGARET M. HECKLER, Republican of Massachusetts; HENRY HELSTOSKI, Democrat of New Jersey; FRANK HORTON, Republican of New York; JOSEPH E. KARTH, Democrat of Minnesota; HASTINGS KEITH, Republican of Massachusetts; EDWARD I. KOCH, Democrat of New York; ROBERT L. LEGGETT, Democrat of California.

DONALD E. LUKENS, Republican of Ohio; RICHARD D. MCCARTHY, Democrat of New York; CATHERINE MAY, Republican of Washington; ABNER J. MIKVA, Democrat of Illinois; WILLIAM S. MOORHEAD, Democrat of Pennsylvania; F. BRADFORD MORSE, Republican of Massachusetts; JOHN E. MOSS, Democrat of California; JAMES G. O'HARA, Democrat of Michigan; ARNOLD OLSEN, Democrat of Montana; RICHARD L. OTTINGER, Democrat of New York; BERTRAM L. PODELL, Democrat of New York; ADAM C. POWELL, Democrat of New York.

MELVIN PRICE, Democrat of Illinois; GRAHAM PURCELL, Democrat of Texas; ALBERT H. QUIE, Republican of Minnesota; THOMAS M. REES, Democrat of California; OGDEN R. REID, Republican of New York; HENRY S. REUSS, Democrat of Wisconsin; HOWARD W. ROBISON, Republican of New York; PETER W. RODINO, Democrat of New Jersey; EDWARD R. ROYBAL, Democrat of California; WILLIAM L. ST. ONGE, Democrat of Connecticut; JAMES H. SCHEUER, Democrat of New York.

HERMAN T. SCHNEEBELI, Republican of Pennsylvania; FRED SCHWENGEL, Republican of Iowa; B. F. SISK, Democrat of California; HENRY P. SMITH, Republican of New York; ROBERT T. STAFFORD, Republican of Vermont; J. WILLIAM STANTON, Republican of Ohio; WILLIAM A. STEIGER, Republican of Wisconsin; SAMUEL S. STRATTON, Democrat of New York; CHARLES M. TEAGUE, Republican of California; FRANK THOMPSON, JR., Democrat of New Jersey; MORRIS K. UDALL, Democrat of Arizona; JIM WRIGHT, Democrat of Texas; and JOHN W. WYDLER, Republican of New York.

Text of the Atlantic Union resolution follows:

Whereas, the interdependence of the nations of the Atlantic Community has steadily grown with the increased mobility of capital and goods, while the revolutionizing speed of scientific, technological advance has outstripped the North Atlantic Treaty and made it necessary to forge new bonds to maintain the unity of these nations, so essential to international prosperity, peace and freedom;

Whereas, the defense of the nations of the Atlantic Community against not only war but monetary crash and depression continues to be a mutual concern;

Whereas, the citizens of these free nations are already united also by a common devotion to democratic traditions and the rule of law;

Whereas, this common heritage enables and requires them, when facing such challenges as those now confronting them, to meet and explore together how best to enlarge and extend the rule of law to provide for effective democratic government and regulation of their common concerns;

Whereas, our Original States, when beset by divisive dangers under their Articles of Confederation, sent delegates to the 1787 Convention, who traced the trouble to the confederal structure and to replace it invented the federal system, which has effectively safeguarded member States from domination by one another, equitably apportioned among their sovereign citizens voting power on common concerns, assured each State of independent government of State affairs, met other challenges like those now facing the Atlantic allies and not merely worked but proved that free people can thus work marvels;

Whereas, a joining together for such purposes of the democratic nations of the Atlantic Community to create an Atlantic Union within the framework of the United Nations would reduce the cost of the common defense, provide a stable currency for world trade, facilitate commerce of all kinds, enhance the welfare of the people of the member nations, and increase their capacity to aid the people of developing nations: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That (1) The Congress hereby creates an Atlantic Union delegation, composed of eighteen eminent citizens, and authorized to organize and participate in a convention made up of similar delegations from such North Atlantic Treaty allies as desire to join in this enterprise, to explore the possibility of agreement on:

(a) A declaration that the goal of their peoples is to transform their present alliance into a federal union;

(b) A timetable for the transition to this goal; and

(c) Democratic institutions to expedite the necessary stages and achieve the objective in time to save their citizens from another war or depression, and let them enjoy, as soon as possible, the greater freedom and higher moral and material blessings which federation has brought free people in the past;

(2) The convention's recommendations shall be submitted to the Congress for action by constitutional procedure;

(3) Not more than half of the delegation's members shall be from one political party, and all shall be citizens of high stature and wide influence, representing together a broad range of experience in the various major challenges facing this undertaking, and so conscious of its importance and urgency as to be willing to give it personally the necessary priority and time;

(4) (a) Six of the delegates shall be appointed by the Speaker of the House of Representatives, after consultation with the House Committee on Foreign Affairs, six by the President of the Senate, after consultation with the Senate Committee on Foreign Relations, and six by the President of the United States.

(b) Vacancies shall not affect its powers and shall be filled in the same manner as the original selection.

(c) The Delegation shall elect a chairman and vice-chairman from among its members.

(d) All members of the Delegation, like the drafters of the United States Constitution, shall be free from official instructions, and free to speak and vote individually in the Convention.

(5) The Delegation shall cease to exist at the expiration of the three-year period beginning on the date of the approval of this Resolution.

This resolution, almost identical with the one eloquently endorsed 3 years ago by the man who is now President of the United States, would establish an 18-member U.S. delegation of eminent citizens.

This group would be authorized to meet in convention with similar groups from other NATO nations for these purposes. First, to seek agreement on federation as the goal of the alliance; second, to fix a target date for achievement of the goal; third, to establish interim institutions needed to keep the developments on schedule.

This resolution contemplates a massive advance in political institutions, one that indeed would be historic. At the same time it is no more massive than the advances in scientific technology we witness almost daily on our television screens.

Conceivably, the convention would explore the possibility of applying the genius of our own U.S. federal system to the broader Atlantic community. A federation of these major nations of western civilization would be formidable indeed. It would result in a political institution large enough to deal successfully with the supra-national problems that now confound us.

Brought together effectively and permanently by means of federation, the people of this broad community would then be enabled to speak and act as one—and share burdens equitably—in all external matters, like aid to underdeveloped nations, filling the requirements of international law and order, halting safely the arms race.

At the same time, this development—by effectively unifying the total strength of these nations—would make possible the safe reduction of internal militaristic influence in our society.

If, as seems to me logical, it would also lead to a unified monetary system and the elimination of internal barriers to trade, it would spur economic progress and reduce to a minimum the danger of economic depression and monetary crash.

During the years since World War II our Government has spent nearly a trillion dollars seeking national military solutions to problems which are fundamentally supranational. We have spent only a pittance of energy and money seeking solutions on an appropriately supranational scale, searching for peaceful nonmilitary means through which our free institutions can be protected, strengthened and advanced to the benefit of ourselves and others.

For years we have known that nationalism in its traditional form is as obsolete as the muzzle-loading rifle, but we do nothing about it. We invest billions in weapons that quickly lose value, but next to nothing in federation, an investment which our own national experience has shown to increase steadily in value.

If only to assure that America will have the high respect and devotion of its rising generation, it is high time we explore nonmilitaristic ways to deal with mounting problems like world policing and nuclear proliferation. Federation is such a way. It is time-tested. It is practical.

The resolution makes the same proposal—and in practically the same text on all essential points—as the one I and others introduced on October 18, 1965, and again on February 23, 1967.

In the interval, this resolution had gained in 1966 the strong endorsement of the statesman who is now our President, Richard M. Nixon. At about the same time in the spring of 1966, I also received letters endorsing it from former President Eisenhower—who wrote me:

> I strongly favor your undertaking; let there be no mistake about this.

And endorsements from BARRY GOLDWATER, Nelson A. Rockefeller, George Romney, and William W. Scranton.

The same resolution was introduced in the Senate in both 1965 and 1967 by Senators EUGENE MCCARTHY and Frank Carlson as chief cosponsors. In 1968 it gained the support of the late Senator Robert F. Kennedy who wrote on April 8 to Freedom & Union magazine:

> The Atlantic Union Resolution affords us the opportunity to study this intriguing concept (a federal union of the Atlantic nations). I urge the proposal's adoption. * * * To fail to study this concept . . . would be to turn our back on the lessons of history.

Vice President Hubert H. Humphrey, soon after he announced his candidacy for the Democratic nomination for President, gave the resolution his support in a statement on May 7, from which I quote:

> While a Senator, I was among the sponsors, from 1949 on, of all the resolutions for an Atlantic Convention to explore with N.A.T.O. allies a federal union answer to the challenge of how to unite effectively and democratically the great moral and material strength of these free peoples. And so I heartily welcome the impressive support the pending resolutions to do this have gained.

One of the many powerful reasons for the Atlantic Union delegation resolution is the dangerously increasing gap between the amount we have spent since 1949 on strengthening the defense of freedom by national armed force plus "domino" wars, as contrasted with the pittance spent to assemble strength through federal union. To quote Mr. Humphrey, it is high time to explore the "federal union answer to the challenge of how to unite effectively and democratically the great moral and material strength of these free peoples."

Both armed power and federation of free peoples are obviously necessary for the defense of freedom—but consider the gap between the efforts we have thus far made to defend it in these two ways.

In the 21-year period from 1949 through 1969 we have appropriated for armed power a total of $959 billions. In the same period, we have appropriated nothing at all, as yet, to explore the federal union way to unite the free effectively.

In other words, we have spent, since 1949, almost $1 trillion more on the strength that comes from arms than on exploring Atlantic federal union. Yet we all know that the immense productive, financial, scientific, and armed power of the United States came from federal union. Our Founding Fathers had the foresight, when the alliance of the 13 States under the Articles of Confederation proved weak and unreliable, as NATO is today, to call the kind of exploratory convention in 1787 we urge today. That convention resulted in the discovery that a federal union was the way to unite the free effectively and democratically, a way which has brought us our great strength.

Think of only one of the consequences of this appalling gap. We are justly concerned by the unrest among our youth, the tumult on campus and in high school, the rising rebellion of students against ROTC and all forms of strength through arms, their growing tendency to echo the communist charge that our country is "imperialistic."

We overlook the fact, that throughout the entire lifetime of all Americans under voting age, the U.S. Government has increasingly sought to defend liberty by spending lavishly on armed power—far more than on education or anything else—to the neglect of idea power, moral power.

We have overlooked this stark contrast so long that, when we try to explain to our youth that armed power and drafting the young to fight far away are needed to maintain our free way of life, we are bewildered to see them brush this off as the "hypocrisy" of older people. Yet, to understand them, their parents and grandparents must remember that no previous generation has ever seen, through their entire lifetime, the overwhelming U.S. accent on armed power that has been the lifelong experience of all Americans under 21. Our youth have seen this gap grow—from a defense budget of $10 billion in 1949 to one of $76 billion in 1969—grow seven times greater while the outlook for peace has certainly not grown apace, if at all.

Freedom needs both armed power and the power that comes from federation, as I said earlier—but between the two, federation deserves the higher priority.

We know from experience that rapid technological advance renders modern weapons rapidly obsolete—sometimes obsolete even before the model on which millions were spent can go into production. That's the major reason why armed power is so increasingly costly.

But the passage of time, which quickly scraps our most sophisticated and expensive weapons, strengthens no less quickly the power free people gain from federation. This power grows stronger, instead of weaker, every year, decade, century. Our own history as a federation shows that to be true. And the passage of time makes union grow stronger, not only the total effect of its armed power but in every field—financial, monetary, productive, scientific—and in moral power, too. We know this also from experience. We know how weak our own Federal Union was when it began, and how its power has grown in many ways for 180 years now.

To meet the danger from inflation, the challenges from the campus and the city and others I shall not mention, we should cease depending so exclusively on the kind of strength that costs most, only to turn quickly obsolescent, and seek instead the kind of power that costs virtually nothing, never becomes obsolete, grows only stronger as time goes on. It is this marvelous, priceless, ever-growing, everlasting, many-faceted strength which the Atlantic Union resolution would have us explore now with the other free people of NATO.

Let me now turn to some other reasons that add urgency to the Atlantic Union resolution and make the outlook for it better.

To begin with, there is the departure from power of General de Gaulle. This has removed what to many Americans was so great an obstacle to the proposed convention's success as to make convoking it impractical. At the same time, however, his resignation opens a period of uncertainty in this key country, and the risk of its reverting in a few years to the political instability it suffered through the period preceding the Presidency of General de Gaulle. To avoid this and other risks we need to seize the present opportunity this very year.

The return to the front pages of the chronic threat of a world monetary crash is another urgent reason to explore the Federal answer. A crash could trigger a world depression as did the one of 1929—and this time advance Communist dictatorship as it then brought Hitler to power in less than a year and a half.

There are also other ominous signs: The rising power of the marshals in Moscow, the brutal invasion and stifling of Czechoslovakia, the resulting threat to the German Federal Republic, the expansion of Soviet naval power in the Mediterranean, Moscow's re-arming of the Arab States and the lurking danger of a nuclear confrontation in the Mideast.

I wish I had time to develop these reasons for convoking the proposed convention to explore Atlantic Union. But I must delay no longer to recall in full the statement which President Nixon sent to the House Committee on Foreign Affairs on September 1, 1966, urging it to approve the resolution. It merits recall not only because he is now President, but because of the unanswerable case he made for the resolution, and the prophetic insight he showed. Here is what President Nixon said:

> It is fitting that the United States, the world's first truly federal government, should be a main force behind the effort to find a basis for a broad federation of free Atlantic nations.
>
> Although the accomplishment of the ultimate goal of the Resolution may well be impossible to attain for many years, recent events of history and numerous scientific and technological advances of the past 20 years point the way in this direction. It would be foolish for us to ignore the fact that science and history are even now fatefully combining to accomplish the same goal. Perhaps, by anticipating the further shrinking of the world, the dialogue which this Resolution contemplates will provide a resourceful tool for coping with the problems of a world which in 20 years will have undergone even more drastic changes than have occurred since World War II.
>
> I have been deeply disturbed of late by the trend of events in Europe. The renewed nationalism of France has for the moment halted the pace at which the nations of Western Europe were moving toward becoming a unified and federated community. By adopting a measure such as the Atlantic Union Resolution we could give new impetus to the spirit of federalism in Western Europe.
>
> To be sure the concept of an "Atlantica" is at present only a dream, but in the age of the rocket, dreams become reality with a speed which is difficult to imagine. The Atlantic Union Resolution is a forward-looking proposal which acknowledges the depth and breadth of incredible change which is going on in the world around us. I urge its adoption.

Consider the accelerating speed at which "incredible change" has continued since 1966 when President Nixon made that statement. He recalled in it how events of history and technological-scientific advances in "the past 20 years" have pointed the way toward Atlantic Union. He stressed the need of not delaying further to use the "resourceful tool" which the proposed convention provides "for coping with the problems of a world which in 20 years will have undergone even more drastic changes than have occurred" in the previous 20 years.

It is not 20, it is less than 3 years since that forecast was made. In that brief period the nuclear power of Red China raised the call for the production of the Sentinel missile system. Before it could be started, the multiple nuclear warhead produced by the Soviet Union has brought the need for the Safeguard missile system—and the current ABM controversy.

As for the advance in space, consider the highlights of only last month: Americans circled the moon repeatedly in Apollo 10, and we saw on TV in our homes the photographs they took of the earth rising over the bleak horizon of the moon—a most impressive proof of the "shrinking of our world."

Truly—to quote the prophetic Nixon statement again:

> In the age of the rocket dreams become reality with a speed which is difficult to imagine.

And no less truly, this applies also to the dream of a federation of the Atlantic community—a federal union of the free—of bridging the Atlantic Ocean by the principles with which our fathers boldly began spanning this continent before there were steamboats, trains, telegraph, when the steam-electric period was only dawning, and its marvels were beyond the dreams of even Benjamin Franklin.

Earlier I said we all know that our own federal union has grown immensely in strength since its weak beginning. Let me conclude by citing a timely example of how dark the outlook for it was in this period in 1787. In February of that year the convention to explore how to transform the moribund Articles of Confederation into an effective, democratic government had been summoned to open in Phildelphia on May 14. That was 182 years ago.

George Washington feared the convention was doomed to fail. Nonetheless he had traveled more than 4 days by horseback and carriage to be present when the Convention began. He reached Philadelphia on the 13th, and the next

day he went with Madison and the majority of Virginia's eight delegates to Independence Hall for the opening session. Only one other delegation met them there. It was Pennsylvania's—and only some of the Philadelphia members of its eight delegates. There was no delegation from the four States nearest Philadelphia: New York—only half as far away as Mount Vernon; New Jersey, just across the river; Delaware, 20 miles down the river; and just beyond it, Maryland, another State Washington had traversed in those 4 days.

A lesser man than the Father of our Country might well have gone home, concluding that such apathy—or opposition—proved that his fears were well founded. Moreover, on March 10, just after receiving word that the Convention was summoned for May 14, he had sent the Foreign Secretary of Congress a letter in which he agreed that the Confederation was ready to fall, unless drastically changed, and then added:

> But, is the public mind matured for such an important change? . . . My opinion is that the country must yet feel and see more, before it can be accomplished. A thirst for power and the . . . monster . . . sovereignty, which have taken such fast hold of the States individually will . . . form a strong phalanx against it . . . The opposition will be altogether irresistible till the mass, as well as the more discerning part of the Community, shall see the necessity . . . Yet I would fain try what the wisdom of the proposed convention will suggest. It may be the last Peaceable mode.

Despite his misgivings, Washington had made the arduous trip—only to find abundant cause to say, "I told you so" and return home. Had he done so, it is all too certain that the Convention would never have got the quorum of seven States it needed, and no Federal Union would have been constituted. The "fast hold" of the monster sovereignty on each of the 13 States would have scourged them all as it has the nations of Europe. The 13 would have been sucked into the alliances and wars of the 25-year maelstrom which began with the opening of the French Revolution in May 1789—some on one side, some on the other. The New World would have gone the way of the Old.

But Washington did not take apathy or "No" for an answer. Rather, he cooled his heels not merely 1 day, but day after day, hoping for a quorum. On the 18th, Alexander Hamilton and a majority of the New York delegation arrived; on the 21st, the Deleware delegation was on hand—but the Convention was still three States short of a quorum. It did not attain that quorum and open until May 25, when the New Jersey delegation finally crossed the Delaware.

Such was the outlook for effective union of the 13 States 182 years ago this day. During that 11-day period various delegates grew so discouraged that they urged that the Convention, if it ever opened, content itself with half measures. These, they held, were the only changes that would be accepted by the people of the 13 States—and the Articles of Confederation stipulated that any change in it required ratification by all 13.

In these gloomy circumstances Washington did much more than hope and pray for seven States to come. When defeatism grew rife on one of those discouraging 11 days, he intervened and turned the tide from despair to determination with these solemn words to the other delegates:

> It is too probable that no plan we propose will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and the honest can repair; the event is in the hand of God.

Such was the prospect at this time in 1787 for the first convention in world history called to explore whether allied democracies could agree to constitute an effective, democratic government for their common affairs. Such was the little acorn of courage and wisdom from which our mighty tree of liberty grew. With that spirit we can now arm freedom with decisive moral and material power for peace, by deciding to explore the inspiring possibilities offered by Atlantic Federal Union.

Mr. WRIGHT. Mr. Speaker, the time clearly has come in the affairs of men for the North Atlantic democracies—those of us who share so much in common tradition, common governmental form, common respect for individual rights—to explore the possibilities of forming more effective common solutions to our most pressing common problems.

The sponsorship of this resolution calling for a convention of these free world nations demonstrates the broad and growing recognition of this need. When I examined the list of sponsors earlier today, I discovered that there were 69. How appropriate Sixty-nine in 1969. It is in every sense a bipartisan group. The list includes Democrats and Republicans, liberals and conservatives, hawks and doves—and perhaps a few owls. But it should not be surprising that so broad a spectrum of the politically aware have joined hands in supporting this resolution.

The history of mankind can be seen politically, in the gradual expansion of the unit of government. First, there were families; then nomadic tribes; then small settled communities; ultimately the Greek city-states, and finally under Philip II of Macedonia the first nation. Since then, nations have merged into larger nations for the common well-being of their citizens, and formal groupings and alliances of nations have culminated in formal international organizations.

In each step along this upward civilizing road, people have submerged differences to seek common ends. The merging of the destinies of those with common aspirations has given greater strength to all who share the same dreams. And, in one of history's paradoxes, the voluntary forgoing of unrestrained local autonomy has resulted in greater individual liberty and broader individual opportunity.

Almost 200 years ago, 13 weak and independent little republics banded themselves together on this continent and agreed to survive as one strong nation. There were among our forefathers different cultures, different languages, different religious backgrounds. Yet the things that united them were greater than the things that divided them. They had a common enemy and a common purpose. Thirteen years under the loose alliance of the Articles of Confederation demonstrated the need for stronger ties of unity. When the Articles of Confederation blundered and broke apart on the rock of reality, our American ancestors drew the bonds of union tighter about themselves by means of the Constitution. Thus banded together in a federation, their progeny have known the blessings of a viable government and the ability to come to grips with common problems.

The twin catalysts which drew our forebears together originally were a common enemy and a common purpose. Today the members of the North Atlantic Community—with equally as much in common as the inhabitants of the 13 Colonies—face common external enemies, tyranny, and the threat of nuclear war. They certainly face common purposes in the survival and triumph of humanity itself and of the human values which we cherish in common.

The fantastic compression of time has shrunk our planet. For purposes of transportation or communication, the average citizen in my city of Fort Worth today is much closer to London or Paris—or Moscow or Saigon—than his ancestor was 100 years ago to our State Capitol in Austin. We can travel to any major city of the world or communicate with anyone in any such city with greater ease, speed, and facility than our ancestors could have traveled to Austin or communicated with a resident of that city.

Our human arts of governing our relationships and coming to grips with the common problems that beset us in a civilized and effective way have not kept pace with the movement of events. The explosion of scientific knowledge has far outstripped the development of our social and governmental institutions.

So it seems only plausible and natural that intelligent men and women, sharing aspirations and values in common, should perfect their mutual capacity to assault and conquer the problems of this age in quite the same way that forward looking statesmen of past times have done. Does someone suggest that such an approach is too visionary? I would remind him only of Solomon's warning that "Where there is no vision, the people perish."

It is to be hoped that hearings can be held at an early moment by the House Committee on Foreign Affairs and that the membership of Congress may have an opportunity to express the readiness of our people to sit down in a civilized way with our friends and kinsmen of the other western democracies and explore the avenues by which together we may work to build a more secure and hopeful future for our posterity.

ATLANTIC UNION RESOLUTION

Mr. FRASER. Mr. Speaker, today I have joined more than 70 other Members in introducing a resolution calling for an Atlantic Union convention. In addition to the names already listed by the

gentleman from Illinois (Mr. FINDLEY), two more should be added: Congressmen FRANK E. EVANS, of Colorado, and ROBERT O. TIERNAN, of Rhode Island.

I am proud to be associated with this resolution because I have supported the concept of Atlantic Union for more than 20 years. Events occurring through this period have reinforced my conviction.

The rule of law is embraced by nations on both sides of the Atlantic. The people of these nations share a common heritage in their commitment to the dignity of man and in their belief that government must always be the servant and never the master of the people. Sovereignty resides in the people themselves. They confer upon various levels of government the power to regulate and order certain aspects of community life.

Thus the people have it within their power to create a new level of government when this will best serve their interests.

A union of Atlantic nations would be a move toward regulating the international affairs of mankind by substituting the rule of law for traditional diplomacy. We need to regulate trade and commerce including the money supply, to provide for the common defense, and to create relationships with the rest of the world which will be conducive to the pursuits of peace and development.

Passage by the Congress of this resolution does not guarantee that other Atlantic nations will reciprocate. We may find that other nations will be reluctant to engage in this effort with the United States at this time. Nevertheless the mere passage of this resolution will be a clear signal to our friends in the Atlantic community that the United States desires to explore the creation of political and governmental relationships which assure parity with all other peoples who choose to join.

The overwhelming power of the United States is a cause of concern to some in Europe. They question the wisdom with which this power has been used. By joining with us to legislate on common concerns, they will be assured that people rather than economic power or military strength will count in the formulation of common policies.

The risks of nuclear war are growing steadily. While proliferation of nuclear weapons may have been slowed for the moment, experience teaches that nations may too quickly move away from agreements which they find chafing or confining in the protection of their national interests.

The consequences of nuclear war are so enormous that mankind must do all those rational things which are within reach to lessen or eliminate this threat.

The creation of an Atlantic Union is in no way in derogation of the United Nations of which I am a fervent supporter. In fact, it will strengthen the United Nations by insuring that the rule of law prevails over a wider area of the planet. It will enhance the capacity of the developed nations to aid the developing nations.

In short, we have nothing to lose and everything to gain by applying the lessons of history and the fruits of civilization to a wider area of human affairs.

FRAUD IN AMERICA—IV

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, the CBS broadcast "Hunger in America" was as remarkable for what it did not say as for what it did say.

I have already noted that CBS neglected to say that it had failed to check facts, had broadcast flat untruths, neglected to report that it had staged scenes, prompted and paid persons who appeared on the show, and edited out of recognition statements made by others—all to make the "facts" conform to the script that had been written.

CBS also neglected to say a few other things in its broadcast. It failed to say what programs the Federal Government does have, and how they have been improved in recent years, to help assure that everyone can obtain an adequate diet. They neglected to show the very real concern of governments, local and national, about the problems of those who are poor. They neglected to attempt any measurement of what is being done against what needs to be done. Had they done this, the show might have been more devastating than it was—or perhaps it would not; but in any case it would have been a completed story, one that would have enabled the viewers to know the several aspects of a complex and crucial problem, one that would have enabled people to form some kind of rational judgment.

But CBS was not interested in informing people, as much as it was in inflaming them. They wanted shock and sensation, not hard and honest news. It is easier to write a story in the yellow manner than in the honest manner. Besides, the single eye of the lens does better when fed color than when it is fed monochrome; one need not worry about truth so long as one can get it in living color, so seems to run the journalistic credo of the networks. It is not so important to them whether the picture is true so much as whether it sells.

But Mr. Speaker, people can form opinions only on the basis of what they know. Few people are inclined to question what they see in print or on television. Fewer still have the time or resources to perform individual research. And since in the case of television only the networks have access to the broadcast facilities, there is only one view—and that is their view. If it be truthful, then well and good. But if it be untruthful, then all is not so well and good. If we are to permit the networks to have a monopoly on the content of news broadcast, then we are bound by conscience and by good sense—as well as public responsibility—to see that they exercise some responsibility.

If the networks can plunder the air with junk, and can abuse the basic responsibilities of truthful journalism—which they do and repeatedly have done—then it is time that Congress devised some method of bringing accountability to the barons of broadcasting. There must be some way that the public can know that their interests are protected from minds that have a conscience only for high ratings and high profits, and none for good sense, good taste, or even plain old fashioned honest truth.

Mr. Speaker, I believe that Congress must act, must explore this problem, and must solve it. No one wants censorship. But at the same time we cannot afford to have wildly incompetent journalism fed into 96 percent of the homes of this country. We are confronted with a dilemma. Does the first amendment cover deception? It did not when the quiz show scandals erupted. It should not when a far more serious issue is at stake. What guarantee have we that future news programs will not take great liberties with the truth, all in the name of ratings and sales, all in the name of poetic license, but all flying in the face of honest broadcasting? We have none. I do not believe that the barons of Manhattan should sell the public trinkets in the place of truths. "Hunger in America" glittered, but it was not the truth that made it glitter, but the false glass of a vidicon tube. When that tube shows blatant disregard for truth, it is time that we acted. It has, and we should.

Mr. Speaker, I have said that "Hunger in America" left many things unsaid, among them what has been done to date to assure that massive hunger is not accepted as a fact of life. I offer to my colleagues an article from the Dallas regional office of the Federal Reserve System, in their monthly bulletin for May 1969:

FEDERALLY ASSISTED FAMILY FOOD PROGRAMS

For many years, the U.S. Department of Agriculture has been cooperating with state and local authorities in providing low-income families with supplemental food. Such assistance currently is being furnished through two basic types of programs—the Commodity Distribution Program and the Food Stamp Program. The Commodity Distribution Program is the older of the two types of programs and, until recently, has been the more important. Commodity distribution programs originated in the early 1930's, when surplus foods were given directly to the poor and unemployed.

A food stamp program was in operation between 1939 and 1943 but was discontinued when wartime demands increased incomes and reduced unemployment. This stamp program was directly related to surplus commodities. In 1961, a new food stamp plan was initiated on a pilot basis, and the plan was given more permanent status by the passage of the Food Stamp Act of 1964. The program was established to remedy some of the weaknesses of the Commodity Distribution Program.

Both the Commodity Distribution and the Food Stamp Programs are in operation in parts of the Southwest. The purpose of this article is to highlight the background and growth of these two programs in the United States and in the five states of the Eleventh

Federal Reserve District. One section of the article will discuss how successful each program seems to be in achieving the goals outlined by the framers of the enabling legislation.

COMMODITY DISTRIBUTION PROGRAM

As mentioned earlier, the Commodity Distribution Program is the oldest governmental family food-assistance program operating at this time. Under this program, food commodities declared to be in surplus supply, as well as other purchased foods, are shipped by the U.S. Department of Agriculture to various distribution centers throughout the Nation for redistribution to low-income families and to institutions. Presently, the USDA carries out its surplus food donation program to the needy under two authorities: section 32 of Public Law 320, approved in 1935, and section 416 of Public Law 439, approved in 1949. The USDA also distributes food to participants in the school lunch programs under section 6 of the National School Lunch Act, passed in 1946. Sections 32 and 416 are intended to provide food assistance to families and institutions, and section 6 is a part of child nutrition programs. The following article will focus on the family food-assistance programs.

Under section 32, an annual appropriation is provided to the USDA for the general purpose of expanding the demand for agricultural commodities. Specifically, the legislation was to give assistance to agricultural products in excess supply and to producers suffering from low prices. Section 32 legislation permits the USDA to make surplus-removal purchases of commodities, usually those that are in excess supply at the time of peak marketing. The commodities acquired under section 32 generally do not move into Government inventory but are shipped to centers throughout the country for redistribution to eligible recipients.

Section 416 of Public Law 439 provides authorization for the distribution of agricultural commodities that have been acquired by the Commodity Credit Corporation under price-support programs. Under section 416, commodities held by the CCC that cannot be sold or bartered are made available to school lunch programs and to needy families and institutions in the United States. Any quantities in excess of domestic requirements are eligible for use by needy persons abroad.

The cost of Federal assistance to needy persons and institutions under the Commodity Distribution Program has varied significantly. Federal assistance was at the extremely low level of less than $2 million in fiscal 1945 but subsequently rose to a record of about $257 million in fiscal 1965. With the introduction of the Food Stamp Program, the cost of Federal assistance to the commodity program declined sharply in 1966 and 1967, but such cost increased again in fiscal 1968. The slight increase in cost in 1968 reflected the greater variety of foods made available in the program, since the number of participants continued to move downward.

FOOD STAMP PROGRAM

The Food Stamp Program authorized by Congress in 1964 has dual objectives: (1) to improve diets by increasing the ability of needy persons or families to puchase more and better foods and (2) to expand the domestic markets for agricultural products.

Through the stamp plan, participants are able to increase their food-purchasing power by exchanging the amount of money they would normally spend for food for an allotment of coupons of a higher monetary value. These coupons are used by needy persons and families to purchase domestically produced foods from retail food outlets at prevailing prices. Authorized merchants redeem the food coupons for cash at commercial banks, which present the coupons to a Federal Reserve bank for payment through appropriate collection channels. Food stamps are liabilities of the U.S. Treasury Department, and Federal Reserve banks serve as fiscal agents of the Treasury.

After Congress authorized the permanent Food Stamp Program in 1964, the number of counties and cities participating grew to 324 by 1966, to 838 in 1967, and to approximately 1,550 local governmental units by the first of the current year. The average monthly participation in the program in fiscal 1968 was slightly more than 2.2 million people, up sharply from 1.4 million in fiscal 1967 and from 0.9 million in fiscal 1966. The total value of food coupons issued in fiscal 1968 amounted to $455 million; $282 million of this was paid for by participants, and $173 million was the cost to the Federal Government.

With the authorization of the stamp plan in 1964, the USDA proposed to make the Food Stamp Program the first-line food delivery system in the war on poverty. Consequently, the cost of Federal assistance under sections 32 and 416 declined; and in fiscal 1968, the Federal subsidy under the Food Stamp Program surpassed Federal assistance to institutions and needy persons under the Commodity Distribution Program.

GEOGRAPHICAL PARTICIPATION

By January 1, 1969, one or the other of the two family food-asisstance programs was in operation or planned in approximately 2,640 counties throughout the Nation. About 83 percent of the population of the United States resides in these counties. The number of participants in both programs had reached nearly 6.5 million persons, and the USDA estimates that this number will likely increase to 7.0 million participants by the end of fiscal 1969. Most of the increase probably will occur in the Food Stamp Program if present trends continue. At the beginning of this year, there were only about 480 counties and cities which did not operate under the programs.

The map on the following page shows the participation in both the Commodity Distribution Program and the Food Stamp Program. At the beginning of 1969, only six states had a family food-assistance program in all of their counties and cities. (Under present regulations, the programs cannot operate simultaneously in the same area.) Program participation is heaviest in the Mississippi River Basin and in Mountain and Far Western States.

In the southwestern states of Arizona, Louisiana, New Mexico, Oklahoma, and Texas, some counties in each state participate in the Commodity Distribution Program. In fact, all counties in Arizona and all but three counties in Oklahoma participate in the commodity program. Counties in Arizona and Oklahoma have not participated in the Food Stamp Program, although a majority of the counties in Louisiana and New Mexico and a few counties in Texas are participants. The greatest concentration of participants in the stamp program in the Southwest are in Louisiana and New Mexico.

Less than 5 percent of the total population in the five southwestern states participated in the family food-assistance programs at the first of this year, with the proportions for the individual states ranging from slightly over 9 percent in Oklahoma to below 3 percent in Texas. In the Nation, less than 4 percent of the population participated in the programs.

PROGRAM PROCEDURES

Under current legislation, both the Food Stamp Program and the Commodity Distribution Program are operated as joint Federal-state-local efforts. Generally, counties, parishes, or townships desiring to participate in one of the two programs work through the state's welfare office. Once a program is approved, the eligibility of participants is determined according to standards used by the state in its own welfare programs.

Under the Commodity Distribution Program, participants are usually given punch cards to show proof of their eligibility to receive food monthly at distribution centers. Under the Food Stamp Program, coupons are usually issued by local welfare departments or commercial banks. Recently, some states were given authority to deliver stamps to individual recipients by mail without being held liable for loss (Texas has been authorized to use mail delivery).

The dollar amount of food coupons received monthly by eligible individuals or families is based upon the amount of purchasing power necessary to provide an adequate diet as defined by local authorities, assisted by the USDA. Cost of the coupons to the participant is based upon the family's income and the number of dependents. The difference between the value of coupons received by a participant and the cost paid by the receiver is referred to as bonus power; mathematically, the cost of the stamps and their bonus value are inversely correlated. Food coupons are issued in books of 50-cent and $2 denominations, and families use the coupons to buy domestically produced food at retail stores authorized to accept them by the USDA's Consumer and Marketing Service. Authorized retailers agree to abide by the rules governing the use of such food coupons.

PROGRAM GOALS

The relative effectiveness of the two family food-assistance programs probably could be evaluated in the light of three variables. First, and possibly most important, is the influence the programs have on increasing the dietary standards of low-income families. Second, the programs should be evaluated as to their influence on increasing the aggregate demand for farm products, thereby raising farm income. Finally, the relative cost of the two food distribution methods should be evaluated.

IMPROVING DIETARY STANDARDS

The potential for substantially improving the diets of low-income families under the Commodity Distribution Program was quite low up to 1961 because the foods distributed were basically limited to five commodities. Since 1961, a greater variety of commodities has been available; and by the beginning of 1969, a maximum of about 22 commodities, valued at $12.75 per person monthly, could be distributed under the program. However, not all participating areas were distributing the maximum number of commodities.

Despite the fact that the number of commodities available under the Commodity Distribution Program has increased, the Food Stamp Program has the potential of providing a superior nutritional diet. Food stamp coupons can be used to purchase any basic foods at retail food stores at existing prices (no imported foods may be purchased). Since the choice of foods under the Commodity Distribution Program is dependent, in most cases, upon which commodities are in excess supply or have been acquired by the Commodity Credit Corporation, the Food Stamp Program—with no such restrictions—would seem to offer the housewife a better opportunity to prepare a wider range of nutritious meals.

The success of either type of program in increasing the dietary standards of participants is, however, limited by substitution. If any food acquired under either of the two programs is substituted for purchases that would have been made otherwise, the net increase in total food consumption would be smaller than anticipated. Both programs are intended to supplement food consump-

tion; they are not intended to replace usual or previous levels of consumption.

The Food Stamp Program may be more effective than the Commodity Distribution Program in limiting the ability of participants to substitute the new purchasing power for previous purchasing ability. Participants are required to pay for food coupons, and the amount necessary to purchase stamps is based, in part, on the income of the recipient. Under the Commodity Distribution Program, recipients pick up their free commodities at central distributing points and may do as they wish with the income that would have been spent for food if the free commodities were not available.

INCREASING FARM INCOME

The influence of family food-assistance programs upon farm income naturally depends upon the extent to which the programs add to aggregate demand. Whether or not aggregate demand for farm products has been increased is difficult to determine because some assumption must be made as to what aggregate demand would have been without the family food programs. For simplicity, it is assumed that all food consumed by recipients under the two programs is an addition to aggregate demand; this assumption, in essence, implies that the substitution effects of the programs are zero.

The food distributed under the Commodity Distribution Program to institutions and needy persons in fiscal 1968 amounted to approximately 860 million pounds. At average market values, this quantity of food probably represented no more than one-half of 1 percent of total U.S. gross farm income. Federal subsidy to the Food Stamp Program in fiscal 1968 amounted to around $173 million, which represented about one-third of 1 percent of farm income. The effect of both programs on gross farm income was, therefore, less than 1 percent. In addition, since the Food Stamp Program is not directly tied in with surplus commodities, as is the case for the Commodity Distribution Program, it is likely that the increased consumption induced by the food coupons had little effect on the demand for most surplus commodities, such as the basic food grains.

COST OF PROGRAMS

The direct costs of purchases and the amount of subsidies paid by the Federal Government for both programs reached a total of about $321 million in fiscal 1968. However, the data available on this assistance are not adequate to permit a definitive analysis of all of the costs of each program on a common basis since the figures do not include state and local cost. Some analysts have taken the position that the Food Stamp Program may be the more efficient of the two programs. The reason given is that the Food Stamp Program utilizes the usual channels of distribution in the marketplace, while the Commodity Distribution Program requires a special distribution network. The USDA admits that the Commodity Distribution Program is a difficult program to administer.

Furthermore, the two programs may have different impacts on the local economy and may, therefore, involve some social cost. If the substitution rate under the Commodity Distribution Program is greater than zero, the program would have an adverse effect on retail food sales in the local community. By operating within the free market system, the Food Stamp Program stimulates retail food sales, and the amount of additional spending for food would equal the value of the bonus coupons minus any substitution.

Surveys by the USDA on the impact of the pilot food stamp plan on retail food store sales showed that the dollar volume of food sales in the pilot areas rose around 8 percent over the year immediately preceding the initiation of the Food Stamp Program. The largest percentage sales gain recorded by the survey stores was for fresh produce, a food category for which an increase in consumption is generally indicative of higher nutrition levels. Because of their perishability, fresh fruits and vegetables are usually not available to participants in the Commodity Distribution Program. The value of food stamps redeemed by all stores in the survey also averaged 8 percent of total sales volume.

The concept of providing food assistance for low-income families has moved into a new dimension with the introduction of the Food Stamp Program. Emphasis has changed from a means of distributing surplus food to a method of increasing the food-purchasing power of low-income families so that these families can obtain a nutritious diet through the efficient food distribution system available to other U.S. families. There is also a growing interest in furnishing information and education on the proper selection and care of food in order to create a change in attitudes toward the kinds of foods to purchase for family health.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. RYAN, today, for 10 minutes; to revise and extend his remarks and to include extraneous material.

Mr. FINDLEY, for 30 minutes, today; and to revise and extend his remarks and include extraneous matter.

Mr. GONZALEZ (at the request of Mr. LOWENSTEIN), for 10 minutes, today; to revise and extend his remarks and include extraneous matter.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. WRIGHT to follow special order by Mr. FINDLEY today.

Mr. FRASER to follow special order by Mr. FINDLEY and remarks of Mr. WRIGHT today.

Mr. EDMONDSON in three instances and to include extraneous matter.

(The following Members (at the request of Mr. DENNIS) and to include extraneous matter:)

Mr. PETTIS.
Mr. KEITH.
Mr. BURTON of Utah in 10 instances.
Mr. DERWINSKI.
Mr. FISH.
Mr. CLEVELAND in two instances.
Mr. HOSMER in three instances.
Mr. BROTZMAN.
Mr. DON H. CLAUSEN.
Mr. HALPERN in two instances.
Mr. MILLER of Ohio in two instances.
Mr. SAYLOR in two instances.
Mr. BERRY.
Mr. UTT.
Mr. GROSS.

(The following Members (at the request of Mr. LOWENSTEIN) and to include extraneous matter:)

Mr. BIAGGI in two instances.
Mr. ST GERMAIN.
Mr. TEAGUE of Texas.
Mr. RARICK in three instances.
Mr. RYAN in three instances.
Mr. NICHOLS.
Mr. BINGHAM in two instances.
Mrs. MINK in two instances.
Mr. JACOBS.
Mr. GONZALEZ in two instances.
Mr. ANDERSON of California in three instances.
Mr. BYRNE of Pennsylvania.
Mr. HUNGATE.
Mr. SATTERFIELD.
Mr. TIERNAN.

SENATE ENROLLED BILL AND JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled bill and joint resolution of the Senate of the following titles:

S. 537. An act for the relief of Noriko Susan Duke (Nakano); and

S.J. Res. 77. Joint resolution authorizing the President to designate the period beginning June 8, 1969, and ending June 14, 1969, as "Professional Photography Week in America."

ADJOURNMENT

Mr. LOWENSTEIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 36 minutes p.m.), under its previous order, the House adjourned until Monday, June 9, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

836. Under clause 2 of rule XXIV, a letter from the acting Secretary of Transportation, transmitting a draft of proposed legislation to provide a formula for apportionment of State and community highway safety funds for fiscal year 1970 and thereafter, was taken from the Speaker's table, and referred to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DADDARIO: Committee on Science and Astronautics. H.R. 4284. A bill to authorize appropriations to carry out the Standard Reference Data Act; with amendment (Rept. No. 91-284). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 11235. A bill to amend the Older Americans Act of 1965, and for other purposes; with amendment (Rept. No. 91-285). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 4314. A bill to amend section 302(c) of the Labor-Management Relations Act of 1947 to permit employer contributions to trust funds to provide employees, their families, and dependents with scholarships for study at educational institutions or the establishment of child care centers for preschool and school age dependents of employees (Rept. No. 91-286). Referred to the Committee of the Whole House on the State of the Union.

Mr. JOHNSON of California: Committee on Interior and Insular Affairs. S. 742. An act to amend the act of June 12, 1948 (62 Stat. 382), in order to provide for the construction, operation, and maintenance of the

Kennewick division extension, Yakima project, Washington, and for other purposes; with amendment (Rept. No. 91–287). Referred to the Committee of the Whole House on the State of the Union.

Mr. DADDARIO: Committee on Science and Astronautics. H.R. 10878. A bill to authorize appropriations for activities of the National Science Foundation, and for other purposes (Rept. No. 91–288). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 6543. A bill to extend public health protection with respect to cigarette smoking, and for other purposes; with amendment (Rept. No. 91–289). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 11900. A bill to provide for special programs for children with learning disabilities; to the Committee on Education and Labor.

By Mr. ANDERSON of California:

H.R. 11901. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. BUSH (for himself, Mr. BELL of California, Mr. BROWN of Michigan, Mr. DULSKI, Mr. GUBSER, Mr. HARVEY, Mr. LONG of Maryland, Mr. MCCARTHY, Mr. PELLY, Mr. PIKE, Mr. PREYER of North Carolina, Mr. QUIE, Mr. REID of New York, Mr. ROBISON, Mr. VAN DEERLIN, Mr. WHITEHURST, Mr. CHARLES H. WILSON, and Mr. YATES):

H.R. 11902. A bill to promote public health and welfare by expanding, improving, and better coordinating the family planning services and population research activities of the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CLARK:

H.R. 11903. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. CLEVELAND:

H.R. 11904. A bill to amend the Legislative Reorganization Act of 1946 to provide for the inclusion of certain cost estimates of certain measures reported by the standing committees of the House of Representatives; to the Committee on Rules.

By Mr. CUNNINGHAM (for himself, Mr. ROBISON, Mr. LLOYD, Mr. EDWARDS of Alabama, Mr. ANDREWS of Alabama, Mr. WEICKER, Mr. MAILLIARD, Mr. COLLIER, Mr. MICHEL, and Mr. MORTON):

H.R. 11905. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. EDMONDSON:

H.R. 11906. A bill to amend section 1682 of title 38 of the United States Code to increase the rates of educational assistance allowance paid to veterans under such section; to the Committee on Veterans' Affairs.

By Mr. FARBSTEIN:

H.R. 11907. A bill to impose an excess profits tax on the income of corporations during the present emergency; to the Committee on Ways and Means.

By Mr. GOODLING:

H.R. 11908. A bill for the relief of certain civilian personnel employed by the Navy Department, for expenses incurred incident to temporary duty performed at the Navy Yard, Philadelphia, Pa., in 1942; to the Committee on the Judiciary.

By Mr. HUNT:

H.R. 11909. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

By Mr. MESKILL:

H.R. 11910. A bill to provide for orderly trade in antifriction ball and roller bearings and parts thereof; to the Committee on Ways and Means.

By Mrs. MINK:

H.R. 11911. A bill to amend the National Labor Relations Act, as amended, to amend the definition of "employee" to include certain agricultural employees, and to permit certain provisions in agreements between agricultural employers and employees; to the Committee on Education and Labor.

By Mr. POLLOCK:

H.R. 11912. A bill to amend the act of August 27, 1954 (commonly known as the Fishermen's Protective Act), to strengthen the provisions therein relating to the protection of U.S. vessels on the high seas; to the Committee on Merchant Marine and Fisheries.

By Mr. ROGERS of Florida:

H.R. 11913. A bill to amend the Public Health Service Act to provide authorization for grants for communicable disease control; to the Committee on Interstate and Foreign Commerce.

By Mr. ST GERMAIN:

H.R. 11914. A bill to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market interest rate mortgages insured under section 221(d)(3) of the National Housing Act; to the Committee on Banking and Currency.

By Mr. SNYDER:

H.R. 11915. A bill to amend title II of the Social Security Act to provide disability insurance benefits thereunder for any individual who is blind and has at least six quarters of coverage, and for other purposes; to the Committee on Ways and Means.

By Mr. TAYLOR:

H.R. 11916. A bill to require annual disclosure to the Comptroller General of the United States of the source and amount of all outside income received by any person serving as a Federal judge, a Member of Congress, or a policymaking official in the executive branch of the Government, and for other purposes; to the Committee on the Judiciary.

By Mr. WILLIAMS (for himself, Mr. BIESTER, Mr. BYRNE of Pennsylvania, Mr. CAHILL, Mr. COUGHLIN, Mr. EILBERG, Mr. GREEN of Pennsylvania, Mr. HUNT, Mr. NIX, Mr. WATKINS, and Mr. WYMAN):

H.R. 11917. A bill to amend title 5, United States Code, to provide a pay differential of 10 percent for nightwork performed by employees subject to prevailing rate pay systems, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ZWACH:

H.R. 11918. A bill to amend the Communications Act of 1934 so as to prohibit the granting of authority to broadcast pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. WATSON:

H.J. Res. 768. Joint resolution proposing an amendment to the Constitution of the United States to provide a method for nominating and electing Judges of the Supreme Court; to the Committee on the Judiciary.

By Mr. FINDLEY (for himself, Mr. FARBSTEIN, Mr. FULTON of Tennessee, Mr. GOLDWATER, Mr. GUDE, Mr. HALPERN, Mr. HANNA, Mrs. HANSEN of Washington, Mr. HECHLER of West Virginia, Mrs. HECKLER of Massachusetts, Mr. HELSTOSKI, Mr. HORTON, Mr. KARTH, Mr. KEITH, Mr. KOCH, Mr. LEGGETT, and Mr. LUKENS):

H. Con. Res. 283. Concurrent resolution, Atlantic Union delegation; to the Committee on Foreign Affairs.

By Mr. FRASER (for himself, Mr. ADDABBO, Mr. ANDERSON of California, Mr. ASHLEY, Mr. BIAGGI, Mr. BLATNIK, Mr. BOLAND, Mr. BOLLING, Mr. BROWN of Michigan, Mr. BROWN of California, Mr. BUTTON, Mr. CONTE, Mr. DADDARIO, Mr. DIGGS, Mr. DULSKI, Mr. EDWARDS of California, Mr. EILBERG, and Mr. ESCH):

H. Con. Res. 284. Concurrent resolution, Atlantic Union delegation; to the Committee on Foreign Affairs.

By Mr. MORSE (for himself, Mr. MCCARTHY, Mrs. MAY, Mr. MIKVA, Mr. MOORHEAD, Mr. MOSS, Mr. O'HARA, Mr. OLSEN, Mr. OTTINGER, Mr. PODELL, Mr. POWELL, Mr. PRICE of Illinois, Mr. PURCELL, Mr. QUIE, Mr. REES, Mr. REID of New York, Mr. REUSS, and Mr. ROBISON):

H. Con. Res. 285. Concurrent resolution, Atlantic Union delegation; to the Committee on Foreign Affairs.

By Mr. UDALL (for himself, Mr. RODINO, Mr. ROYBAL, Mr. ST. ONGE, Mr. SCHEUER, Mr. SCHNEEBELI, Mr. SISK, Mr. SMITH of New York, Mr. STAFFORD, Mr. STANTON, Mr. STEIGER of Wisconsin, Mr. STRATTON, Mr. TEAGUE of California, Mr. THOMPSON of New Jersey, Mr. WRIGHT, and Mr. WYDLER):

H. Con. Res. 286. Concurrent resolution, Atlantic Union delegation; to the Committee on Foreign Affairs.

By Mr. TEAGUE of California (for himself, Mr. HORTON, Mr. MIKVA, Mr. CAHILL, Mr. BLACKBURN, Mr. PIKE, Mr. MOLLOHAN, Mr. MCCLOSKEY, Mr. LUJAN, Mr. LLOYD, Mr. HALPERN, Mr. MANN, and Mr. STEIGER of Arizona):

H. Res. 433. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on the Environment; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

204. By the Speaker: Memorial of the Legislature of the State of Colorado, relative to funds for the construction of Mount Carbon Dam; to the Committee on Appropriations.

205. Also. memorial of the Legislature of the State of Alaska, relative to the definition of ammunition in the Federal Gun Control Act; to the Committee on the Judiciary.

206. Also, memorial of the Legislature of the State of Alaska, relative to the establishment of the Continental Sheif as the exclusive fisheries zone for the United States; to the Committee on Merchant Marine and Fisheries.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. EDWARDS of Louisiana:

H.R. 11919. A bill for the relief of Fred J. King; to the Committee on the Judiciary.

By Mr. O'NEILL of Massachusetts:

H.R. 11920. A bill for the relief of Carmelo Privitera; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

FARM PAYMENTS—SHOULD A CHANGE BE MADE NOW?

HON. ROBERT DOLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. DOLE. Mr. President, last week there was nationwide publicity concerning an amendment adopted by the House of Representatives to the bill making appropriations for the Department of Agriculture which would limit farm program payments to not more than $20,000 to any one farm operator.

It was evident from debate on the bill that there is widespread misunderstanding concerning the purposes of the farm program. There is a belief widely held that farmers receiving payments must be on easy street. The deplorable condition of the agricultural economy belies this notion. Thousands of farm families continue to abandon farming as a way of life only because they are unable to make an existence. Lagging farm income forces those able to farm to acquire more land to operate only as a matter of survival.

An illuminating and timely editorial entitled "Farm Payment Change Should Await a Whole New Program," published in the June 2, 1969, issue of the Kansas City Times, does much to place in proper perspective the question of farm program payments. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARM PAYMENT CHANGE SHOULD AWAIT A WHOLE NEW PROGRAM

The proposal to limit the amount of dollars paid to any one farmer under government farm programs is one of those emotional issues that reaches far beyond the immediate factors.

To suggest that large payments going to "rich" farmers could be better utilized by poor people is a dramatic presentation. If that were all there is to the proposal, the answer would be simple.

The fact is, programs for the poor are not dependent on appropriations for farm programs. Actually, the programs are designed to sustain a prosperous agriculture and certainly one avowed purpose is to decrease poverty. A depressed agriculture not only would contribute to poverty on the farm but in cities as well.

It can be properly asked, however, whether the current farm program is the best that can be devised. Most farmers would contend that their incomes should be higher. Statistical evidence, comparing them with other segments of the economy, suggests they are right, despite criticism of government payments.

The current program has two primary goals: To "buy" a reduction in acreage and thereby curtail the production of surpluses and to increase farm income. To get payments, farmers sign a contract with the government to cut their planted acreages. If the idea is valid that an acreage reduction is good for farmers and the economy of the nation, then it is valid for big farmers as well as small farmers. If big farmers are pushed out of the programs and plant from fence to fence, their increased production would tend to reduce prices for the products from the small farms. These are among just a few of the reasons why the payments are necessary if the present program is to function.

The proposal to limit the payments is for one year—1970. The contracts for this year cannot be changed. The present farm program expires in 1970.

The proper place to eliminate payments to large farmers would be in the new program that must be developed for 1970 and beyond. Undoubtedly this would require many basic changes in the farm laws. New concepts necessarily would have to apply.

Clifford M. Hardin, secretary of agriculture, has told Congress he believes such a program can be developed for consideration in this session of Congress or early in the next. The payment limitation idea should await that time.

VOTER REGISTRATION EFFORTS

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. FISH. Mr. Speaker, the Judiciary Committee is presently conducting hearings on the extension of the Voting Rights Act of 1965. This bill, which I am cosponsoring, falls squarely within the American tradition of free expression and the political process combining to produce rational decisions. It is in the tradition that reason and persuasion rather than assault are the ways to bring about change.

The importance of the extension of this act to the vitality of our system is explored in a column by Don Oberdorfer in today's Washington Post. The analysis of the contributions of charitable foundations to enlarged voter registration is timely also in that it reminds us of the interplay and effect of otherwise separate considerations by the Congress. For the information of my colleagues I am including Mr. Oberdorfer's column at this point in my remarks:

ATLANTA, GA.—In the immediate aftermath of the sit-ins and freedom rides which ushered in this decade of racial protest, leaders of the U.S. Government, private foundations and civil rights groups met to chart a way to redress the black man's grievances in the South without tearing the society apart. The course they chose was as old as the Constitution—not white power or black power but political power through the ballot box on a free and equal basis, one man, one vote.

This effort has achieved dramatic strides, though far from complete success. Today it is threatened by Congress and the Nixon Administration. Decisions to be made in the next several months will determine whether the Nation will scrap this drive to update the Constitution in the case of the Southern Negro.

The concept of political and social change through the ballot box is, as they say, as American as apple pie, but its application to the black man in many areas of the South was long denied. In 1962, according to the best available data, less than 30 per cent of the voting age Negroes in the 11 southern states were on the registration rolls.

This was the starting point for the Voter Education Project put together by the Southern Regional Council with the cooperation of major civil rights groups notably the NAACP, SCLC, SNCC and CORE—and with funds from private foundations and encouragement from the Federal Government. From its headquarters in Atlanta, VEP has funnelled more than $1.2 million from a dozen major foundations and other givers to local voter registration drives throughout the South. The campaign was strengthened immeasurably by the Voting Rights Act of 1965, which suspended much-abused literacy tests and authorized Federal examiners in areas where Negroes were denied the vote.

By last summer, according to the latest statistics, some 62 per cent of southern blacks were registered—roughly double the percentage of six years before. Though this falls short of the 78 per cent registration ascribed to southern whites, and though the power of the black man at the ballot box is still limited by many circumstances and contrivances, the rise of the Negro voter has had a substantial and generally healthy influence on southern politics. Some 461 Negroes are now serving in elective posts throughout the South, more than six times as many as in 1965.

At this point, one might expect that the southern voting campaign would be receiving widespread and even perhaps exaggerated accolades as an example of the vitality of the embattled American political system. Instead, it is facing the possibility that Washington officialdom is about to wring its neck.

One line of attack is on the foundation money which has supported the drive. As part of the Nixon administration's tax reform program earlier this year, the Treasury Department recommended to Congress that private foundations be prohibited from financing any activity "intended to affect a political campaign" specifically including voter registration drives.

The recommendation arose from the Ford Foundation's grant of $175,000 to the Cleveland, Ohio, chapter of CORE a few months before the 1967 election there. Much of this money went to CORE's registration drive in the inner city which helped nominate and elect Mayor Carl Stokes over white opponents.

A few weeks ago, executives of four major foundations—Ford, Carnegie, Taconic, and Field—met with presidential assistant Daniel P. Moynihan to plead that the voter registration campaign in the South should not be sacrificed because of the incident in the North. On May 9, the Treasury issued an almost indecipherable press release intended to show—as Treasury officials later explained—that the Government did not mean to interfere with "publicly-supported" registration drives such as that of the Southern Regional Council.

Last week the House Ways and Means Committee announced a tentative ban on "direct or indirect" foundation sponsorship of any activities intended to influence an election, including voter registration drives. While the text of this proposal has not been made public, the indications are that it would stop the funds to the southern campaign.

At the same time, the Nixon administration has shown signs of hesitation about the extension of the Voting Rights Act, which expires next year. The civil rights groups engaged in the voting drive—probably the healthiest surviving remnants of the civil rights movement—have appealed for the Act

to be strengthened to eliminate abuses. Now they fear that it will be weakened instead or even junked.

It is true, that Mr. Nixon and the Republican Party have won the support of very few of the 1.6 million southern Negroes who are reported to have registered since 1962. However, the broad principles and object lessons involved clearly outweigh any political advantage or disadvantage in this region of 18 million registered voters.

The Nixon Administration, like the Kennedy and Johnson administrations before it, has appealed to protesters to channel their energies within the system. Mr. Nixon has argued that violence and disorder are unjustifiable because legitimate means are available to deal with the problems at hand.

At the moment, the evolutionary process which Mr. Nixon extolls is being threatened in Washington. If he means what he says about the merit and vitality of the American system, he will not let the voting rights campaign go down the drain.

SENATOR YARBOROUGH MAKES STRONG PLEA FOR OCCUPATIONAL HEALTH AND SAFETY LEGISLATION

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. RANDOLPH. Mr. President, accidents and illness in American industry are costing the Nation's economy billions of dollars every year. Many more people are injured, it is indicated, while at work than are wounded while fighting in the Vietnam war.

Last night the Senator from Texas (Mr. YARBOROUGH), the distinguished and able chairman of the Committee on Labor and Public Welfare, discussed this serious national problem in an address before the Occupational Safety and Health Conference conducted by the Industrial Union Department of the AFL–CIO. I was present as he carefully delineated the scope of the problem and urged the passage of the Occupational Safety Act of 1969, which is now being considered by his committee.

I ask unanimous consent that Senator YARBOROUGH's knowledgeable and thought-provoking remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN INDUSTRIAL SAFETY LAW IS NEEDED NOW

Over the Memorial Day weekend, it was difficult to turn on the radio without hearing a plea to drive safely. There is constant emphasis on the ever increasing toll of injury and death due to highway accidents. Three years ago Congress made a start toward reducing these needless injuries, when it passed the National Traffic and Motor Vehicle Safety Act of 1966. Under this law the Secretary of Transportation has established safety standards for automobiles, and everyone is aware of the headrests, seat belts, dual braking systems and other improvements which are on the new model cars.

Yet, according to the National Safety Council there were more disabling injuries and deaths in the work situation than were due to motor vehicle accidents in the first six months of 1967. Specifically, there were 850,000 motor vehicle injuries and 23,600 deaths—and 1 million work injuries resulting in temporary or permanent disablement and 6,900 deaths.

During the same period in Vietnam there were 4,899 deaths and 31,913 military personnel wounded or a total of 36,812 injuries and deaths; that is, there were roughly 30 times as many people injured at work in the United States as were injured fighting in Vietnam during the same six months of 1967.

In 1967, work accidents and illnesses cost the American economy $7.3 billion. Ten times more man-days were lost due to injury than were lost because of strikes in 1966. Obviously, industrial safety and health problems merit our most careful consideration.

Yet last year when Congressman O'Hara and I, with the help of Secretary Wirtz, Asst. Secretary Esther Peterson and Senators such as Jennings Randolph who is with me tonight, introduced into the House and Senate the first comprehensive occupational heatlh and safety bill, we drew the critical fire of several organizations who claim that legislation of this type is too expensive.

One may well ask too expensive for whom? Is it too expensive for the company who for lack of proper safety equipment loses the service of its skilled employees? Is it too expensive for the employee who loses his hand or leg or eyesight? Is it too expensive for the widow trying to raise her children on meager allowances under workman's compensation and social security? And what about that man—a good hardworking man—tied to a wheel chair or hospital bed for the rest of his life? That's what we're dealing with when we talk about industrial safety.

We're talking about people's lives, not the indifference of some employers. We're talking about assuring the men and women who work in our plants and factories that they will go home after a day's work with their bodies intact. We're talking about assuring our American workers who work with lethal chemicals that when they've accumulated a few years seniority they will *not* have accumulated lung congestion and poison in their bodies.

Must we always have disasters in order to pass safety legislation? As a nation, we have simply not faced up to the real issue, and that is that our workers are being killed needlessly, that they are being injured and disabled and infected on the job by largely preventable accidents and disease.

It is true that many large industrial establishments have excellent employee health and safety records. They are to be highly commended, and they would not be affected by the basic standards that would be set under the proposed legislation now before Congress.

The real need for safety and health standards is to be found in plants that do not have adequate safety regulations. Most plants, as a rule, offer little or no protection for their workers. And these plants constitute 98 percent of all working establishments in the United States.

Today, job safety laws and regulations are scattered pretty thinly between local, county and state governments.

Many of these laws are not laws at all. They call for "voluntary" compliance—and you know how anxious management can be to spend money on its employees!

Four states still have no safety inspection staff of any kind—and no safety regulations. My own state of Texas has one of the poorest industrial safety laws in the nation.

In fact, there are only about 1,600 safety inspectors working for all state governments in the Union and 87 in the federal service. Of the state inspectors, about half are general safety inspectors and half are specialists who examine boilers, elevators and the like. That is about 17 general safety inspectors per state in the United States.

I should note that inspectors are useful not only for what they do, but more importantly for what they represent—a commitment of the government to ensure proper working conditions for its citizens. Most companies don't violate the laws of the United States, but the laws must exist for the companies to know that it is the public policy of the United States to protect its citizens from industrial accidents and disease.

We know worker accidents can be prevented. The National Safety Council has 10,000 member companies who—over the past ten years—have maintained an excellent low-accident rate. These companies lost only one-fourth as many man-hours during the past ten years as the national average.

We know that our workers' lives can be protected. It's good business to protect your workers. And yet in 1966, there were 14,500 industrial deaths—2.2 million injured permanently—and another 7 million who sustained less serious injuries.

That's why I introduced my occupational safety bill last year, and why I was happy to defer as the principal sponsor of S. 2193 to Senator Williams, the new Chairman of the Labor Subcommittee. Needless to say, I am co-sponsor, and as Chairman of the full Committee on Labor and Public Welfare, I intend to make every effort to help better the working conditions of our citizens by improving occupational health and safety.

The Occupational Safety and Health Act of 1969 will give the Secretary of Labor new powers to set and enforce safety and health standards. It provides for research, training and special safety education campaigns. And it encourages the states to set up their own strong safety programs and to enforce them.

For too long we have watched our fathers and our brothers and our sons and daughters suffer needlessly on the job. We have seen lives lost—limbs torn—wages and work-hours missed—and we have seen human grief.

The time for change is today. I need your help and your support to help pass the Occupational Safety Act of 1969.

TAXES, TAXES, TAXES

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. MILLER of Ohio. Mr. Speaker, grassroots concern about rising taxes imposed at all levels of Government continues to grow. A very incisive editorial on the topic of taxes appeared recently in the Wellston Telegram, one of the leading newspapers published in the State of Ohio. Mr. Lawrence Townsend is editor of the newspaper and authored the editorial. I offer it for inclusion in the RECORD at this point:

TAXES—TAXES—TAXES

Taxes at all levels of government have now risen to the point where authorities appear to genuinely fear a taxpayers revolt. Exhorbitant property taxes, it is predicted, will force some people out of their homes. Refusal of voters to approve bond issues are compelling cutbacks in education frills and even the closure of some schools for limited periods. Taxpayer pressure is also felt at the federal level.

As a consequence of the rising concern over taxes, we may see in the coming months a new political approach to the whole subject of spending and taxation. For one thing, it is likely that the carefully cultivated illusion that people can get something for nothing from the government will go down

the drain, as public officials are faced with the ever-increasing necessity of balancing each new spending program with additional tax revenue or new bond issues.

For another thing, there will very likely be redoubled efforts to make tax systems more palatable—and more equitable. Indicative of the trend is a new Treasury Department study that has been submitted to Congress proposing sweeping tax reform for the federal government. The study is a 960-page 8.5 pound document, compiled by treasury experts over a two-year period.

According to experts, the highly detailed technical document is probably the most comprehensive tax reform ever put together by the Treasury Department. As such, it will be the standard for judging all other tax reform bills offered in Congress and the basis for whatever legislation is eventually written on the subject.

The proposals in the study are directed to making the tax laws more fair and not at raising money. In the main, they would reduce the federal tax burden of low income families, the elderly and the middle income group. To balance the tax loss from these groups, the study proposes closure of "loopholes" used by millionaires and corporations.

Other proposals in the study deal with simplifying and changing many of the rules on deductions for charitable contributions, state gasoline taxes, etc. The study passes over some of the controversial targets of the more extreme school of tax reform. These include mineral depletion allowances, rapid real estate depreciation provisions, the capital gains tax and tax-free municipal bonds. Instead, the treasury experts suggest a minimum tax on gross income of the wealthy who reportedly use present laws to escape their fair share of taxes.

Press reports on the treasury study may easily lead people to believe that proposed tax reforms would shift much of the tax burden to higher income groups. Common sense should tell us this is not possible. The cost of government has become so great there is no one to bear the burden other than the majority of citizens of modest means.

As the pressure grows for tax relief, we should not lose sight of the main truth. Real tax relief must await a realignment of government spending in relation to the tax-paying ability of the people. Moreover, in the search for ways to ease the tax burden on those least able to pay, we should remember that a tax system must not only seek to be fair, but must also preserve the incentive of workers and producers. The fable of killing the goose that lays the golden egg is as valid today as ever.

SEMANTIC WARFARE

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. FANNIN. Mr. President, a few days ago I placed in the RECORD a highly interesting research paper on the semantic differences in the language of negotiations between the United States and Russia. That research brief was most enlightening to me and I hope it proved beneficial to my colleagues and others in the Government of this Nation called upon to deal with the Soviets in international negotiations.

Since the Senate is called upon to advise the President and give its consent for the ratification of international agreements, it is most important that we understand the nature of the semantic battle we are in with the forces of communism, or perhaps more properly with the forces of Marxist-Leninism.

Because of our open society, Mr. President, we are accustomed to the free interchange of ideas and often find that a new word or phrase more accurately expresses the things we have to say; so we often interchange words that in their essence means the same thing. We use U.S.A. to mean the Federal Government. We say United States when we mean Congress, the executive branch, the judiciary, the comparable governments on a State and local level, and all the people.

Behind the Iron Curtain the same semantic rules do not prevail. Because of the nature of an authoritarian society, the saying of a character from "Alice in Wonderland" is the rule of semantics:

> When I use a word, it means just what I choose it to mean—neither more nor less.

So it is with those authoritarian governments that seek to subvert the whole world to their particular system; when they use a word, it means what they say it means, neither more nor less.

How then are we to prepare ourselves to properly negotiate when we are at this obvious semantic disadvantage? It becomes necessary for us to understand the nature of this conflict—this systemic warfare in which we are engaged. By understanding we can greatly reduce the effectiveness of the semantic trickery that has so often plagued our international agreements in the past.

Mr. President, to contribute to this understanding I ask unanimous consent that several pertinent quotations and an article entitled "Systems in Conflict," prepared by the American Research Foundation, be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

N. S. Khrushchev, November 23, 1955; Speech, Bombay, India: "You know that the heads of Government of the Four Powers met in Geneva and that the Foreign Ministers of the Four Powers met there later. Great efforts were made to achieve agreement but the results were very small so far. This happens because we understand the same words differently".

John F. Kennedy, Report on European Talks, Washington, June 6, 1961: "And just as our judicial system relies on processes appearing in court and on cross-examination, instead of hearsay testimony of affidavits on paper, so, too, was this give and take of immeasurable value in making it clear and precise what we consider to be vital, for the facts of the matter are that the Soviets and ourselves give wholly different meanings to the same words—war, peace, democracy and popular will".

Weekly Journal, Warsaw, July 1958: "In our public, political and intellectual life, in our organizations and newspapers, there exists a special figurative language. It consists of the usage of certain terms of phrase. All that is needed is a clue. These who have guessed that clue are able to read public utterances as if they were an open book and thus learn a lot of things. It goes without saying that one has to read between the lines to follow hidden ideas, and this reading between the lines is not illegitimate. On the contrary, the texts are construed in such a way that reading between the lines is the only way to grasp their meaning. To be able to follow this figurative language one has to possess many years training in reading it."

Evgeni Yevtushenko, Shosse Entusiyastov, Page 18, Moscow, 1956: "Comrades, you have to give words back their original meanings."

SYSTEMS IN CONFLICT

For years the Communists have plainly told us—and are still telling us—what they will do and how they plan to do it. They tell us, of course, in a language all their own. Sometimes this language is so esoteric that it is difficult even for people who are fully acquainted with the ideology and the organizational and operational methodology of the Marxist-Leninist camp to apprehend. This is by design, for language manipulation is one of their strategic methods of conquest.

Since the conflict between the World Capitalist System and the World Socialist System is being waged mainly in the realm of ideas, it is essential to be constantly aware of the strategy and tactics employed in the struggle. This awareness is possible only after careful and continuous analysis of statements issuing from the Communist sources, subjecting the words used in those statements to almost microscopic scrutiny in search of their meaning within the context in which they are used. Only when the Communist meaning is understood can it then be challenged.

As President Kennedy said, the two camps "give wholly different meanings to the same words". It is perilous, therefore, to assume that their meaning can be construed as equivalent to ours. Furthermore, the whole context of communication must be taken into consideration—the source and the object, the writer and the reader, the speaker and the hearer.

It is intended here to show the way to the understanding, meaningful comprehension, by pointing out a process of semantic analysis aimed at cutting through the superficial layers which can encrust the words and uncovering the significant core of their actual meaning. A reader of contemporary news finds himself confronted with numerous words, terms, and phrases which sound familiar but, to the Marxist-Leninist faithful these words more often than not, have a different meaning. Some of the terms are entirely new and strange. Many of them can be found in the Communist classics, but for the most part, they are the products of the last two decades. They tend to express relevant intentions and opportunities to advance Communist designs on the free world.

Marxist-Leninist programs, policy and action have always moved along dual channels the conventional machinery of the Union of Soviet Socialist Republics (USSR) as a nation-state, and the World Revolutionary Movement which is headed by the Communist Party of the Soviet Union (CPSU). This latter operates under the name of the World Socialist System and its multipurpose subsystems; the Commonwealth of Socialist Countries, the World Marxist-Leninist and Workers' Movement, the class liberation movement which is labelled, the National Liberation Movement, and myriads of internal and world-wide fronts and infiltrated nonparty organizations.

There is another dualism with which we are concerned here, namely, the linguistic duality of communist terminology and usage. The language of Communism can itself constitute a deadly weapon to be used in the Marxist-Leninist assault on the free world. When that language is understood correctly, its effectiveness as a weapon is weakened considerably. It is essential, therefore, to focus sharply on the semantics of Communism, casting aside conventional, traditional meanings, and searching for the exact meaning attached to even the most commonplace words in the political vocabulary of today's struggle. The tendency to equate verbally what cannot be equated conceptually provides the Communists with semantic am-

munition for assault on all levels of life in the free world. In this, warlike intentions are attributed to the community of so-called "Peace-Loving" countries and states.

The study of semantics is a dynamic, vital craft. It can never be static. It is subject to constant change, particularly in regard to the shifting dual vocabulary of Communism. For in the free world, this is precisely where one of the major problems lies in efforts to determine the true meaning of the language of Marxism-Leninism. The behavior of the USSR/Soviet Union and the "Russian" complex is described by different terms at different times. There is an almost total absence of delineation and precisely defined words and terms. The Party Line and its symbols are ambiguous; occasionally, however, one may be able to detect at least three "standardized" terms of reference: Right, Left, and Correct. These three "standardized" usages change with the nuances of the Party Line.

Words are symbols for ideas and images without which we could not communicate with each other except by gestures and inarticulate noises. We take words for granted and find it difficult to imagine that ancient time when our primitive ancestors did not have them. In speech we often use words and terms loosely, knowing that we can rely on the tone of voice, inflection, facial expressions and gestures to get the meaning across. In writing, however, the word stands alone. It must in itself carry the full import of its meaning.

Effective communication through the use of language depends upon whether or not understanding is present. If words have different *intentional* meanings for different parties, mutual understanding is impossible. In trying to comprehend the true meaning of the language used, semantics, or the study of meanings, is important.

In any study of ideological or other *transnational semantics* it is necessary to examine doctrines, key words and terms, slogans and phrases from the point of view of how they are understood as well as what they mean. The style of language is very informative; it varies according to particular situations, but certain characteristics can always be observed as being indicative of its true source in a democratic culture or in an autocratic culture. To the skillful interpreter, style of language is also useful as a barometer to measure significant political and other trends. A correct interpretation will depend largely on the accuracy of that measurement.

Today, in a world where the expression of diverse ideas affects daily world events, whether the expression conveys meaning or not depends upon the writer/speaker and the reader/hearer. The words and phrases of common usage throughout the world, however, have been ideologically redefined and molded by the Communists and imbued with a new class meaning which is exclusively designed to serve their purpose. Thus Marxist-Leninist leaders may communicate with their followers and adherents anywhere on the face of the globe. Communists and their ideopartisans use terms of established conventional usage which we unconsciously understand and interpret in our accepted English connotation. These expressions have definite values for us. They do not have the same values and significance for the Communists who use them malevolently.

The most important and striking feature of the Communist dual use of language is the deliberate effort to convert it into a powerful instrument for the Marxist-Leninist hegemony to wield over the human intellect. The effort to transform the substance of language while maintaining its outward and visible or audible forms, to deliberately destroy the significance of words whose conventional meaning is inimical to Marxist-Leninist purposes and to attach a new specific meaning that makes words allies of Communist ideology is *semantic subversion and deception.*

On the surface, their meaning appears to be innocuous; but when read or heard by persons who know the Communist dual-value semantic inference, their true significance as conveyors of the Party's ideological and instructional directions can be perceived. Their true meaning is hidden from the uninitiated or casual reader. Hence by the use of ostensible, legal jargon, resorting to words of unquestioned virtue in another context, the Communist leadership is able to provide ideological guidance as well as organizational and operational directives from the Communist Party of the Soviet Union without having to resort to illegal or clandestine methods and activities.

The Marxist-Leninist ideological, organizational and action image as conveyed by their words and terms is shaped according to their New Scientific World Outlook or the New Historical Perspective based on concepts of Class Systems in Conflict. In order to perceive, therefore, what the Communists are really saying, we must study their writings in the light of their own ideological, indoctrinational and organizational conditioning as well as in the light of their practical action experience in the implementation of the Communist tenets. This conjunction of conventional words and terms and their implied Marxist-Leninist meaning can best be made clear through *semantic analysis* and subsequent interpretation. Consequently, in order to fully understand Communist *semantic warfare,* one cardinal rule must be rigidly observed when reading Communist and fellow-traveled writing; *note the origin of the writings and read them as they understand them.* Only thus can the real, the substantive meaning of these key words, terms and phrases with their variables be correctly understood. A regular perusal, study and analysis of Communist and Soviet Russian and non-Russian publications will disclose to the trained reader a great deal of information. To arrive at a correct semantic interpretation, however, not only literal translation (i.e., form), but also idiomatic interpretation (i.e., substance) must be applied.

When a key word like "peace" is used by the Communists, one must be cautious which clarifying variable or adjective should be mentally added to the term: Marxist-Leninist, ideological, or conventional geographic, tactical; or whether the word applies to the situation within the Communist Bloc or the situation within the Free World.

For instance, the Communists in their propaganda and agitation efforts would have the noncommunized world believe that peace in its fullest sense is universally enjoyed within that part of the world which the Communists control. On the other hand, the capitalist/imperialist world (as they would characterize it) is distinguished by aggression, exploitation, slavery, misery, hunger, tyranny, brutality, etc. It goes without saying here, that people of the free world believe identical conditions obtain within the communist world. Obviously both opinions cannot be correct. Both are extremely divergent conclusions based on the same set of inferences.

Facts which we can vertify determine the correctness of opinion in the free world. On the other side, however, facts are irrelevant in the Communist controlled world if the facts conflict with the CPSU Party Line. Under communism facts are usable only if they aid or abet the Communist objectives. From the point of view of Marxist-Leninist ideology, conclusions are drawn *prior* to the formation of facts. Thus, peace may be lasting and universal only as a result of total annihilation of the World Capitalist/Imperialist System with all of its social, political and economic foundations based on private ownership and free enterprise. To the Communist this will occur only when victorious Communist revolutions sweep through the world.

This *semantic distinction* must consistently be made regarding a great number of other key words such as justice, law, democracy, disarmament, sovereignty, self-determination, free elections, etc. Only by careful and painstaking scrutiny of these and other words of similar ilk can semantic confusion be eliminated. Otherwise, a meeting of minds is impossible. However, having arrived at a meeting of the minds or agreement on definitions of words used in a given set of circumstances or negotiations, there is no assurance that the ostensibly agreed to results or programs will be carried out by the Soviets and their Satellites. The Politburo of the Central Committee of the Communist Party of the Soviet Union *alone* will determine what action will or should be taken, what obligations honored, what obligations ignored or repudiated. The only criterion exercised is: Does compliance further the cause of the Communist Party of the Soviet Union? If the Communist cause is not furthered, by restorting to semantic subterfuge, the leadership of the Party can announce to its followers throughout the world that the ostensible agreements are not binding and are to be honored only in the breach.

Meanwhile, if semantically unenlightened, the Free World will formulate its plans on the erroneous assumption that agreement in fact has been reached and that the negotiators or treaty signatories are of one mind. All too often, as history unfolds it becomes obvious that such is in fact *not* the case.

Between the base, the superstructure and the infrastructure of the Marxist-Leninist system, there is an intricate framework of communications which is the prime exponent of Communist theory and practice.

The following sketch of the power framework within the USSR and satellite territories is found in the Marxist-Leninist concept of base and superstructure.

(1) The Communist Party of the Soviet Union is the leading ideological and organizational peace force, the vanguard of the World Marxist-Leninist/Communist/and Workers' Parties throughout the world. They are in power or are seeking power under their true colors or under such guises as, for one, the Socialist Unity Party in East Germany. They may be legal, semi-legal or illegal. In all cases their "official" organs are *Pravda,* the daily paper, and *Kommunist,* the monthly publication. There are innumerable other publications prepared and edited by the AGITPROP of the Central Committee on the CPSU. These, too, carry the officially approved action line.

(2) The constitutionally nonexistent international and nation-state entity called the Soviet Union according to the Communists is the real ideological, organizational, strategic force and material-technical base of the World Socialist System, which embodies:

(a) the Commonwealth of Socialist Countries or the national (*not* nation-state) government superstructures of the USSR; the Socialist, People's, Democratic, and National-Democratic Republics and other international governmental fronts such as the Warsaw Pact, CEMA, and others.

(b) the World Marxist-Leninist (i.e., Communist) and Workers' Movement in developing countries.

(c) The World National and/or People's Liberation Movement in newly independent states and other developing countries and dependencies;

(3) The world-wide superstructures or subsystems of national, provincial, local, regional, international mass or front and infiltrated organizations which are directly or indirectly under the control or direction of corresponding party fractions.

This entire World Socialist System is cemented by the principles of unity of will and action, democratic centralism and proletarian internationalism.

For the most part, in an informal situation, the terms "USSR" and "Soviet Union" are used interchangeably as are the terms

"USA" and "America". It must be pointed out here that this casual attitude is not shared by USSR Government officials, members of the CPSU, and all other Communists throughout the world. To them, there is not only a formal, verbal difference; there is a very real ideological distinction between the two terms. The Soviet Union can be defined as the base, while the USSR is defined as the superstructure of the World Socialist System. The governments of other socialist states are also built upon this base and are, therefore, also superstructures of the World Socialist System and its components, the Commonwealth of Socialist Countries. In speaking and writing, USSR officials and Communists are very precise in their use of these two fundamental key terms.

The distinction between the two can be demonstrated by the fact that while the bases of Capitalist and Socialist Systems are in a class war with each other, their superstructure (i.e., the USA and the USSR) are living together in a climate of peaceful co-existence as nation-states. This co-existence is based on a nonviolent class and political struggle and a kind of peaceful competition. The peaceful co-existence of the superstructures such as the one held at Glassboro in 1967. Furthermore, the United Nations Organization, being an organizaion of superstructures, provides a forum for peaceful debate between the member superstructures.

With the base, however, it is a different matter. Since the October Revolution of 1917 the two bases have been in a class struggle. This class war between socioeconomic systems, according to the Marxist-Leninist, will continue until one or the other is destroyed.

Upon realizing the distinction between the terms Soviet Union and USSR, it is a simple matter to see why the Soviet Union as the base openly supports wars of National Liberation throughout the world while the USSR, on the other hand, can support such war only within the limitations imposed by conventional International Law and such recognized codes as the U.N. Charter.

Between the base and the superstructure lies the complex infrastructure of the Marxist-Leninist system, namely the party fractions. These fractions are in effect the tentacles of the Communist Party of the Soviet Union. They infiltrate and penetrate non-Party mass organizations and guide them along the path determined by the CPSU. Accordingly, the USSR, as well as the governments of socialist, peoples' and democratic states are nothing more than non-Party mass organizations or fronts which are penetrated and controlled by Party Fractions.

With this in mind, it is easy to reach the conclusion that governments which are infiltrated by Communist fractions must reflect a degree of ideological and other control by the CPSU. In the United Nations Organization, which incidentally is in itself a Superstructure according to Communist organizational concepts, this control and direction of the Superstructures by the base is evident directly and indirectly in the pattern of voting by the various member nation-states. The vote of nation-states with controlling overt fractions within the Communist bloc will indicate the Soviet Union's interlocking fraction leadership. These nation-states with overt fractions tend to vote according to the *indirect* guidance of the Communist Party of the Soviet Union: the voting pattern of these states is less obvious.

To understand the semantic warfare waged by the Marxist-Leninists in their ideological class struggle, one must be able to project the concept of base and superstructure into socio-economic, political and diplomatic realities. By following this semantic analysis, one may conclude that the USSR and its allied Socialist States—those within the Warsaw, CEMA, and other fraternal pacts—are nothing more than fronts, mass organizations or superstructures of the base, organized, controlled, guided and disciplined by the CPSU whose party program is actually the constitution of the USSR and the Satellite States.

By adding to this semantic analysis a semenatic interpretation one may then conclude that any negotiations, treaties, agreements, etc., within and without the United Nations Organization, with the USA and other *bona-fide* nation-states of the free world are agreements between superstructures only. Such being the case, they can be readily broken whenever they endanger the base, the Communist Party of the Soviet Union. Furthermore, alliances between nations of the free world such as NATO, SEATO, etc., are viewed with alarm as posing a physical threat to the base and consequently these alliances become targets for attack. Within the Bloc, ideological threats are viewed with equal concern. Such is the case with current developments in the Czechoslovak Socialist Republic.

Incorrect understanding of the Marxist-Leninist concept of base and superstructure leads towards almost complete and irremediable break in effective communications between the two mutually antagonistic world systems, Capitalist and Socialist. Furthermore, the misunderstanding of the substantive language of such international documents as the Yalta Agreement led later to the "legal" seizure of power in Poland by the Communists. The misinterpretation of the international court decisions at Nuremburg led to the "legal" charge that U.S. pilots downed in North Vietnam are war criminals. The tragedy of Korea in 1950, Hungary in 1956, Cuba in 1959, and aspects of the strife in the Middle East stem from the failure of the free world to understand the language of Marxism-Leninism.

The introduction of Marxist-Leninist language and phraseology into the proceedings and resolutions of the United Nations Organization and its agencies—Disarmament, Human Rights, Colonialism, Non-Interference in Internal Affairs of States, Nuclear Weapons, Space and other international legal statements—provides the USSR/Soviet Union, that is to say the Communist Party of the Soviet Union with legality and approved semantic license in conventional international relations.

This legality is necessary to the imperative to maintain relations with capitalist and other non-aligned nation-states pending the national liberation of the free world's class oppressed peoples who are to be inspired ideologically, organized and supplied by the world revolutionary base, the Communist Party of the Soviet Union. In order to exploit the concept of a Western parliamentary form of government, the superstructure, i.e., the USSR and the Socialist States as these latter exist as nation-states, were set up. The base considers these to be but temporary expedients, however, for the Communist Party of the Soviet Union rejects the concept doctrinally.

Peaceful co-existence between states has been devised as a convenient, long-range means or tactic for entering into formal intern-nation-states relations with noncommunist states without endangering the existence and security of the Communist Party of the Soviet Union whose ultimate goal is the establishment of the classless society throughout the world. Or, in other words, whose ultimate goal is world domination.

Before World War II, the communist party of the Soviet Union's world political party line was to take over the capitalist society and its governments by violent means or armed struggle. This policy did not produce the expected results, i.e., world revolution, so it was expediently changed to cold war, or political, diplomatic and economic struggle, or class war by other means such as semantic deception and subversion with an eventual, nonviolent takeover of capitalist society and its governments. This, then, is the period of semantic warfare.

The Agitation and Propaganda Department (AGITROP) of the Central Committee of the Communist Party of the Soviet Union has the major responsibility for the conduct of semantic warfare. This Department has a vast scope of responsibilities, namely:

(1) The Program of the Party, General Party Line, and other basic Party resolutions and decisions,

(2) to designate specific courses of action, i.e., tactics, in all matters affecting government and other mass organizations or fronts on all levels,

(3) to mold and mobilize public opinion within and without the Communist Bloc so that it will most effectively support and facilitate the implementation of short and long term aims defined by the Politburo of the Central Committee of the CPSU,

(4) to establish and implement guide lines for all communications media both governmental and public, both within the Communist Bloc and in the components which lie outside the Bloc,

(5) to control all societal life, including press, publishing arts, scientific, technological and academic work. This control is exercised by ideological censorship,

(6) to assist in economic, labor, education and other Party activities,

(7) to serve as the internal and external security guardian,

(8) to prepare all material and guidance for delegates and participants in international organizations,

(9) to prepare and assist in all cultural, academic and other exchanges between nation-states, public organizations, societies, etc.

This broad spectrum of responsibility is carried out by fractions which the AGITPROP guides and controls ideologically through the cadre department of the central committee of the CPSU. It is the cadre department which is charged with the responsibility, the cadre department relies on the united fronts.

The formation of united fronts is an essential part of Communist technique for the seizure of power. It is a tactical weapon employed by Marxist-Leninists to broaden both the real and the apparent basis of support where they strive to attain power. Through the united fronts the Marxist-Leninist party seeks to form alliances or coalitions with non-Communist elements and organizations on mutually acceptable programs which embrace popular themes such as "Peace" "anti-imperialism', "neo-colonialism", "genuine democracy", "sovereignty", "anti-corruption", etc., which are popularly acceptable and at the same time consonant with the tactical approach of the Party. Being tactical, Communist objectives for the United Fronts vary with the country concerned. These objectives range from *minimum goals* to *maximum goals*. The following general objectives, however may be said to be universal:

(1) to give the Communist Party respectability and to broaden its base of support,

(2) to attack, discredit and denounce major ideological enemies of the Communist Party in order to eliminate class enemies under the guise of popular support,

(3) to enable the Communist Party to make converts from membership of allied parties, and then build up fractions in those parties,

(4) to capture, if possible, entire parties and organizations,

(5) to prepare as large a proportion of the masses as possible for a sudden switch to the offensive when the *revolutionary situation* warrants and, ideally, to establish a

United Front, National Unity or a National Democratic Government.

The Communists usually establish two basic types of United Fronts,

(1) the United Front from below whose objective is the neutralization of the non-communist leadership, gaining thereby access to the rank and file of the masses. Leaders are to be isolated by exposing them before the people in general. The ranks are to be won by appeals for unity in the struggle against exploitation by capitalism/imperialism.

(2) The United Front from above which is known as the Popular, or Peoples' front. This transcends a purely working class arrangement and seeks to compose an "alliance" with petit-bourgeois, peasant, and bourgeois parties for immediate aims of a specific nature. Into this category such organizations as the World Peace Council fall.

Our major concern here is, of course, with the language of international diplomacy and government. This is an area for the specialist, the expert. But an informed public is also an essential segment of the socio-political structure of our time. A correctly informed public can be a great force for stability in the free world. An incorrectly informed public can be said to be the Achilles' heel of government. In informing itself, the serious public is confronted with a problem of the first magnitude. The journalese which we rely on so heavily can be so misleading as to sacrifice truth in the interests of brevity. For example the words "Russia", "Moscow", or "Kremlin" are almost universally used as a broad symbol for the hub of the Communist world. In actuality, they are by no means synonymous, for as a political nation-state "Russia" died with the last Czar. In the world of hard political realities, "Russia" is an utterly meaningless word, except for its historical meaning.

Furthermore, even a literate public is inclined to project its own corpus of background, facts, inferences and value judgments into their interpretation of key words and phrases. For instance, take the word "Peace". There is no more pregnant word in the Communist vocabulary. To assume that they use the word with the same body of reference as does a spokesman for the free world is to lay one's self open for frontal attack. The assumption that everyone wants Peace in the same sense that we use that word is erroneous and can lead only to disaster.

The semantic barrier can be significantly reduced if wishful thinking is avoided and the problems are recognized in a realistic *substantive* manner rather than simply on the basis of the *form*. It must not be assumed that the Communist substantive meaning can be construed as being equivalent to ours.

Some people feel that there has indeed been a change of Communist policy for the better. As evidence of this they cite "Peaceful Coexistence". It must be cautioned here that that phrase itself is nothing more than a tactical formula designed to throw the free world off guard.

The factor of constant change served to complicate any semantic analysis of the language of Communism and emphasizes the need for intelligent, sophisticated and constant reevaluation. There are, however, some aspects of Marxism-Leninism which are fundamental and which need to be understood specifically in discussing Communist semantics. In spite of the seemingly overt appearance of change in the USSR/Soviet Union actions and verbal enunciations, the fundamental concepts of Marxist-Leninist theory and practices have remained intact since their inception.

There are many key words and phrases concealed in protective methods of expression or open codes known only to the indoctrinated communist cadres and their ideopartisans who master Marxist-Leninist ideology and methodology. Through one key word, term, combination of words, or phrases which originate in Marxist-Leninist, Maoist and other classics and in history, an open code to an entire orientation or policy line can be presented.

Most prominent among these key terms is Marxism-Leninism itself. This term appears so frequently in written and spoken communications of the CPSU and its affiliates that it is the most important key to the identification of documents as expressions of the party line regardless of the ostensible source of the actual document itself.

Stalin himself posed the question, "What, then, is Leninism in the last analysis?" He also answered it: "Leninism is Marxism in the epoch of imperialism and the proletarian revolution, or to be more exact, Leninism is the theory and tactics of the dictatorship of the proletariat in particular."

In short, Marxism-Leninism means a commitment to the class doctrine of complete destruction of the existing social class system based on private ownership of property by the use of nonviolent (political) and/or violent (armed) struggle and combinations of tactics essential to the establishment of a classless social order, the World Socialist System, throughout the entire world.

Manuilski further defined Marxism-Leninism as "The teachings of Marx, Engels, and Lenin as developed and supplemented by Comrade Stalin in the scientific world outlook of the international working class, the class which has won an historic victory on one-sixth of the globe. It is destined to overthrow capitalism and build a new communist society. Marxism-Leninism is the most revolutionary theory and practice that has ever existed in the history of mankind."

In conclusion, if it were not harmful to national security and to our survival as a free society and democratic government, this linguistic duality of Communism could be ignored. However, if this dual-value Communist language is not understood properly and checked, the Communists not only can infiltrate, penetrate, subvert and disintegrate the Free World's social order, but more ironic, they can and will do it with semantic license employing the United Nations and other forums of the Free World to do it *legally*.

LEGION CITES DRIVER

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. TEAGUE of Texas. Mr. Speaker, over the past several weeks a great number of organizations and Members of Congress have issued statements commending former VA Administrator Bill Driver for the magnificent job he performed as a career employee in several key positions within the Veterans' Administration, and more importantly, its top position as Administrator of Veterans' Affairs. Last week at a special reception the Legion's National Commander William C. Doyle honored Bill Driver by the presentation of a special citation setting forth his and that organization's appreciation for the excellent service Bill Driver performed for war veterans and their dependents. I am pleased to insert in the RECORD the wording of the American Legion Citation to Mr. Driver:

Born in Rochester, New York, May 9, 1918, and educated in the public schools and universities of this country, William J. (Bill) Driver decided to utilize his seemingly limitless talents and desire to serve his fellow veterans, community, and Nation.

This dedicated public official served with distinction as a Lieutenant Colonel, AUS, from 1941 to 1945, and in the U.S. Army from 1951–53, as evidenced by his military decorations, which include the Legion of Merit, Bronze Star Medal, Order of the British Empire, and Croix de Guerre.

Mr. Driver continued his outstanding service to his country as a career employee of the Veterans Administration subsequent to his military assignments, having received the Veterans Administration's two highest awards: the Meritorious Service Medal in 1951, and the Exceptional Service Award in 1960.

His exceptional administrative abilities in serving the sick and disabled veterans of our Nation brought him national prominence when, in 1964, he was awarded the Career Service Award of the National Civil Service League.

President Lyndon B. Johnson recognized Mr. Driver's extraordinary talents by appointing him Administrator of Veterans Affairs in January 1965, the first career Federal employee to hold this post.

As Administrator, Mr. Driver's scholarship in veterans affairs, his seriousness of purpose, and his sincere dedication in perpetuating the commitments this Nation has made to its veteran population, have brought unparalleled prestige to the Veterans Administration program. A gentleman of irreproachable moral and ethical principles, and one with a deep compassion for his fellow man, Mr. Driver initiated and brought to fruition several innovations within the program designed to improve the economic and social status of veterans, their widows and orphans.

The American Legion wishes to take this opportunity to express its heartfelt and sincere gratitude to William J. Driver for the excellent manner in which he administered the United States veterans affairs program during his tenure as Administrator of Veterans Affairs.

WILLIAM C. DOYLE,
National Commander.

APOLLO, PA., HONORS APOLLO 10

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. SCOTT. Mr. President, Apollo, Pa., the only city in the Nation with the name Apollo, has honored the astronauts who manned each of the historic Apollo space flights by making them honorary citizens of that city. The men of the Apollo 10 have been similarly honored.

I ask unanimous consent that a telegram from the mayor of Apollo to the crew of Apollo 10 be printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

MAY 27, 1969.

Congratulations on your historical Apollo 10 flight. Whereas on the 18th day of May 1969 the "men of Apollo" set forth from this earth via Apollo 10.

Whereas Apollo 10 did orbit the moon to further man's cognizance of the universe with the aid of one "Charlie Brown" and his capable companion "Snoopy" and

Whereas astronauts Thomas P. Stafford, John W. Young, Eugene A. Cernan did fur-

ther evolutionize the Apollo program with precise efficiency.

Whereas at 12:52 p.m. on this 26th day of May 1969 Apollo 10 returned from this fantastic mission to the moon therefore I, Duane S. Guthrie, mayor of Apollo, do hereby declare the "men of Apollo", Colonel Thomas P. Stafford, Commander John W. Young, and Commander Eugene A. Cernan, to be honorary citizens of Apollo, Pa.

DUANE S. GUTHRIE,
Mayor, Apollo, Pa.

A TRIBUTE TO CHIEF JUSTICE EARL WARREN

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. ANDERSON of California. Mr. Speaker, today I rise to pay tribute to one of the outstanding men of this century, our Chief Justice Earl Warren.

I feel privileged to be able to regard him as a close friend as well as a leader. During my tenure in the California Legislature, he was Governor of our State. Actually, I took office the same day he was sworn in, and I am convinced he will go down in history as one of the great Governors of California.

History will also regard him as one of our great Chief Justices. I choose to repeat the recent words of former President Harry Truman on the occasion of the Chief Justice's appointment as Chairman of the International Order for the Advancement of Peace:

> Earl Warren's reputation in the world community symbolizes justice, understanding and compassion for all peoples of all Nations.

These words aptly sum up that for which Earl Warren has stood throughout his public life, including his service in California as a district attorney, State attorney general and three-term Governor, as well as for the last 15 years during which he has served as Chief Justice of the Supreme Court of the United States.

These words also suggest what in the best and most meaningful sense is so often called the "Warren Court." As Chief Justice, Earl Warren has headed the Supreme Court during a time of unprecedented turmoil and change in the world and the Nation. It has been a time when the Court has been called upon to decide some of the most significant and controversial issues ever to come before it.

The decisions of the Court under Chief Justice Warren's leadership, as many others have pointed out, have had a revolutionary impact on our legal, social, and political structures. It no doubt is unfair both to the Chief Justice and to the Court to label it and the decisions it has made during his tenure with the name of one man. The Court's responsibility is a collective one, while at the same time each Justice is responsible in the Court's collective judgments for his own decisions. Yet there is no doubt that Earl Warren has been particularly suited by his experience, character, and abilities to head the Supreme Court during a period marked by "judicial activism" and, as has been said by Justice Schaefer of the Illinois Supreme Court, by its intentions to put "flesh and blood" on our constitutional ideals. One does not have to agree with all or each of the specific decisions of the Court in the Warren era. But history will not fail to recognize the tone and quality of the leadership Earl Warren has provided as the Court has sought to fulfill the substantive meaning of our constitutional rights, concepts and ideals.

In a recent statement on the work of the Court over the past 15 years, the Chief Justice mentioned those decisions which he thought were the most important rendered by the Court in this period. These were *Brown* v. *the Board of Education*, 347 U.S. 483 (1954), the first of the school desegregation cases, which spurred and dramatized a national awakening to the problem of racial justice in our society; *Baker* v. *Carr*, 369 U.S. 186 (1962), which required a reapportionment of the State legislatures in accord with precepts of justice in political representation during a time when the Nation's population has shifted massively to great metropolitan areas; and *Gideon* v. *Wainwright*, 372 U.S. 355 (1963), which symbolizes the Court's concern with civil liberties in the field of criminal procedure.

This summary by the Chief Justice of the Court's work during his tenure reflects Earl Warren's passionate concern for justice under the law that has distinguished his leadership of the Supreme Court, and the judicial philosophy which has guided his and the Court's decisions during this period in its history. This concern and philosophy were given eloquent expression by the Chief Justice himself in an address made in 1968 after he announced his impending retirement from the bench. The following excerpt from this speech deserves to be repeated as a testimony to his long record of public service to the Nation:

> Justice in individual cases is the basis of justice for everyone. A failure to protect and further anyone's individual rights leads to justice for no one . . . Justice will be universal in the country when the processes as well as the courthouse are open to everyone. This can occur only as the institutions of justice, the courts and their processes are kept responsive to the needs of justice in the modern world. Such a goal will be accomplished only as all elements of the legal system, the law-makers, practicing attorneys, legal scholars and judges, recognize the ever-changing effects of the law on society and adapt to them within the principles which are fundamental to freedom.

OIC EDITORIAL

HON. J. CALEB BOGGS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. BOGGS. Mr. President, on May 23, a Philadelphia television station, WCAU–TV, broadcast an editorial urging its listeners to "give meaningful support to a very meaningful program," the Opportunities Industrialization Centers. OIC was started several years ago by the Reverend Leon H. Sullivan in an effort to create a workable training program for the hard-core unemployed of Philadelphia. It has since flourished under the imaginative leadership of Dr. Sullivan, and now operates in more than 75 cities.

In an effort to expand and encourage this private effort, three of my colleagues joined me recently to introduce S. 1362, a bill to provide Federal financial assistance to the OICs. For a further understanding of the OIC concept, Mr. President, I ask unanimous consent that the WCAU–TV editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIC EDITORIAL

It started in an old abandoned jailhouse in Philadelphia. Now it has been visited by Presidents and international leaders to see what makes it go.

We're talking about Leon Sullivan's O.I.C. (Opportunities Industrialization Center) and it's not only going on here in Philadelphia but also in almost 80 cities in this country and in several foreign cities.

Even with the success of O.I.C., it has one basic flaw that you can help to alleviate. O.I.C. programs just cannot expand fast enough to meet the needs here in Philadelphia.

A financial donation to O.I.C. by a business or an individual is not a handout, it's an investment which helps all of us. Here's how it works. It costs on the average of about $1,000 to take an individual into O.I.C., train him and get him into a job. (Film.) There are over 30 specific courses at O.I.C. involving anywhere from a couple of months to a year for training. The electronics training course, for example, takes one year.

Many of the applicants to O.I.C. are recipients of welfare money. You and I are contributing to that welfare money through our taxes. Now, through O.I.C. the man is trained, he's on the job, and he begins (perhaps for the first time in his life) to earn money. No longer is he a welfare recipient. so some of our tax money is saved. But even more important, that man becomes a taxpayer. He also becomes a consumer with money in his pocket. And, according to Dr. Sullivan, by 1980, O.I.C. graduates will be adding some $150 million to the city's purchasing power. (Film out.)

Through a well-rounded training program, we see men and women come from the fringes into the mainstream of society. The one thousand dollar investment is paid back in no time at all.

But there just isn't enough expansion of O.I.C. programs because of the limited funds. There are over 10,000 people on the waiting list at O.I.C. in Philadelphia—over 10,000 who want to be trained, who want to work; many who want to get off welfare.

In its current campaign, the O.I.C. headquarters at 1225 North Broad Street in Philadelphia is hoping to receive, in addition to federal money, one million dollars from businesses and private citizens from around the Delaware Valley. WCAU–TV hopes that you will give meaningful support to a very meaningful program.

With individual participation by Philadelphians, the O.I.C. campaign will be a success. With increased funds, O.I.C. programs can be expanded.

Here's your chance to get involved.

WILLIAM J. DRIVER

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. SAYLOR. Mr. Speaker, I wish to add my name to those of my colleagues

who have expressed this Nation's sincere thanks to William J. Driver, who is retiring as head of the Veterans' Administration.

Bill Driver has been a respected leader and devoted servant to veterans for nearly a quarter of a century and in the past 4 years he has administered this huge sprawling agency with efficiency, integrity, and compassion.

He can take much credit for the vast changes we have seen in the past few years that have increased, improved, and expanded benefits to this country's 26 million veterans.

I express my appreciation to Bill Driver for a job "well done" and wish him the best in all his future endeavors.

ADDRESS BY PRESIDENT NIXON AT U.S. AIR FORCE ACADEMY

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Confrontation With Reality," published in the Washington Daily News of today, June 5, 1969. The editorial relates to President Nixon's address yesterday at the Air Force Academy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONFRONTATION WITH REALITY

President Nixon is overloaded with problems, many of them tough and delicate. But none is tougher or more delicate and none involves more gambles, more misunderstanding or bigger stakes than the military-defense-peace situation.

This situation is a whole complex of problems, and it was this complex Mr. Nixon faced in his speech yesterday at the Air Force Academy. We think the public, Congress, our allies and our foes should have a better insight into the Administration position than they had before.

The President, it seemed to us, laid it on the line: What we have to do, why we have to do it, what the alternatives are.

"I have no choice in my decisions," he said, "but to come down on the side of security."

To fail in this would be to risk failure in survival.

Without security we could do nothing. We could not promote peace, we could not solve our domestic problems. The weak can only hope and beg. Only the strong can deter adversaries, or bargain with them.

Moreover, if the United States does not stay strong, does not keep geared to the danger that "has changed but . . . not vanished," does not lead in striving for peace—then, as Mr. Nixon says, "the rest of the world would be living in terror."

This, then, is the national policy—as it has to be.

But standing up for a policy is one thing; putting it to work another. Here too, tho, Mr. Nixon faced the problems. And one of them is the rising torrent of anti-military oratory in Congress.

Mr. Nixon made plain his fundamental disagreement with "skeptics and isolationists" and effectively rebutted them. And he met head-on the new clique in the Senate which suddenly has loosed a blanket attack on "militarism" with all the generalities that connotes.

But even more reassuring was the President's statement that he was not disagreeing with those who reveal waste and inefficiency in defense operations, or who demand clear explanations of military buying policies, or who "want to make sure a new weapons system will truly add to our defense."

Such challenges are responsible and essential.

The military establishment invites much of the political assault it endures by its own shortcomings—by wasting money, by goofing on purchases, by going astray with its planning.

It is just as important for the President to recognize these things as it is for him to defend his Administration against the insinuations of ambitious political fault-finders.

The Defense Department should never be anybody's scapegoat, as Mr. Nixon said, but neither should it be everybody's sacred cow. It is not all virtue any more than it is all sinister.

The President, it seemed to us, was eminently sound in the perspective he applied to that issue.

We are in the midst of another hot debate—whether it turns out to be a "great debate" is uncertain. But the moral and social aspects of our defense posture, as well as the tactical phases, are being aggressively challenged—sometimes wisely and sometimes frivolously.

This is, by and large, healthy and necessary. Our strength is illusory if our policies are not resolute, if the enforcement of policy is confused, if our military system is not sharp and prudent, if our money is frittered away on the impractical or the wasteful.

What is cheering about Mr. Nixon's extraordinary speech at Colorado Springs is that it leads us to believe we have a President who clearly understands all these things, and is prepared to deal with them, who is keeping his cool and holding to his course.

And if this is so, then we can take heart that we may yet plod our way out of the babble of confusion and raucous dissonance which lately seems to have clouded our national purpose and dimmed our common aspirations.

PHILADELPHIA CITY COUNCIL RESOLUTION AGAINST SHIPPING OF MUSTARD GAS

HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BYRNE of Pennsylvania. Mr. Speaker, the Honorable Paul D'Ortona, president of the city council of Philadelphia, has brought to my attention Resolution 140, which was adopted by the council at a meeting on May 15, 1969. I am unalterably opposed to the planned shipment of mustard gas through Philadelphia sometime this summer as I feel there is a possibility an accident could occur—through mechanical failure, human failure, or subversion—which would be catastrophic for the citizens of Philadelphia. Therefore, I am interested that my colleagues have the benefit of the views of the Philadelphia City Council, as follows:

RESOLUTION 140

Resolution prohibiting the shipment of 2,975 tons of surplus mustard gas, and 30 tons of tear gas by rail or any other carrier through the City of Philadelphia

WHEREAS, The Department of Defense of the Army is planning to ship 2,975 tons of surplus mustard gas and 30 tons of tear gas by rail through Philadelphia this spring or summer for burial in the Atlantic Ocean at a point 250 miles east of Atlantic City; and

WHEREAS, The Department of Defense of the Army also states that 30 tons of tear gas are stored in 55 gallon drums; and

WHEREAS, The reason for this disposal is that the containers that these gases are stored in are either corroded or have become ineffective so that they leak gas; and

WHEREAS, The Department of Defense of the Army has failed to take into consideration the density of population that exists in the City of Philadelphia; and

WHEREAS, The Department of Defense of the Army has failed to take into consideration the possiblity of a derailment or other kind of accident if another carrier is used; and

WHEREAS, If such accident takes place the results could prove fatal to many residents in the City of Philadelphia who either live or work adjacent to the routes used by the carrier; therefore

Resolved, That this Council immediately instruct the City Solicitor of the City of Philadelphia to take immediate and appropriate court action that would block any movement of these gases through the City of Philadelphia; be it further

Resolved, That copies of this Resolution be forwarded to Senators Hugh Scott and Richard Schweiker and all Congressional Representatives from Philadelphia enlisting their aid at the Congressional level.

PAUL D'ORTONA,
President of City Council.

Attest.

CHARLES H. SAWYER, Jr.,
Chief Clerk of the Council.

TRANSPORTATION PROBLEMS RESULTING IN PART FROM STRIKES POSE SERIOUS THREAT

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. RANDOLPH. Mr. President, I have an interest and concern in the problems of collective bargaining as they relate to the transportation industry. I have endeavored to work with labor and industry representatives, as well as with Government officials in order to achieve a greater stability of labor-management relationships.

Recently, the activities of the Transportation Association of America in this same direction have been called to my attention. The TAA is a nonprofit educational organization with a broad spectrum of membership. It includes many types of transportation users, investors, and the six transport modes—air, freight forwarder, highway, oil pipeline, rail, and water. TAA's basic objective is to maintain and foster a sound national transportation system under private ownership and operation.

During the past 18 months, at the direction of the TAA Board of Directors, a transport labor-management study has been underway under the guidance of a TAA Transport Labor Committee. The committee is headed by Director Henry E. Seyfarth, of Seyfarth, Shaw, Fairweather & Geraldson, Chicago, Ill. In the words of Mr. Seyfarth:

The essential purpose of TAA's labor study is to get into the best possible position to make a worthwhile contribution to the solution of the labor problems of the transportation industry.

At a recent meeting of the TAA committee, one of the members presented a scholarly and provocative paper containing his own views on the settlement of labor disputes. The paper, entitled "Transportation Labor Legislation: From Peine Forte Et Dure to the 20th Century," was authored by Arthur M. Wisehart, corporate secretary and assistant general counsel of American Airlines, Inc.

Without expressing any comment or reaction to the document, I think it represents a statement worthy of wider circulation. Accordingly, I ask unanimous consent that the document be printed in the RECORD.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

TRANSPORTATION LABOR LEGISLATION: FROM PEINE FORTE ET DURE TO THE 20TH CENTURY [1]

(By Arthur M. Wisehart) [2]

This is a revised version of a paper presented recently at a symposium in Dallas sponsored by the Journal of Air Law and Commerce at Southern Methodist University.

Those of you who are students of Law French know that the phrase "peine forte et dure" in the title means "pain strong and hard". Having emerged recently out of a three-week strike with the type of settlement that is customary these days, the phrase seems an apt description of the game we euphemistically call collective bargaining.

"Peine forte et dure" was an English legal procedure which evolved in the middle ages as a substitute for trial by battle. It was invoked when an accused felon refused to accept a trial by jury, preferring trial by battle, and involved piling heavy weights on his chest until he either "confessed" or expired.[3] One of its purposes was to encourage "voluntary" acceptance of the rule of reason, in the form of a trial by jury, in lieu of the rule of force. Unfortunately, in collective bargaining today, we have not yet progressed beyond trial by battle, and Professor Arthur Goodhart, the eminent Anglo-American legal scholar, has singled out this problem as one of the greatest challenges facing our legal system today.[4]

As a technique, peine forte et dure bears an interesting resemblance to suggestions for the use of "non-stoppage" strikes or seizure in which the consequences are so painful that one party either "settles" or, as the formerly private New York City bus system, expires. One high corporate official has suggested that perhaps if a carrier and union would agree to propitiate the god of collective bargaining by ritualistically offering up and burning in a huge bonfire $20,000,000 in one dollar bills, in lieu of the revenues and wages which otherwise would be lost as a result of a strike, and then settle their agreement, at least the traveling public could be spared the inconvenience.

I. IS THERE A NEED TO CONTROL TRANSPORTATION STRIKES?

A recent law review article sets forth my proposal for amending the Railway Labor Act to control transportation strikes.[5] Copies are available for those who are interested in reading it.

Under the proposal, the responsibility for determining whether an airline labor dispute—or any part of it—should be submitted to arbitration would be transferred from Congress to the emergency boards. In deciding whether a dispute should be arbitrated, the emergency board would be guided by two important criteria: the effect of the threatened strike on the public and the prospect for settlement by collective bargaining. If an emergency board were to determine that a dispute should be arbitrated, the parties would be given a reasonable period of time to agree upon acceptable arbitrators and procedures. If the parties should fail to do so, the emergency board itself would prescribe the terms of arbitration. Thus, it should be possible (i) to restore emergency boards to the effectiveness originally contemplated, (ii) to eliminate what has been described as one-sided compulsory arbitration in which the carriers, regulated by the government, are virtually compelled to accept emergency board recommendations which the unions can ignore with impunity, (iii) to give collective bargaining a better chance to work by strengthening mediation, (iv) to relieve Congress from the necessity of reviewing the merits of labor disputes on an ad hoc basis, and (v) to place in the hands of disinterested experts—who would function somewhat as a specialized ombudsman or blue ribbon jury—the delicate question of whether the nature of the dispute and the public interest are such as to require third-party determination.

While I will be glad to discuss any questions about the proposal, my plan is to use the time available to analyze the *need* for limiting strikes in transportation. Once the need is generally recognized, then I think the means to satisfy the need will suddenly not seem so elusive. The first step in solving an intractable problem is the seemingly simple but often most difficult matter of recognizing that the problem exists. This fact is reflected in Step One of the Alcoholics Anonymous program, which is an admission that ". . . our lives had become unmanageable." So let's look at the question, "Have transportation strikes become an unmanageable disease—is there a need to curtail them?"

II. DO TRANSPORTATION STRIKES CREATE AN EMERGENCY?

The argument is frequently heard that transportation strikes create no true emergency, and that limiting them therefore is unwarranted. Whether such strikes create an emergency, of course, depends entirely on how "emergency" is defined. What may be an emergency to one is a tea party to another. I remember hearing some who had been personally affected by the five-airline strike in 1966 bravely insist that it was not an emergency so far as *they* were concerned. On the other hand, there were others who believed that the grounding of 6,450,000 passengers and the elimination of 70 percent or more trunkline service for 43 days from over 300 cities in the United States, in the midst of Viet Nam, if not an emergency, was a luxury that we could ill afford. It is estimated that a strike of the same five carriers in 1970 would inconvenience 10,000,000 passengers and 15,000,000 passengers in 1975.[6]

In Sweden the problem of defining what is an emergency was solved in an interesting way. To forestall the enactment of restrictive legislation against strikes, the two confederations of management and labor entered into a basic agreement for the control of disputes, and the framework established by that basic agreement remains in effect today.[7] In drafting the basic agreement, one of the most serious problems was in defining what constituted an emergency strike. After much fruitless debate, those responsible did a very practical thing. They concluded that no definition could be made which would both be objective and win general acceptance. They said that the need for restricting strikes in the public interest is directly dependent upon the circumstances of each case, a concept not foreign to the common law, so they established a Labor Market Board to assess the facts of each case as it comes up. If the Labor Market Board concludes that a given dispute threatens the public interest, then the confederations of management and labor cooperate in defusing the threat.

The lesson the Swedish experience teaches is that we need not throw up our hands in hopeless dismay simply because of lack of agreement in defining what constitutes an emergency. A reasonably adequate procedure for making such determinations as each situation arises can be established, and I think that the proposal in my Michigan Law Review article does that.

III. WHAT ARE THE COSTS OF A TRANSPORTATION STRIKE?

It may be that there will not be repetition of the 1966 airline strike. The IAM has gone back to the strategy of whipsawing one carrier at a time, the strategy which led to the demise of Capital Airlines in 1958. And the rail unions, faced with ad hoc arbitration legislation whenever a national rail strike is threatened, are also adopting the whipsaw tactic of carrier-by-carrier strikes. But a strike against a single airline such as American, United, or TWA today is the equivalent of a strike against the whole industry in 1954. And the New York transit strike in 1966 demonstrates that a transportation strike need not be national in scope to have consequences which are a serious matter for the entire nation. That strike, in a transit system in which advances in productivity have been virtually negative, brought the City of New York to its knees and extorted a settlement which at that time was unprecedented—three 5 percent wage increments over a period of 18 months.

The New York transit strike by the Transport Workers Union established a pattern which a rival union, the IAM, could not ignore when the time arrived for settling the open mechanics' contracts on five airlines later in the year. The IAM later took full credit for shattering the Presidential guidelines in the aftermath of its 43-day strike—and was criticized for having done so:

"The settlement, which has just been ratified by the International Association of Machinists, will raise the compensation of its members by an average of 4.9 percent a year, not by the 6 or 8 percent a year which some reports have inaccurately claimed. In addition, there is a provision for limited cost of living escalation, effective during the last 12 months of the three-year contract.

"The Council [of Economic Advisers] greatly regrets that its settlement so substantially exceeds its guideposts of non-inflationary wage behavior. It regrets the unwillingness of the Machinists' Union to accept the reasonable and responsible settlement of this dispute recommended by the President's emergency board, or even the somewhat higher settlement which the union's representatives negotiated on July 29." [8]

The strategy of the 1966 IAM strike was aptly summarized by C.A.B. Examiner Arthur S. Present in the Initial Decision approving, for the third time, the Mutual Aid Agreement. He said (*Mutual Aid Agreement (Renewal)*, Docket 9977, Initial Decision, March 7, 1969, p. 36):

"The real goal of IAM in this controversy appears to have superseded immediate objectives peculiar to the airline industry. Thus, IAM, with a total membership of approximately 1,025,000, only 68,000 of whom are employed in the air transport industry, strove to demolish the President's Wage-Price Guidelines and succeeded in doing so."

But in fact, the guidelines had already been demolished by the TWU's transit settlement. And, as a practical matter, with the TWU representing mechanics of two other airlines, American and Pan American, the IAM could do little but follow suit. The IAM settlement approximated the increase in the

Footnotes at end of article.

New York transit settlement, as did the subsequent American and Pan American settlements.

The pattern thus established was carried over into the railroad shopcraft negotiations, which ended with a like settlement, and the virus spread to other parts of the economy as well.

Thus the public interest involved is not to be weighed only in terms of the effect of the transit strike on the City of New York, or the effect of the five-airline strike in grounding millions of passengers and tons of air-freight, or the harm which would have resulted from a national rail strike.[9] Far more serious was the disabling effect of inflation on the economy.

This spiral of cost-push inflation was felt by the employees no less acutely than by others. Workers winning a collective bargaining "victory" in 1966 of a 5% increase for 1968 (at a loss in earnings of about $900 for each employee participating in the 43-day strike) might well wonder whether it was not Pyrrhic victory when considering that the net differential between their increase and the ensuing 4.7% increase in the Consumer Price Index for 1968 was only .3 of 1%. As Mr. Gardner Ackley prophetically said while Chairman of the Council of Economic Advisors:

"Efforts by the Government to curb inflationary pressures and maintain steady economic growth cannot achieve their objectives if business and labor continue to agree on wage and benefit increases that far outrun our ability to produce the additional goods and services on which higher incomes can be spent.

"Other unions that are in the process of formulating bargaining demands and other employers who are entering labor negotiations or setting prices must remember that higher wages and profits beyond those justified by productivity trends can only be collected by reducing the real incomes of all Americans. *The efforts of others to protect themselves from such reductions by excessive increases in their own wages and prices will in the end destroy the initial gains of those who started the process.*" (Emphasis added.)

As the forces set in motion by these inflationary settlements have yet to be contained, it remains to be seen how disagreeable the hangover will be. The Committee for Economic Development recently released a study which is hopeful that fiscal and monetary "fine tuning" will stem inflation. However, their conclusions presuppose (i) the subsidence of Viet Nam, (ii) no similar conflict arising to take its place, (iii) an end to inflationary wage increases, and (iv) the acceptability of high interest rates and taxes. Inflation can be mitigated by increased unemployment, but unemployment entails its own problems. The nation loses the productive labor which could be contributed by the unemployed, and the damaging effect on problems of minority employment and urban turmoil is self-evident. An increase of unemployment from last year's rate of 3.6% to 4.7% would mean almost a million more people out of work (Wall Street Journal, March 26, 1969, p. 1).

It has been reported that many of the 1969 settlements exceed the 6.6% average wage-and-fringe gains in 1968 settlements.[10] In transportation, the Philadelphia transit agreement embodies a 17.1% package increase, 9.2% of which is for the first year; the New York longshore settlement is 29.6% over three years; and mechanics on Flying Tiger Line received a three-year package worth 28%.[11] The recent settlements by American, Eastern, Northeast, and Pan American, naturally, are in the same ball park. With settlements such as these, a great deal of "fine tuning" indeed will be needed to prevent inflationary consequences.[12]

Footnotes at end of article.

Further, we are still far from able to assess all of the effects of fiscal and monetary fine tuning. What has happened to date is that real growth in our economy declined from $10.9 billion for the first quarter of 1968 to $5.2 billion for the first quarter of 1969, while inflation has increased from $9.3 billion to $10.8 billion.[13]

Meanwhile, the proposed repeal of the investment tax credit, which inevitably will weaken the chief tool available for combating rising labor costs, technological improvement admittedly "did not arise within the Administration in the context of considering whether existing policy was adequate to cool off the inflation."[14] With respect to the regulated industries having relatively inelastic demand curves, subject principally to cost-push rather than demand-pull inflation, and already making an inadequate return on investment, the effect of repeal can only be inflationary.

IV. DO TRANSPORTATION STRIKES CONTRIBUTE ANYTHING OF VALUE TO COLLECTIVE BARGAINING?

I have often wondered what positive contributions transportation strikes could be said to make to collective bargaining that would justify their tremendous economic and social costs. The more I think about that question the more convinced I become that the disadvantages far outweigh any possible advantages.

1. Strikes are not needed to bring about organization of employees. Most transportation is highly organized already.

2. Strikes are not needed to enforce collective bargaining. Collective bargaining in transportation is a legally enforceable right of relatively ancient vintage, being the product of statutes which go back to 1888, far antedating labor laws in other fields.

3. Strikes are not attributable to grievances. The Railway Labor Act mandates adjustment Boards for grievances, and the grievance procedures are highly developed.

4. Strikes are not needed because transportation employees are underprivileged. The rates of pay and fringe benefits received by transportation employees compare favorably with comparable employees in any other industry. I could digress here about such facts as the rates for the 747 aircraft going into service this year—which, under a TWA Agreement, will produce $58,000 a year plus about 20% more in pension and annuity contributions, or a total of over $70,000 for airline pilots who have a monthly maximum of 75 hours flight time—or the fact that airline mechanics will be making $12,000 a year—but it would take too much time to go into these details, and most of you are familiar with them anyway. Meanwhile, the airlines themselves are earning less than half the rate of return the Civil Aeronautics Board found to be reasonable.[15]

5. Strikes are not needed to make collective bargaining function properly. Management and labor, in agreeing originally to the terms of the Railway Labor Act, apparently regarded strikes as unnecessary to collective bargaining because it was their understanding that the Act would virtually eliminate strikes. It did so, and collective bargaining on the railroads functioned acceptably for about fifteen years without significant strikes. It was only after World War II that the original understanding was forgotten and strikes began to afflict the railroads and airlines. The National Mediation Board has described the situation as follows:

"Until the wage movements of 1941, the recommendations of emergency boards were commonly accepted by both sides. After the experiences of that year, the pattern changed, and it has become customary to reject rather than accept, the recommendations of emergency boards set up to handle national wage and rules movements . . . since 1941, emergency board recommendations have served only as a base to be used for securing further wage and rule concessions in a final settlement, usually made under Executive auspices."[16]

6. Strikes do not contribute toward a sensible solution of problems.

Perhaps it would be easier to defend transportation strikes if one were assured that settlements produced through the strike process were worth waiting and suffering for because they are somehow better. But the opposite would seem to be true. Strike settlements are not the products of a rational, objective process as much as they are the result of lack of sleep, emotionalism, irrationality, and expediency.

Further, strikes are indicative of sickness, not health, in collective bargaining. When they impose more injury on bystanders than on the combatants themselves, why are they permitted? Perhaps it is because of some mystique wrongly attributed to them.

Trial by battle—personal combat—was an accepted method of settling disputes in Norman England. Superficially this system would seem, like strikes, to be based on the morally indefensible premise that "might makes right." However, in the 12th Century, it had a loftier source—i.e., the medieval faith that God would quash the unjust.[17]

As piously entoned by the King in Shakespeare's Henry VI, Part II:

"What stronger breastplate than a heart untainted!
Thrice is he arm'd that hath his quarrel just,
And he but naked, though lock'd up in steel,
Whose conscience with unjustice is corrupted."
(Act III, Scene ii.)

Over the centuries, those with practical experience in the affairs of men inevitably began to develop doubts about the soundness of this proposition. If God would indeed quash the unjust, it must have seemed a curious coincidence that the unjust was also always the weaker of the antagonists. A waning enthusiasm for trial by battle led Richard II to banish both antagonists—

"For that our Kingdom's earth should not be soil'd
With that dear blood which it hath fostered. . . ."
(Shakespeare, Richard II, Act I, Scene iii).

The usual cultural lag existed, however, and it was several centuries before perception became settled in practice.

It was not until 1819 that England was able to do away with trial by battle entirely.[18] This came about as a result of a lawyer's ingenius, and successful, assertion of the right as a defense in a celebrated civil case decided by the King's Bench the year before.[19] In an action for damages for the alleged murder of a near relative, when the King's Bench upheld the defendant's right to trial by battle, the plaintiff, "having been further advised" that he faced something far more rigorous that the pleasantries of a trial by jury, stated that he "prayed no further judgment", and the suit was discharged.[20] Legislation followed.

Today we leave many collective bargaining disputes to the modern equivalent of trial by battle. And, with God not in the picture, I'm afraid that the rationale has to be that "might makes right."

Thus transportation strikes as a procedure for resolving collective bargaining disputes are the antithesis of due process. They are not the embodiment of the force of reason, but the exaltation of force over reason. We tend to forget that strikes are not a natural right, a part of the social contract. God did not give to the late Michael Quill a stone tablet that said, "I grant you and your union the right to strike," nor did the founding fathers mention this right in the Constitution.[21]

Because the law at present fails to establish an equal balance of power between labor and management, those unions which strike to settle disputes are so rewarded, at the public's expense, that no aspiring union leader or competing union dares ignore the example. Thus our law not only tolerates strikes but, contrary to its stated purposes, actively encourages them.

It is romantic to suppose that what we have for settling labor disputes in transportation is a system of collective bargaining. What we have instead is a system of strikes. Like the natives organizing a corporation as a form of government in Gilbert and Sullivan's "Utopia, Limited," the unions go through the ritual of bargaining, but not the substance, waiting only until the power to strike becomes available as the determinant.

When one considers what actual usefulness those marathon talkathons may have, one is reminded of the following bit of dialog between father William and his son:

"You are old," said the youth, "and your jaws
are too weak
For anything tougher than suet;
Yet you finished the goose, with the bones
and the beak—
Pray, how did you manage to do it?
"In my youth" said his father, "I took to
the law,
And argued each case with my wife;
And the muscular strength, which it gave
to my jaw,
Has lasted the rest of my life."
—Lewis Carroll, *Alice's Adventures in Wonderland*, ch. V, p. 65.

There may be some among you who think that this exaggerates the case. To make the point clearer, I could refer to statements made frankly by union representatives in the privileged vicinity of the bargaining table. But it is not necessary to do this. The bankruptcy of collective bargaining in transportation, the futility of pretending it exists, the complete absence of the balance of power which is supposed to nurture it, are all reflected in the brief filed in the *Mutual Aid Renewal* case before the Civil Aeronautics Board on behalf of six unions including the IAM and TWU.[23] The brief very persuasively argues that the five airlines struck in 1966, instead of attempting to comply with the government's urgent requests for a noninflationary settlement, would have been better off not to have bothered with bargaining at all, and should have merely accepted the IAM's original demands. Whether this is an implied threat that, if the carriers insist on wasting time by bargaining, the unions will have their revenge, I do not know, but here is what the brief says: [23]

"Reference to Carrier Exhibit No. 31 shows that more than two-thirds of the claimed past losses of the Mutual Aid carriers from strikes resulted from the disputes on Eastern, National, Northwest, Trans World and United with the IAM in the summer of 1966. It is perfectly clear that the decision to undergo this strike cost the carriers involved substantially a greater sum of money than if they had accepted the original union demands without any strike *or indeed without* any negotiations of any kind. Six Unions Joint Rebuttal Exhibit No. 13, a Board study, states that the total loss of net income during the strike for the five struck carriers is estimated at $103 million. To this figure must be added the cost of the settlement which Carrier Exhibit No. 26 (page 16) estimates at $85,700,000. Thus, the total cost to the carriers of the strike and the settlement was $188,700,000. On the other hand, the carriers value the original union demands prior to any negotiations thereon at $114 million (Carrier Exhibit No. 26, page 4). Thus, the carriers involved would have been better off in the amount of $74,700,000 if they had accepted the original union proposal without a strike *or indeed without any negotiations at all.*" (Emphasis added; footnote omitted.)

The lesson from the foregoing is clear: The airlines are foolish to give greater weight to government requests than to union demands. They should simply capitulate, regardless of the public interest. This position of the unions may be short sighted however. As Edmund Burke said:

"Men are qualified for civil liberty in exact proportion to their disposition to put moral chains upon their own appetites. . . . Society cannot exist unless a controlling power upon will and appetite be placed somewhere and the less of it there is within, the more there must be without." It is ordained in the eternal constitution of things that men of intemperate minds cannot be free. Their passions forge their fetters." [24]

The Fifth Amendment of the Constitution guarantees that no person ". . . shall be . . . deprived of . . . property, without due process of law". Yet I can think of no procedure sanctioned by law that results in a more direct taking of property from the public, and with such an obvious lack of due process, than transportation strikes. When such a strike occurs, the public loses, first, the use of common carriage facilities, the cost of which to a significant extent may have been contributed by the public, second, the confirmed reservations and contracts of carriage which have been made, and, third, the increased fares the public inevitably has to pay. Who can doubt that the practice of the blockading a public highway to enforce the demands of a minority group could not be sustained. Yet we now have a collective bargaining practice which encourages a union, which is also an interest group, to deprive the public of its common carriage facilities to enforce union demands. One wonders why the public may not be deprived of the use of its facilities and property in one case, but may be deprived of them in the other.

V. WHAT ARE THE CHANCES FOR TRANSPORTATION STRIKE CONTROL LEGISLATION?

In coming to the question of what chances there might be for transportation strike control legislation, I must immediately disclaim any political expertise. Speaking as one nurtured in the democratic tradition, however, my conviction is that, in the long run, the public will not be denied a correction in a system which adversely affects so many of its members. The increasing public sentiment in favor of such legislation is indicated by recent polls.[25] And that there is a need for a correction is one fact which seems indisputable. As long ago as 1952, the National Mediation Board said:

"The present situation, if it continues, can result only in a complete breakdown of the machinery for the settlement of wage and rules disputes which was so carefully and hopefully constructed by the legislators and sponsors of the Railway Labor Act in 1926." [26]

In 1961, W. Willard Wirtz said in a speech:

"There is reason to suspect that the same thing may be happening to the concept of force in the labor relations fields as in the international arena, that the destructive power of the available force has become too great for it to be used freely and fully. The strike and the lockout, like the force of arms in international relations, may continue to be regarded as effective in comparatively small, limited disputes. But the big strike, the big lockout, covering a whole vital industry, may well be moving into much the same position as the atom bomb." [27]

In his State of the Union Message on January 12, 1966, President Johnson made the following statement in connection with the New York City transit strike:

"I also intend to ask the Congress to consider measures which, without improperly invading state and local authority, will enable us to effectively deal with strikes which threaten irreparable damage to the national interest." [28]

Shortly thereafter Plato E. Papps, the General Counsel of the IAM, made this statement in a speech before the American Management Association:

"One final topic upon which I'll touch is 'national emergency' disputes and the collective bargaining process. Such obvious things as transportation—air, rail and truck—I'll leave to your imagination because I don't believe that the Congress will again tolerate what recently transpired in New York. In fact, there are already several bills in the hopper which will try to meet this problem." [29]

One of the original architects of the New Deal, Samuel I. Rosenman, recently came out in favor of such legislation. He said:

"I urge that the time has now come, at least in those industries where a strike would cause an emergency, to adopt a bill along the lines of S. 176, and to substitute the reason and considered judgment of the courtroom for a verdict based only on comparative strength and resources. Giving up rights like the right to strike—and even more ancient rights—for the general good and welfare of the community—is nothing new in civilized countries." [30]

On January 16, 1969, Secretary of Labor Shultz told the Senate Labor Committee that, although he would be "very careful about recommending any legislation" which might have the effect of "destroying collective bargaining in areas where it's working well and most collective bargaining in this country is working well", he also said that "I'd like to see the situation under the Railway Labor Act improve." [31] And subsequently President Nixon said, responding to a question about the dock strike:

"Now, long range, I believe that the Taft-Hartley Act's provisions for national emergency strikes, which I helped to write along with other members of the Labor Committee 20 years ago, that those provisions are now outmoded. I do not believe we have enough options in dealing with these kinds of disputes and breakdowns. I have, therefore, asked the Department of Labor to develop some new approaches in this field, and we will submit them by legislation to this Congress." [32]

To me it seems only a question of time until the foregoing sentiments are expressed in the form of legislation and the Twentieth Century at last arrives in transportation labor relations.

[10] Curiously, S. I. Nakagama of Argus Research Corporation has noted that non-union workers received higher increases in 1967 and 1968 than those represented by unions. The increases negotiated by major unions in those years were 5.6% and 6.6%, respectively, while the increase for *all* workers (including non-union) were 6.0% and 7.2%. Kraus, "Wage-Price Specter," New York Times, February 12, 1969, p. 53.

[12] In separate comments in the report by the Committee for Economic Development, M. C. Turner, Jr., a member of the Research and Policy Committee, stated (p. 34):

"I am sure that the Committee gave consideration to the strong inflationary effect of excessive wage and benefit increases, but the statement does not appear to give adequate recognition to this factor. There have been many union agreements in major industry which are far beyond any productivity improvement and, therefore, they are truly inflationary . . . This situation is just as important to recognize as monetary and fiscal measures which are controllable by government and business . . . While nobody would like it, it appears that we must consider the proposal of labor courts and final and binding arbitration." (fn. cont. on next page)

John Kenneth Galbraith has said:

"The American economy, whatever wishful analysis there may be to the contrary, is not stable at or near full employment. Wages will always shove up prices, and prices will always pull up wages, and this spiral will revolve for Republicans and Democrats alike. Moreover, it has been the experience of virtually every other major industrial country that some machinery for wage and price restraint is the only alternative to inflation or heavy unemployment." DECLINE OF U.S. NAVAL STRENGTH

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. GOLDWATER. Mr. President, the Governor of Arizona, Hon. Jack Williams, has during the course of his life spent many years as a columnist both in the newspapers and on the air, and he has, during this period, developed a keen sense of history and an ability to read into the present, lessons and mistakes of the past. Very recently he spoke on the air expressing his great concern about the decline of our naval strength and the incline of the naval strength of the Soviets. I ask unanimous consent that the remarks be printed in the Extensions of Remarks.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Thank you and hello again . . . it is not my practice to pontificate on international politics. I've frequently described myself as a parochial governor . . . interested in the state I've lived in all of my early years and adult life. But when I read something such as a report released by the House Armed Services Subcommittee on seapower that reports the U.S. Navy has deteriorated into an aging collection of worn out ships . . . that the ships inherited today are rotting so badly that some crewmen work as much as 80 hours a week to fight rust and corrosion, I feel impelled to comment. In 1934 Churchill deplored the fact that the defenses of England were being allowed to deteriorate. His remarks then in the House of Commons could be paraphrased by any United States Senator or Congressman today. Said Churchill then:

"I am not to be understood to mean that the possibilities of a gigantic war are nearer, but the actual position of Great Britain is much less satisfactory than it was this time twenty years ago, for then at least we had a supreme fleet; nobody could get at us in this island; and we had powerful friends on the continent of Europe, who were likely to be involved in any quarrel before we were; but today, with our aviation in its present condition, we are in a far worse position."

Then Churchill continued: "There is no greater danger than equal forces. If you wish to bring about war, you bring about such an equipoise that both sides think they have a chance of winning. If you want to stop war, you gather such an aggregation of force on the side of peace that the aggressor, whoever he may be, will not dare to challenge."

Three years later Churchill said: "When the situation was manageable it was neglected, and now that it is thoroughly out of hand, we apply too late the remedies which then might have effected a cure. There is nothing new in the story. It falls into that long, dismal catalogue of the fruitlessness of experience and the confirmed unteachability of mankind."

Two months later Churchill warned: "It would be folly for us to act as if we were swimming in a halcyon sea, as if nothing but balmy breezes and calm weather were to be expected and everything working in the most agreeable fashion. By all means follow your lines of hope and your paths of peace, but do not close your eyes to the fact that we are entering a corridor of deepening and darkening danger, and that we shall have to move along it for many months and possibly for years to come."

These were words spoken only shortly before Hitler began to move. But much earlier in 1931 Churchill warned: "The great liner is sinking in a calm sea. One bulkhead after another gives way; one compartment after another is bilged, the list increases; she is sinking, but the captains and the officers and the crew are all in the saloon dancing to the jazz band. But wait until the passengers find out what is their position!"

Then in 1937 on April 14th Churchill warned: "We seem to be moving, drifting steadily, against our will, against the will of every race and every people and every class towards some hideous catastrophe. Everybody wishes to stop, but they do not know how!"

Again and again, his voice cried out in commons. "Historians a thousand years hence will still be baffled by the mystery of our affairs. They will never understand how it was that a victorious nation with everything at hand suffered themselves to be brought low and to cast away all that they had gained by measureless sacrifice and absolute victory—gone with the wind."

All of this was inspired by a friend, Holmes Alexander, who opened his column recently with: "The awful truth about America's sickening plunge into military inferiority is politically untellable." So, I thought you might be interested that the story is not new. Churchill told it 30 years or so ago, and Cassandra long before that.

FOREIGN AID PROGRAM

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. BUSH. Mr. Speaker, although I have been in favor of lean foreign aid programs during my brief tenure in the House, I do want to point out to my colleagues the priority given family planning in President Nixon's aid message.

Too often we get so immersed in the immediate problem of hunger that we fail to see the important link between it and family planning. With the present estimate of the world population doubling itself in 35 years, this link cannot be overlooked.

I have long felt that we needed to totally revamp our foreign aid program to give primary emphasis to population control and agricultural improvement. I have felt that we have made a huge mistake in concentrating our foreign aid on building technology rather than on helping to bring these countries up to a level where they can feed their own population. If we really want to help people with our aid, then, cannot we do it better by increasing agricultural pro-

duction. Nothing could be more humanitarian than to dent the grim list of 10,000 who die each day of malnutrition and starvation.

In the aid message the President said:

At least another decade of sustained hard work will be needed if we are to win the battle between economic development and population. But our assistance to voluntary family planning programs and support for the work of the United Nations and other international organizations in this field must continue to have high priority, as will our support of efforts to increase food production.

This is exactly the kind of action that has been needed and I find it most heartening.

A BILL TO AMEND SECTION 312 OF THE HOUSING ACT OF 1964—THE REHABILITATION LOAN PROGRAM

HON. FERNAND J. ST GERMAIN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. ST GERMAIN. Mr. Speaker, in the Housing Act of 1964 we established the section 312 rehabilitation loan program which provided for 3-percent rehabilitation loans to owners or tenants of properties in urban renewal and concentrated code enforcement areas, to enable them to bring the structures up to local code requirements and make the many existing structures in our cities more decent and livable homes. In a sense, this was a new concept in our urban renewal program which would make use of the existing housing stock in a renewal area by rehabilitating them through low cost loans rather than bulldozing them down.

The 312 rehabilitation loan program has been generally a successful operation. It is designed to encourage renewal of housing and buildings by repairing, remodeling, and restoring rather than demolition and clearance. An applicant for a 312 loan must be an acceptable risk, although the nature of the loans involve certain risks that make them marginal by most lending institution standards.

In the Housing and Urban Development Act of 1968 we amended this program to authorize loans for owner-occupied residential properties in areas outside renewal areas but in an area definitely planned for rehabilitation or code enforcement within a reasonable time. We also provided that 312 loans may be made to owners and tenants whose properties have been deemed reinsurable by statewide property insurance plans—State FAIR plans—in order to bring the property up to insurable standards.

An amendment was added to this program which restricted loans for residential properties to persons with incomes within prescribed income ceilings of the section 221(d)(3) below-market interest rate program. This amendment has severely restricted the application of this program in most of our large cities. In some cities the 312 rehabilitation loan program is dead. In my own congressional district, the city of Pawtucket Redevelopment Authority has told me that the program with this income ceiling of $8,500 gross family income is inoperable.

Mr. Speaker, I am today introducing a bill which strikes the income limitation placed on theh 312 rehabilitation loan program. In recent hearings held by the Housing Subcommittee, I have asked numerous witnesses whether they would favor this removal of the income ceiling. In every case the answer has been "Yes." Support for such a removal has been endorsed by the National Association of Home Builders, the National Housing Conference, the National Association of Housing and Redevelopment Officials, and the Conference of Mayors-League of Cities. Mayor Tate of Philadelphia stated in strong terms that if the cities were to use existing housing stock then the 312 loan program is absolutely vital, but with the existing income ceilings the program is unusable. Sherman Maisel of the Federal Reserve Board stated to the subcommittee that Congress should place greater stress on rehabilitation than it has in the past if we are to meet our national housing goals. My bill, then, will enable us to use this rehabilitation program effectively, and make it one of the strong programs that we need to make decent and sanitary housing available to our citizens in our cities.

TRUMAN WARD

HON. ROY A. TAYLOR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1969

Mr. TAYLOR. Mr. Speaker, I wish to join with my colleagues in paying tribute to one of our closest friends, Truman Ward.

He was, in every sense, a Christian gentleman. I had no more than arrived in Washington before he was working to persuade me to attend services at his church. As the years passed, it was not uncommon to find a sermon or church bulletin he wanted me to read attached to printing being delivered from his shop.

There is much evidence that he had real concern for humanity and a compassion for others. It reflected itself in whatever he did. I think people who knew him sensed this.

As a printer, he was an innovator with whom complacency never caught up. He was forever looking for a better way to help his congressional customers capture attention back home. As I look over the programs and projects of my own office, I can see Truman Ward's ideas everywhere. He had technical skills and the ability to translate them into useful political tools.

As a businessman, he made everyone feel as if he were his only customer. Probably, he was too generous. I am thinking of all the favors and small printing jobs he did for me and for Mrs. Taylor when she was president of the Congressional Club for which he refused to accept payment. "That's okay," he would say with a grin, "come back and see me when you have a big job."

We will miss this man and the example he set for us in our daily lives.

INTELSAT—A BLUEPRINT FOR MODERN COMMUNICATIONS

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. PASTORE. Mr. President, Leonard Marks, former head of the U.S. Information Agency and more recently Chairman of the Plenipotentiary Conference on Definitive Arrangements for the International Telecommunications Satellite Consortium (Intelsat), and Chairman of the U.S. delegation, recently delivered an address to the Electronic Industries Association meeting at Los Angeles, Calif., entitled, "Intelsat—A Blueprint for Modern Communications."

In view of the fact that the conference on definitive arrangements for the International Telecommunications Satellite Consortium will reconvene in the near future, I feel that the impressions and opinions of this dedicated American and public servant will be of inestimable assistance to all those interested and concerned in this very vital area.

I ask unanimous consent that the speech be printed in the Extensions of Remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY HON. LEONARD H. MARKS,* MAY 12, 1969

INTELSAT—A BLUEPRINT FOR MODERN COMMUNICATIONS

Progress in the field of communications satellites has been so rapid and dramatic that few realize that only seven years have elapsed since the experimental Telstar was launched by the American Telephone and Telegraph Company; and only four years since the first commercial communications satellite, Early Bird, was put into orbit. A review of what has happened during these exciting years would make an interesting book; but I intend, today, not to outline that volume, but merely to report on the most recent chapter—the INTELSAT conference of 98 countries which has just been held in Washington, D.C.

After Telstar was launched, it was apparent to Congress and to our communications industry leaders that a new era had arrived, and that communications satellites were no longer fiction conceived by Arthur Clarke.

In the Communications Satellite Act of 1962, Congress had declared U.S. support for a single global communications satellite system, and had charged COMSAT, as the U.S. chosen instrument, with the responsibility of creating it. When Comsat was organized, I was appointed by President Kennedy as an original incorporator, and later elected by the stockholders as a director. Our Board of Directors recognized the importance of the single global concept, and as soon as it was possible, we arranged for an organizational conference with any and all countries who wished to join in this venture. After 8 months of negotiation, 10 countries arrived at the agreement creating an *Interim Consortium* to build, launch and operate the satellites. Thus, in 1964, Intelsat was born. At the inception it was agreed that five years later, its creators and adherents would again meet to discuss permanent arrangements.

* Formerly Chairman of the Plenipotentiary Conference on Definitive Arrangements for the International Telecommunications Satellite Consortium (Intelsat) and Chairman of the U.S. Delegation.

From this humble beginning Intelsat has had an exciting growth. Let's review some of the progress:

The original ten countries have grown to a present membership of 68 nations, who collectively are responsible for 90 to 95 per cent of the world's international communications traffic.

The first commercial satellite, Early Bird, had only 240 circuits . . . today the Intelsat III series carries 1200 circuits.

The next generation of satellites, Intelsat IV, will be capable of carrying from 6000 to 10,000 circuits.

In 1964, satellite service was available *only* between the U.S. and Europe, with an Atlantic satellite. Today, there are two satellites positioned over the Atlantic, two over the Pacific, and one about to be launched over the Indian Ocean.

In five years, earth stations have been developed in all continents. There are now 24 in existence, and another 30 being constructed or in advanced stages of planning.

In five years, the nations of the world have moved from the "idea" phase to the operation of a truly international communicational satellite system.

These accomplishments are not only impressive, but unique, for the INTELSAT venture is the first truly international partnership of independent nations in a commercial venture. The three Scandanavian countries, Sweden, Norway and Denmark, operate an airline; there have been various bridge and tunnel joint ventures between neighboring nations. There has been economic and banking cooperation, ranging from the World Bank to the European common market, but never before have as many countries worked together in operating a "business" embracing traditional commercial concepts. The success of Intelsat hopefully will furnish a precedent for similar efforts in the future.

Before we examine the recent Intelsat conference, it is essential that you understand the basic structure created in 1964, and how Intelsat operates its business:

1. *Ownership Interests.*—From the outset, it was agreed that shares in the Consortium should be allocated according to use of the system. Obviously the U.S., with its large international traffic to all parts of the world, would become the single largest user, followed by Canada, Japan and the European nations. Initially, the U.S. was allocated a 60% share; the next largest was the United Kingdom with 8%, France and Germany with approximately 6%, and others receiving lesser amounts down to a minimum of 0.5%.

2. *Expansion of Membership.*—To achieve international character, the Interim Agreement provided that any of the 135 nations belonging to the ITU (International Telecommunications Union) could join at any time that they desired by accepting the terms of the agreement. When they did so, a share would be assigned to them, thereby reducing the holding of the founders. Accordingly, as membership grew to the present 68 nations, the U S. share declined to 53%.

3. *Capital Contributions.*—Currently, Intelsat has an invested capital of approximately $100 million contributed by the members in the proportions outlined above. As additional funds are needed, assessments will be made, up to a limit of $300 million, established by the 1964 agreement.

4. *Policy Control.*—Following the pattern of business corporations, the interim agreement provided for a committee—the Interim Communications Satellite Committee—which would function essentially as a Board of Directors is planning for the system, procuring equipment, launching and operating the satellites, establishing rates of return, and determining other aspects of the service.

Each country which had a 1.5% or greater share would be entitled to a seat on the Board. Smaller countries could group their holdings to make up 1.5% and choose a common representative. Under this arrangement, the ICSC now consists of 18 members representing 48 countries.

Since the U.S. had more than 50%, it was decided that, as a protection to minority owners, an action would not be approved unless it was supported by 12.5% of the remaining members.

5. *Management.*—When Intelsat was organized, the U.S. was the only member country having the technical capability to manage this unique and complex venture. Accordingly, Article VIII of the Interim Agreement specified that the newly organized Comsat was to act as manager "in the design, development, construction, establishment, operation and maintenance of the space "segment" pursuant to general policies of the ICSC.

6. *Procurement.*—Although the founding nations acknowledged that the United States had developed the concept of the communications satellite, and that our space industry was the most advanced in the communications field, the organizers of Intelsat wanted to have alternative or competitive suppliers for the space hardware. Therefore, Article X of the Interim Agreement provided that the manager should "develop and procure the best equipment and services at the best price for the most efficient conduct and operation of the space segment," but specified that contracts and subcontracts be distributed "in the States whose Governments are Parties to this agreement in approximate proportion to the respective quotas of their corresponding signatories . . ."

On this point it is significant to note that all of the technical know-how developed by our space contractors through NASA contracts has been made available to Intelsat, and that the launch facilities at Cape Kennedy are provided at out-of-pocket costs.

7. *Duration.*—The Interim Agreement signed on August 20, 1964, by nineteen countries specified that within one year after the initial global system became operational and in any event not later than January 1, 1969, a report on the changes proposed for the permanent Consortium was to be sent to all members and a meeting called within 90 days. Until the permanent agreement was reached, the Interim arrangements are to continue in effect.

These are the principal characteristics of the Interim Agreement under which the Consortium has operated and which were reviewed at the Conference on Permanent Arrangements from February 23 to March 21, 1969.

Now, let me give you some background on how the Conference was organized and the problems that we considered during our four weeks of deliberations:

At the outset, the United States, as the host government, was required to send out invitations to attend. Of course, all members were invited to participate, but we had to consider who else would be invited or permitted to attend. When we reviewed the Congressional intent in adopting the Communications Satellite Act in 1962, and the avowed purpose of creating a single global system, we concluded that all ITU member countries should again be reminded of their eligibility to participate. Accordingly, notifications of the meeting were sent to all nations in this group. Some did not have diplomatic relations with the United States, or other members; some had governments which had openly declared their hostility to other members of the Intelsat Consortium; many had primitive means of communicating within their borders, and at most makeshift links to the outer world. The group invited included the Soviet Union and the Socialist countries of Eastern Europe who had recently announced their intention to create Intersputnik, a network of satellite communications which might rival Intelsat.

The response was most gratifying for those who believe in the importance of international cooperation. U.S.S.R. and all of the Eastern European Socialist countries were included in the 28 countries who responded and sent representatives to observe the conference. In addition, the UN and the ITU were seated as observers.

I want to point out a significant condition of the invitation to these observers. An invitation was extended to those who had a "serious interest in the possibility of becoming an Intelsat member at a future time." No commitment to join was required, but a serious interest was clearly specified. Those who attended demonstrated by their presence at the meetings that they took this condition literally. Their delegates were able men, versed in diplomatic matters and specialists in the field of communications. Their participation was meaningful, their questions were searching, and their observations were most helpful in the deliberations. During the conference one nation announced its intention to join, others indicated that they would recommend joining to their Cabinets or Parliaments.

The agenda for our meeting was based on a review of the Interim Agreements of 1964. For nearly a year prior to the Conference, the ICSC had met and carefully considered their four years of experience. All viewpoints were canvassed and a report prepared containing recommendations for change and observations on the existing agreement.

When the meeting was organized on February 23, 1969, rules of procedure were adopted creating four substantive committees. I was elected as Conference Chairman and the heads of the delegations from Argentina, Italy, Japan and Australia as Committee Chairmen. Formalities were omitted and on the second day we settled down to a discussion of the agenda items referred to each of these four groups.

I want to compliment my colleagues for the very business-like atmosphere that pervaded throughout our deliberations. There was little waste motion. Sessions began on time and lasted after the announced closing hour. Delegates refrained from polemics, and spoke to the point at issue. As a result, in three and one-half weeks, the entire agenda was reviewed and reports were delivered on 75% of the items. There were differences of opinion, but in the discussion many were eliminated and compromises reached. Where differences remained, they were clearly identified in the committee reports. As a result, when we concluded our deliberations on March 21, we had heard in plenary session from all committees, subcommittees and working groups with alternative recommendations or the agreed text.

Let me stress that the Conference was not called for the purpose of considering a new or fundamentally different form of Intelsat, but rather to consider *changes* in the existing Intelsat organization to *improve* its operation.

Many members of the Consortium have expressed their satisfaction with the basic structure, the efficiency with which it has functioned, and the remarkable success of the program. Some pointed out the need for changes to accommodate the large group of members as compared to the original founders, and to adapt procedures for *operating* an existing world-wide system as compared to *planning* for such an enterprise.

With this in mind, let me identify the principal issues of the agenda:

1. *Scope of Intelsat Operations*

Should Intelsat be authorized to provide facilities for other than point-by-point and broadcast use, such as services for aeronautical and maritime use? If so, should this be on an exclusive or non-exclusive basis?

2. *Legal Status of Intelsat*

Should the Consortium continue to operate as a joint venture or have a legal personality such as a corporation?

3. Organization

What changes are needed to give a voice to the small countries not represented on the ICSC? Should the role of the U.S. as a majority "shareholder" be altered?

4. Management

Should Comsat continue as Manager as heretofore? Or should changes be made in its authority?

5. Procurement

Was the procurement to be on a "best price, best quality" basis or should this be waived to subsidize suppliers in other countries?

Should patents developed by Intelsat contractors be made available for others? . . . On what basis?

At the end of the four week session, the Conference recessed until November, 1969. During the interim, a Preparatory Committee will give further consideration to the unresolved questions on the agenda and draft the text of language for the Permanent Agreement.

Although no final decisions were made in the March conference sessions, the outline of an agreement became apparent. In my judgment the following will be included:

1. *Creation of an Assembly in which all member nations will be represented.*

This group would meet periodically to discuss issues of general policy in the same fashion as an annual stockholders meeting. This concept introduced by the U.S. Delegation, received wide support. Some members suggested two assemblies—one consisting of countries, and the other, of telecommunication entities. In my opinion, one of these alternatives will appear in the Permanent Arrangements.

2. *Enlargement of the ICSC to a maximum of 22 members to permit the smaller countries to have a greater voice in the consideration of policy on operating problems of Intelsat.*

3. *Authorizing Intelsat to furnish a communications service for the aviation and maritime services on a non-exclusive basis.*

The technology is at hand, and the industry is anxious for the new service. Some countries prefer that it be rendered by regional groupings rather than Intelsat, but I sense that the prevailing opinion is contrary to that view. This service offers opportunities for greater safety in international travel, cutting down the congestion in airports at takeoff and landings and expediting customs and immigration clearances. With satellites offering abundant circuits at relatively inexpensive rates, airlines can send to the authorities at a passenger's destination photocopies of all passports and any other information required on arrival. While passengers are in flight this material can be checked and clearances issued before arrival. Air carriers using the satellite for traffic control should be able to schedule arrivals so that landing delays are eliminated. In fact, this service should be able to expedite everything except the delivery of baggage and getting a taxi to take the passengers into town.

4. *Retention of the present method of procurement, with greater emphasis on best price, best products.*

5. *Retention of Comsat as the general manager of the Intelsat system, with the inclusion of more non-Americans on the management team.*

During the conference, Comsat was repeatedly praised for its excellent performance in planning, executing and operating the world-wide network of satellites. It has earned the respect of its co-venturers for having performed with great efficiency and skill. There is no other comparable organization in any member country that could undertake the complex responsibilities which Comsat now performs.

Some representatives wanted greater "internationalization" of the management, and the creation of a Secretariat with a Director-General to operate the system. Others urged the transfer to a secrearlat of some functions, such as financial, administrative, legal and public relations. I do not believe that any basic changes in management will be made at the next meeting.

6. *Permission for all countries to launch and operate domestic satellite systems outside of the Intelsat framework and for regional groupings within the Intelsat structure.*

In considering this subject, member nations stressed their sovereign rights to operate their own communications networks, and no one seriously questioned that philosophy. Intelsat is prepared to make facilities available for those who seek such, but if a nation wants to launch its own satellite for domestic services, it is free to do so if it coordinates its planning on frequencies and other engineering aspects with Intelsat.

Within the past month, Canada announced plans for such a domestic satellite, and other countries are studying the possibilities. Those who have completed their studies have found that satellites will not be economical unless the country has large land areas to cover, for which cable and microwave would not be feasible. Few countries can justify domestic satellites and most will rely on Intelsat for such circuits as they need for domestic use.

In this connection, I want to stress that the time has come for the United States to arrive at a determination on how we shall use satellites for our domestic communications links. For more than two years the problem has been under study. Suggestions have been made by the common carriers, the broadcasters, the specialized users, the principal hardware manufacturers, the Ford Foundation, and others interested in the improvement of communications. Some have proposed a pilot program; others regular operation.

In my judgment we do not need further experimentation. The technology is clear, the need is substantial and the time has come for action.

Communications satellites offer the United States great opportunities for an abundance of circuits and a dramatic reduction in costs of some services. I doubt that the price of a long distance call will be greatly affected, but hopefully the additional circuits made possible by satellites will harness the computers of this nation into a "network of knowledge":

Doctors in remote towns and villages should be able to immediately tap the resources of our great medical libraries and medical research centers.

Diagnostic clinics in central locations should be able to read electrocardiagrams and X-Rays instantly and respond with analysis and advice for the patient.

Reference libraries should similarly be used by colleges, universities and industries in the smallest towns.

Factories can have immediate access to home offices and laboratories with closed-circuit television, facsimile and any other form of communication, written or oral.

We may be able to develop national daily newspapers with editions being printed in principal cities simultaneously.

Rates for educational television may be drastically reduced from the present tariffs for coaxial and microwave connections.

All of this awaits us in the United States in the next few years, but it will not be possible until we announce a national policy on how the satellites will be launched and by whom. The time is overdue for a decision and I hope that this plea will be heard by the FCC, Congress, and other Government agencies involved.

7. *Finally, a reaffirmation of the need for INTELSAT.*

Few would dispute the wisdom of having a single global system. I told a story to my colleagues which illustrated this point very dramatically. When I was a youngster living in Pittsburgh, Pennsylvania, my parents had a telephone connected with the Bell System. My grandparents, who lived just two miles away, were subscribers to the Keystone System. As a result, although we both had phones, we could not talk with each other. This situation does not exist any longer in the United States, and must not exist in relationships between countries. If it does we will have wasted the miracle of the satellite.

Unless we have a single global system, in which all countries participate either as owners or users, we will have created artificial obstacles to international trade and commerce; but more significantly, we will have stifled opportunities for a better understanding between peoples everywhere.

We must use the satellite to exchange ideas between countries with different ideologies, and with different languages. Satellites can bridge oceans, cross impenetrable mountain ranges and jungles, and seek out the otherwise inaccessible.

Communications is the lifeline of civilization, and we must not sever the cord which can unite us. When we communicate with each other, we find that all men have common aspirations, regardless of language, race, color, religion, or place on the map. We all yearn for a chance to live in peace; to have enough to eat, a roof over our heads, a chance to perform work that satisfies, and an opportunity to leave the world a better place for our children to live.

I can think of no more important first step we can take toward reducing world tensions than that of broadening the communications links between powerful nations representing different political systems.

We should not rely just on a few hot lines. We will all be better off when we have thousands of cool lines linking us—the big and the small, the rich and the poor, the powerful and the weak.

Today our satellites look down on earth from a distance of 22,000 miles. They see the earth as it truly is—the green-blue globe that is the home of us all. They see a world where no national boundaries are visible, no divisive lines between men of differing race, or economic circumstances, or ideologies. The map may show lines dividing neighboring countries, but the satellite erases all of these artificial boundaries and sees no oceans, mountains or man-made barriers. By rising above both geographical and man-made divisions, they can serve us all in building the works of peace.

COLORADO SECOND CONGRESSIONAL DISTRICT 1969 OPINION POLL

HON. DONALD G. BROTZMAN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BROTZMAN. Mr. Speaker, in 1964 I initiated an opinion poll in my district to give my constituents an opportunity to express consensuses on the broad issues which we, in the Congress, must debate.

Since that time, the poll has become one of the largest samplings of public opinion in the Nation. In 1967, for example, I received—by actual count—the opinions of more than 50,000 Coloradans.

I know of no poll of its kind which has been more successful, both in terms of

total response and the usefulness of the resultant data.

This week I am mailing to every post office patron in my district the 1969 edition. Since my district is one of the most populous in the Nation, 207,000 individual ballots will be required.

For the information of the Members, I would like to present the format which I utilize:

(If married, both husband and wife may participate)

	Men's opinions			Women's opinions		
	Yes	No	Undecided	Yes	No	Undecided
1. Do you favor proposals which have been made to utilize a "lottery" selection system for the draft?	☐	☐	☐	☐	☐	☐
2. Do you favor legislation limiting the number and type of questions to be asked in the census?	☐	☐	☐	☐	☐	☐
3. Should Federal grants and loans be denied students who participate in campus disturbances?	☐	☐	☐	☐	☐	☐
4. Should the Federal Government share a fixed percentage of income tax revenues with schools, local and State governments for use as they see fit?	☐	☐	☐	☐	☐	☐
5. Should more of our Federal, State, and local resources be channeled into law enforcement?	☐	☐	☐	☐	☐	☐
6. Do you feel that the proposed 6-month extension of the 10-percent income tax surcharge is justified?	☐	☐	☐	☐	☐	☐
7. Do you favor continued U.S. efforts to achieve a negotiated settlement in Vietnam, regardless of the outcome of the Paris talks?	☐	☐	☐	☐	☐	☐
8. Should Communist China be admitted to the United Nations?	☐	☐	☐	☐	☐	☐
Your age group: A. 20 to 35; B. 36 to 49; C. 50 and over	A ☐	B ☐	C ☐	A ☐	B ☐	C ☐
Political affiliation: A. Republican; B. Democrat; C. Independent	A ☐	B ☐	C ☐	A ☐	B ☐	C ☐
Occupation, head of household: A. Business or professional; B. Industrial worker; C. Government; D. Farmer; E. Educator; F. Retired.	A ☐	B ☐	C ☐	D ☐	E ☐	F ☐

The results will be tabulated by modern business machines. So that my colleagues may be informed on how the people of my district stand on these issues I will reproduce the tabulation in the RECORD.

NEBRASKA RURAL ELECTRIFICATION ESSAY CONTEST WINNERS

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. HRUSKA. Mr. President, it was one of Nebraska's most distinguished sons, Senator George Norris, who led the fight for rural electrification in the Congress some 35 years ago. In the subsequent period the Rural Electrification Adminisrtation has made available loans to provide for 116,000 electricity consumers and 26,000 subscribers in Nebraska.

The first REA-financed line in the State was energized December 2, 1936. At that time only 7.1 percent of Nebraska farms were receiving electric service. Today, more than 98 percent of our farms and ranches are receiving central station electric service.

The ever-increasing importance of electrical energy to the rural citizens of Nebraska is easily measured by the use they make of it on their farms, and in their homes and businesses. In 1956, the average monthly consumption per consumer was 429 kilowatt-hours. By 1967, that figure had risen to 988, substantially above the national average of 751 kilowatt-hours per month. More than simply indicating growth, these figures demonstrate the vital role that electricity—and the REA—plays in contemporary rural life. Today's farmer is as dependent on kilowatt power as his grandfather was on horsepower.

As of January 1, 1968, the REA had advanced more than $185 million to borrowers for electric system in the State. The funds have been invested by the borrowers in local electric facilities, including 62,211 miles of line, serving 107,335 farm and other rural consumers.

From the time of the first REA telephone loan in January 1954 to January 1, 1968, the REA had approved over $15 million in loans to telephone borrowers in Nebraska.

Mr. President, it has become an annual practice for the Nebraska Rural Electrification Association to sponsor, as an educational endeavor, an essay-writing contest on the subject of the REA.

This year the topic was "The Value of Rural Electrification in Our Home and Community." Hundreds of essays were submitted and a few were selected. As part of the prize these youngsters are sent to Washington, courtesy of the NREA.

A highlight of the trip is the Nebraska congressional breakfast at which these young people are presented with copies of the CONGRESSIONAL RECORD containing their essays.

Mr. President, I have here some of the winning entries from this year's competition, and, I ask unanimous consent to have printed in the Extensions of Remarks essays written by the following:

Joe Reynolds, 16, a junior at Wood River High School; the son of Mr. and Mrs. A. F. Reynolds of Wood River, Nebr. Sponsor: Southern Nebraska Rural Public Power District, Grand Island, Nebr.

Bruce Carse, 17, a junior at Palisade High School; the son of Mr. and Mrs. Leon Carse of Palisade, Nebr. Sponsor: Southwest Public Power District, Palisade, Nebr.

Barbara Gottschalk, 16, a junior at McDonald High School; the daughter of Mr. and Mrs. B. E. Gottschalk of Benkelman, Nebr. Sponsor: Southwest Public Power District, Palisade, Nebr.

Dotty Jo Beeler, 18, a senior at Oxford Community School; the daughter of Mr. and Mrs. Earl M. Beeler of Oxford, Nebr. Sponsor: Twin Valleys Public Power District, Cambridge, Nebr.

Tom Haffey, 17, a senior at Oxford Community School; the son of Mr. and Mrs. Leo Haffey of Oxford, Nebr. Sponsor: Twin Valleys Public Power District, Cambridge, Nebr.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

RURAL ELECTRIFICATION, AN EXERCISE IN COOPERATION

(By Joe Reynolds, 16, junior, Wood River High School; father: A. F. Reynolds, R.R. No. 1, Wood River, Nebr.)

(Contestant sponsored by the Southern Nebraska Rural Public Power District, Grand Island, Nebraska, in cooperation with the Nebraska Rural Electric Association.)

Rural electrification is of great importance in my life even though electricity was in this area long before I was born. Electricity has given me and my neighbors a sense of responsibility and cooperation, a fact that has been, and is being, proved countless times each year.

As I sit here writing this essay, I look out the window and see the bluish haze of reflections from yard lights on farms nearby. I acquire a feeling of satisfaction and joy from this sight, because its wonderous sight tells me that everything is just the way it should be in the world tonight. Yet, I also realize that without the cooperation of many, many people in the miracle of creating light, I could be looking out into bleak, dark, ebony blackness. I could also be writing this paper by candlelight or gaslight, but I'm not, and thankful to be able to work under illumination that is bright, steady, and gained by simply pushing a button.

Perhaps my appreciation is greater because of the experience of having had no electric lights one night during this past winter. The snow was falling, and the wind was blowing, creating a real blizzard. Already the lights had flickered off and on a couple of times since darkness set in. I was working on homework that night when the lights went off and didn't come back on. I rummaged through drawers, found candles and went back to work, but with considerable difficulty—candlelight flickers at the slightest air movement. About an hour later, I saw a car go by outside. What I saw was something I will never forget! An REA truck was traveling slowly down the road, shining a spotlight on the wires and poles. I hadn't expected the electricity would be fixed until sometime the following day. But there they were, freezing at the peak of the storm, trying to fix the trouble for the people in this area and me. Two hours after the power failure, electricity was back on. Ever since then, I've wanted to thank the REA, and now's my chance to express my deep gratitude to those men who performed that night, far above and beyond the call of duty! That is real cooperation and genuine service!

This event, together with the acts of my friends and neighbors, have shown me that people do care for people and are willing to help out and become involved whenever the need arises. These deeds have also taught me the pleasures and joys there are in reciprocating the sacrifices of others who have rendered their aid by my own sacrifices. In so doing, these sincere gestures of others have helped me to become a better citizen and have also given me guideposts to follow and have been gigantic steps in growing up.

Yes, rural power users really do have more than electricity; they do have cooperative spirit—a spirit that will never die and will never fade away—a spirit that will last as long as there are civilized men—a spirit started by electrification of rural areas.

These are moments I will always remember when I look out the window and see the bluish haze of yard lights, conquering the ebony blackness.

RURAL ELECTRIFICATION AND THE VALUE OF ELECTRICITY IN THE HOME AND ON THE FARM

(By Bruce Carse, 17, junior, Palisade High School, father: Leon Carse, Palisade, Nebr.)

(Contestant sponsored by Southwest Public Power District, Palisade, Nebraska, in cooperation with the Nebraska Rural Electric Association.)

Electricity is the cheapest servant you could ever wish to have. And, it's the most powerful! Pharaoh, in building his pyramids had thousands of slaves, but he couldn't compare to what you have at your command in your electrical switch.

Where was this servant born? In 1936, Senator George Norris of Nebraska and Representative Sam Rayburn of Texas sponsored the Rural Electrification Act of 1936. The act provided that the Administration is authorized to make loans for rural electrification for the purpose of financing construction of generating plants, electric transmission and distribution lines for the furnishing of electric service to persons in rural areas. At the time the Act was passed, only 10% of America's rural areas had central station electric power; today, that figure is 98%.

Nebraska rural electric systems operate about 59,307 miles of line and serve about 102,315 customers. Each rural electric system sets its own rates, hires its own employees, pays its own salaries and makes its own policies.

Yes, rural electrics are great! . . . Great because they provide a necessary service, and provide it continuously, economically and dependably—but with very little fanfare.

On the farm alone there are more than four hundred uses of electricity; at least two hundred and fifty of them increase production or make farming more profitable. An important result of this program is the increased business it brings into rural communities. The rural market for appliances and equipment is estimated at more than a billion dollars a year.

Electricity's greatest convenience on the farm is in the form of power. At the touch of a switch electricity will pump water, dry, grind, load, or convey grain, or power many different shop tools.

One of the most pleasant uses is the excellent lighting it provides. Good lighting means more efficient and safe work. It makes more comfortable the specific tasks such as reading, sewing, cooking, and also makes our recreation more enjoyable.

Electricity in the house has made it a home. The homemaker uses many appliances to make her work easier, more efficient and enjoyable. Water pumps and heaters mean instant hot water for all household needs. Electric dishwashers, washers and dryers, mixers, vacuum cleaners, skillets, coffee makers, toasters, and many other appliances allow the housewife freedom to do other things. Radios and television provide news, weather, and entertainment for the whole family. Electricity provides a controlled room temperature summer or winter with heaters or air conditioners.

It is predicted that by 1980 our electric power needs will be nearly three times greater than what we now use. Experts predict that by 2000 the average use of electricity per person will be more than twenty times the present consumption!

Think what a precious gift my generation is inheriting. One that will provide better health, wealth, and happiness to its people.

All in all, rural electrification has been the means of lightening the heavy loads of work rural America has to carry and I believe it will be an even greater servant in the future.

RURAL ELECTRIFICATION AND THE VALUE OF ELECTRICITY IN THE HOME AND ON THE FARM

(By Barbara Gottschalk, 16, junior, McDonald High School, McDonald, Kans., father: B. E. Gottschalk, Benkelman, Nebr.)

(Contestant sponsored by the Southwest Public Power District, Palisade, Nebraska, in cooperation with the Nebraska Rural Electric Association.)

What is the cheapest most powerful servant that you could ever wish to have? No, it's not a brawny housemaid or a powerful butler, but electricity! Today, when you flick an electric switch, you are in command of more power than any of the ancient kings or conquerors could ever have dreamed of possessing. Rural families were still living in the "Dark Ages" for over 50 years while their city cousins reigned over electric power, but thanks to modern rural electrification, city and farm dwellers are now equals.

Yes, today rural farms are just as "turned on" as the younger generation and they are as much a part of the American scene as the cities! Farming technology is advancing by leaps and bounds every day and electricity is playing a big part in this. Specialized operations such as dairy farms, irrigation projects, livestock feeding yards, and the like are becoming almost wholly dependent on electric power. Electric augers, grain dryers and welders are examples of farming equipment which provide extra help that a farm 50 years ago would have had to do without.

The housewife appreciates electricity perhaps better than any of the other members of a farm family. Radio and television give her contacts with the rest of the world, and household drudgery is nearing extinction, thanks to electric washers, dryers, stoves and countless other appliances.

Today's younger generation can't imagine life without electricity. Children watch television and listen to the radio without giving the electric power that operates them a second thought. One part of the home can be just as comfortable for them to play in as another part because of central electric heating or cooling.

Electric power may be a willing servant, but it should be appreciated. Perhaps today we don't have to think of electricity every time we use it, but since the creation of REA in 1935, countless scores of dedicated people have made it their business to continually improve, and lower the cost of REA service. We owe a lot of gratitude to these public servants who have helped to bring us electric power that makes our lives more enjoyable every day.

REA benefited greatly from enthusiastic open-minded people at the start of rural electrification cooperatives and it is still searching for people who will open the doors to greater advancement in future generations. Even though a farm youth might not choose a particular career in the REA program, his life will be more satisfying and productive because of rural electrification, no matter what his career may be.

The story of electrification in rural America is by no means over. Every year electric power enters the homes of 140,000 new rural consumers, bring higher living standards with it, and consequently changing their lives. Moreover, increasing amounts of electricity are being sold each year to existing consumers.

The whole American way of life is symbolized by the REA program. Only in a free democratic country could citizens work together for their own common good. In the past 30 years that REA has served rural America, electricity has increased farm living standards at an astonishing rate. What will happen in the next 30 years? It is beyond the imagination of anyone, but as REA continues to expand in the future, we can be assured of seeing a rural America that will be a stronger and an even more dependable part of our free country, the United States of America.

HOW RURAL ELECTRIFICATION HELPS ME AND MY COMMUNITY

(By Dotty Jo Beeler, 18, senior, Oxford Community School, father: Earl M. Beeler, Oxford, Nebr.)

(Contestant sponsored by the Twin Valleys Public Power District, Cambridge, Nebr., in cooperation with the Nebraska Rural Electric Association.)

When I think of the myriad of ways Rural Electrification has helped me—a girl born and raised on a farm—literally hundreds of ideas pop into my head. It is really amazing that such small wires can carry so much comfort! In the winter our electric furnace keeps my family and me warm; in the summer our air conditioner keeps us cool. Electricity has greatly expanded family entertainment from the time my mother was a girl. I can watch television, listen to the radio, or read late at night and not have to worry about batteries, candles, or kerosene lamps. As in the rest of the house, when I work in the kitchen, my servant, electricity, is always at my side furnishing power for the electric stove, refrigerator-freezer, dishwasher, washer and dryer.

Not all of my work is in the house because as a livestock producing 4–H girl, I work outside a lot. When I go about my chores, I realize just how much electricity is needed on our farm. I would hate to carry all the water for the cattle that our electric pump furnishes. We used to run a seventy-five cow dairy. The few times the power failed brought to our attention how much we really needed electricity for our dairy. Another silent helper is our vapor light which not only discourages prowlers, but also provides a reassuring atmosphere for our livestock. Dad often discusses how much easier it is to wean calves in a lighted pen.

In my community I see excellent examples of what Rural Electricity has done for the small town. Many factories are moving from the cities to smaller communities. One such factory is Dyna-Forge which located near Oxford. The executives of Dyna-Forge wanted a small community that would provide a place to build an airport adjacent to the plant. Without REA our community would not have been able to furnish the electricity needed for both the factory and the airport. Another rural located factory, which is just beginning to provide employment in my community, is a church pew factory. Many of the workers for these factories could not find rental property in town and now live in farm houses with electricity furnished by REA.

While driving down the highway in the evening, I see the rows of lights from turkey houses where, again, our Rural Electrical servant has lighted the way. For a generation turkeys have been my community's largest industry. If it were not for Rural Electrification, we would not have this large industry and many Americans would miss the turkey for holiday dinners.

REA is the All American Power for all Rural Americans. I shudder when I try to imagine what it would be like if we suddenly lost our electricity and rural America returned to the "Dark Ages."

WHAT RURAL ELECTRIFICATION MEANS TO ME AND MY COMMUNITY

(By Tom Haffey, 17, senior, Oxford Community School; father: Leo Haffey, Oxford, Nebr.)

(Contestant sponsored by the Twin Valleys Public Power Districts, Cambridge, Nebraska, in cooperation with the Nebraska Rural Electric Association.)

The water surges endlessly up from the earth giving life to the land that had before been barren except for dry grass and cactus.

The steady hum of a power line and the drone of an electric pump laboring under unseen weight can be heard pushing the water through rows of pipes. This is a modern day miracle, making land which had previously been useless for raising crops, because of the lack of water, green and furtile.

This modern day miracle had been made possible, in part, by rural electrification bringing electricity to farm areas throughout the nation. With the aid of rural electrification the farmer, or rancher can now enjoy many of the benefits of electricity. It makes irrigation away from streams, rivers and all open water sources possible with the aid of a reliable electric pumping system. By using electricity to power a mechanical feeding operation, the feeder can increase production and thus increase his profit.

As a member of a farming community I can realize the importance of electricity in a rural area. Rural electricity makes it possible to gain more from the land and raise livestock more quickly and efficiently.

There are many applications of electricity on the farm today. Many of these uses increase both the speed and the quality of production. An example of this is the air-conditioned housing unit for the raising of swine. Electricity to heat and cool the building results in year round production of swine and a decrease in the number of animals lost during farrowing. Electric lighting of the farmyard makes it possible for the farmer to have longer working hours or more leisure time to spend with his family after the working day is over. Farmyard lighting also discourages would-be thieves from trespassing.

Rural electrification plays an important part in the success of a rural community, also. A community with an inexpensive and efficient power supply has a greater chance of promoting new businesses. By using electricity to light its streets a community may become a safer and better place to live; electricity also makes possible many different ways of entertainment, such as theaters and lighted recreation facilities, to keep the younger people busy.

Electricity is an important part of a rural area. Without it the United States would not be what it is today; a world power exporting products to all parts of the world. Electricity may well be one of the mainstays of rural America.

QUESTIONNAIRE

HON. BENJAMIN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BLACKBURN. Mr. Speaker, each year I attempt to ascertain the thinking of my constituents on matters of importance to our country by sending questionnaires to them.

Since many of my colleagues would like to know the nature of the questions I am asking, I am inserting the questionnaire at this point in the RECORD. Also, when all responses have been received and tabulated, I will share the results with my colleagues.

The questionnaire follows:

	Yes	No
1. Should the Federal Government develop laws to help prevent strikes by public employees?	☐	☐
2. Do you favor legislation which would return to the States a percentage of the money now collected in Federal income taxes?	☐	☐
3. Do you believe the Federal Government should guarantee an annual income to heads of families, whether or not they are working?	☐	☐
4. Do you support the proposal to convert the Post Office into a Government-owned corporation to operate on a self-supporting basis?	☐	☐
	Yes	No
5. Red China—do you favor U.S. support for admission of Peking to the United Nations?	☐	☐
6. The President's economic advisers recommend extension of the 10-percent surtax, along with other Federal actions, as essential to control inflation. Do you agree?	☐	☐
7. With regard to Vietnam, do you favor—		
(a) Continuing present military operations while negotiating for an indefinite period time, or	a	b
(b) Setting a time limit on the peace talks?	☐	☐
8. In the absence of meaningful agreements at the peace talks would you favor that we—		
(a) Announce the beginning of systematic withdrawal of U.S. forces, or	a	b
(b) Exert all military and diplomatic pressures necessary for victory?	☐	☐
9. For future presidential elections, do you favor—		
(a) Continuing the present method	a	b
(b) Apportioning the electoral votes from each State so as to reflect the popular vote cast	☐	☐
(c) Casting one electoral vote for the successful nominee in each congressional district (with the two state-wide electoral votes reflecting the successful nominee statewide)	c	d
(d) Electing the President by direct, popular vote?	☐	☐
10. Would you rate President Nixon's overall performance since he took office as—	a	b
(a) Excellent (b) Good	☐	☐
	c	d
(c) Fair (d) Poor	☐	☐

DEATH OF R. G. LeTOURNEAU

HON. JOHN G. TOWER

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. TOWER. Mr. President, it was with deep regret that I learned of the recent death of Mr. R. G. LeTourneau of Longview, Tex.

Mr. LeTourneau led an active and productive life. He personally made a significant contribution to his country's military effort in World War II as the developer and manufacturer of the world's largest earth-moving equipment.

All through his life, he never lost sight of his own need for divine assistance and the role of the Lord in the lives of all men.

His 80 years of life constituted a unique linkage of personal resourcefulness, creativity and ability with dependence upon God. This linkage has been an inspiration to many of those who knew Mr. LeTourneau and to those who worked for him.

His motto was, "God is my partner." His life was a symbol of success of the free enterprise system.

His three uncles and two sisters were missionaries, and he himself traveled many hundreds of thousands of miles preaching.

A native of Vermont, Mr. LeTourneau took correspondence courses in engineering and geometry and went to work at the age of 14, first as an iron molder, then as a garage mechanic in California.

During World War I he served in the Navy and he learned the electric machinist's trade. After the war, he went into business repairing tractors. Soon his creative genius with machines resulted in an improved method of building earth scrappers and this in turn resulted in his becoming an industrialist.

He opened his first plant in 1920 and within a decade was manufacturing heavy-grading equipment.

During World War II, the LeTourneau Co. produced 70 percent of all the earth-moving equipment used by our Armed Forces. LeTourneau machines leveled jungles and revolutionized roadbuilding techniques.

In 1946, Mr. LeTourneau introduced a machine which could lay the concrete required to build a four-room house in a single day.

Later, he turned his attentions to producing other types of machinery including a jungle tree crusher and an ocean-going drilling barge.

During all of this industrial success, he continued his evangelistic work. He sponsored religious activities at all of his industrial plants. He once said:

A factory can be dedicated to God as well as a church.

And added—

It may be used as a means of saving many souls.

In 1935, Mr. LeTourneau established a foundation which distributed 90 percent of the dividends from the stock he held in his own company to Christian and charitable causes.

In 1946, Mr. LeTourneau purchased a surplus Army hospital facility in Longview and converted it into a technical institute, now known as LeTourneau College, a 4-year liberal arts and engineering college having more than 750 students.

Mr. President, this great man contributed much to his Nation, to the people he met, and to Christianity. He is sorely missed.

THE SOUTH DAKOTA STOCKGROWERS ASSOCIATION

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BERRY. Mr. Speaker, the South Dakota Stockgrowers Association is holding its annual meeting this weekend in Sioux Falls, S. Dak. The keynote speaker at the 3-day convention will be Secretary of Agriculture Clifford M. Hardin.

I would like to commend the stockgrowers association as a vital cog in providing South Dakota with a sound agricultural economic base.

Beef provides the largest source of agricultural income to South Dakota farmers, and the State ranks sixth nationally in the number of beef cows.

It is interesting to note that beef cows have more than doubled since 1950 and beef income in South Dakota represented 47 percent of all the total cash farm income from crops and livestock last year.

The future of beef production in South Dakota will be even more promising with the development of the Oahe irrigation

project, which will assure a guaranteed feed supply to feed out cattle on South Dakota feedlots which are presently being prepared for market in neighboring States.

TAX-FINANCED PROPAGANDA MACHINE

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. FANNIN. Mr. President, 2 or 3 years ago, Congress debated quite hotly on the issue of financing some sort of public broadcasting corporation. With a full public airing, a carefully limited program was authorized. The main fear stemmed from the possibility that once Government gets into the propaganda business, it is hard to know when to stop.

Now it appears that what Congress would not permit to be done directly is being done indirectly. I call attention to an excellent article appearing in Barron's magazine which gives documentation to the degree of growth Government propaganda has experienced over the past 3 or 4 years.

It seems that several departments have audiovisual departments and production capabilities that rival Hollywood and New York. In addition, these productions—prepared with tax money—often seem to be in direct contradiction with stated policies of the executive branch of the Government.

In a time when we are seeking ways to cut the Federal budget, I would suggest this as a prime area for consideration. It makes little sense to me to have an audiovisual publicity department churning out commercials on how to get Government to do more things for you, when we are trying to get people to be more self-reliant.

In addition to all this, I would suggest it is not proper for one Federal agency, the Federal Communications Commission, to be insisting that broadcasters devote a certain portion of their air time to "public service," and at the same time to be providing a great bulk of material to be used in that same "public service" time. It is not hard to imagine a broadcaster being under some degree of intimidation in such a situation. I can well believe that a station manager may schedule some of the releases of HUD, OEO, HEW, or Agriculture just to "cover" himself in case his next license renewal is questioned. Thus, in such a situation, we find Government, tax-financed radio-TV material competing for a limited amount of air time with such organizations as the Red Cross, United Givers Fund, March of Dimes, and other private or voluntary "public service" announcements.

Mr. President, I suggest that each department examine the budget it is now preparing to cut back or eliminate a great deal of this kind of activity. I have no objection to departments providing assistance to news media in their pursuit of any important programs being carried on by those departments and agencies—however, even those activities can be overdone. What I do object to, and I think most of the American people will agree on this point, is the building of great propaganda empires to turn out reams and reels of material trying to turn the populace's desire toward more Federal intervention into their lives rather than less. That was not the basis upon which the Nation was built, that was not the basis upon which the Nation became great, and it is not the direction in which I believe the majority of the American people wish to proceed. I think that was clearly indicated in the reluctance and care exercised in the discussion over public broadcasting.

I further suggest that members of the various appropriations subcommittees charged with the financial oversight of these activities may wish to inquire into these activities so as to satisfy themselves that the money requested in the budget for fiscal 1970 is really essential to carrying out and implementation of the department's work.

Mr. President, I ask unanimous consent that an article written by Mrs. Shirley Scheibla, published in the May 19 issue of Barron's magazine, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR MASTER'S VOICE: "PUBLIC SERVICE" BROADCASTING HAS BECOME A PROPAGANDA MACHINE

(By Shirley Scheibla)

WASHINGTON.—In carrying out plans to close 59 Job Corps centers, President Nixon may find his task made harder by radio and color television spot announcements which the Office of Economic Opportunity recently sent to stations throughout the country. In a staff memorandum dated February 14, OEO said: "Three new Job Corps TV spots, with the theme of 'Give Yourself a Chance,' have been distributed to all TV stations and will be shown in addition to those currently used. Additional radio spots have also been distributed." (While the Labor Department, slated to take over the Job Corps, persuaded OEO to withdraw plans to advertise the Job Corps on the side panels of every mail truck in the country, it failed to talk OEO into killing the radio-TV spots.)

HIGHLY CONTROVERSIAL

A few years ago, federal production of TV and radio material to propagandize highly controversial programs was most unusual. Today it's the rule rather than the exception for most government agencies engaged in social endeavors, nor are their efforts confined to spots. On the contrary, today they turn out vast quantities of long and short TV films, video tape and radio productions and scripts. They're doing it on their own; through donated professional services; and under contract with private companies and non-profit institutions like universities. Some agencies even have a "Spotmaster" which enables stations to broadcast recordings directly from a phone after dialing the right number.

Nobody knows how much money the government spends on such activities, or even the approximate value of the gratis services. Nobody even knows how much Uncle Sam spends for public relations; most agencies take such disbursements out of their administrative budgets. However, one independent producer of TV films for the government estimates that expenditures for that item alone run into hundreds of millions of dollars. (He likes the work because it doesn't involve competitive bidding.)

Nobody at the top in government studies the radio and TV messages being disseminated. Herbert Klein, communications director for President Nixon, doesn't have the time. Small wonder. The Agriculture Department alone has 300 different films available for television, not counting about 350 spots, plus radio material.

The uncontrolled avalanche of federal propaganda gets a great reception from radio and television. Broadcasters apparently are delighted to receive free material of commercial quality. Moreover, it is one way to comply with the requirement of the Federal Communications Commission to devote some of their time to "public service"; all federal productions for the airwaves are lumped into the "public service" category. But they're beginning to look less like a public service and more like a propaganda monster.

OTHER REALMS, TOO

President Nixon may find himself in opposition to federal radio-TV material in other realms as well. As he tries to "bring us together" and still the voices of racial turmoil, he will be running into a TV spot distributed by the Department of Housing and Urban Development (HUD), which says, in part, "If you're black, you've got to be famous to live where you want. You call up; the agent has a house. Show your face; it vanishes."

While Mr. Nixon is trying to bring OEO's community action under control, a HUD radio spot is urging listeners to "organize community action groups." (A 14-minute Interior Department TV movie suggests community action to remedy a water shortage.) Although, the Chief Executive's advisors are pondering the problem of too many requests for HUD money, the agency's TV and radio spots tell people to send for a booklet, "Better Communities," which urges readers to apply for nine different kinds of grants from HUD.

Communications Director Klein says he would like to inspire a new pride in America. But here's what the booklet says: "Today America's urban communities are at a juncture. Their sidewalks are unsafe, streets jammed with traffic and air polluted. Their office and apartment buildings are all too often uniformly drab and unoriginal in design. Their cores are ridden with slums, junkyards and neon forests. Their splayed amorphous suburbs are rapidly becoming unsightly and unlivable. Whether they will continue to deteriorate or will be revitalized and rebuilt is in question." The answer, says the booklet, is that everyone "must be made aware of the abundant opportunities available to them for bettering their communities," i.e. money from HUD. Proudly HUD reports it has had 1,500 requests for the booklet directly attributable to the spots.

SOLICITING BUSINESS

The Equal Employment Opportunity Commission is another agency which appears to be using spots to solicit more business than it can handle. Despite its admitted inability to deal with the huge volume of complaints it has on hand, EEOC has a radio spot which says, in part, "Do you need a job? If so, go to your United States Employment Service or visit a private employment agency. If you hear of a job that you can do and you would like to have, go today and apply for it . . . If you are turned down because somebody thinks you are the wrong color or the wrong race or the wrong sex or religion or national origin, that somebody is breaking the law—and the Equal Employment Opportunity Commission wants to hear about it."

The Agriculture Department's huge roster of TV movies and radio material promotes virtually every controversial activity within its jurisdiction, including farm and electric cooperatives. A film now in preparation will tout the federal meat and poultry inspection service which recently has been criticized for

issuing biased reports on conditions in the meat-packing industry (Barron's, April 7).

HOLLOWS AND RUTS

Back in 1965, when President Johnson was struggling to win support for the War on Poverty, the Department produced a 28½-minute film titled, "Poverty in Rural America." It remains in circulation for TV use. According to the Department's catalog: "This film takes you where the 'Hidden Americans' live—into the mountain hollows, to the end of the rutted dirt roads, and into the by-passed communities."

This a long way, of course, from Smoky the Bear, who now is revered as the grandfather of the mushrooming federal broadcasting ventures. The Department still is promoting its fire-fighting bear and features him on about 95 commercially produced TV spots. They are the only films which the agency doesn't turn out in its own studio in its sprawling South Building. During fiscal 1968, the studio made 87 TV films for the Department, compared with 94 in 1967. "But owing to a sharp increase in the requirement for longer films," it explains, "the level of activity in terms of finished screen minutes held essentially constant."

Here is what the Department reports on its growing radio activities: "'Agri-Tape,' a weekly tape recorded program, went to 427 radio stations, exceeding what was thought a year earlier was near production capacity (400) for regular handling with existing facilities. 'Agriculture USA,' another weekly taped program, grew from 220 regularly using stations to 236. The daily radio featurettes, 'Consumer Time,' issued on a weekly reel of six programs (three and a half minutes), continues serving 325 to 350 radio stations."

The Department of Health, Education and Welfare (HEW) is so deep in dramatic productions for the airwaves that it employs a former theatrical agent—Harry C. Bell—as its radio-TV officer. Among the Department's recent TV films are two running a half-hour each, called "Beware the Wind" and "Battle Below the Clouds." Dealing with air pollution, both are distributed under the auspices of HEW's Consumer Protection and Environmental Health Service.

A 15-minute weekly show by HEW's Social Security Administration is carried by 743 TV stations and 3,698 radio stations. A five-minute weekly show, recorded for Social Security by singer Eddy Arnold, is aired by 2,000 radio stations a week. In addition, Social Security reports that during the final quarter of last year, 185 TV stations used its live programs; 91, its long films and 703, spots.

"Three years ago," says Mr. Bell, "we were producing virtually no TV spots; now we have them out on anti-smoking, air pollution, drug abuse, rehabilitation, the Teacher Corps, financial aid to students and Social Security."

With over 1,000 community action centers scattered all over the country, OEO is in a unique position to exploit radio and TV as a propaganda tool. It is urging every center to literally get into the act. Volume II of an OEO Public Affairs Handbook called "Sound and Sight" tells how to do it.

"Under terms of their licensing by the Federal Communications Commission, TV and radio stations must devote a certain amount of broadcast time to public service" and "your Community Action Program fits the definition of a public interest program," the booklet advises.

SCRATCHING THE SURFACE

But wangling free spot announcements and guest appearances on existing programs is "only scratching the surface," according to the booklet. Send news releases about CAA activities to TV and radio stations and develop with them a public affairs series telling "what the poverty program can do for the community and what the community can do for the poverty program," it urges.

"Know the special prejudices of your audience. . . . In a rural area . . . emphasize the 'individuality' or 'self-help.' . . . In an urban area, where group cooperation is more of a way of life, your program might portray those efforts in which the community joins together toward a special goal," declares the booklet.

With a $100,000 grant from OEO, the Community Action Training Institute of Trenton, N.J., produced a TV show series which recently was nominated for a special citation by the National Academy of Arts and Sciences. Called "Ya Es Tiempo" (It's About Time), the five Spanish language shows were aired over UHF channel 47 in Newark last August and September. The theme was that it's about time to do something about poverty and that the answers lie in community action.

ACTION-TYPE CLUBS

CATI reports that over 50 buyers' clubs, block clubs and "other action type" clubs were formed as a direct result of the Spanish-language showings.

On each of the five evenings when the TV programs were shown, 224 Spanish-speaking CATI group leaders conducted training sessions in their homes for 2,300 people in connection with viewing the programs.

Here, in essence, is how CATI describes the show on employment problems: A man who has worked at a factory for seven years is fired without being told the reason. His union will not help him. When he tells his friends, they are afraid that if they help him, they will be fired. But finally they meet with an employment specialist at a CAA. "He suggests they form a group so they can learn what to do; e.g. how to participate in the union so it's working for their benefit." The specialist also helps the fired worker "get into a training program that will prepare him for a new career."

This is what CATI reported about advance promotions: "The group leader and actor network of local people, assisted by many CAAs, local organizations and churches in New York City and northern New Jersey, distributed more than 3,000 posters and 50,000 throwaway announcements. This neighborhood promotional effort reached 36 Spanish barrios. . . . Channel 47 gave free air time for short promotional spot announcements. . . . An advertisement was placed in The New York Times the day of the first telecast."

Currently being aired in Newark—over radio station WNJR—is the Newark Report, produced by the United Community Corp., the top CAA in that city. Started last October, it is a panel discussion show of the programs of the UCC, and WNJR says it is very popular.

DYNAMIC PLATFORM

According to The Crusader, a newspaper published by the UCC, television "can provide a dynamic platform to bring the basic problems of the ghettos more clearly into focus. . . . The poor have come to recognize that their demand for a free and equal access to the mass media is an intrinsic part of their being able to succeed in the struggle for freedom from hunger, from privation, from exclusion."

Down in Williamston, N.C., Martin County Community Action, Inc., puts on a 15-minute radio program twice daily. "An antipoverty agency is not the easiest thing to sell the public on, but we have been rather successful in our efforts with the affluent as well as the poor," says Harmon St. Clair of MCCA.

OEO itself sends out radio-TV material in addition to that on the Job Corps and urges its local community action groups to help persuade local stations to use it. For instance, OEO recently sent all TV stations half-a-dozen new color spots lauding VISTA.

"The Owl Who Gave a Hoot" is described as an OEO cartoon film which "alerts low-income groups to their rights as consumers, rights being denied them because of malpractice, fraud or their own lack of knowledge."

Mention of the future prospects for the role TV and radio will play in government public relations brings a sparkle to the eyes of many information officers of the aforementioned agencies. They talk of only beginning to exploit the possibilities.

Obviously those who are battling creation of a Public Broadcasting Corp. to forestall federal broadcast propaganda are unaware of what is now going on.

LOS ANGELES COUNTY AID DIRECTOR ENDORSES ROYBAL BILL, H.R. 11044, FOR NATIONAL WELFARE STANDARDS, WITH 90-PERCENT FEDERAL FUNDING

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. ROYBAL. Mr. Speaker, one of the most important issues facing the country today is the urgent need for reform and revisions in our public assistance programs.

For that reason, I was particularly happy to receive a letter from Mr. Ellis P. Murphy, director of the Los Angeles County Department of Public Social Services, and a nationally recognized authority in the welfare field, in which he offered his enthusiastic support for my bill, H.R. 11044, to establish minimum standards for welfare benefits to apply across the board in all 50 States, with provision for 90-percent Federal cost reimbursement.

H.R. 11044 would also repeal the arbitrary child welfare "freeze" in the program for aid to families with dependent children.

Because this issue is of vital concern to millions of citizens throughout the country, I include Mr. Murphy's letter in the CONGRESSIONAL RECORD at this point:

COUNTY OF LOS ANGELES,
DEPARTMENT OF PUBLIC SOCIAL SERVICES,
Commerce, Calif., May 28, 1969.

Hon. EDWARD R. ROYBAL,
Cannon House Office Building,
Washington, D.C.

DEAR ED: I want to thank you for introducing your bill, H.R. 11044, establishing national welfare standards with 90 per cent federal funding. In view of the recent Supreme Court decision eliminating durational residence requirements for welfare, national standards become imperative.

Ninety per cent federal funding would mean a saving to Los Angeles County property taxpayers of $84,553,656, equal to a 46 cent decrease in the tax rate. At a time when increasing taxes place more and more of a burden on the property owner, this reduction is especially welcome.

Your bill also benefits recipients of public assistance by encouraging a uniform standard of need for aged, blind, and disabled individuals, removing the "AFDC freeze," as well as increasing the amount of aid being provided. As you know, we have long advocated uniform standards for aged, blind, and disabled recipients since we feel it removes certain unnecessary inequities in the programs. The removal of the "AFDC freeze" will let us

extend help to all families in need without an arbitrary quota being imposed. Any attempt to help recipients keep up with the generally rising cost of living is, of course, very much appreciated.

I have written to our Los Angeles County Board of Supervisors urging them to give their full support to H.R. 11044.

Again, thank you for your bill on behalf of both recipients and administrators of public welfare. I certainly hope it becomes law.

Sincerely,

ELLIS P. MURPHY,
Director.

THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. SCOTT. Mr. President, it has long been commonplace that every American could succeed in whatever pursuit he chose, so long as he had the ability and desire to work for it. The falseness of this cliche has for an equally long time been apparent to members of minority groups, particularly black Americans. It is an unfortunate fact of life that many of our citizens are the victims of racial discrimination, barred from aspirations that most of us consider normal.

It was to wipe out this disease that the Equal Employment Opportunity Commission was created. The Commission has endeavored to carry out its statutory mandate of implementing the employment provisions of the Civil Rights Act of 1964, but has been slowed in its efforts by its own lack of enforcement power.

Hopefully, this administration will demonstrate real and sincere leadership in pursuing the goal that is so critically important to the attainment of the American ideal—equal opportunity for all. The President has already moved in this direction by naming William H. Brown III to be Chairman of the EEOC. Mr. Brown's experience covers the whole spectrum of civil rights, and his legal activities have been of international significance. Prior to passage of the public accomodations law, it was he who assured black African diplomats traveling between New York and Washington of the common courtesy of being served in a restaurant. I am confident that William Brown will not "walk soft" where there are injustices to be remedied. His personal history gives the lie to any such supposition. As a distinguished member of the Philadelphia bar he has many times lent his services to civil rights causes aimed at obtaining better jobs and housing for black people. Success has not sapped his drive to improve the lives of the less fortunate. But if he is to succeed in his new mission, he must have the wholehearted backing of every organ and instrumentality of this Government. Any other course will not maintain the confidence of a people in its institutions.

I ask unanimous consent to have printed in the Extensions of Remarks President Nixon's remarks at the swearing in of William H. Brown III as member, and announcement of his designation as Chairman of the Equal Employment Opportunity Commission.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

(The President's Remarks at the Swearing In of William H. Brown III as Member and Announcement of His Designation as Chairman of the Commission. May 6, 1969)

We are here today for the swearing in of the member of the Commission and then I will make an announcement after that about Mr. Brown's appointment.

He will be sworn in by an old friend, Judge Hyde.

Mrs. Brown, would you hold the Bible and stand here?

[At this point, Judge DeWitt S. Hyde of the District of Columbia Court of General Sessions administered the oath of office.]

Now, if the Senator and others would come here, all of you who would like to congratulate Mr. Brown, then I will say a word and leave him to the press.

In making the appointment of Mr. Brown to this Commission, I did so with the full knowledge that he was a man who was uniquely qualified for it. He comes from Philadelphia. I suppose we could describe him as a Philadelphia lawyer, because he is a lawyer. But he is a Philadelphia lawyer in a much broader sense than we usually think of that term.

He knows the law. He is an expert in the law. But he also has what I would call a spirit of brotherly love which the city of Philadelphia has been so long associated with.

Combining that legal expertise with a deep dedication to the principle of equality of opportunity for all people in this country, an equal chance for all people, I think these are the unique attributes that we need, not only as a member of the Commission, but as Chairman of the Commission.

I am delighted to be able to appoint a man so well qualified, so full of dedication, to this very important position.

We wish him and the members of the Commission well. I know that, having had a chance to talk to him, he will provide the leadership that this administration wants in this vitally important field.

Now, I will leave you for your first press conference as Chairman of the Commission here in this very pleasant place.

(NOTE.—The President spoke at 4:15 p.m. in the Rose Garden at the White House.)

D-DAY

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. TIERNAN. Mr. Speaker, tomorrow marks a very special day for every American—D-Day, the day in World War II when our valiant fighting men began the liberation of Western Europe.

To commemorate the 25th anniversary of this occasion, some 350 veterans of the 4th Infantry Division and their families are retracing the route they followed in 1944.

The 4th Division, which spearheaded the invasion of Normandy and the liberation of France, was flown to Europe on two charters by Pan American World Airways on May 31. The dedication tomorrow of the 4th Infantry Division monument at Utah Beach will highlight the trip.

First stop on the itinerary was London where 2 days were spent before visiting former training sites near Exeter. From Britain, the veterans will sail tomorrow to Normandy, revisiting the invasion beaches, to take part in the D-day ceremonies. The group will then continue to Mont-Saint-Michel, Paris, Luxembourg, and Cologne with stops at famous battlefields en route.

The movie "The Longest Day" was released to Pan Am by Twentieth Century-Fox for a special showing on the New York-London flights.

I can think of no more appropriate way to commemorate this occasion—lest we forget.

WELFARE NEEDS OVERHAULING

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. PUCINSKI. Mr. Speaker, the Chicago Daily News carried an excellent editorial on the need for overhauling the Nation's welfare program.

I am pleased the Daily News noted my own concern with existing programs.

The Chicago Daily News quite properly points out that action on this entire subject is necessary and with the influential voice of the Daily News calling for needed reforms, I am sure the goal is so much closer of achievement.

The Chicago Daily News editorial follows:

WELFARE NEEDS OVERHAULING

The cost of providing the necessities for the poor bears heavily upon state and local budgets also strained by other needs. The welfare program tends to perpetuate itself—the poor stay poor and their children succeed them on the welfare rolls. It often contains little or no incentive for independence. It is debasing to its clients. It tends to fragment families. Wide differences in welfare payments among the states encourage massive movements to the high-paying states.

Obviously, something's got to be done, and mayors, governors, congressmen and the President are all working on it. A week ago Sen. Charles Percy (R-Ill.) introduced three bills to equalize welfare payments, assist the states in meeting their obligations, and ease the rule applied in some states prohibiting child-aid payments to families with "a man in the house." On the same day Mayor John Lindsay told the President's Urban Affairs Council that the present approach to welfare should be scrapped and replaced by one that would include job incentives, encourage families to stay together, increase federal government financing, and would be flexible, Rep Roman Pucinski (D-Ill.) has already introduced a bill that would standardize welfare payments, create work incentives, and provide full federal funding of the welfare program.

President Nixon is considering two revisions. One—the "Family Security Plan"—would provide income maintenance, by the federal government, of families with employed fathers. The alternative revision would establish a minimum national welfare standard, probably at about $40 a month per

person, and give federal aid to the poorer states.

At the moment these are only beginnings, but they are trending in the right direction—toward increased federal financing of welfare programs, toward incentives to encourage employment and help break the poverty cycle, toward better treatment of human beings and families. It is encouraging that many official minds are at work on the problems and are concerned for the cost of poverty and for the consequences if that cost is not met.

THE 100TH ANNIVERSARY OF JOHN WESLEY POWELL'S FIRST EXPLORATION OF THE GREEN AND COLORADO RIVERS

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. McGEE. Mr. President, a few days ago, on the banks of the Green River in Wyoming, I participated in the commemoration of the 100th anniversary of John Wesley Powell's first exploration of the Green and Colorado Rivers. We gathered on the banks of the Green at Green River, Wyo., the jumping-off place for Powell's excursions and a likely starting place for any modern travelers who would like to see a large swath of the West, including the mighty rivers Powell mapped.

Jack Goodman, in an article published in last Sunday's New York Times, outlined the trip for motorists with a week or two to spend on such an excursion, from Green River, where the road takes one along the rising cliffs of the Flaming Gorge National Recreation Area, to the south rim of the Grand Canyon in Arizona, where a plaque will be dedicated in another centennial ceremony in August. Mr. President, I ask unanimous consent that Mr. Goodman's article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 1, 1969]

FOLLOWING POWELL'S RIVERS IN AN AIR-CONDITIONED SEDAN

(By Jack Goodman)

GREEN RIVER, WYO.—This anniversary year of Maj. John Wesley Powell's exploratory rides down the waters of the Colorado River system is being widely marked by ceremonies, dedications and re-enactments of his thrilling boat trips. While the re-enactments attract the adventurous, any sedentary tourist who wants to get close to the Green and Colorado Rivers without getting his feet wet or getting near a rubber boat, can do so from the comparative comfort of his own or a rented and air-conditioned automobile.

The motorist may have to make an occasional judicious choice of route, but anyone with a week or two to spend in this part of the West can see a great deal of Major Powell's rivers.

The major's exploratory mission in 1869, and a more thorough mapping project two years later, were detailed in his journal published in 1875. In it, he gave the nation its first practical program for Western reclamation and Great Basin agriculture. Powell went on to help establish the United States Geological Survey, of which he served as director for 12 years, beginning in 1881.

THROUGH A MAZE OF CANYONS

The major had planned to run the Green River through Utah Territory, departing from the town of Green River, Wyo., and continuing to the river's junction with the Grand River (now the Colorado) in a maze of canyons south of Moab, Utah. Beyond the rivers' confluence, the streams joined to form the "Colorado River of the West," which somehow ambled, cut and roared its way into Arizona Territory, on to California and then to the Gulf of California.

This year, boatmen will navigate the Green and Colorado Rivers, portaging around Flaming Gorge and Glen Canyon Dams, the twin concrete monoliths built by the same Bureau of Reclamation that Powell helped father. Wyoming and Federal officials launched one trip here in Green River last week, when a National Park Service historic site on nearby Expedition Island was dedicated to the major and his men.

On June 26, at Split Mountain Gorge in Dinosaur National Monument, Utah and Federal officials will dedicate a new highway, campground and monument to Powell. At this ceremony, Ute Indians will dance and rivermen will set off downstream for Lake Powell and the Grand Canyon.

Still another ceremony will take place at Glen Canyon Dam in Page, Ariz., on June 19, when a museum saluting Powell will be dedicated. And on Aug. 15, an observance at Bright Angel Point in Grand Canyon National Park will mark the date, 100 years ago, when Powell's two battered boats were beached beneath the canyon walls.

In making this north-south highway junket paralleling and crisscrossing the Green and Colorado Rivers, motorists can follow paved and/or hard-surfaced roads for all but about 175 miles of the 1,000-mile route. Large cities are still few and far between in this part of the West, but there are adequate motels and eating places.

DRESS FOR VARIED ELEVATIONS

The country hereabout ranges in riverside elevation from 6,000 feet above sea level in Green River to barely 1,000 feet above sea level near Lake Mead, and the roads cross high mountain passes and hot desert country. This means that a variety of garb should be carried. There are service stations along the entire route, but in one sector they are 130 miles apart.

The trip can be made in three days, but the region is so rich in scenery and history, Indian cultures, natural wonders, opportunities for side jaunts and camping that even two weeks may prove inadequate. If you choose to boat and fish, take side trails, use a camera or go rock-hounding along the way, allow a full month for the trek. The area covered is larger than most European nations.

WHERE TO BEGIN

Jumping-off place for the highway tour downriver is Green River, Wyo., on Interstate 80; the town is on the main line of the Union Pacific Railroad and the historic Mormon and Pony Express trails. The nearest scheduled airline stop is Rock Springs, Wyo., 15 miles to the east, while the closest metropolis is Salt Lake City, 175 miles westward. If Green River motels are crowded because of the Powell centennial, which is unlikely, seek out the highly modern, very sizable motel in Little America, 24 miles west of Green River.

South of Green River itself, the best road paralleling Powell's river run is State Route 530, even though the motorist unfortunately loses sight of the Green River as the stream moves toward the depths of Firehole Canyon. The road crosses dry, rolling hills in which you may see a few pronghorn antelope, and then enters increasingly scenic country south of Blacks Fork, a tributary of the Green River.

For much of the 48-mile drive between Green River and Manila, Utah, the pavement skirts a series of rising cliffs and the boundaries of the newly established Flaming Gorge National Recreation Area. There are pleasant camp, picnic and boat-launching sites on the western shores of 90-mile-long Flaming Gorge Lake, man-made, placid, open water formed by 502-foot-high Flaming Gorge Dam.

South of Manila and the Utah state line, the Uinta Mountains forced the Green to cut deep gorges for its passage. As a result, portions of the 48-mile route between Manila and the towering Flaming Gorge Dam—it is near Dutch John, Utah—are unpaved or eroded by occasional floods.

RED CANYON OVERLOOK

The road veers in all directions as it swings toward Red Canyon overlook, Flaming Gorge Dam and lodge and a half-dozen campgrounds. At this point, the road paralleling both lake and river is Utah State Route 44.

The lodge and campgrounds at Flaming Gorge, roughly 100 miles south of Green River, can provide pleasant quarters for the night, especially if you wish to try fishing in the clear, rapid-running waters of the Green below the towering power dam. There, the river is easily traveled by portable boat or rubber raft; it has a reputation as being one of the finest trout streams in the West.

Below Flaming Gorge Dam, State Route 44 runs south through scenic, rugged country within the borders of Ashley National Forest. However, Powell's river route swings off to the east, as the Green River carves its series of white-water gorges through Red Canyon, crosses the Colorado state line at Browns Park and enters strikingly scenic Lodore Canyon.

GATES OF LODORE

There is a graveled road to the river at this point—it is accessible from Maybell, Colo., to the east—but those wishing to view the Gates of Lodore should plan to spend an additional day in the area.

At Vernal, one of the better food-and-lodging centers on the trek, a brief stopover at the Utah State Natural History Museum is worthwhile. From there, motorists head to Jensen, 12 miles east on U.S. 40, for a swing into Dinosaur National Monument.

State Route 149, entering the monument just above Jensen, follows the now placid Green River across meadowland and ranch pastures. After a stopover at the visitor center and the Dinosaur Quarry, there to watch scientists chip away at ancient skeletons, the motorist should drive on to Split Mountain Campground.

At this spot on June 26, Utah and Park Service officials plan to hold afternoon and campfire ceremonies commemorating the Powell voyage. One reason for the celebration is completion of pavement to the riverbank.

The monument's only other paved road to the river enters from U.S. 40 just east of the Colorado state line and extends to a 7,500-foot-high viewpoint at Harpers Corner. There, motorists can peer across to Steamboat Rock, the junction of the Yampa and Green Rivers, and the site of the proposed Echo Park Dam.

Below Jensen and Dinosaur National Monument, the Green flows untrammeled and unreachable by any major road as it cuts through the Uintah and Ouray Indian Reservation. A 20-mile spur road does cut into the reservation, meeting the Green at Ouray, where the White River flows into the mainstream. However, the road deadends abruptly at riverside.

The best and most scenic way south is to proceed on U.S. 40 to Duchesne, Utah, and there onto State Route 33, a road that is reasonably well paved for more than half of its 45-mile length. There are no service stations along the route which tops a 9,000-foot-high pass near Gray Head Peak.

DESOLATION CANYON

Beyond Castlegate, Helper and Price (a good motel and dining town) on U.S. 6–50,

the motorist heads southeast across some 60 miles of desert in the lee of the Roan Cliffs. At Green River, Utah, the road finally meets the river, which has chewed its way through countryside that Powell aptly named Desolation Canyon.

Situated there is Green River State Park, at 4,080 feet above the sea. This means that Powell dropped 2,000 feet in elevation coming down the upstream rapids of the Green.

An annual "cruise" set forth from the state park launching ramp this weekend. It traversed 117 miles of the Green to its confluence with the Colorado, and then swung 65 miles up the latter river to Moab.

Those vacationists who welcome the challenge of rough country, and do not fear a lack of pavement, should proceed south from Green River, Utah, on State Route 24, newly paved for its scenic 53-mile length to Hanksville (last place for gasoline, so fill up there).

OFFERING MOUNTAIN VIEWS

From Hanksville, State Route 95 also has been freshly paved to Trachyte Junction, a 68-mile journey offering fine views of the 11,000-foot-high Henry Mountains. From pavement's end near the new Hite Bridge across the Colorado, Route 95 is graded, bladed, dusty and bumpy for nearly 100 miles to Blanding.

Before reaching Blanding, State Route 95 passes Natural Bridges National Monument, with its three memorable sandstone spans; the road also provides the motorist with views of one of the most spectacular Colorado River gorges in this vast sector of mesas and cliffs.

The monument has no lodge, but does have pleasant campgrounds, well-marked trails and viewing points and a cool, shady visitor center. At Blanding, good motels are plentiful.

The alternate route from Green River, Utah, leads east to Crescent Junction and then south on U.S. 160 to Moab. Just north of Moab, a newly paved road takes one to Dead Horse Point State Park, with its striking views straight down on the Colorado.

A connecting road, unpaved but easily traversed, goes into the upper section of Canyonlands National Park. A terrace at Grand View Point enables the visitor to peer down to the confluence of the Green River and the subsequently renamed Grand, which come together some 3,000 feet below to form the Colorado.

ARCHES NATIONAL MONUMENT

While near Moab, the traveler should explore Arches National Monument. Motorists also can drive 18 miles downstream along the Colorado to a point almost directly below Dead Horse Point, and they likewise can drive north and east up a paved sector of State Route 128, a trip that takes them through the cliff-girt gorge. Also while in Moab, the vacationist with time to spare can make a boat trip of an hour or two either upstream or down.

Nearly 60 miles south of Moab, a well-maintained road leads west into Canyonlands National Park, which is bisected by the Colorado River below its confluence with the Green. This section of river can be reached only by four-wheel-drive vehicles.

Guided tours into this portion of Canyonlands, with visits to the confluence, Angel Arch and the Needles, can be arranged in Moab or Monticello. The latter lies southeast of the park entrance and, like Moab, is equipped with good motels.

NO ROAD TOUCHES THE RIVER

Utah State Route 47 should be followed south from Monticello to Blanding and on to Bluff, where St. Christopher's Mission to the Navajos is situated. From this point south and west across the Navajo Indian Reservation, no road touches the Colorado or its successor, 180-mile long Lake Powell.

The only available cross-reservation road is the Navajo Trail, U.S. 164. The Navajo Visitor Center at Monument Valley, on the reservation grounds, is a good stopover point.

At Tuba City, Ariz., also on the reservation, vacationists have another choice of routes. A 43-mile drive north on U.S. 89 leads to Alternate U.S. 89, the Marble Canyon Bridge across the Colorado and a patch of placid, riverside road at old Lees Ferry. The newer road, U.S. 89, goes to Glen Canyon Dam and the Waheap Marina. Lake tours extend to Rainbow Bridge and up shimmering Lake Powell.

South of Page, Ariz., and Lake Powell lies Grand Canyon National Park. A 150-mile trip along U.S. 89 and State Route 64 brings one to the canyon's South Rim, where a plaque will be dedicated to the explorer on Aug. 15.

CHURCH COUNCIL ADOPTS ANTI-ABM RESOLUTION

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BROWN of California. Mr. Speaker, last month the general board of the National Council of Churches adopted a resolution opposing deployment of President Nixon's proposed Safeguard ABM system. I now place that resolution in the RECORD:

NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE UNITED STATES OF AMERICA: RESOLUTION ON THE ANTI-BALLISTIC MISSILE, ADOPTED BY THE GENERAL BOARD ON MAY 2, 1969

The General Board of the National Council of Churches

1. Recognizing wide diversity of opinion and controversy in our churches and the country concerning construction and deployment of a United States antiballistic missile (ABM) system, the most recent version of which was announced by President Nixon on March 14, 1969, as the "Safeguard" ABM system; noting that this debate has become a *primary focal point* for the broader national debate on the meaning of national security and the reordering of national priorities;

2. Reaffirming the Policy Statement of September 12, 1968, "Defense and Disarmament: New Requirements for Security," which addressed itself to the issues of national defense and security in Christian perspective and attempted to set forth a *framework for a new concept* of security;

3. Recalling that one of the next steps toward a national reorientation on defense and security matters suggested in that Policy Statement was "a *mutual halt* in the further production and deployment of strategic *offensive and defensive* missile systems, including the anti-ballistic missile system";

4. Believing that the ABM debate has raised *questions of fundamental importance* for the future *direction* of United States foreign policy, for the real *security* interests of the nation, for the use of our *national resources*, and for the *quality of our society;*

5. Understanding that among the *serious questions* calling for clarification are those concerning the basic justification for the ABM, its effectiveness, its eventual cost, its effect on the arms race, its relation to the spirit and intent of the Nonproliferation Treaty, its use of resources needed for other national and international needs, and its contribution to the real security of the nation;

6. Believing further that these questions, raised frequently by *knowledgeable* persons including many of the nation's *leading scientists, experts on Soviet and Chinese affairs,* many members of the Congress, and former high government officials, have not been given satisfactory answers;

Does therefore

1. Oppose deployment of the ABM on the basis of the case now made as to its necessity for national security, its effectiveness, its effect on the arms race and disarmament negotiations generally, its implication for the Nonproliferation Treaty,[1] its cost, and its drain upon national resources;

2. Request churchmen, and all concerned citizens, because of the potential consequences of this watershed decision for international peace and the quality of our own society, to consider these grave matters and to exercise their rights and responsibilities as citizens and to state their conclusions to appropriate decision-makers.

WATER POLLUTION—ADDRESS BY MAURICE B. TOBIN

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. JACKSON. Mr. President, Maurice B. Tobin, former counsel to the House Committee on Public Works, recently addressed a luncheon of the National Water Pollution Convention in Houston, Tex., on the subject of the pollution question as we move into the seventies. Because of his experience as a staff member on the legislative team that helped to write the water pollution laws, I believe his remarks are of interest to all of us. I ask unanimous consent that his speech be printed in the Extensions of Remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

GEARING UP FOR THE SEVENTIES—THE POLLUTION QUESTION

One of the truly critical areas on the domestic front as we reach to open the door of the seventies is the whole problem of pollution. We can't do much about holding back the nineteen seventies, but surely when that door is opened some light must be shed on our efforts towards pollution control.

Behind the door to the seventies is an ever-mounting backlog of work to be done to fulfill the nineteen sixties legislative mandate for action. Congress started the sixties by passing strengthening legislation to the pollution act only to have it cut down by a presidential veto. Congress came back the next year (1961) and by a 3–1 margin amended and strengthened the Water Pollution Control Act. More teeth were put in the Act by the unanimous passage of the 1965 Water Quality Act; the next year, 1966, saw financial promise with the unanimous passage of the Clean Waters Restoration Act; 1968 saw the passage of the Water Quality Improvement Act, though adjournment prevented a conference and, finally in 1969, a similar improvement act passed the House by over 390 votes and is now pending before the Senate—so the legislative pace of the sixties pushed, pulled, and passed on amendments that bolstered the outcry for clean water.

ONLY 21 PERCENT FUNDING

Now a decade of legislative gains is brought to a near halt by the gut issue of no money. The inventory of pollution needs

[1] The relevant part of the Nonproliferation Treaty is Article 6: "Pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date. . . ."

were paraded from one end of the country to the other—but, the no money problem halted the march to action. Of the billion dollars Congress unanimously authorized for water pollution control for FY 1970, the Federal budget allows only 21% or $214 million. So only 21% of the waste treatment plants sorely needed to treat sewage across the country will be built. Keep in mind this $214 million is for the whole nation. It must reach into the nation's over 4,494 cities and towns.

ROCKEFELLER TAKES LEAD

To spread this meager $214 million out across the nation's cities and towns requires a minor miracle. One state—New York—could devour this entire amount in one easy gulp as the Federal Government now owes New York over $267 million in reimbursements for sewage treatment plants already constructed. Like many states, New York could not wait. Under the constant push of Governor Rockefeller, the citizens of New York voted four-to-one to tax themselves on a billion-dollar bond issue to raise their share of the necessary pollution control dollars. Then they had to get extra money to take care of the Federal share until such time as the Federal share can be paid. Other states with less dynamic leadership find it next to impossible to raise not only their own share, which is nearly three times that of the Federal Government, but also raise the Federal share with the understanding that some day they will be repaid.

CITIES OUT FRONT

Following the Rockefeller lead, cities have voted bond issues to help raise sorely needed pollution control dollars. To get on with expansions, additions, and modernization, St. Louis voted by a five-to-one margin on a $95 million bond issue to stop the discharge of untreated sewage into the nation's water system. Education, urban renewal, welfare and crime control, etc., all vie for the municipal tax dollar too, but progressive and farsighted cities are moving ahead with pollution control programs. Among these cities taking the lead in getting the money to do what we are all talking about are Kansas City, Cleveland and Chicago. Some New England cities voted bond issues—their industries had the money in hand—yet, the Federal share for a joint treatment plant was not forthcoming and well planned programs faltered or dissolved.

OTHER PROGRAMS

Other programs of national concern like space or highways gallop into the seventies with little or no cutbacks. Both the highway and the water pollution control programs were brought into existence by Congress about the same time. Yet, since their birth in 1956, the highway program has spent over $50 billion while the pollution control program limps along with a little over one billion dollars since 1956. The highway dollar is on a 90 Federal to 10 state ratio where Federal construction funds for sewage treatment when available contribute 30% compared to 70% raised by state-municipal. Our highways with their vast expressways and clover leaves are truly the engineering marvel of the world—while our underground sewers have changed little from the ancient aqueducts of Rome. When there is a proposed cutback in our highway program, appropriate interests are marshalled and its priority to the Federal dollar is quickly reestablished. President Johnson's three different multi-million dollar highway cutbacks were all ultimately restored. One proposed highway cutback was greeted by a deluge of 41 wires of protest from governors the next morning; the other nine wires arrived by lunch time. Needless to say shortly thereafter the budget was restored. Yet, going into FY 1970, we are 79% short of the authorized money for construction of sewage treatment plants and there is no immediate outcry. Isn't it time for a green light on clean water plans? Or at least some sort of searchlight to find the formula to finance our way to clean water in the seventies?

THE BACKSIDE OF THE MOON

As we pass through the doorway into the seventies, the fantastic brilliance of our space effort will put man on the moon. Our own nation's singular success in this race in the sky is a justified source of national pride. But, if we can marshall men of every scientific discipline to get us to another planet, surely we can finally master a problem as old as civilization itself—namely the disposition of her wastes. Can we in clear conscience take a trip to the moon, and leave our own earth slowly poisoning herself with her own wastes?

SOLVED BY OTHER COUNTRIES

Other countries anticipated the seventies and met their pollution problems head-on. The Ruhr River Basin is a prime example. It contains nearly one half of West Germany's industrial capacity—yet the Ruhr River is clean enough to swim in. The stream flow in the Ruhr River is much less than the lowest ever recorded on our historic Potomac River in the nation's Capital. Even with the country's heavy industry, the Ruhr River finances a system to keep its streams clean.

INDUSTRIES TO THE RESCUE

Industry is gearing up to face the seventies realistically by launching costly antipollution programs. Long accused of being slow to answer in the call for clean water with solid financial support, industry is now at the front ranks in this national effort. A pacesetting announcement in this massive move is U.S. Steel's declaration that it will "end all water pollution from its Great Lakes installations by 1972."

Leadership in the fight to retain the 7% investment tax credit for pollution control expenditures is also evidenced by industrial leaders such as President Verity of Armco Steel. In telegraphing President Nixon, Mr. Verity stated, "In the case of Armco Steel and many other companies, the investment 7% tax credit is crucial to our efforts to control air and water pollution." Other industries across the country are coming to the front with new and expanded ideas in pollution control.

For the first time, industry may participate in the Federal Water Pollution Control Administration's grant program. These grants to industry are to develop and demonstrate new, novel, or modified waste treatment processes that have industry-wide application. Though the 1966 Act authorizes 70% grants, the Federal Government has found but 45% funding of this vital program. Industry has come up with the remaining 55% so that the program doesn't collapse due to lack of funding. There are roughly 275 grants actively in the mill at this time. Industry has come up with over $51 million, but due to lack of funds, the Federal Government has committed only $23 million for this vital program that could provide solutions to the major standard industrial classifications of waste in this country.

GOVERNORS GO AHEAD

As the governors across the country prepare their attack on pollution in the seventies the basic problem is highlighted by Maine's popular Governor Ken Curtis. In his report to the 104th Legislature, the Governor states: "The most basic problem in our slow fight against water pollution is the continuing unavailability of Federal funds to meet the Federal share (up to 55%) of the total cost of any project. Despite Maine's total needs of $250 to $320 million, the Federal money available is $1.8 million for this current year." The Governor went on to ask his state to go ahead even though the Federal Government backed down on producing its share. Said the Governor: "The time is now approaching when we cannot wait for authorized Federal funds to be appropriated. There are many situations where state and local governments are ready to move, industries have made their commitment and the only input lacking is the Federal one."

The Governor went on to urge Maine to act "now to authorize the advancing of state funds to cover the authorized Federal share because inaction costs money. The cost of not dealing with the problem becomes greater than the costs of dealing with it. The cost of Maine in interest payments while we wait for eventual Federal reimbursement will, in all likelihood, be offset by the lower costs of construction now as compared to construction three, four, or five years from now."

SOLUTIONS ARE BEING REACHED

Governors, mayors, presidents of companies are all faced with the money shortage; yet, success is being realized in the continuing battle for clean water. Faced with the shortage of clean water, Bethlehem Steel takes the entire sewage of Baltimore and after complete treatment uses it for industrial purposes. The small town of Santee in water scarce California came up with a solution by completely treating, filtering and restoring its sewage to provide a million gallons of drinking water a day. In Los Angeles County, one purification plant reclaims 10,000 acre feet of water a year out of a trunk sewer. Western Research Company of Dallas is working on a solution to prevent tank oil spills such as the Torrey Canyon incident.

The nation will look to research such as Western's to find solutions to the growing pollution problems of the seventies. Western's prescribed solution is a technique that prevents spillage by rapidly gelling oil in the ruptured compartment of a tankship. The gel forms and blocks the outflow of oil and the inflow of water. Hopefully, we can enter the seventies with confidence that oil spills can be quickly mitigated because of this research.

SEMINARS ON THE INCREASE

Since pollution is on all our lips going into the seventies, it is encouraging to see the number of conferences or seminars geared to find solutions to our pollution problems. Public awareness of pollution has forced to the front even international conferences on water pollution. Recently, an international pure water conference (PURAQUA) in Rome, Italy, attracted some 37 countries. Encouraged by the tremendous response to this conference and exhibition, the United Nations is sponsoring an International Conference on Water Pollution in Sweden in 1972. Numerous panels, papers, meetings, studies across the nation indicate the wide interest and concern for solutions in the pollution dilemma.

THE POLLUTION SCARE

It is indeed encouraging to see the number of conferences and willingness of men to set their minds to reaching for solutions to the centuries-old problem of human waste. Red flags on the horizon concerning pollution range from the helpless housewife in Prince Georges County, Maryland, who can't risk a barbecue in the backyard of her $55,000 home because of the summer stench of septic tanks to Chairman Glenn T. Seaborg of the nation's Atomic Energy Commission who says: "All 22 river systems in the United States will be 'biologically dead' by the end of this century if pollution continues at present rates." U.S. Geological Survey's Dr. Raymond Nace warns us that "our world population is expected to double to nearly seven billion by 2000." He further warns "out of its total potentially controllable liquid assets, the United States uses 95% chiefly as a conveyor belt on which to send waste products out to sea." Since the world depends on the sea for over 70% of its oxygen, it is little wonder that Cornell University's Dr. L. C. Cole admonishes us for reckless pollution

habits by saying, "Mankind seems bent upon his own extinction since the sea is at once the chief supplier of fresh water to the land and of oxygen to the air."

WHY LIMP INTO 1970?

It seems obvious then that in gearing up for the seventies all systems must go if we are to realistically meet the demands made on the air we breathe and the water we drink. It is encouraging to see the quick pace with which industry, cities, and the world is responding to the call of the seventies. But it is most disheartening to see the Federal Government limp into 1970 a full 79% away from the billion dollars that Congress unanimously authorized to meet the pollution problem going into the seventies. How can the promise of partnership in the battle for clean water be won if the Federal Government continues to falter on its share of the money? Even with the extreme demands of the Federal dollar today, surely there must be money somewhere to bolster the war on pollution. The State Department's Water for Peace Program initiated in 1967 is concerned with a host of programs ranging in scope from provisions of drinkable water on a local scale to large river basin development programs. As part of this project, the United States is spending about $400 million a year in many countries to build waterworks designed to supply household and industrial needs. Although this is a most laudable program, why can't we find more than $214 million per year for our own country's crying need for construction of waste treatment plants. The cities and states have somehow found the money for the majority of the cost of these plants but somehow the Federal Government is woefully behind in its commitment. At a time like this when the cadence is loud and clear in support of antipollution, how soon can we expect the Federal Government to get in step?

THE 6-DAY WAR

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BIAGGI. Mr. Speaker, it has been 2 years since the 6-day war in the Middle East, while the Arab States have pursued their twin policies of diplomatic intransigence and military terrorism against the peaceful nation of Israel. It has been 2 years since the end of the war in the Middle East when the valiant army of the beleaguered nation of Israel defeated the massed forces of the Arab countries, but there have been no steps toward a permanent peace. It has been 2 years since the guns were silenced, but the echo continues to ring in the ears of the Israeli people, who wait each night for the next incursion of the guerrilla armies sent from the Arab land to maim and kill. It has been 2 years since the Israelis began their patient vigil at the conference table of peace, but the Arab leaders, with the encouragement of their Russian conspirators, have wasted those 2 years in a torrent of meaningless propaganda.

For the past 23 years, Israel has tried unsuccessfully to find a way to reach a peaceful settlement with the Arabs. The United Nations has appointed commissions, mediators, and committees, it has sent representatives to the region, it has passed resolutions, and it has provided the forum and the good offices where both sides could meet and discuss their mutual problems, but to no avail. The U.S. efforts in the search for peace in the Middle East have met with similar failure, but the rebuffs of the past must not diminish this Nation's attempts to seek and find a peaceful solution to the Arab-Israeli problem: In fact it is incumbent upon the United States to do all that it possibly can to help speed negotiations and to facilitate the pacific settlement of this most tragic dispute. We must not let another anniversary of the June war of 1967 pass without achieving peace in the Middle East, a peace that will guarantee the continued life of the State of Israel.

FBI TAPS ON KING

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. RARICK. Mr. Speaker, public acknowledgement that Martin Luther King was under FBI surveillance can be accepted in only one manner—that is, that King's activities, confidants, and financiers were felt by top intelligence people to be questionable in relation to our national security. How many other conversations of King's were monitored—who were these people?

On Monday, June 2, on page 14427 of the RECORD, I urged the present administration to authorize J. Edgar Hoover and the Justice Department to make public their records on King's activities so that our people may know who this man really was.

Deceit and slanted information have blurred his true character to the disservice of some well-meaning Americans. We owe it to contemporary understanding and history itself to refocus the picture from distortion to clarity. The present concern of many Americans is that the intelligence dossiers could be destroyed or misplaced and that information beyond retrieve for honest inquirers.

I insert a news article on the King surveillance, as follows:

FBI TAPS ON KING, BLACK MUSLIMS ARE DISCLOSED AT HEARING FOR CLAY

(By Nicholas C. Chriss)

HOUSTON, June 4.—A Federal District Court hearing today into an effort by Cassius Clay to overthrow a 1967 draft-evasion conviction turned into a startling disclosure of FBI eavesdropping methods and secret surveillance reports.

The summaries of four "top secret" and illegal FBI wire-tapped conversation Clay had with the late Dr. Martin Luther King Jr. and various Black Muslim leaders in 1964 and 1965 were publicly revealed for the first time over Government objections.

The revelation of the conversations, the times and places and the introduction of the documents as evidence in the six-hour hearing spelled out officially for the first time that the FBI actually had eavesdropped on Dr. King. It also detailed how active the investigative agency was in monitoring the telephone conversations of various Black Muslim leaders.

The former world heavyweight champ's attorneys contend that the wiretap evidence is relevant to the case because it might have been used to prejudice his attempt to declare himself a conscientious objector to the draft. The monitored conversations were not revealed by the Federal Government until the boxer's conviction had reached the U.S. Supreme Court, which ordered the hearing.

Federal lawyers contended the conversations took place in 1964 and 1965 and therefore could not have affected the 1967 draft-dodging conviction against Clay, nor the 1966 ruling exempting him from a conscientious objector status.

Clay's telephone apparently was not tapped in any of the four conversations, but the telephones of those persons who called him or received calls from him were monitored. His lawyers called Clay "the innocent third party."

John S. Martin, an attorney in the U.S. Solicitor General's office and a member of the prosecution team here, said the revelation of Dr. King's conversation was the first time it had been officially revealed that the civil rights leader had been under FBI electronic surveillance. Martin also acknowledged that the four FBI wiretaps were illegal and that the Government did not choose to contest the legality of them.

Most of the information about the FBI wiretapping and surveillance came as Clay's attorney, Charles Morgan Jr. of Atlanta, southern representative of the American Civil Liberties Union, pressed an FBI agent who had once been in charge of monitoring Dr. King's conversation in Atlanta.

Richard Nichols, now based in Valdosta, Ga., testified that the FBI "did not follow regular policy on this particular (King) surveillance." He did not elaborate.

Nichols said two "investigative clerks" recorded the conversations. Then, he said, they either penciled notes on the contents of the tapes or logged a summary and then destroyed the tape. He said all the King-monitored tapes had been destroyed.

The contents of the four conversation summaries included talks with Dr. King, Elijah Muhammad, head of the Black Muslims; Herbert Muhammad, a Black Muslim and Clay's former fight manager; John Ali, Black Muslim national executive secretary, and Chauncey Eskridge, a Chicago attorney who represents Clay. Eskridge, at the time, also represented Dr. King.

Clay was convicted here June 21, 1967, of refusing induction into the U.S. Army. An all-white jury convicted him after deliberating 20 minutes. Judge Joe Ingraham then sentenced him to the maximum penalty—five years in prison and a $10,000 fine.

The most interesting of the four FBI-monitored conversations included a 45-minute telephone talk Clay had with Dr. King Sept. 4, 1964. The conversation was recorded in Atlanta and on the Miami end of the line were—alternately—Eskridge, Elijah Muhammad and Clay. Although the conversation lasted some 45 minutes, according to Eskridge who testified in the courtroom later, the summarized conversation consisted of little more than 12 lines.

A RATIONAL APPROACH TO THE ABM

HON. ROBERT DOLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. DOLE. Mr. President, as the time nears for the Senate to vote on the question of deploying the Safeguard system, it is obvious that millions of Americans are resolving their doubts on this controversial issue on the side of what appears to be the best interests of our Nation's security.

These citizens, though deploring the

expenditure of large sums on armaments, want all the protection our scientific know-how can provide. They are willing when our national security is involved to pay the price to insure freedom.

The Wichita Eagle-Beacon, one of the leading daily newspapers of the Nation, noted for moderation in its editorial policies has endorsed President Nixon's proposal to deploy the ABM. In its editorial of Sunday, June 1, 1969, entitled "Weighing the Evidence Pro and Con on Safeguard," the Eagle has, in my opinion, performed an invaluable public service by helping readers to resolve their doubts. Iask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wichita Eagle-Beacon, June 1, 1969]

WEIGHING THE EVIDENCE PRO AND CON ON SAFEGUARD

Certainly the most confusing public debate to arise in America in a long time is that over the proposed Safeguard system of antiballistic missiles.

Perhaps only one thing may be said of it with absolute certainty: Virtually every American wishes it were possible to spend the money involved on various humanitarian purposes instead of on the ABM.

Most of us would rather feed the hungry, heal the sick, repair urban blight, increase the space program, solve the nation's transportation problems, improve opportunities for the disadvantaged, and otherwise address our multitudinous domestic problems—if we thought we had a choice.

President Nixon, after getting the best advice available to him, came to the same conclusion as former President Johnson: That an ABM system is vital to the defense of the nation. Congress is far from being in agreement about it, and there are scientific and military experts on both sides who make the most persuasive arguments.

In an effort to help our readers to formulate their own opinions on this controversial subject, we present today on the right-hand side of this page capsule arguments both pro and con from the best sources we have been able to find—the so-called Kennedy Report presenting the argument against Safeguard, and the National Security Council arguing for it.

As for us, we are reluctantly persuaded that the United States cannot afford to be without at least the beginning of an ABM system.

As former Secretary of State Dean Acheson pointed out to the American Society of Newspaper Editors in April, if you have a program in being you can adjust it as necessary—speed it up, slow it down, abandon it. But if you have no program at all and find you need one you are starting far behind the enemy.

The Administration has answered the objections of the opponents of ABM Defense Secretary Laird assures the public that components of Safeguard have been tested in the Pacific and that he knows it will work. He has further said that the Soviet Union's SS–9 missile is equipped with warheads obviously designed to destroy not our major population centers, as was once believed, but our Minuteman ICBM system. Without protection against these Russian missiles, we could be left without this striking power.

Against the argument that Safeguard is useless because it couldn't destroy all incoming missiles, the Security Council answers that the existence of Safeguard would require an enormously multiplied arsenal with more sophisticated missiles before the enemy would dare attack, and that this in itself would be a deterrent.

Costly as Safeguard would be, it is less costly than being without proper defenses. Surely it is debatable whether for us to have an antiballistic missile system would stimulate or deter the arms race, and there is as much logic on the side that says it will deter as there is on the other.

There are those who would have us delay while we try to negotiate an arms agreement with the Soviets, but this seems to us to be largely wishful thinking. An agreement without surveillance would be meaningless, and Russia has never shown any signs of submitting to that. There is, indeed, one school of thought that holds an ABM system would provide insurance against cheating under an arms agreement, if one were worked out.

Perhaps the most convincing argument for Safeguard is that two Presidents of different political faiths, each using his own advisers and making use of the detailed knowledge available only to Presidents, have concluded that America is not safe without Safeguard.

We believe that they are correct.

THEY, THOSE WHO, AND SOME

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BINGHAM. Mr. Speaker, as a member, I assume, of the group now known as They, Those Who, and Some. I would like to direct my colleagues' attention to the Washington Post's analysis of how we fared yesterday at the hands of President Nixon. The editorial, entitled "The President's Commencement Address," follows:

[From the Washington Post, June 5, 1969]

THE PRESIDENT'S COMMENCEMENT ADDRESS

It was a big day out in Denver yesterday for *They* and *Those Who* and *Some*—the nameless, numberless enemies of everything right and honorable and strong, who would make fun of our armaments programs, pillory our servicemen, turn their backs on the world and disarm America unilaterally at the first disarming smile or honeyed word from our adversaries. They are plainly a shabby lot, unworthy of the men who settled our frontiers and the men who would set the first foot on the moon and President Nixon paraded them before the graduating class of the Air Force Academy in terms sufficiently grim to make an impressionable cadet turn in his wings.

"It is open season on the armed forces," the President cried, as he warned the new air officers that "on the home front you are under attack . . your critics at home were never more numerous . . . the military profession is derided in some of the best circles. Patriotism is considered by *some* to be a backward, unfashionable fetish . . . *they* believe that we can be conciliatory and accommodating only if we do not have the strength to be otherwise . . . *those who* think that way have grown weary of the weight of free world leadership . . ."

It was strong stuff, but the President didn't blink. "It would be easy to buy some popularity by going along with the new isolationists," he declared, but he holds "a totally different view of the world . . . the danger to us has changed, but it has not vanished. We must revitalize our alliances, not abandon them. We must rule out unilateral disarmament . . . The aggressors of this world are not going to give the United States a period of grace in which to put our domestic house in order—just as the crises within our society cannot be put on a back burner until we resolve the problem of Vietnam."

There was more, of course, but not much more that mattered, and nothing in the President's presentation of his own thinking that a quite comfortable majority of Americans would argue with. So, you could say, it was fine, as Commencement addresses go, suitably cliche-ridden, appropriately devoid of content, quite in keeping with the traditions governing such affairs—except, of course, for the fact that the speaker was the President of the United States and the White House had promised a major address on "the role of a great Nation in the world and the role of defense in our society."

And this, it cannot be said too emphatically, the President's speech was not; it was not major, just to begin with, because it offered absolutely nothing new in the way of answers to questions that are genuinely troubling reasonable, rational men. It did not mention the war in Vietnam, or where we are headed there, except to talk about the post-Vietnam scene. It did not mention the ABM or the plans for testing MIRV or the prospects for the arms control talks that were supposed to begin in late spring or early summer. It set up any number of straw men and knocked them askew, conjured up spectres and demolished them; it spoke of a "crossroad in our history" and neglected to point the way; "revitalizing" alliances is a nice idea, but how? It conceded the evils of waste in defense spending but said nothing about how you deal with it. It said things as fatuous as: "The American defense establishment should never be a sacred cow, nor should the American military be anybody's scapegoat." So?

It is understandable, of course, that the President should lash back at his critics; there are plenty of them, and some of them are saying some of the things Mr. Nixon said they were saying. There has been a lot of loose talk about military men and military programs and the military mind, when the heart of that problem goes far deeper—to the efficacy of the natural checks and balances on the civilian side of government. The question is whether the President adds much to sanity and common-sense solutions by assailing the extreme minority among the critics while paying only passing attention to the deep disquiet of a more moderate majority about the war and the growth of military spending and the momentum of the arms race and the future role of this country in the world.

We cannot "conduct a successful policy of peace abroad if our society is at war with itself at home," the President said, in passing, as he declared his "total," "fundamental" disagreement with *Those Who* do not see things his way. It was good, strong stuff, as Commencement addresses go, but it is not easy to see just what it contributed to the problem of a society at war with itself.

PUBLIC OFFENDER PROGRAM IS SUCCESS AT ARIZONA STATE PRISON

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. FANNIN. Mr. President, often a great deal of criticism is mounted in Congress over the ineffectiveness of Government-sponsored training programs. I invite the Senate's attention to one that has worked and is continuing to prove an excellent means of returning rehabilitated individuals to society.

The Arizona State prison vocational rehabilitation program is accomplishing its aim of helping to rehabilitate inmates

so they may find gainful employment once they are paroled. As evidence, I cite this paragraph from a report prepared for me on the program:

One of the most important factors and results of the Public Offender Program is that of those clients placed in training and on jobs, not one has become a recidivist. Also, two inmates at Arizona State Prison refused parole until completion of their vocational training.

Mr. President, the fact that some prisoners think so highly of the training they are getting in prison to refuse parole until they have completed the training seems to me to bear effective testimony to the worth of this effort.

I wish to commend all those associated with this success story and ask unanimous consent that a report prepared for my use be printed in the RECORD together with a newspaper article written by Mr. Vince Taylor.

There being no objection, the report and article were ordered to be printed in the RECORD, as follows:

REPORT FOR SENATOR FANNIN

Since its inception in January, 1968 the Public Offender Program for the State of Arizona has developed into an outstanding example of cooperation and effort between various agencies.

The agencies involved, namely: Department of Corrections, Vocational Education, Vocational Rehabilitation, Central Arizona College and Eastern Arizona College have combined their resources to provide vocational training for the inmates of Arizona State Prison and for the boys at Fort Grant Industrial School. Training is provided in the fields of welding, auto mechanics, drafting, sheet metal, diesel mechanics, printing, body and fender repair and business receptionist for the women inmates.

There are four schools presently functioning at the Arizona State Prison and seven schools at Fort Grant Industrial School. Space limitations have restricted the number of trainees at the prison to a total of forty-eight. The vocational schools at Fort Grant are presently training a total of thirty-seven boys.

Future plans call for an expansion to a minimum of six schools at the prison and perhaps ten at the Industrial School.

A new building to be used exclusively for vocational training will be constructed during the year of 1969 at Arizona State Prison. The cost of construction will be shared by Vocational Rehabilitation and the Department of Corrections. By pooling state funds of the two departments additional federal monies become available for construction for the purpose intended.

The Department of Corrections is actively investigating the possibility of using the Job Corps camps, which are to be closed in Arizona, for the purpose of vocational training, education and conservation.

The Public Offender Program of the Division of Vocational Rehabilitation also accepts referrals from other law enforcement agencies and the State Board of Pardons and Paroles. The number of clients in the caseload by month will indicate the magnitude and scope of the program.

NUMBER OF CASES BY MONTH—1968

January	84	July	261
February	122	August	280
March	171	September	294
April	206	October	308
May	229	November	336
June	243	December	351

NUMBER OF CASES BY MONTH—1969

January	363	March	396
February	379	April	418

One of the most important factors and results of the Public Offender Program is that, of those clients placed in training and on jobs, not one has become a recidivist. Also, two inmates at Arizona State Prison refused parole until completion of their vocational training.

Another aspect of the Public Offender Program is development of a plan whereby the courts will refer an individual to Vocational Rehabilitation, and upon successful completion of a training program and job placement, the felony conviction will be stricken from the client's record. This is patterned after the Federal Youth Authority Act.

Also, the Division of Vocational Rehabilitation is deeply involved in the Drug Addicted Release Program using local hospitals and the Federal Health Centers at Lexington and Fort Worth.

PRISONERS LEARN NEW INTERESTS

(By Vince Taylor)

FLORENCE.—Emphasis upon rehabilitation of inmates at Arizona State Prison here has provided some overtones familiar in civilian life.

"Get involved," urge members of the prison's Outside Trusty Junior Chamber of Commerce (ASPOT Jaycees), one of a dozen or more voluntary activities which have pushed back the walls of prison routine and widened the horizons of inmates.

Between 75 and 80 per cent of the 1,600 inmates at the institution do get involved, in some way, in social, educational, vocational and recreational programs, prison authorities reported.

All such activities are on a voluntary basis. They are available, if the inmates want to participate.

Some, like the "Knowledge Seekers," were started by the inmates themselves. Approximately 60 are in this group which meets weekly to hear talks by people in all walks of life.

"It's an escape into the outside world," a prison official remarked, and then, realizing the implications, added, "figuratively speaking."

Communication with local and world affairs has become increasingly more meaningful for inmates through television, newspapers, magazines, radio and films, said Warden Frank Eyman.

"Why, these guys know more about baseball batting averages or football league standings than the average citizen," he declared.

"The more contact they have with free world people, the better chance they'll have to make it," Eyman said.

Outside contacts are maintained by approximately 100 members of the prison's two Gavel Clubs, both affiliates of Toastmasters International. There are 50 participants in Alcoholics Anonymous, and 25 narcotic addicts are seeking help through Nar-Conon, an organization similar to AA.

Officials said about 25 inmates are interested in chess and they regularly invite statewide participation in tournament play at the prison.

At present, 112 inmates who will shortly terminate their life in prison are qualified for the comparatively new 7th Step Foundation program, administered by former prison inmates who have succeeded on the outside.

The ex-cons, plus interested businessmen known as "Square Johns," provide the link with today's social problems which confront a man as he walks through the prison gates into the free world. Basically, they point out, the seven steps idea is to remotivate a man, to change his thinking so he can better accept the responsibilities and self-discipline he will need after years behind prison walls.

Gratified with the results of such activities, prison authorities admit they were totally unprepared for the response which greeted the start last October of vocational job training classes in auto mechanics, welding and drafting. For the Women's Division, an office receptionist school was set up.

"We were flooded with inmate applications," a prison official declared.

Combining federal and state funds totaling about $125,000, the pilot program represented the cooperative efforts of Mrs. Sarah Folsom, superintendent of public instruction; M. W. Holdship, director of vocational rehabilitation; J. R. Cullison, director of vocational education; Allen Cook, director of the department of corrections, and Dr. Don Pence, president of Central Arizona College.

Under the supervision of Warden Eyman and his staff, an old horse stable was converted into a garage for the auto mechanics course, a former dining hall became a welding shop, and an idle classroom was set up for the drafting course.

Each course, for a period of nine months, is limited to 12 students during the initial stages of the program. Officials say its potential is limited only by facilities and funds available.

Jack Dillard, director of education at the prison, calls it a program to develop "salable" skills.

Two students, intent upon completing their course, even requested that their paroles be delayed until they finish. Six others already have jobs waiting when they are released. No less than 150 employers have expressed an interest in the program, parole officials said.

"We could have placed 20 draftsmen this week if they were available," remarked Dale Gibson, in charge of vocational education at Central Arizona College, contractual agent for the program.

Gibson said he had noted "an entirely different attitude" among inmates at the prison in the few months the program has been in effect.

"They want to learn," he said. "Most of them had no work skill when they came here. This represents an opportunity."

Another recent innovation at the prison is a course in computer programming, involving eight inmates who work on assignments from the Arizona Highway Patrol, the Industrial Commission, the Arizona Fish and Game Commission and Maricopa County Technical College. Tapes prepared by the inmates are dispatched to Phoenix to be fed into the agency computers.

Closely allied with vocational rehabilitation is the prison's Institute of Educational Rehabilitation, or IER, where 300 inmates take part each year in classes from first grade through high school.

"Eighty per cent of all inmates are dropouts or have never had any educational opportunities," according to Jerry Thompson, assistant director of education.

Once they enroll in IER, they are given an achievement test to determine their grade placement or level. Then they progress at their own speed, many completing three or four grades within a year.

"When they reach the 10.5 plateau, equivalent to 10th grade, fifth month, they are eligible to work for their General Educational Development of GED certificate," Thompson explained.

In addition to the supervised academic program, the prison furnishes books to some inmates for spare time study in their cells. Even some of the 13 men now on death row are taking correspondence courses "to keep their minds occupied." Three or four of the condemned men are involved in handicraft hobbies.

Hobby craft work and recreation are a big part of prison rehabilitation, according to officials.

"We feel if you keep the inmate busy you're accomplishing a great deal," Eyman said, adding:

"If a man is idle, he presents a problem. That's why we encourage inmates to par-

ticipate in the various activities available to them, to become a part of things. Those who do have a better chance to become involved in the better things of life when they are released."

HIGHWAY SAFETY—COMMENTARY NO. 1

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. CLEVELAND. Mr. Speaker, the Public Works Subcommittee on Roads, of which I am a member, is presently holding hearings on highway safety. Although, plagued by public apathy, this problem ranks among the highest causes of death in our Nation today. Traffic accidents rank as the No. 1 killer of persons 37 years old and under. Fifty-five thousand people lost their lives last year in traffic accidents. This figure does not even take into consideration the vast numbers who are injured, either physically or mentally with the loss of sight and limbs each year. Traffic accidents are causing more than 1,000 deaths of men, women, and children every week—36,000 injuries, and $200 million worth of economic waste. Since 1900, more citizens of this Nation have died from motor vehicle accidents than in all the wars we have fought, including the American Revolution.

Three years ago, in 1966, this body passed the National Highway Safety Act. The intentions of that act were to provide means by which State and local authorities could deal with problems affecting highway safety. The act also called for the creation of research, testing, and development programs in an attempt to develop new scientific data needed to place the entire field on a thoroughly modern basis.

It is with this last category in mind, that of research, that I direct my attention today.

I feel that it is an accepted fact that through creative and effective research, lives can be saved on our Nation's public roads. Dr. Robert Brenner, Acting Director of the National Highway Safety Bureau, in testimony before the Subcommittee on Roads this morning, stated that presently there is a backlog of more than $100 million in requests for constructive and important research projects. The sad fact is that only $12 million was appropriated for highway safety research in fiscal 1969 and only $15.9 million has been asked for 1970.

I am inserting at the end of this statement a table showing the wide gap between our authorizations since 1967 and the amount of money actually appropriated.

It is clear that our good intentions have not been matched by our performance.

It is my considered opinion that we should appropriate at least as much money as we have authorized for the conquest of this national menace and very likely the authorizations themselves should be higher than they are. I have labeled these remarks "Commentary No. 1" because I shall be speaking further on this subject.

The table follows:

HIGHWAY SAFETY RESEARCH

[In millions of dollars]

	Authorized	Appropriated	Obligated
Fiscal year:			
1967	10.0	4.3	4.3
1968	20.0	7.3	7.3
1969	25.0	12.0	[1] 12.0
1970	30.0	[2] 15.9	[1] 15.9
1971	37.5		

[1] Estimated.
[2] Administration request.

OIL DRILLING IN LAKE ERIE MAY ADD TO POLLUTION

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. DULSKI. Mr. Speaker, both the Lackawanna, N.Y., City Council and the Erie County, N.Y., Legislature have passed resolutions opposing permission for oil and gas drilling in Lake Erie.

With the pollution problem we already are facing on this great body of water, our people are not at all interested in taking any chance on further complicating the situation.

Following is the text of an editorial broadcast recently by WGR–TV in Buffalo, N.Y., on this matter:

OIL WELL DRILLING—POLLUTION IN THE LAKE

It seems to us just plain unreasonable to assume that drilling for oil in Lake Erie isn't going to contribute to the already serious pollution problem of our lake.

The State of New York is willing to sell drilling rights for a small fee . . . a pittance compared to the cost of rehabilitating the lake, if we ever get around to it.

How can the state on one hand say it's trying to clean up the mess, and then turn around and possibly add to it? Modern technology no doubt would control pollution . . . hold it down, but it doesn't seem feasible to assume that a number of drilling rigs aren't going to contribute to the problem.

Our stand is not one of anti-drilling, it's the same position we've had for years, we're anti-pollution. We haven't even begun to deal with our existing problem, how can we possibly contend with its expansion?

COLUMBIA LAW SCHOOL ALUMNI ASSOCIATION'S MEDAL FOR EXCELLENCE AWARDED TO DEAN WILLIAM C. WARREN

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. RYAN. Mr. Speaker, on April 22 the Columbia Law School Alumni Association presented its Medal for Excellence to Dean William C. Warren. As both alumni, students, and faculty will attest, this honor was well deserved recognition of the dedicated service as both professor and dean which Dean Warren has rendered to the Columbia Law School.

An expert on taxation, Dean Warren has served as special consultant to the Secretary of the Treasury and also as a member of the U.S. Tax Mission which drafted a complete tax program for Japan after World War II. During World War II he helped to administer and coordinate aid to the lend-lease nations.

As educator and law school dean, Dean Warren has stressed excellence in education while augmenting student aid funds in order to make it possible for every qualified applicant to have an opportunity for a law school education.

He has constantly worked to improve and modernize the law school, expanding the curriculum and increasing the size of the faculty. Perhaps the most conspicuous improvement that he has brought about is the new Law Building. He worked tirelessly to raise the money necessary for its construction, and his influence can be seen in the architectural design.

I am delighted to add my own congratulations to Dean Warren on the occasion of this honor and include in the CONGRESSIONAL RECORD today the text of the accompanying citation:

CITATION TO WILLIAM C. WARREN

In the year when William Clements Warren was born, Congress submitted to the States what became the Sixteenth Amendment to the Constitution, authorizing an income tax. Before Warren reached manhood, the body of statutes, rules and decisions under this amendment was so large as to make it the chief source of contentious problems between the government and the governed. As such, the subject was bound to engage the interest of a lively student majoring in government which young Warren became at the University of Texas in the years 1926 to 1930.

After a year of graduate study leading to the M.A., Warren entered the Harvard Law School. His vigor and appetite for the law were notable, since in addition to his regular work he put himself in peonage to not one but two professors of law as research assistant in taxation. It was then that the virus of pedagogy entered his blood stream, for after graduating *cum laude* and practicing for a short while in New York, he moved to Cleveland where he combined office routine with part-time teaching at Western Reserve University Law School. And on top of teaching he was writing and publishing the first of his many papers on tax and corporate law. They made his scholarly reputation.

At this point, events in the big world took a hand in Warren's career, and did it in a fashion probably not congenial to a mind hitherto bent upon the conservation of assets; war is spendthrift and wasteful. Commissioned a Captain not long after this country's entry into the war, Warren was assigned to the International Aid Division of the Army Service Forces, where he was concerned with the administration and coordination of the needs of forty-seven Lend-Lease Nations. This task brought Captain (later Lt.-Colonel) Warren to the European, North African, Middle Eastern and Mediterranean theatres of operations and called into play the superior

talents for negotiation with which Dean Warren is so richly endowed. With his surplus energies he also assumed the editorship of the War Department's treatise on Lend-Lease. For these outstanding military services, Warren was awarded the Legion of Merit by the United States and the Order of the Crown by the Italian government. And as by-product and bonus of these war years, Warren acquired a firm grasp of international affairs, a continuing interest which was soon to express itself in the expansion of international studies at Columbia.

After leaving the Army, William Warren resumed the practice of law in New York City, but in a few months the teacher in him once again got the upper hand. In September 1946, he came to Columbia Law School as Associate Professor of Law, and the next year was promoted to full professor. His students of those years remember the brilliant analyses of cases and the hard lessons in statutory-construction.

At the same time, the legal expert and mentor followed the Columbia tradition which says that teaching is enriched by things done in the public service. The record of Professor Warren's services to government attests to the confidence in which his knowledge and judgment were held as early as 1942. From that year to 1949, he served as special consultant to the Secretary of the Treasury on fiscal matters. In 1949, and again in 1950, he was a member of the United States Tax Mission that drafted a complete tax program for Japan. In 1954, he was a member of the Van Fleet Mission to the Far East. For years he was Associate Chief Reporter on the income tax project of the American Law Institute. His services to the organized bar are too well known to require more than mention here.

In November 1952, Professor Warren was named Acting Dean of the Faculty of Law; four months later he was appointed Dean. To the Columbia community, the most conspicuous achievements of his deanship is doubtless the new Law Building, to the making of which he brought to bear all his great powers of persuasion—first to raise the money, then to insure its architectural merits. Mere housing was not enough for one with a never-dormant interest in the arts. Dean Warren helped produce the first modern building at Columbia, then conceived and carried to completion the imaginative Revson Plaza with its Henry Moore and Lipchitz sculptures.

Even before the building was under way, more subtle, less visible, things were being achieved. In constant pursuit of excellence, Dean Warren promoted a policy of raising the standards of admission to the Law School and of augmenting student aid funds so that no gifted applicant need be kept away for the lack of money. Under his leadership, too, the Law School curriculum has been expanded to keep abreast of the times; the Law School Faculty has been enlarged and strengthened and its instructional work regularized and facilitated; the number and scope of research activities for both public and private service increased. Almost non-existent when he shouldered the responsibilities of the Dean's Office, the endowment of the various activities of the School has grown through his efforts to impressive proportions. It is hardly necessary to add, for all here present know this, Dean Warren has by the warmth of his personality fostered and multiplied the School's ties with the alumni who, when all is said and done, are the living hallmark of a sterling institution.

By his devoted service to the Law School and to our Association, Dean Warren has become one of us. For years, his effort to advance the cause of learning at Columbia has been our inspiration as well; we have all benefited by his success. It is accordingly our pleasure and our pride to bestow on him our Medal for Excellence.

PRESIDENT NIXON'S ADDRESS AT THE AIR FORCE ACADEMY

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. HOSMER. Mr. Speaker, today's Washington Daily News contains an editorial highly complimentary to the President and his courageous effort to make certain this country is defended. The editorial follows:

CONFRONTATION WITH REALITY

President Nixon is overloaded with problems, many of them tough and delicate. But none is tougher or more delicate and none involves more gambles, more misunderstanding or bigger stakes than the military-defense-peace situation.

This situation is a whole complex of problems, and it was this complex Mr. Nixon faced in his speech yesterday at the Air Force Academy. We think the public, Congress, our allies and our foes should have a better insight into the Administration position than they had before.

The President, it seemed to us, laid it on the line: What we have to do, why we have to do it, what the alternatives are.

"I have no choice in my decisions," he said, "but to come down on the side of security."

To fail in this would be to risk failure in survival.

Without security we could do nothing. We could not promote peace, we could not solve our domestic problems. The weak can only hope and beg. Only the strong can deter adversaries, or bargain with them.

Moreover, if the United States does not stay strong, does not keep geared to the danger that "has changed but . . . not vanished," does not lead in striving for peace—then, as Mr. Nixon says, "the rest of the world would be living in terror."

This, then, is the national policy—as it has to be.

But standing up for a policy is one thing; putting it to work another. Here too, though, Mr. Nixon faced the problems. And one of them is the rising torrent of anti-military oratory in Congress.

Mr. Nixon made plain his fundamental disagreement with "skeptics and isolationists" and effectively rebutted them. And he met head-on the new clique in the Senate which suddenly has loosed a blanket attack on "militarism" with all the generalities that connotes.

But even more reassuring was the President's statement that he was not disagreeing with those who reveal waste and inefficiency in defense operations, or who demand clear explanations of military buying policies, or who "want to make sure a new weapons system will truly add to our defense."

Such challenges are responsible and essential.

The military establishment invites much of the political assault it endures by its own shortcomings—by wasting money, by goofing on purchases, by going astray with its planning.

It is just as important for the President to recognize these things as it is for him to defend his Administration against the insinuations of ambitious political fault-finders.

The Defense Department should never be anybody's scapegoat, as Mr. Nixon said, but neither should it be everybody's sacred cow. It is not all virtue any more than it is all sinister.

The President, it seemed to us, was eminently sound in the perspective he applied to that issue.

We are in the midst of another hot debate—whether it turns out to be a "great debate" is uncertain. But the moral and social aspects of our defense posture, as well as the tactical phases, are being aggressively challenged—sometimes wisely and sometimes frivolously.

This is, by and large, healthy and necessary. Our strength is illusory if our policies are not resolute, if the enforcement of policy is confused, if our military system is not sharp and prudent, if our money is frittered away on the impractical or the wasteful.

What is cheering about Mr. Nixon's extraordinary speech at Colorado Springs is that it leads us to believe we have a President who clearly understands all these things, and is prepared to deal with them, who is keeping his cool and holding to his course.

And if this is so, then we can take heart that we may yet plod our way out of the babble of confusion and raucous dissonance which lately seems to have clouded our national purpose and dimmed our common aspirations.

BLOOD FOR HEMOPHILIA WEEK

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, June 5, 1969

Mr. FANNIN. Mr. President, a terrible affliction, hemophilia, often requires as many as 3,000 pints of blood per patient. In many families this condition afflicts two and sometimes three members. The resultant financial strain, not to mention the physical suffering, is terrific and becomes a very great burden. I ask unanimous consent to have printed in the RECORD a proclamation by the Governor of Arizona, Hon. Jack Williams, which designated the week of May 19 to 23 as Blood for Hemophilia Week 1969.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION—BLOOD FOR HEMOPHILIA WEEK/1969

Whereas, in a number of communities around our state, fellow Arizonans are victims of hemophilia—more than 70, as an example, in the Phoenix metropolitan area, alone; and

Whereas, any one of these victims can have need for as many as 3,000 pints of blood, as the result of a single episode—with a punishing financial burden accompanying the physical burden; and

Whereas, in some families there are two victims of this disease—and, in one case, three—thus compounding an already serious financial problem; and

Whereas, Arizonans always respond, in a spirit of community participation, to the needs of their neighbors and friends; and

Whereas, by becoming donors to the "Blood for Hemophilia": bloodmobile at its visits to five key locations around the Valley of the Sun, May 19–23, Arizonans can display that spirit, and fulfill a serious and continuing need;

Now, therefore, I, Jack Williams, Governor of the State of Arizona do hereby proclaim the period from May 19 through May 23 to be Blood for Hemophilia Week/1969, and do urge and encourage all Arizonans to support the good objectives of this observance by serving as blood donors for victims of hemophilia.

In witness whereof, I have hereunto set

my hand and caused to be affixed the Great Seal of the State of Arizona.

Done at the Capitol in Phoenix this 2nd day of May in the year of Our Lord One Thousand Nine Hundred and Sixty Nine and of the Independence of the United States One Hundred and Ninety-third.

[SEAL] JACK WILLIAMS,
Governor.

Attest.

WESLEY BOLIN,
Secretary of State.

A CONVICTION THAT COMES FROM THE HEART

HON. DAVID E. SATTERFIELD III

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. SATTERFIELD. Mr. Speaker, we read and hear a great deal about whether this Nation should be involved in Vietnam. I have been impressed by the fact that our fighting men there have reflected strong convictions in support of that involvement. One such expression came to my attention recently in the form of a letter written to the student newspaper of the Bladensburg High School in Bladensburg, Md. The letter was written by a former student of the school L/Cpl. Bennet W. Dixon, who is now serving with the Marines in Vietnam. By way of further introduction, Corporal Dixon is the son of William J. Dixon, a member of the professional staff of the House Interstate and Foreign Commerce Committee.

At this point I would like to insert this letter in the RECORD since it is an observation that comes from the scene, and a conviction that comes from the heart:

LETTER FROM CPL. BENNET W. DIXON

First of all, I'd like to commend the editor and all personnel involved in putting out the Scroll. While I've been here in Viet Nam, I have found the Scroll a very informative paper expressing "the latest" at Bladensburg High. Being a student at BHS for a short time prior to my enlistment in the Marine Corps, I felt compelled to write in regards to the article, "Teachers Speak Out on Viet Nam" (Scroll, February).

Realizing that the statements published were personal convictions and opinions, to which everyone is entitled, I still felt the need to comment on one statement which particularly stood out in my mind. This statement was under the heading, "Doves of a Feather"—"We shouldn't be in there now. The people don't want us there. The principle is fine, but I don't think the people are worth saving." As a person and Marine I feel we are definitely needed here. And as far as I can tell, the only people who "don't want us here" are the Viet Cong and NVA. And as for "the people aren't worth saving", well, I think that statement is absurd. Any human being is worth saving. Everyone has the right to live and work for his own benefit without the fear of someone coming with hostility and aggression.

I have seen a few of my friends killed over here and heard of many others. They died for a very noble cause. Everyone of us who is over here is willing to make the same sacrifice if the cause arises. The people here appreciate it and thank us for it in their own special way. A smile from the elders of the village, a wave or thumbs up from a five year old as you ride past, all give the American servicemen a feeling of warmth knowing that we are wanted and appreciated.

I could go on for pages relating my experiences of the past 6 months but time does not permit. One again I thank you for the excellent work you do on the Scroll. As one baby-san might put it—NUMBAH ONE, Scroll. Thank you.

Sincerely yours,

L/Cpl. BENNET W. DIXON,
U.S. Marine Corps.

NINE RESOLUTIONS

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. UTT. Mr. Speaker, I would like to include in the Extensions of Remarks in the RECORD for today the nine resolutions which were adopted by the National Association of Pro America at their national board meeting in Tacoma, Wash., on May 2, 1969. I believe that these resolutions deserve wide attention.

RELIGIOUS FREEDOM IN THE UNITED STATES

Whereas for over a century and a half of our existence as a nation, it was recognized that the first ten amendments to the Constitution known as the Bill of Rights prevented Congress from ever interfering with rights of individual citizens of the United States; and

Whereas contrary to the expressed intention of the framers and ratifiers of the Fourteenth Amendment the Supreme Court of the United States has recently misinterpreted the Fourteenth Amendment to limit the provisions of the First Amendment; and

Whereas in pursuance of this unconstitutional assumption, the Supreme Court in 1962 handed down a decision which ignored the first article of the Bill of Rights which guarantees religious freedom, in banning the "Regents' Prayer" from the public schools of New York State; and

Whereas correction of this situation by constitutional amendment is both unnecessary and dangerous since it falsely implies that the Federal Court was acting constitutionally, and will inevitably result in placing federal government in the field of religion contrary to the intention of our founding fathers in the first amendment; therefore

Resolved that the members of the National Association of Pro America, acting as individuals urge their congressmen to exercise their constitutional authority under Article III, Section 2 of the United States Constitution to remove from the Supreme Court all jurisdiction over cases involving the issue of religion.

THE U.S. FLAG

Whereas the United States Flag Code is frequently violated because of lack of appreciation of the symbolic meaning of our Flag; and

Whereas certain persons have violated the Code and shown disrespect for the Flag by flagrant abuses on the ground that it is their sacred right to misuse the Flag as an expression of protest, and this is sometimes done by desecration or by caricature; therefore

Resolved that the National Association of Pro America urge the Congress to enact the necessary legislation to make any desecration of the Flag as described in the present Flag Code a criminal offense, and

Be it further resolved that maximum penalties be prescribed for any violation of such legislation.

COLLEGE AND UNIVERSITY DISTURBANCES

Whereas pro America prizes the individual's right to reasoned dissent but deplores the abuse of this constitutional freedom; and

Whereas the education of vast numbers of college and university students is being frequently interrupted and curtailed by the fomentation of "sit-ins", "study-ins" and serious riots on campuses,

Resolved that the National Association of Pro America commend the 1968 Congress for its legislative action, requiring the withholding of student loans, tuition grants and scholarship funds from colleges which retain faculty members and/or students who participate in acts of campus violence or destruction of college or university property, and

Be it further resolved that the National Association of Pro America commend the Department of Justice for its decision to prosecute agitators who travel from state to state to promote violence on campuses of educational institutions, and

Be it further resolved that Pro America urge the Congress to use every available means to combat the current situation in educational institutions which does violence to the very nature of education in the United States.

HOUSE COMMITTEE ON INTERNAL SECURITY

Be it resolved That the National Association of Pro America commend the House of Representatives for voting on February 14, 1969 to retain the functions of the House Committee on Un-American Activities under its new title House Committee on Internal Security, and urge the continuation of a constructive and vigilant study of subversive activities affecting our nation.

THE ELECTORAL COLLEGE

NOTE.—The National Association of Pro America endorses the following resolution which was adopted April 16, 1969 by the National Society, Daughters of the American Revolution at their Continental Congress in Washington, D.C.

Whereas in providing the Electoral College it was the intent of the Constitution of the United States of America to give American voters the same numerical representation in selecting a president as they enjoy in their representation in Congress, but this objective has long been thwarted by application of the unit rule or "winner take all" of the electoral votes to which a given State is entitled; and

Whereas the State of Maine by its recent action has demonstrated that it is within the power of the States, without Constitutional amendment or federal legislation to eliminate the unit rule, and Maine has now substituted a district plan of selecting electors, under which electors will be chosen by Congressional Districts and will vote for the candidate with the winning margin in the district, with two electors chosen at-large who will vote for the candidate with the popular majority in the State; and

Whereas the District Plan, by giving each voter one vote in his district together with the two votes of the electors chosen at-large to represent the vote of the State would be consonant with the provisions of the Constitution of the United States of America, in that it would retain the Electoral College and would require electors to represent the will of voters by Congressional Districts as well as the State; and

Whereas the method of direct election would mean abandonment of the federal system of representation, would risk federal control of elections, and would deprive the small or less populous states of the protection now provided by the two electoral votes representing their senators;

Resolved that the National Association of Pro America commend the State of Maine for

adopting the District Plan of representation and voting in the Electoral College;

Resolved that the National Association of Pro America urge the several States to exercise their Constitutional powers; abolish the present bloc system of voting in the Electoral College; and adopt the District Plan, under which the body of electors comprising the Electoral College would represent the votes of each Congressional District and the two at-large votes to which each State is entitled, thereby giving the American voters equal representation in a presidential election.

CHANGES IN THE VOTING AGE

Whereas due to the post World War II population increase and the progressive lowering of the age balance, there is a concerted pressure to lower the present legal voting age; and

Whereas the lower age group is for the large part still in the sheltered sanctuary of their parents, economically dependent, without practical experience in the business world, with little training beyond technology and theory in economics learned from teachers versed only from textbooks; and

Whereas high school and college campuses would not be the ideal area for political campaigning from the viewpoint of the academic purposes of educational institutions and the gravity of the issues involved in an election; and

Whereas the argument that a man old enough to fight for his country is old enough to vote does apply in some cases, but out of eleven million in this age group, less than one million are in the military service and these are trained for the most part to obey orders; and

Whereas politicians taking advantage of the emotionalism and idealism of this proposed new bloc of voters could easily appeal to their special interests detrimental to the nation as a whole; therefore

Resolved that the National Association of Pro America urge all states which have not lowered the voting age to retain the present legal age of twenty-one years, and that the voting procedure be left in the control of the sovereign states, thus limiting further federal centralization.

RED CHINA

Whereas Red China has consistently demonstrated her animosity toward the United States; and

Whereas Red China has refused to conduct her international relations in accordance with accepted diplomatic policies; and

Whereas Red China having seized control of mainland China through an international Communist conspiracy, is dedicated to spreading Marxism throughout the world,

Therefore, resolved that the National Association of Pro America urge the Administration and the Congress to resist all pressure to grant diplomatic recognition to Red China.

SEX EDUCATION

Whereas organized sexologists operating on grants from tax-exempt foundations and funds from the federal government are promoting courses in sex education in public and private schools from the kindergarten through the twelfth grade; and

Whereas some of the officers and directors are connected with pornographic publications; and

Whereas the goal of these organizations appears to be carrying out the declared intention of the International Communist Conspiracy with regard to breaking down the morals of the American children and youth; and

Whereas their programs present premature sex awareness in graphic forms using audio-visual aids, models, pictures, and charts which may result in irreparable psychological harm, especially since emphasis is placed on divorcing the subject from morality and stressing "situation ethics"; and

Whereas sex perversion, premarital sexual intercourse, and extra-marital intercourse are being presented as permissible in this so-called modern progressive society; and

Whereas the example of Sweden after twenty-three years of this type of education shows increases on a vast scale in illegitimacy, venereal disease, alcoholism, and suicide; therefore

Resolved that the National Association of Pro America oppose sex education in the schools of the nation.

AGRICULTURAL WORKERS

Whereas pro America believes it is the right of an individual to join or not to join a Union; and

Whereas proposed legislation calls for an amendment to the National Labor Relations Act, extending the collective bargaining rights of agricultural employees, which would destroy Section 14b of the Taft-Hartley Act, therefore

Resolved that the National Association of pro America reaffirm its several resolutions supporting the Taft-Hartley Act, and urge Congress to resist all attempts to repeal or modify that part of Section 14b which leaves the authority to the States to decide right-to-work laws.

COUNCILMAN BOB LEAVITT—A GREAT AMERICAN

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. DON H. CLAUSEN. Mr. Speaker, I rise today to pay tribute to a dedicated public servant, a loyal and devoted American, and a longtime close personal friend—the late Robert R. Leavitt, of Crescent City, Calif.

Bob Leavitt's untimely passing at the early age of 41 years once again reminds us of something that he believed in so fervently—"that there is so much to be done and so little time to do it in."

Here was a man who was both active and deeply involved in service to his fellow men, to his community, to his friends and neighbors, and to the country that he loved so greatly.

Bob was born in Klamath Falls, Oreg., but grew up and attended public schools in nearby Medford. He served in the Armed Forces with honor in both World War II and the Korean conflict and, although interrupted by subsequent military service, was employed by the Pacific Power & Light Co. since 1945.

Bob Leavitt was never satisfied with merely "talking about problems." He was best known as an energetic and probing public servant who gave so much of his limited time and boundless energy to the business of "problem solving."

He was a member of the city council in Crescent City, Calif., at the time of his passing last month. Prior to this, he served on the Crescent City Planning Commission for 7 years, with part of this service being as chairman of this commission. He also served as a city council representative on a triagency committee for the development of harbor and waterfront facilities for the county of Del Norte.

Beginning early in life, Bob was active in local civic activities including the Jaycees, boys club, and athletics. In addition, he was a past exalted ruler of BPOE, Elks Lodge No. 1689, in Crescent City, and at the time of his death, was the secretary of his lodge.

Typical of his desire to be active and involved, Bob could not resist the call and the challenge of politics, and it was in this context, that I became personally and intimately associated with him.

Bob first became active in politics through the Young Republicans in our home county of Del Norte. In addition, he served on the county Republican central committee, and in my own campaign for reelection in 1964 I was deeply privileged to have Bob working in my behalf as my first county chairman.

Certainly, I have lost a close personal friend and I feel that loss deeply. In an age when human life is constantly being extended, it is difficult to fully comprehend the tragic and sudden departure of one that you have known so intimately, admired so greatly, and shared with so completely, as I have with Bob Leavitt.

It has been said, and rightfully so, that "a person does not find life worth living; he makes it worth living."

Bob Leavitt made life worth living, both for himself and for those around him—he made it meaningful and exciting. He had intense compassion for people; especially for those who had problems and were in need of help.

It was not unusual then, that he should find interest in and devote himself to public service and community action. His was a life filled with the challenges of our time—personified by the highest qualities of honesty, integrity, and dedication to purpose.

I will always remember Bob as the "can do" guy. To him, no request was too large, no challenge too great, no task too big, no person too "small."

As a city councilman, Bob served the community of Crescent City with distinction. He could always be depended upon to render decisions on the issues and proposals before him, only after careful analysis based on fairness and merit. That was the kind of a man Bob was, and this is the way in which he will be remembered.

I am proud to have known Bob Leavitt, and privileged to have called him my friend. Our lives, our goals, and our dreams were so closely intertwined that at times, I can honestly say that we literally thought and functioned as one person.

I know how deeply and how much this tragedy means to Bob's lovely, faithful, devoted wife, Doris, and their four children. To them, I extend my sincere and heartfelt sympathy in this, their darkest hour.

While all of us who knew and admired Bob Leavitt will miss him greatly, his memory and the contribution he made to his community and the country will live on forever. Bob, your Del Norte friends, including your Congressman, will never forget you.

In mourning Bob Leavitt's untimely passing, I can think of no more appro-

priate closing verse than the words of Dandemis:

No man knows but that today's setting of the sun may be his last here on earth. Tomorrow, when he stands in the presence of his Creator, when in a flash, he sees the purpose of life, when he is asked what progress he has made, happy will he be who has exercised the principles of virtue, for he will reap the seeds he has sown during the fruitful years of his visit to earth.

RICKOVER VIEWS ON ARMS DEBATE MERIT ATTENTION

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. NICHOLS. Mr. Speaker, there is much controversy today over the expenditure of funds for defense of our country. Personally, I find it difficult to place any dollar value on the defense of the freedoms we enjoy in America. I was particularly interested in the comments of Adm. H. G. Rickover which were contained in James J. Kilpatrick's column this week. Under unanimous consent I submit this column for inclusion in the CONGRESSIONAL RECORD, and I further urge my colleagues to give close attention to Admiral Rickover's message:

RICKOVER VIEWS ON ARMS DEBATE MERIT ATTENTION

(By James J. Kilpatrick)

Several weeks ago, Sen. John O. Pastore wrote to Adm. H. G. Rickover. The senator asked for the admiral's views on where the nation is going and what needs to be done in a military way at a time of national debate on preparedness.

Rickover responded with a letter that merits the widest possible reading. Let me give him the floor:

"The first point I would like to make," Rickover wrote, "is that in judging between conflicting views on this matter, the deciding factor must be their relevance to the world as it is, not as we would wish it to be. Granted the hideousness of modern war, can we deduce therefrom that mankind is now wise enough to forgo recourse to arms? A look at history should put us on guard against those who claim that humanity has now reached a state where the possibility of armed aggression can be safely disregarded in formulating national policy.

"I am reminded of the intense opposition to the Navy's 15-cruiser bill in 1929. It was argued by many that with the signing of the Kellogg Peace Pact the year before, it was no longer necessary to build new warships. And this in light of the lessons of World War I which erupted despite the various Hague Peace Treaties! These ships were of inestimable value in helping us to win World War II. The war itself was prolonged because the Congress—heeding the 'merchants of death' argument—in 1939 prohibited shipment of war materials to Britain and France.

"Then, too, weight must be given to the credentials of those propounding opposite views. Are they public servants, charged with the awesome responsibility to secure our country against foreign conquest? Or are they private individuals not accountable for the consequences of their opinions, who feel free to express their personal abhorrence of war and to agitate for a reduction of the financial burden military preparedness imposes on the taxpayer?

"Would the majority of the electorate accept their argument that, given our unmet domestic needs, we cannot afford an effective defense position vis-a-vis our potential adversaries? Or that war is so horrible that it is better to suffer defeat than to fight?

"As for the high cost of preparedness, it is in fact no greater proportional to total U.S. output than 10 years ago—8.8 percent of total U.S. goods and services. Omitting the costs of the Vietnam war, and allowing for inflation, our armed forces have less buying power today than a decade ago.

"In the Soviet Union, on the other hand—according to the annual report of the congressional subcommittee on foreign economic policy issued last June—resources have been diverted from the farm sector to defense, where outlays rose dramatically in 1966–67, after remaining static since 1962. . . .

"If history teaches anything, it is surely that weakness invites attack; that it takes but one aggressor to plunge the world into war against the wishes of dozens of peace-loving nations if the former is militarily strong and the latter are not. . . .

"As a lawyer, you are familiar with Blackstone's statement that security of the person is the first, and liberty of the individual the second 'absolute right inherent in every Englishman.' Just so, the first right of every American is to be protected against foreign attack, and the first duty of government is to keep our nation alive. Given the world situation, this calls for maintenance of a defense capability which is adequate to discourage potential aggressors. . . .

"There can surely be no doubt that the overwhelming majority of the American people are opposed to relinquishment of our defense capability recognizing full well that there will then be no one left to prevent the takeover by Communist power. Whether one takes the optimistic view that a permanent East-West detente can be negotiated, or the pessimistic view that ultimately we shall have to fight for our liberties, this nation has no future if it allows itself to be outmatched militarily."

UNITED STATES HOPES TO SAVE BANKS FISHING

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. KEITH. Mr. Speaker, unquestionably the most pressing problem facing the New England fishing industry today is the haddock crisis. Due to substantial overfishing caused by an influx of foreign fishing fleets into the Georges Banks area off Cape Cod, this traditionally rich fishery has been depleted to such an extent that its very survival is in question.

The international convention of the Northwest Atlantic Fisheries has convened to determine what action is necessary to save this historic fishery. The U.S. representatives are prepared to ask for a voluntary moratorium on fishing on Georges Banks by other nations, and to limit the amount our own fishermen can take.

One of the more perceptive analyses of this critical situation was recently published by the Cape Cod Standard-Times. I commend this article to the attention of all Members and citizens concerned with the fishing industry, and with the larger issue of proper utilization of our natural resources. For fish, as much as forests or water, are a vital national resource—and the consequences of heedlessly exploiting these resources are grave.

The article follows:

UNITED STATES HOPES TO SAVE BANKS FISHING

Hopes that the Cape Cod fishing industry can survive depend mainly on the success of U.S. efforts to obtain a moratorium from other nations on fishing the Georges Banks for haddock and cod.

The United States plans to ask Russia, Canada and all other fishing nations to "cease and desist" from taking the haddock and cod while New England fishermen take a reduced catch.

This is the only way the New England fishing industry can survive, and save the Georges Banks fishing from extinction, Ambassador Donald L. McKernan, special assistant for Fisheries and Wildlife under Secretary of State Rogers, says.

McKernan is preparing his case to be put before the International Convention of the Northwest Atlantic Fisheries meeting in Warsaw next month.

This fishing industry faces a most critical situation. The Georges Banks fishing ground has shown a great decline in haddock the last few years. Much of this is due to the great sweeps by the foreign fishing industry.

American biologists have suggested that the Banks be closed to all fishing. But fishermen in the area object because they say they would not be able to re-establish themselves without substantial federal aid if and when the haddock became plentiful again.

By reducing their catch during the time the Banks would be closed to foreign fishermen, they could stay in business and wait out the return of haddock to former strength.

The United States not only wants the ban on haddock but on cod too. While experts say cod is plentiful now, they want it included in the ban since cod are taken in hauling in haddock.

The United States is optimistic about obtaining the cooperation of the 14 nations in the International Convention.

The Georges Banks fishing ground is an important source of supply for these nations as well as our own fishermen. All have a vital stake in preserving these historic fishing grounds.

The situation has reached the critical point where everyone must cooperate to save the Georges Banks fishing or it will simply be ruined beyond salvage.

EAST-WEST TRADE AS A WEAPON

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. DERWINSKI. Mr. Speaker, the debate over the practical value of East-West trade continues to wage here in Washington.

A view which I believe to be extremely objective is carried in the Monday, June 2 Chicago Tribune. This editorial also refers to the very timely and constructive article by Senator EVERETT DIRKSEN in the June issue of Reader's Digest.

It is obvious that the senior Senator of Illinois understands the issue thoroughly and is not suffering from the illusions which beset some of his colleagues.

The editorial follows:

EAST-WEST TRADE AS A WEAPON

The Nixon administration has wisely decided not to relax controls on trade with the communist countries. The administration's position is that trade concessions should be linked with political reciprocity by the Soviet Union in areas where its influence is in conflict with the interests of the United States, such as Viet Nam, Cuba, Berlin, and the middle east.

This position was disclosed in testimony by state and commerce department officials before the Senate banking and currency committee in favor of extending the 20-year-old export control act, which expires June 30. The same officials opposed a bill by Sen. Edmund S. Muskie [D., Me.] to relax restrictions on controls, which is strongly supported by the Senate "liberals," both Republicans and Democrats.

Sen. Everett Dirksen and Sen. Charles H. Percy of Illinois, both Republicans, are on opposite sides of the question of trade with the communist countries, and the Nixon administration has adopted Dirksen's position. In an article in the June issue of Reader's Digest, Dirksen notes that the Johnson administration, "at a time when the Soviet Union and its satellites were keeping the Viet Nam war going," unilaterally removed from the commodity control list more than 500 items for which special licenses had been required for sale to the communist countries. Altho these items were called "nonstrategic," they included rifle-cleaning compounds, propellers, industrial chemicals, crude rubber, and aluminum and magnesium scrap.

The Johnson administration also authorized the export of 35 million dollars' worth of machine tools for an automobile factory which the Fiat company of Italy is constructing in the Soviet Union. Dirksen and other senators protested in vain that the Russians can use the machine tools for the production of armored cars, trucks, and other military vehicles.

Altho the Kennedy and Johnson administrations were obsessed by notions of relaxing tensions by "building bridges" of trade and friendship to the communist countries, the Russians themselves use trade as a cold war weapon. "Trade is an integral part of our foreign policy," says P. A. Chervyakov, a leading soviet economist. Russian oil has been dumped in western markets to expand soviet influence and obtain foreign exchange. While Czechoslovakia is forced to pay 18 rubles a ton, Italy pays less than 8 rubles.

The east-west trade potential is insignificant from the standpoint of the American economy and business profits. In 1968 exports to the soviet bloc were only 216.8 million dollars and imports from the same countries were only 198.4 million. Trade between our European allies and the soviet bloc is more substantial, but the United States should try to persuade them to limit the export of strategic items instead of competing with them for illusory profits.

Actually almost anything the Russians buy in the west is strategically important, because of the backwardness of their economy and their desperate need for western technological assistance. They are abreast or ahead of the United States in weapons technology only because they have devoted a disproportionate part of their resources to it. In a paper privately circulated in the Soviet Union and published abroad, Abel G. Aganbegian, a brilliant young soviet economist, says: "We have the worst and the most backward productive structure among all the industrially developed countries. . . . We employ more workers to do repair work than to produce new machines." Industrial output per worker is one-fourth and agricultural output is one-twelfth of United States production per worker, according to Aganbegian.

It would be a betrayal of our national interest, if not suicidal, to help the Russians catch up with us in technology while they are striving for strategic superiority.

CAUTION DUE ON HOME REPAIRS

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. HUNGATE. Mr. Speaker, at a time when we are all concerned with consumer protection I am sure my colleagues will be interested in a comprehensive article containing helpful advice to avoid being swindled, which recently appeared in the Christian Science Monitor.

CAUTION DUE ON HOME REPAIRS

(By Richard C. Halverson)

As sure as lilacs bloom in the spring, the favorite home-improvement swindles are again blossoming forth.

No amount of publicity seems able to nip in the bud these hardy, perennial home-improvement frauds:

Bait-and-switch, best-selling method of the gyp artist. A sharp salesman signs up a customer for, say, aluminum siding, at a bargain advertised that is too good to pass up.

Then he stuns his customer by confiding that the quality of siding just sold is no good. It will blow away in the first storm, he confesses. But he will kindly let the homeowner switch his order to a good grade of siding that will last. Relieved to get out of a bad deal, the hapless custmer buys the line—and may pay $3,000 for a job worth $2,000 from a reputable concern.

MODEL SCHEME

Model-home pitch, an easy way to pay $4,400 for a $400 roofing job. Follow closely. A salesman got a homeowner to sign a contract for $2,800 for the job actually worth $400 by promising to use his home as a model for other customers. For each prospect sold, the homeowner would get a $100 rebate—guaranteed to total $2,400.

When the payment book from the finance company arrived, the homeowner was hooked for payments totaling $4,400, including interest.

Needless to say, the Federal Housing Administration has banned such phony promises—which never pan out—on FHA-financed home improvements.

Gypsy driveway sealer. He just happens to be in the neighborhood with material left over from another job. He offers to coat and seal driveways for $20 or $30. But what he spreads may be just used motor oil that gets tracked all over the house. A nationally known gang, the "terrible Williamson family," among others has been working this hoary swindle for decades.

Wandering woodsman, offering low-priced tree trimming. Prized shade trees will take years to recover from his butchering.

Phony termite inspector. After getting into a house, he plants termites to convince the homeowner to pay for expensive spraying.

Roofing gyp. He shows the homeowner a handful of shingles, supposedly blown off his roof. The roofer offers cut-rate "repairs."

$12 BILLION TAB IN 1968

Homeowners fall for these medicine-man pitches because they "want something for nothing," says Leonard L. Sanders, president of Boston's Better Business Bureau (BBB).

Moreover, "people want to believe other people"—even total strangers—cautions Dermot P. Shea, head of Massachusetts's Consumer's Council. "They turn their backs on people they've dealt with all their lives and buy from wandering peddlers," Mr. Shea laments.

Homeowners spent a record $12 billion in 1968 for home repairs and improvements. How many hundreds of millions swindlers suck in each year never can be accurately tallied.

But it's clear they prey on the elderly and women. In one notorious case, a fraudulent contractor scared one elderly woman into spending $40,000 for bogus repairs to keep her $6,600 house from "falling down." In just 19 months, for example, her home was painted twice.

In another incredible case, different salesmen high-pressured a woman into signing for two reroofing jobs on the same house.

Despite consumer protection laws, says Mr. Sanders of the BBB, the homeowner still must look after himself. For instance, the federal truth-in-lending law, effective July 1 will give the homeowner three days to cancel a home-improvement contract that takes a second mortgage on his home. But, warns Mr. Sanders, the homeowner often finds out he has been taken only when the finance company payment book arrives 30 days later.

"Investigate before you invest"—a pet BBB slogan—sums up how a homeowner can guard against fraud. In a national survey, the Association of Better Business Bureaus found that an unbelievable 86 percent of homeowners fail to read and understand the home-improvement contracts they sign. And 71 percent could not even be bothered to get competitive bids for a job before signing on the dotted line.

HOW TO LICK 'EM

BBBs give away a checklist on how to deal with a home-improvement concern. It's called "27 Questions for Homeowners." See also the new BBB "Consumer's Buying Guide" ($1), which contains a chapter on home-improvement tips.

Those rackets would dry up and blow away if homeowners would:

Check the reliability of any contractor with the local BBB, the Federal Housing Administration, and other customers. The FHA blacklist of shady contractors contains more than 6,000 names.

Get several competitive bids.

Make sure the contract spells out the type and extent of work to be done and the quality of materials. Make sure the contract gets in writing any verbal promises by a salesman—especially guarantees.

Consult their bank about financing before signing a contract.

Never pay a salesman or contractor in advance for a job.

Never sign a completion certificate until the work is satisfactorily completed.

SUMMER "WORK-IN" PROGRAM

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. COLLINS. Mr. Speaker, it has come to my attention during the past week that the Texas-Oklahoma leadership of the Students for a Democratic Society—SDS—has established a definite "battle plan" to shift their major thrust of activities from the college campuses to the factories this summer. I have in my possession, a complete list of defense-oriented plants in a five-State area, Texas, Oklahoma, Arkansas, Louisiana, and New Mexico, that the SDS has targeted for student violence this summer.

By State, the list of plants selected are:

SDS SUMMER PLANS EXPOSED

TEXAS

Dallas-Fort Worth area

Baifield Industries (Dallas)—Manufactures brakes for snake eye bombs.

Jet Research (Arlington)—Manufactures explosive detonators.

Space Corporation (Garland)—Bomb hauling and ground support equipments.

LTV (Grand Prairie)—A variety of defense related contracts.

Texas Instruments (Richardson)—A variety of defense related contracts.

General Dynamics (Fort Worth)—A variety of defense related contracts.

Bell Helicopter (Fort Worth)—A variety of defense related contracts.

Houston

Texas Instruments—Sensing equipment and bomb detection devices.

Austin

Tracor—Chaff dispension equipment to jam radar.

Waco

A. O. Smith—Bomb production.

McGregor

Rocketdyne—Explosives.

Longview

R. G. Letourneau, Inc.—Bombs, bomb fins, and warheads.

Pampa

Cabot Corporation—155 mm howitzers.

El Paso

Braddock, Dunn, and McDonald—Weapons systems evaluation.

San Antonio

The Porter Co., Inc.—Brace bomb dispenser.

OKLAHOMA

Quality Machine Works (Oklahoma City)—Bomb door releases.

Leeds-Northrup (Tulsa)—Hardware for missiles (slide wire).

Quality Machine Works (Oklahoma City)—Bomb door release.

LOUISIANA

Baifield Industries (Shreveport)—Bomb fin containers.

Explosive Devices, Inc. (Metairie)—Bomb cartridges.

ARKANSAS

Batesville Manufacturing Co. (Batesville)—Bomb installation equipment.

Camden Manufacturing Co. (Camden)—Ordnance items.

Ouachita Marine and Industrial Corp. (Arkadelphia)—Bombs.

NEW MEXICO

Hewlett Packard (Los Cruces)—Instrumentation.

Mr. Speaker, SDS leadership formulated plans for their national work-in program in Chicago in late April. In attendance at this convention was Roy Bartee Haile of Texas and his wife, Margie Bolton Haile. Haile, former SDS regional traveler for the Texas-Oklahoma region, currently serves as one of eight members of the powerful National Interim Committee of SDS—the top policy-making body of this student group. Haile also played a prominent role in the national SDS meeting in Austin in late March and has been assigned the top planning role in the work-in program both nationally and in our five-State region. Haile recently indicated that he is personally a Communist, and that many of the top leaders of the national SDS organization share his feelings.

Mr. Speaker, the work-in has as its stated objectives to transfer SDS activities from the classroom to the industrial plants of America. A secret instruction sheet outlining SDS objectives has been distributed nationally indicating "that closing down our schools is not enough. Workers produce and move the goods that are used in war and it is they who are primarily forced to fight the war. They can stop it."

Based on a number of personal conversations with the rank and file members of labor unions who staff the majority of the plants targeted on the five-State SDS work-in plan. I feel that the workers have little patience or respect for those who are trying to destroy America. It is quite probable that violence will erupt as SDS members try to forceably clog our machinery. It is for this reason that I am making this information, received in strictest confidence, public. I hope that it will serve to alert industrial executives to a real danger that they face this summer—a danger that can be averted only by prompt and careful scrutiny of prospective summer employees.

I and members of my staff have conferred with key members of the Justice Department, House Committee on Internal Security, and the intelligence division of the Dallas Police Department. My initial concern was to verify the confidential information received. I am now convinced that Bartee and Margie Haile and other top SDS leaders, have formulated a most ingenious plan to transfer chaos from the college campus to the industrial assembly lines. It is imperative that local police officials, industrial executives, union employees, and the general public be prepared to respond if, and when this devious plan is launched in our five-State area.

DEAF, BLIND CHILDREN TAUGHT IN VANCOUVER

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mrs. HANSEN of Washington. Mr. Speaker, there are often individual tragedies in life which are greater than the capacity of the victims to withstand. In these cases, a sensitive and benevolent Government has a responsibility to ease the burden.

This was the case during 1964 and 1965 when some expectant mothers were stricken with rubella. Many of their babies were then born handicapped—some both deaf and blind. In reaction to these tragedies, Congress provided meaningful legislation to ease the impact on the affected families and to help these handicapped children toward more meaningful lives.

Elisabet Van Nostrand, a reporter for the Vancouver, Wash., Columbian, has written an exceptional story about this problem which was carried by the Associated Press and printed in many newspapers, including the Longview, Wash., Daily News. Mr. Speaker, I insert her article in the RECORD, as follows:

MEETING WITH DEBBIE—DEAF, BLIND CHILDREN TAUGHT IN VANCOUVER

(By Elisabet van Nostrand)

VANCOUVER, WASH.—I met Debbie before Debbie met me.

I watched her and heard her talking to her teachers before she even became aware of my presence at her side in the Washington State School for the Blind in Vancouver. Then we were introduced.

She ran her hands over my face and arms and said, "What's your name?"

She had troubles with "Elisabet." There are too many syllables, and my lips and throat moved too many times for her to quite catch it. She never really did, but she does understand and can repeat an amazing number of rather difficult words.

Debbie is 18 years old. She has never seen nor heard. She used to be one of the very few children in the United States who were born both deaf and blind. Now there are many like her.

The reason is rubella, or German measles, in the form of a virus epidemic that swept the country in 1964 and 1965. A mild disease that usually passes in a few days, rubella often has a tragic effect on children before birth.

Many are born with multiple handicaps, the most common ones rendering them both deaf and blind or causing deficiencies in the heart or mental capacity.

An estimated 20,000 pregnant women contracted rubella in 1964 and 1965. One of the results was up to 2,000 babies born both deaf and blind. About 500 of them are expected to benefit from some kind of education.

These children now are approaching school age, and that's where the Washington State School for the Blind enters the picture.

The institution is one of only seven schools in the country that have departments for children who are both deaf and blind. Most of them are in blind schools, partly because the equipment for the blind is more suitable for the deaf-blind than is equipment for the deaf, and partly because the deaf-blind socialize better with the blind than with the deaf.

While most of the school's present eight deaf-blind children are of high school age, the school now expects an influx of very young children. Washington and Oregon alone have 30 known deaf-blind children mostly 4–6 years old.

But not only Washington and Oregon deaf-blind children will come to the Vancouver school. The state blind school was recently designated one of eight regional centers for such children and will also serve Alaska, Idaho, Montana, North and South Dakota and Wyoming.

In addition, says Supt. Byron Berhow, children from other parts of the country will be accepted, especially if they have relatives in the area.

Only one of the school's present eight deaf-blind children. Debbie, was born with this multiple handicap. "Up until now, there have never been more than about 100 deaf-blind children in school in the whole country," Berhow said.

"Now the push will begin with all these small children," he said. "It's a terrible thing and there are few teachers available. Still, the United States wasn't caught totally unprepared like England was a few years ago."

In anticipation of the many deaf-blind children caused by the rubella epidemic, Congress passed Part C of Title I of the Elementary and Secondary Education Act, authorized the creation of the regional centers.

The Washington state school received a federal grant of $156,926 recently to establish one such special regional center for deaf-blind children.

"Federal aid is needed because the problem is simply too great for the individual states to handle," said Berhow, who was a member of a special committee called to Wash-

ington, D.C., to help form the legislation and draw up the guidelines. This work has been in progress for about two years.

By September, the Washington school expects to have about 15 children. A new cottage for 20 boys and girls who are multihandicapped will be ready then.

"This will be an entirely different project than our present one, because the children will be young," the superintendent said. "We will develop the training program in conjunction with Portland State University. All teachers must have training."

At the present, Mrs. Ruth Richardson is supervisor of the school's deaf-blind department. Two teachers help her. Two more teachers will be added next year, along with teachers' aides and houseparents. The school will also employ a coordinator for the entire program.

Because so many parents are totally baffled by the magnitude of their child's handicap, the children often come to the school as little savages with no knowledge of the world around them. Many have been kept in cribs for years, and the teachers must begin by creating some kind of awareness in them.

Like with all other children, some are smarter than others. Debbie is considered quite intelligent, and she manages extremely well despite her handicaps.

TRIBUTE TO DWIGHT DAVID EISENHOWER

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. HALPERN. Mr. Speaker, June 6 marks the anniversary of D-Day, that historic moment in history when the eyes of the world were focused upon the invasion forces of the Allied army and the activities of its Commander in Chief, Dwight David Eisenhower. It is fitting that at this anniversary of that landing we again pay tribute to the man who left his mark on history not only as a military leader but as a political leader as well.

But it is perhaps the mark of a man that we remember him more for his human qualities than for the imprint that he leaves on mankind. Dwight David Eisenhower certainly engraved his name in the history of the 20th century—commander of the greatest invasion force ever assembled in the history of man, university president, author, and President of the United States—yet he is best remembered in the hearts of Americans as a man loved by the people.

He was of the very essence of America. Born to a poor hard-working family in Texas, his warm, outgoing personality engendered the friendship, admiration, and trust of those who came to know him. Upon graduation from West Point, he began in 1915 one of the most successful military careers in the history of the United States. To have led the legions of democracy against the armed might of tyranny would have been reward enough for most men but for General Eisenhower a life of public service could not be so easily ended no mater how richly deserved. After a short term as president of Columbia University, he again returned to the service of the United States in the capacity of commander of the newly formed North Atlantic Treaty Organization. As he had done during the Second World War, he succeeded in welding into a single fighting force the many diverse armies that are part of the common European defense.

Recognizing his talents, the American people called upon him to give yet more of himself to public service. Rising to the call, he spent 8 years providing the American people with that determined, studied leadership ever mixed with a depth and breadth of human understanding that he had so amply displayed in the past. As President of the United States, he placed principle above expediency both at Little Rock and Suez. He sought to maintain democracy wherever it was threatened, whether Lebanon or Berlin. He strove constantly for peaceful coexistence with the Soviet Union while maintaining security for the free world. As new nations emerged from old empires, he remembered that America, too, had fought for its independence against empire and consequently he devoted considerable effort on behalf of these nations struggling with the manifold problems that attend newly won freedom.

At home he provided Americans with great leadership amidst crisis. After the Soviet technological successes of 1957, he pressed for and succeeded in obtaining significant Government assistance to education. So that all of our citizens would be equal under the law, he sought and obtained far-reaching civil rights legislation.

It is possible that other men of similar devotion to duty and general excellence might have accomplished some or even possibly all that President Eisenhower did. But in such a case, one would only be recounting deeds rather than telling of a man and above all things, Dwight David Eisenhower was a man that America knew it could look to for leadership, honor, respect, and, from the very depths of his heart, love of everything America has ever stood for.

DOUGLAS SHOULD GO

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. GROSS. Mr. Speaker, the case against Associate Justice William O. Douglas, of the U.S. Supreme Court, into which new elements of involvement and association beyond the Court are coming to light almost every day, can be boiled down to these specific counts:

First. Justice Douglas violated the American Bar Association canons of ethics and may have violated the Federal criminal law in a letter of May 14, 1969, to Albert Parvin giving advice on legal matters involving the Parvin Foundation and a controversy with the Internal Revenue Service.

Second. Justice Douglas accepted a fee of at least $350 for an article published in Ralph Ginzburg's Avante Garde that consisted of the worst in hard-core pornography. A full-page picture of Justice Douglas and his article on folk singing were featured in the advertising and general promotion of this magazine with its sordid contents of pictures, poetry, and articles that can only be described as filth. Justice Douglas voted against a 5-to-4 Supreme Court decision in 1966 that upheld conviction of Ginzburg for selling hard-core pornography. There are several other suits involving Ginzburg that are in the appeal process and could come before the Supreme Court.

Third. Justice Douglas has continued his association with the Parvin Foundation despite knowledge as early as 1966 that its funds came from Las Vegas gambling casinos that were well publicized as fronts for notorious syndicate gambling and "skimming" operations. The fronts for the syndicate mobsters would appear to include Albert Parvin, Edward Levinson, Edward Torres, and others according to information obtained through Federal law enforcement sources.

Place these facts against the canons of ethics of the American Bar Association that demand our Federal judges be models of propriety in their private as well as their public lives. It is my opinion that Justice Douglas has violated the same canons that were violated by former Justice Abe Fortas in his relations with Louis E. Wolfson. I believe these facts are accurate, and that the opinions on these conflict of interests and other improprieties are within the context of those facts and reasonable interpretation.

If there are those in the House of Representatives, or if there are friends and supporters of Justice Douglas, who have other facts that are relevant to these problems I would welcome that information if it would change or modify this situation in the slightest. If Justice Douglas, or friends of Justice Douglas in the Congress, have any facts to produce or opinions to express, this is the time to do it.

On the basis of the information now in the public domain this is a grave matter, and I have reason to believe that other information will emerge shortly. If Justice Douglas does not see fit to resign, then the time has arrived for him to give a detailed accounting of all his actions involving financial transactions, and the associations that were the beneficiaries of his legal advice beyond the Supreme Court.

Failing to do this within a reasonable period of time, Justice Douglas should know that he will very likely be confronted with impeachment.

I submit for printing in the RECORD, at this point, the following article from the June 4 issue of the Des Moines Register:

U.S. REPORTS LINK PARVIN TO MOBSTERS

(By Clark Mollenhoff)

WASHINGTON, D.C.—Albert Parvin's alleged connections with several notorious syndicate mobsters have become the focal point of the government investigations of the activities of Associate Justice William O. Douglas.

The investigation centers around the fact that Douglas received $12,000 a year as president of the Albert Parvin Foundation from

1962 until he resigned recently. The Parvin Foundation received the bulk of its income from holdings in a number of Las Vegas gambling casinos, including the Fremont Hotel.

Within the last few days, at least four government agencies have submitted information to several key figures in Congress dealing with the background of Parvin, the operations of the Parvin-Dohrmann Co. and the Parvin Foundation. The Treasury Department, the Justice Department, the Securities and Exchange Commission and the FBI have all compiled reports dealing with Douglas and the financing of the foundation.

TOP HOODLUMS

At least one of these reports reportedly relayed information identifying Parvin, a former Chicago, Ill., man now operating in Los Angeles, Calif., as a frequent associate of such important syndicate hoodlums as Meyer Lansky, Frank Costello and the late Benjamin (Bugsy) Siegel.

Key congressional figures who have been pressing for the Douglas investigation by the Nixon administration said Tuesday that Douglas has become aware of the extent of the government investigations of Parvin's background, and has indicated that he will resign within a few weeks.

It is expected that Senator Paul Fannin (Rep., Ariz.), Senator Carl Curtis (Rep., Neb.) and Senator James Eastland (Dem., Miss.) will speak on the Senate floor before the week is out, stressing the connections between Parvin and gambling figures that go back at least to 1940.

Senator John J. Williams (Rep., Del.) has asked the American Bar Association for an opinion on whether Douglas has violated the A.B.A. canons of ethics in receiving $12,000 a year from a foundation financed partly by money from Las Vegas gambling casinos.

The reports by government agencies to the Congress stress that Parvin was arrested in the mid-1920s on charges of receiving stolen property. The charges were dropped when Parvin made restitution.

The reports state that Parvin's relationship with Bugsy Siegel, former operator of the Flamingo Casino in Las Vegas, started in the early 1940s. Siegel was slain in a dispute of the management of the Flamingo, and later it was taken over by Gus Greenbaum who, it was reported, had been designated to run the casino by those who had originally backed Siegel.

At some point before 1960, Parvin obtained a large interest in the Flamingo.

In 1960 and 1961 when he established the Foundation and named Justice Douglas the president, the major asset was listed as a $1.2 million interest in the Flamingo.

Parvin was reported to have become wealthy in operating a firm that sold equipment and supplies to restaurants and hotels.

In 1966, the Parvin-Dohrmann firm purchased the Fremont Hotel from a group of stockholders that included Edward Levinson, Edward Torres and others who were under investigation by the Internal Revenue Service and the Justice Department for alleged "skimming" of millions of dollars in cash from the Fremont casino gambling profits.

The indictment of Levinson and Torres in May, 1967, on charges of filing false tax returns was returned only a few months after Parvin-Dohrmann purchased their interests in the Fremont in a deal that included agreement to pay several million dollars in cash plus $100,000 a year each for five years to Levinson and Torres.

Levinson and Torres were to continue to run the Fremont for the Parvin-Dohrmann firm, and to have a role in the management of two other Las Vegas casinos—the Stardust and the Aladdin—that were being purchased by Parvin-Dohrmann.

Records filed in the United States Tax Court show that in the last few weeks the Nixon administration has initiated action to collect more than $4 million in back federal taxes from the Fremont Hotel Corp. It was only one of several Las Vegas casinos involved in what has been described as a Mafia-directed "skimming" operation.

In the case of the Fremont alone, the tax investigators contend in the period from 1962–64 the Fremont "understatement of gross income from craps (a dice game)" was $5,324,213, and the casino owes $4,228,794 in delinquent taxes and civil fraud penalties.

Government agencies have informed key congressional figures that at least $12 million a year was taken from the Las Vegas gambling casinos in cash. It did not go through the casino books, and no federal or local taxes were paid on it.

Levinson and Torres have been identified as a part of the active "skimming operation," and government sources say they took an active part in sending the millions in cash to Miami, Fla., where Meyer Lansky, identified by various committees as the Mafia's chief financier, arranged for delivery to numbered bank accounts in Switzerland.

The Securities and Exchange Commission is involved in the current investigaton of the Parvin-Dohrmann firm through its effort to determine the real purchasers of Parvin-Dohrmann stock from the Parvin Foundation. The purchases were made through the Bahamas and through international money that appeared to have originated in Swiss banks.

NEW AMERICAN POLITICS: ENABLING THOSE WHO CHANGE THEIR RESIDENCES TO VOTE IN PRESIDENTIAL ELECTIONS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following comments recently made by Hubert Humphrey urging that our registration laws be structured to encourage every American citizen to register and vote for presidential candidates on election day simply by going to the polls and properly identifying himself or herself as to name and residence.

To enable 5 million citizens who were disenfranchised by our residency laws from voting in 1968 to vote in subsequent presidential elections, 62 Members to date have joined Congressman BRADEMAS and myself in cosponsoring introduction of the Residency Voting Act of 1969. It is also encouraging to note that 25 colleagues of Senator KENNEDY joined him on May 14 in cosponsoring introduction of a similar measure, the Voting Rights Amendments of 1969.

I urge my colleagues to consider the former Vice President's remarks with a view toward achieving early enactment of legislation to allow every voting age citizen to cast a ballot for the President and Vice President on election day.

Mr. Humphrey's comments, appearing in the June 2 edition of the Washington Daily News follow:

LET'S ALLOW AND ENCOURAGE EVERY AMERICAN CITIZEN TO VOTE

(By Hubert Humphrey)

Americans take great pride in our nation's democratic traditions, but I couldn't help wondering during the 1968 presidential campaign why we make it so difficult for our citizens to vote.

The United States is, after all, the best educated and most technologically advanced country in the world. Almost every American has a radio and television set and is kept informed on important issues.

Why shouldn't we let every voting age citizen cast a ballot on election day? I think we should.

But look at the results from 1968.

Of 120 million voting age Americans, only 72 million cast a ballot for president. That means 48 million were left out.

President Nixon, who received 42 per cent of the votes cast, actually won the support of only one in every four voting age Americans.

Does this mean Americans are lazy or indifferent about electing their president? I don't think so. But, as a nation, we can certainly do better.

One problem is that we still have a paper curtain of old-fashioned registration and voting laws which keep people away from the polls. The right to vote is a privilege, but why make it so difficult?

Take residency requirements, for example. Every year 20 million Americans move to another state. Many of these citizens are prevented from voting for president until they have lived in their new state for one or even two years. In 1968, five million citizens were disenfranchised by the residency laws.

But these are American citizens, wanting to vote for a national leader. Why should anyone have to live in a state for a year before he or she can vote for president? It may have made sense in the horse and buggy days, but it doesn't today.

We also have a crazy quilt of absentee voter laws. In 1968, six million Americans didn't vote because they couldn't leave work or because they were away from home. Another seven million didn't vote because they were sick or disabled and couldn't get to the polls.

We ought to help these people to vote. Yet, in many areas, citizens have to penetrate a bureaucratic maze in order to cast an absentee ballot.

We also keep many of our citizens from voting by just plain making it hard for them to register to vote. Our political parties expend a tremendous amount of time and energy just telling people how and when and where to register.

In many communities there is only one place to register to vote. It is often an office, tucked away in some county or city government building, with hours of operation that make it difficult for the working man or woman. Is it any wonder that many a citizen grows cynical of government?

In this electronic age, when we are able to keep accurate and up-to-date census and tax lists on computers, we ought to take the burden of registration off the individual and put it on the government.

We ought to do away with the 45 and 60 and 90-day registration cutoffs. We ought to do away with the one and two year residency laws.

Every American citizen ought to be able to register and vote on election day by going to the polls and properly identifying himself or herself as to name and residence.

In some ways, we have done well in expanding suffrage in this country. Since the passage of the voting rights act of 1965, the registration of blacks in the South has doubled. The old barriers of property ownership and sex and race have been struck down.

The next goal should be the lowering of the voting age. Our young people today are the best informed, best educated, most idealistic generation in our nation's history. They want to participate. We ought to let them. I have long supported lowering the voting

age to 18, and it is time we moved in this direction.

Then too, the president and vice-president should be elected by direct popular vote. The out of date electoral college should be scrapped.

Before 1972, let's go to work to get state legislatures to bring registration and voting laws into the 20th century. Let's tear down that paper curtain. Let's live up to our democratic heritage by allowing and encouraging every American citizen to vote.

A BOLD NEW APPROACH TO CURE THE ILLS OF AMERICA'S POSTAL SYSTEM

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. PUCINSKI. Mr. Speaker, earlier today Cook County Commissioner Harry H. Semrow, who was postmaster in Chicago from 1961 to 1966, proposed a bold new approach to the delay and problems of our Nation's postal system.

Few men in this country are as well quailfied to discuss the problems of our postal system as Harry Semrow. As postmaster in the biggest post office in America for 5 years, Harry Semrow had a chance to observe first hand the herculean problems faced by our postal system.

Mr. Semrow, besides being the commissioner of the Cook County Board, is in his own right a very successful businessman who knows well the value of a good postal system.

Mr. Semrow has, today, proposed that we separate the first-class mail from bulk mail. Under his proposal we would have the Federal Government continue providing mail service for first-class mail and a quasipublic agency, as suggested by President Nixon, to handle all of the bulk mail including parcel post and third-class mail.

In Mr. Semrow's proposal newspapers would be treated as first-class mail.

I believe that this merits full discussion, and have asked the legislative council to prepare for me proper legislation to implement Mr. Semrow's proposal.

Mr. Speaker, our Nation is heading for a trillion-dollar economy. First-class mail takes on additional significance and importance when we consider that the advent of credit cards and other billings constitute the very lifeline of our economy.

We must start treating first-class mail on an entirely special basis from all the other material sent into the average home in America if we are to avoid a complete breakdown of our own commerce.

I believe that Mr. Semrow is to be congratulated, and it would be my hope that President Nixon would invite Mr. Semrow to an advisory board to help draw up an appropriate postal system for America.

Mr. Semrow's statement issued in Chicago, Ill., today, follows:

STATEMENT BY COMMISSIONER HARRY H. SEMROW

I take this opportunity to commend President Nixon on his concern over the growing mail service delay in America. What's more, I warmly second his sentiment that in finding the solution—and I quote him—"There is no Democratic or Republic way . . . there is only the right way."

As Postmaster of the Chicago Post Office for five years, one of the biggest and most vital of all post offices in the postal system, I had the opportunity to direct 27-thousand employees to handle 7-billion pieces of mail a year, and in general, to get more than a first-hand view of postal operations. In making an analysis of what the problem is in the postal system, there can only be one conclusion—and that is industry with its heavy outpouring of parcels, advertising gimmicks, magazines, catalogs, and so forth, has crushed the United States postal system and has virtually broken the letter carrier's back! The letter carrier has become a walking general store, delivering soap, cereal, tooth paste, razor blades, and God knows what else! In fact, I recall vividly the time some live alligators were shipped and received at the Chicago Post Office.

The original postal concept was designed for the purpose of delivering what is known as first-class mail . . . letters, business correspondence, and so forth. But over the years the second, third, and fourth class areas have grown to such volumes and extremes that they have stifled off the original intent of good preferential mail service.

In addition, the tax payer has been subsidizing the second, third, and fourth class mails over the years, and as an example, I point to an interesting facet of the mail service, and that's first class mail. First class mail has shown a profit since 1926 with the exception of only one year, and while I hesitate to cite figures, I'll just make a few comparisons to point out what is happening to mail costs:

In 1926—1st Class Mail gained $73,768,786; 2nd Class lost $83,498,229; 3rd Class lost $1,763,768; 4th Class lost $2,959,733.

In 1946—1st Class Mail gained $143,353,028; 2nd Class lost $148,128,993; 3rd Class lost $52,070,453; 4th Class lost $41,512,248.

In 1967—1st Class Mail gained $35,023,133; 2nd Class lost $421,859,903; 3rd Class lost $441,570,984; 4th Class lost $190,487,499.

Obviously, we private citizens are subsidizing the mailing costs of big business. If large corporations want to advertise and deliver their wares through the mails, let them pay their fair share.

These figures make it obvious as to where the problem of postal deficit rests. But to even show the inequities in mail, let's cite an example of a typical one-pound magazine that's delivered weekly, millions at a time, at a cost of 6-cents postage, while they use the taxpayer to pay 6-cents an ounce for first class mail, when they virtually both get the same treatment. Let's take a further example: A 4-pound catalog is delivered for 30-cents as compared to the taxpayer's 6-cents per ounce; and if we projected the 4-pound catalog cost on an equal basis, it would amount to $3.84—and again, they virtually receive about the same delivery service. But enough of the examples. I'm sure the few instances that I have cited give the general idea as to where the true cost of the postal deficit lies.

Again, I congratulate President Nixon on his vital interest in doing something about the postal system, and I totally agree with him that if something isn't done soon, the whole system will collapse—only because as industry grows, so will the crush on the post office, making it more and more difficult for first class mail to get through the big bind. Actually, the post office has become the shipping department of industry and unless the system is changed, and not just the operating head, we will be in for the same type of service—only worse!

In the spirit of trying to help a very difficult problem (the hopeless snarl that has become our national mail delivery system), I would propose the following:

(A) The formation of two separate mail handling agencies in the United States, one being the existing United States Postal Service, but it would only handle preferential mail and would thereby restore first class service to the first class mail system. This service could continue to be administered by a cabinet member, the Postmaster General, but would limit its service to the following items:

1. First Class Mail.
2. Air Mail.
3. Special Delivery (and really making it *special*).
4. Registered Mail.
5. Daily Metropolitan Newspapers.
6. Western Union Telegrams (which letter carriers would deliver on a fee basis for Western Union.)

In this proposal for fast and prompt first class preferential mail service, I would propose the elimination of two costly and onerous services performed by the letter carrier:

(1) the elimination of certified mail to be incorporated instead with Registered Mail;

(2) the elimination of COD mail which places the letter carrier in the role of bill collector.

(B) The second agency could be called the United States Shipping Corporation or some similar designated name, and it would only handle bulk mail. This new corporation could be administered by the nine-man board proposed by President Nixon, it could establish rates by a 3-man commission proposed by President Nixon, and its assignment would be to deliver the following classes of mail: 2nd class, which includes magazines, newspapers and periodicals; 3rd class which is primarily circulars, advertising matter, and sample products; 4th class mail which, of course, is parcel post.

This new corporation could be given the bonding power to raise whatever money it deems necessary in revenue bonds to set up the system, and if new facilities would be needed, they would be in a position to build them—or the present facilities could be divided to accommodate this new United States Shipping Corporation. The work force, equipment and vehicles as well, could be divided to make the new system almost immediately operable.

Needless to say, the postal planning department would have to exercise great care and judgment to work out the myriad of details in establishing the two separate systems. However, I think the facts are clear. The crush by private industry on our postal system will be impossible to relieve in my opinion under the present archaic system; and if America is to have the type of postal service that it's entitled to, I see no other alternative but to form the two separate divisions.

Mail service in the United States is at a crossroads. It's costing us money and not performing the services we have a right to demand for that money. In addition, it's inequitable, and the mail user then should not be in the position of subsidizing big business. Let them both stand on their own—the individual supporting first class mail and its traditional letter carrier, and business supporting a United States Shipping Corporation. When this is accomplished, we then will have a letter carrier walking with dignity with first class, air mail, and so forth, on time, at a profit, with no possibility of a log-jam or a breakdown in the postal system. First class mail never did and never will clog a post office.

And so I ask President Nixon to consider two separate mail handling agencies such as I have proposed with the view to accomplishing what America has not had for a long time—a fool-proof mail system. I have also discussed this proposal with my Congressman, Mr. Roman Pucinski, who endorses it whole-heartedly and has indicated to me that he will have it placed in legislative form.

ANOTHER GIVEAWAY?

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. RYAN. Mr. Speaker, an article in the Washington Post of May 4, 1969, by M. B. Schnapper, editor of Public Affairs Press, raises significant questions concerning the application of copyright protection to publications prepared at Government expense either by civil service personnel or contractors. I urge my colleagues to read the following article and to consider the points it makes when the question of the Copyright Act is again before the House:

TWISTING OUR COPYRIGHT LAW

Although the Copyright Act expressly prohibits copyright restrictions on the contents of government documents, federal agencies and officials are increasingly circumventing the law through the simple device of authorizing its contractors to do that which the government has no power to do.

Take, for example, the long-awaited report on unidentified flying objects commissioned by the Air Force at an expense of $525,905. On page IV of the only publicly available copies of the report (*Scientific Study of Unidentified Flying Objects*) is the following statement:

Copyright 1968 by the Board of Regents of the University of Colorado. All rights reserved. No part of this book may be reproduced in any form, by photostat, microfilm, xerography, or any other means, without the written permission of the copyright owner.

In short, you can read the report aloud to yourself but you had better not quote it in a letter or reproduce any portion of it through any known or yet to be devised means of communication—unless, of course, the Board of Regents of the University of Colorado (B.R.U.C., for short) has given you its permission to do so.

It sounds sort of preposterous for a public institution to be discouraging the dissemination of knowledge, especially since schools and scholars are the chief complainants against tight copyright restrictions, but it's perfectly proper if B.R.U.C. is a genuinely legal proprietor. The facts don't seem to bear this out.

If, as statements in the report itself show, it's an official document in every essential sense, it's non-copyrightable and hence belongs in the public domain. It was officially designed to "strengthen the public position of the Air Force on UFO's" (p. 815), officially justified on the ground of being "of great importance in securing public understanding . . . as a further aid to public understanding on the scientific appreciation taken by the Air Force in attacking the UFO problem" (p. 816), officially commissioned (Pentagon press release No. 847–66), officially released (January 8, 1969), and officially funded (Air Force Contract No. F44620–67–C–0035).

How come, then, that B.R.U.C. has—or, rather, seems to have—the right to decide who may or may not quote or "reproduce in any form" any portion of the contents of a work being privately merchandised by Bantam Books as "The Complete Report Commissioned by the U.S. Air Force"? That has yet to be fully explained by the Air Force or B.R.U.C., but Eugene Wilson, Colorado's vice president for business affairs, has made the following interesting point:

"One of the conditions established by the Department of the Air Force was: 'The University will assure that all editions of the report are protected by a copyright in its name. This includes both the official and the Bantam editions.' The University was glad to accept this condition as we wished to protect the scientific integrity of the complete report against wholesale and indiscriminate excerpting."

In short, B.R.U.C. played ball with the Air Force in order to assure "scientific integrity" via censorship control over the contents of the report. (General C. G. Dodge put the matter more bluntly when he justified the Army's copyright restrictions on its official military histories on the ground that it was considered necessary "to prevent quoting of material out of context" and "sensationalizing.")

What actually occurred remains somewhat unclear, but here's a reasonably close approximation of what happened:

When the University of Colorado team headed by Dr. Edward U. Condon finished the report there was some uncertainty in Boulder and Washington as to how it should be published.

Initially the Air Force made arrangements for publication of the report by the Government Printing Office and dissemination by the Superintendent of Documents. That's the normal way those things are done.

But the Pentagon's public relations people didn't cotton to the idea. Dr. Condon didn't like it either.

A press aide to Secretary of the Air Force Harold Brown complained that the Superintendent of Documents isn't very enterprising in promoting Government Printing Office publications. Dr. Condon could see that; it jibed with his experience when he was the head of the National Bureau of Standards.

What bothered Dr. Condon somewhat more was his aversion to a government imprimatur that might suggest the report wasn't an independent work. Besides he was eager to get the report released before Richard M. Nixon assumed the Presidency. Back in the 1950s Nixon had been associated with attempts to challenge Condon's security clearance. Condon hadn't forgotten that; neither had the Air Force. The Government Printing Office might not get the report out fast enough to avoid the possibility of embarrassment.

Bantam was ready, willing and eager to issue the report on a crash basis provided it was given exclusive publishing rights. A Pentagon lawyer had some doubts about that. The Copyright Act forbids the copyrighting of government works. Section 8 says that "No copyright shall subsist in any publication of the United States Government, or any reprint, in whole or in part thereof." If the government didn't have the right to copyright, it didn't have the right to give Bantam exclusive publishing rights.

An impasse ensued for a week. Back came the same Pentagon lawyer with a solution. Since the law doesn't specifically forbid copyrighting of government works by government contractors, the University of Colorado could copyright the report and turn over the publishing rights to Bantam.

Other problems that arose were easy to resolve. Both the Air Force and Dr. Condon wanted to be sure that Bantam's book and advertising matter didn't say anything that might be inconsistent with the dignity of the report. The assurances Bantam gave were satisfactory. The only substantive material it added to the report was a favorable introduction by Walter Sullivan, a *New York Times* writer, seen in advance by both the Air Force and Dr. Condon. No Pentagon public relations aid could have written more tasteful copy about the book than Bantam's man.

(Although Bantam and *The New York Times* clearly had an inside track on the report which merits close scrutiny, *Times* attorney Edward L. Smith insists that "All negotiations were completely open and above board and there was no 'sort of deal' with the Air Force or the University or anyone else involving either the *Times*, Bantam, or Walter Sullivan.")

Some questions arose as to royalties and the book's sale price. Since royalties are normally payable to the authors, it was felt that they should go to Dr. Condon and his team. By way of justification it was pointed out that the $529,905 paid out by the Air Force didn't really cover all their overtime work, but Dr. Condon preferred to avoid any wrangling as to who should share in royalties on a document prepared for the U.S. government. He proposed that the royalties be turned over to the University of Colorado, although the terms of its contract with the Air Force were supposed to have covered all of the institution's expenses.

What is serious here is that a highly improper, legally dubious and potentially dangerous precedent has been set. If it goes unchallenged we can expect other government agencies to follow suit.

THE STORY OF A PROUD PEOPLE

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. JACOBS. Mr. Speaker, I would like to commend the fine work being done by a group of Indianapolis citizens, who because of their civic mindedness, have joined together to form an organization called the United Southside Community Organization. What they have accomplished in just a few short months is worth noting here.

I include the following article:

THE STORY OF A PROUD PEOPLE

(By Betty E. Sexson)

You can not keep a good man down, so states the old adage and so too, say the people of the near Southside of Indianapolis.

Once a show place sought out by visitors to Indianapolis, the square, known to all as Fountain Square, formed by the intersections of Virginia Avenue, Shelby Street and Prospect Street shall once again claim its inalienable right to live a proud life surrounded by beauty—not decay.

It all began in 1889 when, to quote "The Legend of Fountain Square's Vanishing Lady", the old mule car turntable was abandoned . . . a man named William Mohs contributed $500.00 for the construction of a fountain. Merchants of the square matched the initial amount and the fountain was placed on the turntable site.

Some thirty years later, one of the merchants strung a rope from his store and attached the other end indignantly to the statue of the lady. The rope supported a large banner advertising a sale.

As the legend goes, a strong wind blew up that morning and the weight of the banner with the wind caused the statue to topple to the ground. The fallen lady remained at the base of the fountain that afternoon and on into the evening.

Some people say it was a weary night

traveler from out of town who paused for a drink at the fountain and carried the lady far away into the darkness of the night. So it was, that the lady vanished and has never been seen since.

Although the Lady had gone, the fountain remained the center of a thriving business and proud residential neighborhood. In 1924 a new and more appropriate statue replaced the once proud Lady. The pioneer family depicted in the new statue stood proudly above the fountain. Once again Indianapolis had a spot of rare beauty to visit. Granted, it was a bit difficult to drive through Fountain Square, since by then the mules and horses had been replaced by automobiles that couldn't negotiate the intersection quite as easily as their 4-legged predecessors. Nonethe-less no one seemed to mind slowing down to admire the beauty that stood as a symbol of a proud people in the center of the intersection.

The community continued to grow. Beautiful homes were built by people who wanted to be a part of this community. Churches continued to build, not only buildings dedicated to God, but large congregations dedicated to carrying out God's work. Business establishments continued to expand until Fountain Square became what now would be known as a shopping center.

The stores stayed open until 9:00 on Friday night and Fountain Square was the Great White Way of South Indianapolis. The streets were crowded with shoppers, the drug store soda fountains were the young people's gathering places, and always around the base of the Pioneer Family stood groups of friends just enjoying the beautiful confusion of people. Any trip to Fountain Square was incomplete unless you stopped to toss a coin in the Fountain and make a wish.

By the 1940's there were three theaters at Fountain Square. Any one of which would have rivaled the beauty of a "downtown" theater. There wasn't a vacant store building any place in the business district.

World War II came to Fountain Square as it did everywhere else. The boys left to fight for their country and suddenly the happy Friday night crowds at Fountain Square became a bit more solemn. The gaity at the soda fountain was replaced by lost and lonely young people. Never, though, did it occur to anyone not to continue to live as nearly a normal life as possible. Perhaps the residents worked even harder at keeping their homes and their yards beautiful, there was so little beauty in their world.

By 1950 the world had settled back into some semblance of a normal life and so, thought the near Southside, they too could look forward to the normal routine of their lives. As progress was changing the profile of the nation its sharp chisel was at work in Fountain Square too.

More people had more cars and could get more places more quickly than ever before. Business began to suffer from lack of customers, it was more fun to visit the new, out-lying shopping centers. Crime began to increase and businessmen suddenly found themselves installing safes and burglar alarms they had never before needed. Older residents passed away and young people began the great migration to the suburbs. Homes formerly lived in and loved by owners became rental property, and the former pride of home and yards began to disappear. One by one the theaters and businesses closed their doors. The final blow to the pride of the near Southside came in 1954 when the transportation authorities deemed it necessary to redesign the Square. The dark day *arrived and once* again a proud lady, her pioneer husband and two children were placed on the sacrificial altar of progress and vanished from Fountain Square. This time it was not done in the shadowy darkness of night and there was no mystery surrounding it's disappearance. It was loaded onto a truck and taken a little farther south to enhance the beauty of another public place. The Pioneer Family now stood in the Conservatory at Garfield Park.

Neighborhood decay is kin to the decay of the human body, very often it is neglected until the pain becomes so severe you must seek help. The 1950's faded into the 1960's and the sickness of neglect ate away at the one time proud and beautiful Fountain Square area. The streets and alley were neglected and became almost impassable the homes cried out for repair, the yards became rubble heaps and the people became helpless, hopeless, forgotten. The State began buying property for the proposed inter-state highway, and added to the already almost insurmountable problems were abandoned houses that became festering places for ever more heinous crimes and a haven for drunks and arsonists. Gradually small voices became loud enough to be heard as neighborhood groups began to form. From Washington Street to Pleasant Run Parkway, from White River to Sherman Drive people stood up to speak. They were heard, but they just weren't listened to! Always it was the same answer, "We'll fix the streets and alley, we'll tear down the houses, we'll help you on the Southside when we get the money, when we get the manpower, when we can work it into the schedule."

In late 1968 a united voice quietly began to form. By March 1969 that united voice became loud and the United Southside Community Organization was officially organized as the help the near Southside so desperately needed.

Neighborhood civic leagues became a part of U.S.C.O. and together help has come to the Fountain Square area. People are once again repairing their homes, cleaning up their yards, the streets and alleys are being repaired, the abandoned houses are being torn down, business establishments are coming to life, parks are being repaired and reopened, the pride of the near Southside is blooming again. Like flowers that lay dormant all winter and suddenly burst forth proudly with the first warm days of spring, so these people too, once again raise their heads proudly as they begin to look around their neighborhood.

The rebuilding of an entire section of a large city cannot be accomplished in a few short months. It took nearly two decades to make a slum-ghetto area out of a once proud and thriving neighborhood. It may well take a decade for Fountain Square and its surrounding areas to recapture a part of their former beauty but a start has been made.

A symbolic milestone will be reached with a two day celebration June 13th and 14th. As once again the proud Lady and her family will be returned to their rightful place and the Square will once again become Fountain Square. On June 13th the Pioneer Family returns to the intersection of Virginia Avenue, Shelby Street and Prospect Street.

This is the story of a proud people and their struggle back to their inalienable right to live in a decent home, in a decent neighborhood, surrounded by beauty—not decay, hope—not dispair. It can be done, it will be done, for the story of Fountain Square proves it.

RHONDA FREY THANKFUL FOR ELECTRICITY

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. CUNNINGHAM. Mr. Speaker, we live in an era when going to the moon is a subject of casual and sometimes nonchalant conversation among our young people. We have progressed so far and so fast technologically in recent years that we are inclined to take for granted many things we have not always had which are so vital to our very existence.

My young constituent Rhonda Frey, of Lyons, Nebr., took occasion to stop and think about the importance of electricity in our lives. Her conclusion—"Electricity is an invaluable blessing" Her essay on this subject won for her a trip to Washington under sponsorship of the Nebraska Rural Electric Association which annually conducts a youth tour to Washington.

Rhonda's essay, "The Value of Rural Electrification in Our Home and Community," will help all of us to gain a better appreciation of the value of electricity in our daily lives and to this great Nation of ours, and I recommend it to my colleagues, as follows:

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

The day is in its infancy. The sun has not yet shown itself but there is a stir about the house. Dad rises and stumbles in the darkness to the kitchen. On a shelf he gropes for a candle and matches. Upon lighting the candle, he takes it to Mom. In the dim light and cold air they dress.

Back in the kitchen, Mom lights other chimney lamps to supply light until the sun shows its face. Dad dresses warmly to go out and do the chores.

In the blowing snow, Dad trudges to the new bin. He opens the door to the bin, scoops by hand the grain into a wagon, and drives to the bunks to feed the cattle. He finds an ax to break the ice in the cattle tank. After he carries feed and water to the ducks, Dad returns to the house.

Meanwhile, Mom has awakened the children and begun breakfast. As she searches for a can opener, she cuts her finger on a knife. After taking time out to doctor her finger, she opens a jar of fruit. She places the jar with a platter of cold meat, butter, and bread on the table. Because the milk must last indefinitely, it will be rationed carefully throughout the day. All the while she shivers as she moves through the cold air; if only there were fuel to heat the house!

John and Billy come downstairs slowly so their candle won't go out. They put on their coats and sit down at the table. By now, Dad is in from doing chores and the family eats a cold breakfast together.

The day goes slowly. Mom can't do the dishes because she must save the water; she does the mending by hand; she can't bake because there is no fuel; she sweeps to keep warm. Dad busies himself by catching up on his reading. The boys spend their time arguing until Mom makes them sit down to read a book but sitting so still chills them. The snowstorm lets up, so she sends the boys outside to let off some steam.

Never had a day gone so slowly. The minutes seem like hours, especially since the clocks had stopped. Finally the sky darkens again. Sighing with boredom, everyone is glad to have the day over.

Nobody changes into his night clothes, since it's so cold. In the quiet depression and cold of the house, the blankets are dug from the storage room. Just as Mom spreads on the last blanket, the lights suddenly go on.

Dad hurries to inspect the furnace and turn on the heat. Silently, Mom and Dad are thankful the electricity blackout didn't last any longer than it did.

This imaginary situation can and often will happen, even in the year 1969. Electricity, often taken for granted, can't fully be appreciated until one has had to spend even a few hours without it.

Electricity, whether rural or not, is an invaluable blessing!

THE PRESIDENT OF ZAMBIA SPEAKS ON THE PROBLEMS OF SOUTHERN AFRICA

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. CONYERS. Mr. Speaker, the situation which exists today in southern Africa is a tense one. Black Africans of this particular region are truly beginning to assert their just demands for the right to rule themselves and determine their own national directions.

The first years of independence are never easy for any developing nation, but the Republic of Zambia is faced with all those problems unique to emerging African nations, in addition to bordering on areas governed by hostile colonial and white supremacist governments.

Dr. Kenneth Kaunda, the President of Zambia, has been instrumental in the steady economic and political progress which has been made by Zambia, and his leadership has helped Zambia to remain relatively stable, despite a potentially rich, but as yet underdeveloped economy, and hostile neighbors. His performance as President has not only benefited his own country, but has been an outstanding example to all black people of this troubled region.

I believe that President Kaunda is eminently qualified to speak on the problems of the area, not only by virtue of his position, but also because he is able to relate the desires and aspirations of the people to the problems of leadership and examine them in a practical manner.

His Excellency, Rupiah Banda, Zambian Ambassador to the United States, is another articulate voice for the black peoples of southern Africa. His representation of his country in the United States has furthered American understanding of his nation's problems, and has helped the representatives of many nations to grasp the importance and urgency of the crises which confront Zambia and other young African States. It was Mr. Banda who first brought this interview with Dr. Kaunda to my attention. I have asked that this article be placed in the RECORD with the hope that it will help bolster my colleagues' understanding of the situation which faces the people of Zambia, as well as all the black peoples of southern Africa.

EMBASSY OF THE REPUBLIC OF ZAMBIA,

Washington, D.C., April 8, 1969.

Dear Friend: I trust that you will find the attached copy of an interview by *U.S. News & World Report* with Dr. Kenneth D. Kaunda, President of Zambia, both interesting and informative. It contains clear outlines and clarifications of our Government's policies relative to Zambia's neighbours and to the protection and encouragement of foreign investments.

Best wishes.

Sincerely,

R. B. BANDA,
Ambassador.

[From U.S. News & World Report]

RACE WAR COMING IN AFRICA?—INTERVIEW WITH ZAMBIA'S PRESIDENT

LUSAKA.—Q. Your Excellency, what matters do you consider most urgent for a new and developing country such as yours?

A. I would say, first and foremost, that, in a country like Zambia, you need political stability, because only if you have this would you really have the opportunity to implement your other plans, which involve mainly the fight against mankind's enemies—poverty, ignorance, disease and hunger.

Q. Do you have any problems with respect to political stability in Zambia?

A. Well, we have had our spate of strong tribal fractions. Then, last year we had general elections within our political party, and these created a number of ill feelings. Interprovincial feelings were greatly aroused. But I'm glad to say that we are definitely getting over these, and I think as time goes on we will be able to surmount them.

Apart from that, we have serious problems with the minority regimes all around us. We have the Portuguese in Angola and Mozambique, east and west of us, and we have the Rhodesians and the South Africans. These people do not accept our approach to life—which is a nonracial approach, nontribal—and this is a source of concern within our community, because these people do not like the apparent stability here. These are our major problems at the moment.

Q. With respect to the racial situation in southern Africa, what is the situation that Zambia faces geographically, since you have a landlocked country?

A. This is a problem to which I have been trying to draw the attention of the Western world at various meetings. I feel that perhaps I have not succeeded in this direction, but not because I have not explained it. My colleagues in the party and the Government have tried to do the same, but they are not succeeding either.

This is how I see the problem:

Here we have South Africa proper, South-West Africa, Rhodesia; we have Angola and Mozambique. Now we must see this in the context of developments in other parts of the world. To expect Africans in Angola, Mozambique, South Africa, South-West Africa and Rhodesia to continue to remain docile under minority rule is not being realistic at all. History the world over shows that, no matter how long it takes the time does come when people refuse to be subjected to that type of rule.

The latest example is the one in Czechoslovakia, where we have had this uprising against great odds; even against these odds, the people have still spoken out. You had the Yugoslavs in 1948, the Hungarians in 1956, and now the Czechs in 1968. It's a long time in between, but they have spoken out.

Now, I have no reason to believe the people in Czechoslovakia are different from Rhodesians. They may have experienced this type of rule for a longer period, but still the feelings are the same.

Q. What meaning does this have for southern Africa?

A. We see in Mozambique now an uprising against the Portuguese after four centuries of Portuguese rule. In Angola, it is the same thing. Three years ago, no one would have convinced me that the people in Rhodesia would be doing what they are doing now, and yet, here they are, the people in Rhodesia are fighting it out. Unlike Czechoslovakia, we have here a potentially explosive situation racially. And not only does it have this racial setting, but it also has the potential of being an ideological confrontation.

Now, the people of the West have refused to help freedom fighters; they have refused to equip them to fight their own battles. I know from experience that the freedom fighters have gone to them and the Western nations have said, "No, we can't"—naturally, because of their capital investments in southern Africa. This leaves these young men and women with no choice at all but to go the only area where they will be supplied, namely, the East.

So, as they go there to train in the use of these various weapons. as they go there to solicit help to get these weapons, you can rest assured that out of a hundred, 4, 5, or 6 will come out convinced Communists, and so here is the beginning of ideological conflict. And yet the minority groups in southern Africa proclaim from the rooftops that they are defending Christian values, Western values, Western civilization; that they are combating Communism. And yet, by their own behavior, they are inviting Communism.

Zambia has more than a moral interest in this because we know only too well that, geographically, we have 290,000 square miles, with a population of 4 million scattered over the country. We know there are freedom fighters who pass through Zambia. There's nothing we can do about that. I wish we could help them, but we are not capable of helping them. So they go out to train. They go out to get these various weapons, and this alone is for Zambia a danger to her security, but there is nothing we can do about it.

Q. Do these guerrillas pass through Zambia on their way down to Rhodesia and South Africa?

A. Certainly. Going out and coming back to their own country, they pass through Zambia, and this is a problem because it means that the Portuguese in Mozambique, the Portuguese in Angola raid us, kill our people, take some away, and all on the pretext that we were harboring freedom fighters. They know only too well that this is not true, but they've got to use some excuse to satisfy their own minority regimes, so this is a danger to Zambia.

Apart from the moral involvement, we, of course, have a very selfish interest in this. If we could solve this problem peacefully, it is the only thing we would like to do. But is it possible?

Q. How long do you think the Africans in these countries will remain docile? How long will it be before real trouble breaks out?

A. The Portuguese troops in Mozambique have been pushed aside from a good area, which is now in the hands of the freedom fighters, the nationalists, and it is the same in Angola. It is just the beginning—it started seven years ago, in 1961, and the nationalists now are in full control of some areas.

Q. You have been quoted as saying there is a serious danger of racial wars breaking out along the line of the Zambezi River. Specifically, how do you see such a thing coming about?

A. Well, let's look at it now. I'll give you some examples of where the Portuguese have bombed our villages. Surely, the only thing that stopped us from retaliating was that we were unable to at the time, and it is only a matter of time before we can retaliate heavily. And this is when the Portuguese will call upon the South Africans to come and help them, and there you are—a very dangerous situation.

Q. What are you asking the outside world, the big powers, to do about all this?

A. The big powers have an obligation to us and the rest of humanity.

First of all, you must realize that when we speak of the big powers we speak of the West because, as it is now, Russia has no more right to condemn the West as imperialist. They must condemn themselves now as imperialists, too, because if they feel strongly about the people in Rhodesia—the black people—I feel the same way about the people in Hungary, the people in Czechoslovakia, and Russia is just another imperialist power to me. It will take a long time to recover from this shock—and a shock it was.

I never believed that a country that called itself a socialist country could do that.

To come back to the subject: The Western countries must really influence South Africa, and Rhodesia so that they can develop a system there which involves what all of us regard as the cardinal point, that is, participation in their own government by all the people all over the country.

Q. Are you talking about majority rule?

A. Yes, and if this could come about it would be the answer to the problem. I know of no African leader who has said, either before or after independence, that he wanted to drive away all the white people. But the white must accept the will of the majority of the people.

Q. In connection with Zambia's building up its defenses, there has been talk that you are going to buy missiles from the British. If this is so, would you have the personnel to operate them?

A. We are still approaching a number of governments, both in the West and in the East. Before we make our purchases, we obviously must get the best deal, so as soon as we are ready we will make the purchases, but I can't say definitely where we will get them.

Q. Will you need foreign technicians to operate them?

A. This will be one of the provisions in making these purchases—a training program for Zambians. This is obviously something Zambians themselves must handle.

Q. With respect to Rhodesia, do you feel that situation will be resolved peacefully and, if so, in what manner?

A. I would say first of all that Rhodesia has been and still is a British colony, and therefore is primarily a British problem. If the British Government had wanted to settle that problem, the world today would not be suffering from it; it is because of the refusal of the British Government to do so that the whole of southern Africa is now on fire.

Now, when you ask me what should be done, I would say that much depends on the willingness of Mr. Wilson [British Prime Minister Harold Wilson] to do the right thing, and to me this means only the use of force. If Mr. Wilson doesn't use force now, force is going to be employed anyway, with wide repercussions.

WHY SANCTIONS FAIL

Q. Do you think, then, that the Rhodesian situation cannot be solved peacefully?

A. I can't see how. Economic sanctions, for example, are coming too late, as is usual when big powers are involved. If the measures that are being taken now had been taken earlier, there might have been some hope.

Let us understand that the aim and objective of the sanctions exercise is not just to make sanctions bite economically. It is to bring down a rebellion—a rebellion against the Queen of England, a rebellion against the British people, their Government and, indeed, a rebellion against humanity as a whole. I would say it's a very sad thing. I really feel that mankind has been betrayed by the British Government's inaction.

Q. Since the British seem extremely reluctant to use force against the Rhodesians, then what happens?

A. The thing I fear—racial war. It's inevitable unless, of course [Rhodesian Prime Minister Ian] Smith himself has a change of heart.

We are not saying that majority rule should come tomorrow. We are saying they should lay down the foundation for majority rule. Indeed, we ourselves would discuss this with our nationalist friends in Rhodesia and say, "Look, chaps, you've got to take time over this one." But, as long as Smith categorically states that there is no question of majority rule in his lifetime, then, of course, he's inviting trouble. Then the African people will say, "All right, if this is the case, then we are prepared to die for our independence."

Q. When you say you would not expect majority rule for Rhodesia tomorrow, would you apply that to South Africa as well?

A. Yes, certainly. It can't come tomorrow. That's not being realistic.

Q. And the Portuguese territories as well?

A. For the Portuguese territories, if they were willing to accept Africans in government, I would say that even tomorrow it would be settled and, in fact, the Portuguese would gain a lot more from their giving way to African majority rule. The same for Rhodesia, of course.

South Africa is the only exception here. It is a much more complicated situation where you have 3 million whites and 15 million in other racial groups. It is a much more serious problem there.

Q. In view of the situation along the Zambezi River as it stands now, are you optimistic or pessimistic about future developments?

A. Short term, I'm pretty pessimistic. It's a very gloomy picture, indeed. But I emphasize only short-term.

Q. What do you mean by short term?

A. I mean peace in southern Africa in 3, 4, or 5 years' time. I can't see that coming at all. I think the time will come eventually when Rhodesia will no longer be ruled by a minority group. The same for Angola and Mozambique. South Africa is a most difficult problem, but these others, I think, are going to be solved. There will be a big change in this part of the world 3 to 6 years from now.

Q. Will there be a lot of bloodshed in the meantime?

A. I'm afraid so. I fear that very much indeed.

Q. Why does Zambia seem to have fewer tribal problems than many other countries in Africa?

A. I think it's because we had a long time of struggle against so many forces—first of all, against the colonial government; then we had to fight against the federal government [Federation of Rhodesia and Nyasaland]. All these things managed to really bring us together and, of course, we have always been conscious of the fact that we had to make a united nation.

Q. What is your country's relationship with the United States? Do you feel that the U.S. has some understanding of the problems that Zambia is facing?

A. If I may begin with the last part of your question:

Well-informed circles in the U.S.—Government circles—understand very sympathetically, but perhaps the majority of the people would not understand our problems, and one cannot blame them. To them, Zambia is a faraway country with very little importance apart from the fact that it produces copper, like the Americans do.

I think I can also say that there has been a very strong lobby among "right-wing" groups in the U.S., as in Europe, which are trying to fortify the minority groups in southern Africa. This they have worked at very effectively. All the same, generally speaking, I would say we have had a great deal of sympathy from the U.S. Government.

Q. Does the current racial situation in the U.S. have any impact on American relations with Zambia?

A. While it does affect us adversely in the sense that we feel strongly against racialism anywhere in the world, at the same time we are conscious of the fact that, unlike the minority regimes here in southern Africa, the U.S. has certainly declared policies which it is trying to implement, trying to build up multiracial society. So we do make a distinction. We realize that you are going through certain strains and stresses of a racial nature, but at the same time we realize that, in principle at least, you have set yourself certain goals which are noble.

HOW UNITED STATES HELPS ZAMBIA

Q. Is the United States doing much to help Zambia's development?

A. There are two or three forms of help. First is direct U.S. Government aid, and this is being done mainly at the regional level in Africa, which we would like to encourage. We have our own region here—east and central Africa.

Then there is participation by private enterprise in various development schemes, participation by the business world.

And then there is the World Bank, which is still considered a predominantly American institution, guided by the U.S.

Q. To go back to the question of race relations: How would you describe such relations within Zambia, where you have a substantial minority of whites and other non-Africans?

A. We follow here a multiracial approach to our problems. We have these minority groups: I would say between 65,000 and 75,000 white people here now, 22,000 of Asian origin, and a number of what we call "Eurafricans"—the offspring of black and white or Asian and white or brown and black parents. These are our major racial groups who have come from outside.

In terms of whether they are wanted here, basically we say we accept all human beings who want to make a home in Zambia and who will make a useful contribution to the growth of the country at the social, political or economic levels.

Q. Must they become Zambian citizens?

A. Either way, we have no objection, but we say first of all that because of our employment problems we cannot just open our door wide; otherwise we just create more problems. Because of this, we cannot ultimately allow to enter everyone who wants to come here, but if it is a person with a clean record, someone who has something to contribute, he is welcome.

I am not just speaking in terms of technical know-how and things of that nature, but of anyone who can contribute, in his attitude toward life, toward the growth of the nation, possibly without having any skills at all.

Today we have a good number of miners in the copper belt, very good people—white people—but at the same time, there are a number of them whose orientation is toward South Africa and Rhodesia, and these are the people who create problems; these are the people who cause the racial conflicts which arise from time to time.

So, I would say that, in general, we accept our fellow men not only because of their technical know-how, but because they are human beings like us.

At the same time, we are conscious of unemployment problems in our country.

Q. In view of the controversy over Rhodesian independence do these white people whom you speak of here in Zambia constitute any real danger to the country?

A. Certainly. We have had a number of arrests since 1965, so I had to produce for the country and for overseas consumption a White Paper on these people. First, when we arrested them we used to deport them, but we realized we were just giving ourselves a bad name by doing that, because they would go out proclaiming themselves heroes who were being discriminated against on a racial basis.

Q. What did they do to be arrested?

A. They were spying for Rhodesia and South Africa. When we rounded up one lot, I decided to issue a White Paper which outlined precisely what their activities had been, and this helped a great deal and put the minds of certain people at rest, people who thought we were just being racial.

Q. Is that situation under control now?

A. It's under control, but, as you know, spies are very difficult people to deal with the world over, and we are only a young country and our facilities are limited.

Q. Can you do without the skills of these people? Can you replace them, or are they indispensable?

A. Most of them, unfortunately, are indispensable. I don't know whether this is common knowledge or not, but at the time of our independence in 1964 we had only about 1,200 boys and girls who had gone through secondary school, and only about 100 university graduates. Among these, we had one engineer and a handful of doctors.

When I recall this, it pains me greatly because this was the richest British protectorate, or colony, and yet educationwise we were the least catered for by the British, and this makes it very difficult for us to do away with the services of people who otherwise are racialist. We can't. We must run the mines, and our lack of technical education means that we have to depend on expatriates in the technical field.

We are trying now to establish technical-education facilities for our own people, but it obviously is going to take a long time before we can get desired results.

Q. Does this current lack of local skills apply outside the copper industry—in other fields and in Government?

A. It certainly does. It's true in private enterprise, in small business, in industry, the public sector.

Q. How long will it be before you are able to educate enough Zambians to do these jobs?

A. It's difficult to speak in terms of time, really, for Zambia with its copper industry is highly industrialized. All of our industries need many people, and Government itself needs plenty of manpower, so it will take much time.

Q. Is Zambia basically a rich country?

A. Potentially, yes, but not in terms of exploited wealth, which is a long time ahead. Very often, when people look at the figures of copper production, they think we are doing very well indeed, but in fact when we look at the rural areas, which concern me a great deal because they were neglected in the colonial days, we realize that we cannot improve them as quickly and effectively as we would like to.

Q. Do you have any substantial resources apart from copper?

A. The agricultural potential has not been exploited. We are just beginning.

Q. Do you have lots of good land?

A. Certainly—good cattle land—and I think we could also do a lot of work in terms of groundnut [peanut] production, cotton, tobacco, maize [corn] and various other food lines. Which means we would be able to diversify from complete dependence upon copper.

Q. How great is your need for development capital, and in what fields is it needed?

A. We have been doing quite well, I would say, up to this year. But unless outside help comes, we are bound to run into difficulties between 1971 and 1973, before the breakthrough comes. We will need help principally in the agricultural industry. This is not to say we don't value the copper industry and other industry. We do, and we are trying to find more deposits of various minerals. But, in the main, we must concentrate on agricultural development.

PROTECTION FOR INVESTORS

Q. Are you taking steps to encourage private investment in Zambia?

A. Yes. We're about to go through with our Foreign Investment Act, which will safeguard foreign investment from being nationalized without due compensation. As soon as this is done, I think we will have to advertise the fact overseas, so that people will have no need to fear Government intervention in industries here.

Q. Do you have a problem common to new countries of making sure that impressive increases in national growth rates, which Zambia has been recording each year, are spread more evenly among the people?

A. We have, really, two countries in one—the urban areas and the rural areas. The urban areas have been doing quite well, comparatively speaking, because of the copper industry, which has made it possible for other industries to grow up.

But the rural areas are a great worry. In most cases, our people are still where the colonialists left them. So we need to get the support of these rural people in order to aid their development. I'm all for a welfare state, but with the people's own participation. The people must build it, not the Government for the people.

Q. Do you have any plans for Government participation in the copper industry?

A. None whatsoever. We'll leave that one in private hands. We can't afford it. We can't manage it.

The copper companies, in fairness to them, asked us when we took over the Government whether we would like to have something like 30 per cent interest, but we said "No," we'd let them continue as they were.

NUCLEAR POWER IN PERSPECTIVE

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. HOSMER. Mr. Speaker, for the past 15 years, the Congress has wisely financed and encouraged the development of atomic power for peaceful uses, particularly the development of civilian atomic powerplants. Many years ago, this body decided that such a program was in the national interest. Our reasons, among others, were that a new, competitive energy source would benefit all people of the Nation, particularly in the high-energy cost regions, it would help conserve the remaining fossil fuels and it would help us meet our enormous demand for more and more electricity.

However, for the past few years, a small band of people has been parading around the country charging that the Congress and the AEC are threatening the life and limb of every man, woman, and child in the Nation by permitting construction of nuclear powerplants. I imagine that many Members of this body have received letters from constituents who are concerned about the information they receive from this antinuclear group.

For the information of those Members, I am inserting in the RECORD a report on a conference in New Hampshire recently, which focused on the topic "Nuclear Power—Benefits and Risks." This conference was significant in that it marked one of the few times when the antinuclear people have appeared on a program with the technical experts on atomic energy whose opinions they so readily dispute.

The article is from the June issue of Nuclear News magazine, which does not profess to be impartial but which is at least informed and intelligent on the subject. The article follows:

IN PURSUIT OF PUBLIC AWARENESS

(NOTE.—Conservationist conference presents "both sides" on nuclear power; debate fizzles as Novick walks out after his speech is called "grossly incompetent and irresponsible" by Wright.)

The New Hampshire Governor's Conference on Natural Resources has become an important annual event in New England, and the 1969 program had so much of the makings of a real donnybrook that all previous attendance records were shattered. These conferences are sponsored by conservationist agencies and groups,[1] and the current program planners decided it would be a very good year to talk about nuclear power. When they carried their idea to Governor Peterson, he reasoned it was a suitable topic, but he insisted that "both sides" be presented. The outcome: "Nuclear Power—Benefits and Risks," Concord, N.H., April 23, 24.

WORTHY OPPONENTS

The program committee apparently had little or no trouble in lining up the debaters for the negative team. They were familiar with the Stratton Mountain Conference held last fall in Vermont, and they knew that their neighbors had turned to an organization called S.I.P.I., which had provided ample ammunition for the symposium. The New Hampshire group made contact with S.I.P.I. through its Field Director, Walter Bogan, who booked Sheldon Novick (author of "The Careless Atom" and associate editor of the S.I.P.I. magazine *Environment*) for the luncheon speaker and Dean Abrahamson (College of Medical Sciences, University of Minnesota, and recent opponent to the Monticello nuclear plant—*Science*, Mar. 7, '69, p. 1043) and Clarence Carlson (Conservation Department, Cornell University and member of The Citizens Committee to Save Cayuga Lake—*NN*, Mar. '69) to give papers on the risks of nuclear power plants.

Those who were to debate the affirmative were selected later (about two weeks before the conference), and they were chosen by the Public Services Company of New Hampshire—owner-operator of the Newington nuclear plant to be built near Seabrook, N.H. Reportedly, the utility officials were critical of the programming and particularly of Novick's position as luncheon speaker. A move was made to replace him with Rep. Craig Hosmer (R., Calif.), but this threatened to topple the whole conference so it was set aside. The nuclear people also balked over the conference technique employed at Stratton Mountain, where Theos J. Thompson, carrying the ball for nuclear, was first on the program and was followed by the antinuclear (S.I.P.I.) speakers. No opportunity was afforded Thompson to rebut publicly or to refute any of the arguments subsequently presented. To overcome this objection, the New Hampshire committee planned the first day's program for formal presentations and set aside the second day for three separate group discussions, each to allow debate among panel members and questioning from the floor.

The nuclear organizers, whetted by the opportunity for a free and open debate before a very interested and concerned public and for a confrontation with Novick, were able to find an unusually strong and competent debating team—even on short notice and in the face of conflicting conferences. For the affirmative: Jim Wright (manager of the Westinghouse Advanced Reactor System—disarmingly mild mannered, but a tough and incisive debater); Morton Goldman (vice president and manager of Environmental Safeguards, NUS—possessor of extraordinary credentials and experience directly related to public health and safety and a straightforward manner of presenting detailed facts

[1] Trout Unlimited; Society for the Protection of New Hampshire Forests; New Hampshire Committee for Better Water; New Hampshire Rural Areas Development Committee; Cooperative Extension Service; New Hampshire Department of Resources and Economic Development; and New Hampshire Fish and Game Department.

and figures); containment and construction expert, William Patterson (vice president EBASCO Services); and finally AEC lawyer, Howard Shapar (assistant general counsel for Licensing and Regulation).

DANIELS OR DAVIDS

At the beginning of the conference, the nuclear debating team may have felt a bit like martyrs before the lions: A table in the entranceway to the conference room was well-stocked with the classical anti-nuclear literature—some of the articles even had the most frightening passages underscored. (Missing from the collection: Theos J. Thompson's scholarly review of "The Careless Atom," published by the Atomic Industrial Forum in its special March issue of *INFO.*) The auditorium was filled to capacity, and the name tags identified the attendees as state officials and legislators, housewives, businessmen, and representatives of such organizations as League of Women Voters, Audubon Society, New England Wild Flower Preservation Society, and Trout Unlimited. A large contingency, apparently from the Park Service, wore uniforms and side arms.

But the Daniels at the beginning may have had some cause to feel more like Davids at the end—a point in time at which they stood fast as dedicated professionals ready and willing to talk on any facet of nuclear power and to answer any question—including those from a very calm, petite, and low-voiced lady judge from Brattelboro, Vt., who was concerned about a strange set of leukemia cases and was worried about radioactive materials becoming lost along the roads; a worry enhanced, no doubt, by some of the literature handouts.

On the other hand, Abrahamson and Novick left before the second day's debate, and the embarrassed program planners were forced to announce to a packed room, "Due to circumstances beyond our control . . ." Abrahamson had informed his hosts on the first day of a legitimate conflict at his hospital, but with Novick it was another story. Already peeved about arriving in Concord at 2:00 a.m. in a rainstorm and finding no room in the hotel (see Editor's Memorandum) and cross with the planners for first not informing him fully on the program—the debate, in particular—and second because they simply gave him an airline schedule (and didn't book his return flight). The local organizers said Novick was accompanied by his press agent, Bogan, and they had relayed everything to him expecting that he would take care of the details. As a consequence, Novick chose to book a noon flight out of Boston on the second day, which necessitated a 9:00 a.m. departure from Concord—the debate was scheduled to start at 9:30.

CONFRONTATION

Novick announced his imminent departure at a press-conference breakfast, which prompted Jim Wright, seeing he was going to miss the opportunity for an open debate, to maneuver for a direct confrontation. He told the press that many of Novick's statements made in his luncheon address and in his book are "totally erroneous," and he proceeded to question the objectivity and responsibility of Novick's publishers and sponsoring institute

But there was no confrontation—Novick did not respond.

RADIOLOGY

Although thermal effects came in for some legalistic discussions, particularly by New Hampshire lawyer Peter Shapiro, who was rehearsing his arguments for presentation before the U.S. Supreme Court, the primary focus of the conference was on potential radiological hazards from the floor on the second day, this is a real area of concern among the New Hampshire citizens. This seems to be a shift in emphasis on the part of the conservationists (if not by the public), and it has been suggested that the opponents of nuclear power have homed in on radiological safety because the AEC cannot exclude these arguments from its public hearings as it has been legally able to do with thermal effects.[2]

Both Wright and Goldman gave impressive arguments and detailed statistics on the minute amounts (less than 1% of permissible limits established by international radiological standards) of radioactivity discharged from a nuclear power plant and told of the rigorous monitoring programs and control measures in effect to protect the public health and safety, but Abrahamson and Carlson countered that the minute quantities are additives and that the total future effects cannot be accurately calculated at this time. Both antagonists came out strongly in favor of nuclear power, but they argued that the technology is now available to preclude any radioactive or thermal discharge into the environment—both points were challenged by the protagonists. Concluded Abrahamson and Carlson: the price in dollars must be paid now for preventive measures.

NOVICK

By a strange coincidence, Merril Eisenbud, professor of environmental medicine, NYU, and director of The New York City Environmental Protection Administration, appeared on the Today Show on the morning of the conference's first day, and, among other things, reported that more radioactivity goes up the stack of a coal burner than from a nuclear plant. This became a keynote item to which several conference speakers returned on numerous occasions, but none more dramatically than Novick during his luncheon address.

"Talking about quantities of radioactivity coming from a coal stack is missing the point," said Novick. "Man may be in worse shape standing in the plume of a coal plant than he is in the plume of a nuclear plant, but, if you blanketed the earth with soot, the background radiation would not change from a coal plant. You are just moving material. With nuclear plants the problem is different because you are creating radioactivity and increasing the background."

Novick's address centered generally on two themes: The "incestuous" relationship between the AEC and the JCAE (Ellen Thro, *NN*, May '69); and the maximum credible nuclear accident—a condition under which he postulates his favorite horror-thriller, the "China Problem."

Using the Atomic Energy Act as his take-off point, Novick spoke of the unique federal agency it created with a monopoly to develop, promote, and regulate the nuclear industry and of the JCAE—"Senior men with a unique influence in Congress." Across the years, he said, "strange and disturbing things" have happened: "The AEC and the JCAE have begun to merge and blend and to change their identity; for example, JCAE staff members seem to come from the AEC, and AEC Commissioners from the JCAE staff." With a relationship such as this, he said, one cannot expect the government to re-evaluate itself, and he cited as an example the current budgetary manipulations to cut back on government spending in which "peaceful uses of nuclear energy came off with more money than it started with." He concluded that this is what happens "when the government controls its own activities."

Novick stressed that he is in complete agreement with his opponents that a nuclear reactor "cannot explode," which is contrary to what his own magazine publishes (see box) and, as Goldman later pointed out, to what his publishers say in their book promotion campaigns. Explosion or no explosion, Novick postulates a nuclear accident called the "China Problem," which happens with loss of coolant: "Within 5 seconds the fuel rods will burst and some will shatter; within a few minutes the entire mass will melt into the bottom of the reactor, where the radioactive decay from the residue continues to put out heat. Pouring water on the dense lump won't do any good, and you get the 'China Problem,' where the molten lump will melt through the bottom of the reactor and on down to China."

He said that reactors are operated by people and that people make mistakes, and he asked the question: "Do we have confidence that every contingency has been foreseen and every consequence forestalled?" He concluded that we do not, and he turned again to the AEC-JCAE, which, he said, are insulated from outside pressure. As an example of this last claim, he said the New Hampshire conference was the first time the AEC has appeared on a panel with its critics. As a parting admonition, he warned his audience: "It is imperative that we do not abandon decision making to those charged with promoting the program."

REBUTTAL

Some of Novick's statements were to be challenged later: Howard Shapar referred to the numerous public hearing rooms in which the AEC has faced its critics and under conditions permitting cross examination—"the best known method for getting out the truth." An AEC representative has calculated that the current AEC budget, cut by some $78.6 million, can be compared with the previous budget as follows: In Johnson's last budget, the AEC's defense portion was 52%; in Nixon's budget, the AEC defense portion is 53%. Stated another way: "Peaceful uses of nuclear energy came out with *less* money than it started with."

But the dynamics were provided by Wright, who had trouble containing himself as a head-table guest during Novick's address, and after the luncheon he was swarmed upon by the press seeking a rebuttal. Calling much of the talk "grossly incompetent and irresponsible" and warning that Novick should be read and heard with "extreme caution." Wright reiterated nuclear safety records, criteria, and implementations, and, on the matter of environmental effects, he returned to the main theme of his formal paper to say that the economic advantages are not nuclear power's most important attribute—the main benefit is that nuclear power is "least damaging" to the natural environment. Nuclear power, he said, is the *first* major exception to "man's lack of foresight in his long series of progressive steps toward a better world," because matters of environmental effects and safety standards were anticipated before commercial nuclear power came into being.

RATIONAL PLANNING

After all was said and done, it was really the home folks who scored the major points (with perhaps the exception of a young man from the coal industry who stood up and told the people from New Hampshire that they were going to need every kilowatt they could come by, be it from nuclear, coal, or whale oil, which, panelist Goldman quipped, "would also have some effect on the ecology!")

In a formal paper during the first day, William Tallman, president of Public Service Company of New Hampshire, warned that if there are any more delays on the Seabrook plant schedule there will be a serious shortage of electricity in New Hampshire around 1974. He said his utility is not pioneering in nuclear (Yankee-Rowe, Connecticut Yankee, and the nuclear submarines were cited as

[2] Indeed, radioactive discharge has not always been thought of as a problem. In the early days during the Ravenswood hearings, when asked how much radioactivity would be discharged into the East River the classic answer was "not enough."

proven precedents), and he stressed "we too live in New Hampshire, and we want things to be right." Perhaps the biggest boost for both Tallman and nuclear came in his introduction by Mrs. Jean L. Hennessey, housewife and member of the New Hampshire Committee for Better Water, who chaired one session. As a conservationist, she said, she had always been led to believe that utility executives are all some kind of devil dead-set on destroying the wonders of nature. Then she ticked off the conservation programs on which she has served with Tallman, and she admitted that she was forced to introduce him as a leading citizen with an established record of concern for the conservation of natural resources.

Finally, it was anchorman R. Frank Gregg, chairman, New England River Basins Commission, in the final paper of the day, who brought things into the most rational framework. Without fuss or fanfare and citing such documents as "Considerations Affecting Steam Power Plant Site Selection" by the U.S. Office of Science and Technology (NN, Feb. '69) and the Statement on Thermal Power Plant Siting prepared by his own commission, he called for deliberate and rational planning on power requirements and commitments. In conclusion, he urged the conferees to rely on the knowledge of distinguished professional people and to be careful lest they be deprived of nuclear power because of some emotional and questionable claims that are being put forth.

EPILOGUE

Two weeks later, Paul Bofinger, forester for the Society for the Protection of New Hampshire Forests and head of the conference planning committee, told *Nuclear News* that he considered the conference a real success. "Many people," he said, "have told me that they sure know a lot more now about nuclear power than they did before."

He also admitted that he had heard quite a few critical remarks about Novick's failure to appear before the public discussion.

LOUIS BACHRACH OF THE BRONX

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. BINGHAM. Mr. Speaker, 6 months ago this Saturday, one of the most beloved men in my home community passed away. Louis Bachrach was a stanch and active support of the Bronx Boys Club, and it was in that capacity that I came to know him, but the boys club was only one of many organizations to which he devoted his great energies and talents. Probably the one organization that was closest to his heart was the Hebrew Home for the Aged in Riverdale, N.Y. Louis Bachrach was chairman of the home's Bronx division, and among other activities organized a remarkably successful dinner and journal each year. His breezy and affectionately humorous way of presiding at the dinner was unforgettable.

By unanimous consent I include herewith two brief remembrances of Louis Bachrach with which I wholeheartedly and warmly concur. The first was prepared by his lifetime associate in business and in innumerable good causes, Abraham Gurevich, and the second by the officers and board of directors of the Hebrew Home for the Aged:

On December 7, 1968 Bronx County lost a distinguished citizen, Mr. Louis Bachrach. He was a resident of the Bronx for fifty years, and for almost forty of those years he served as Treasurer of Security Mutual Insurance Company of New York, the only insurance company with a Bronx Home Office, and one of the outstanding business organizations in Bronx County.

Louis Bachrach was known throughout the Bronx as a man of personal wit and charm, and was an ardent worker and contributor for all worthy charities and causes such as the Bronx Boys Club, the United Jewish Appeal, the National Conference of Christians and Jews, the Federation of Jewish Philanthropies, the Akiba Hebrew Academy, the Jewish Theological Seminary, the American Jewish Congress, and in particular, the Hebrew Home for the Aged at Riverdale, which was his pet charity.

He had lived in the Kingsbridge community of the Bronx for many years, and was one of the founders and builders of the Kingsbridge Heights Jewish Center.

This short man with a big cigar, flavorful accent and kindly wit, could enliven any fundraising gathering by his unique capacity for public speaking. Largely a self-educated man, he had the practical knowledge and keen ability to get things done. His was a rare talent for all forms of opinion and a genuine acceptance of people, as well as a deep sense of social respect for his own family and extending to every member of his community.

Mr. Louis Bachrach will indeed be missed by everyone in Bronx County.

Louis Bachrach came from Russia as a boy of 12 and settled with his parents in Harlem. He was soon working at odd trades to earn a livelihood for himself and his family.

In 1929 he was one of the principal organizers of the Security Mutual Insurance Company of New York. He was associated with the Company as its Treasurer for 40 years.

Largely self educated, Mr. Bachrach devoted 65 years of his life in this country and until the day of his death to a host of civic, religious, educational and charitable causes and agencies. He had a full appreciation of the importance of serving the community as a serious dedicated worker.

He was wise in the ways of this world. He was kind and considerate, fully aware of his responsibilities to his fellow man. He acted out these responsibilities in a way that resulted in productive projects benefitting the community and all the people in it.

It was characteristic of him to walk in the ways of his sainted parents. His mother of blessed memory was one of the founders in 1917 and an early supporter of The Hebrew Home for the Aged of Harlem.

Louis Bachrach was a loyal son, devoted to the ideals of his mother. From the time that she helped found the Home, until the day of his own passing, Mr. Bachrach helped to build and maintain the institution. It now shelters and cares for 560 elderly residents in beautiful modern facilities set in an 18¾ acre private park overlooking the Hudson River.

He served as a member of the Board of Directors of the Home. He was a Vice Chairman of its New Building "Foundation Fund", and an Honorary President of its Bronx Division. For seven years, he led the Bronx Division as its President. In this high office, he established new fund raising records, producing large sums of money for its New Building "Foundation Fund".

He was a prominent member of the Building Industry League of the Bronx. He was to have been the Guest of Honor of their Annual Dinner, the evening of the day he passed away.

Among his other communal activities was his leadership of the fund raising campaigns of the Federation of Jewish Philanthropies, the United Jewish Appeal and the Israel Bond Drives. He was actively identified with the National Conference of Christians and Jews, the Boys Club of the Bronx, the YMCA, Akiba Hebrew Academy, the Jewish Theological Seminary and the American Jewish Congress. He was a founder, builder and former Officer of the Kingsbridge Heights Jewish Center.

For all his good works, Louis Bachrach will be long remembered. His devotion to the welfare of his fellow man will forever remain a blessing. He is missed in the councils of all the organizations and causes he served so well. His sense of humor and most of all his loyalty and devotion to his friends and associates and to the things that he held dear were an inspiration.

UNITED STATES-LATIN AMERICAN FRIENDSHIP: KEY TO HEMISPHERIC SOLIDARITY IN TODAY'S FAST-CHANGING WORLD

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. ROYBAL. Mr. Speaker, one of the most important elements in America's foreign policy has always been our close relationship and spirit of cooperation with our sister republics to the south.

As a member of the House Foreign Affairs Committee, I am practicularly aware of the vital necessity to maintain an attitude of mutual cooperation between ourselves and our good neighbors in Latin America.

So, I was especially pleased to read two outstanding statements recently on the subject of hemispheric solidarity and its meaning in today's world of rapid change and often turbulent conditions.

These statements were made by Dr. Misael Pastrana-Borrero, Ambassador of Colombia to the United States, and contain a most thoughtful discussion of the problems and opportunities we face as we strive together for a true partnership for progress.

Mr. Speaker, under unanimous consent I include the Ambassador's remarks in the RECORD at this point:

REMARKS BY DR. MISAEL PASTRANA BORRERO AT A LUNCHEON GIVEN IN HIS HONOR BY THE PAN AMERICAN SOCIETY OF THE UNITED STATES AND THE COLOMBIAN-AMERICAN CHAMBER OF COMMERCE, MARCH 14, 1969, AT NEW YORK, N.Y.

If I am not mistaken, it was Benjamin Franklin who, justifying his shyness when speaking in a foreign language, stated that in so doing "he could only express half of what he was thinking, and people only understood half of what he said." I have always tried to bear this in mind, or, I should say more sincerely, that my lack of knowledge of English forces me to do so. Today I have taken this risk, considering that for many of those who generously honor me with their presence, it is better to understand half of my thoughts than to miss them altogether.

The subject of international cooperation through economic aid, notwithstanding the fact that since the end of World War II it has been the central point of the dialogue between industrialized and developing countries, continues to maintain equal if not greater urgency. Because it is true that, after these past twenty years of trial and error, there is so much confusion, ambiguity and misunderstanding about this noble

policy, that it is worthwhile to analyze and seek out the real causes, in order to be able to measure more precisely the extent of its effects.

The truth is that the cold war has ceased to be the neuralgic point in the confrontation between the two sides that struggle for world power and responsibility. Now the predominant fact is the presence and insurgence of two thirds of mankind, that lives in the anguish of misery and that being conscious that its poverty is not inevitable, searches for the transition of a backward society to participate in some degree in the prosperity of the wealthy nations. These aspirations cause special tensions in underdeveloped areas such as Southeast Asia, or the Middle East, or in the process of liberating the colonies in Africa, or in the frequent internal turmoil of Latin America, and it is just in those areas where the crisis explode more violently and where peace is in danger. And this great gap that divides the nations cannot be maintained without compromising the destiny of the world community.

It is also impossible to form an authentic policy of sincere international cooperation, without establishing reciprocal trust and understanding. The problem of development certainly has a worldwide perspective, but specific proposals for help must be adapted to the peculiar conditions of similar regions, and sometimes each country has to be dealt with individually. For example, in the experience of the Marshall Plan, perhaps the determining factors in the rapid recovery of the Western European economy were the vast human resources and knowledge available there, that obviously do not have equivalents in the developing countries. For the different underdeveloped areas, despite the common denominator of economic backwardness, ignorance and poverty, the confrontation of the problems is different if you look at the huge Asiatic masses, or if you study the process of the African nations that are beginning their journey as free and autonomous states, or if you appraise the group of Latin American nations commonly identified by tradition, language, race and religion.

But, still in the wide range of latitudes between lower California and Tierra del Fuego, where 20 republics exist side by side in an area of 20 million square kilometers, with more than 220 million inhabitants, you will also find clear differences in their social and economic manifestations which also demand special solutions. Next to countries like Brazil, almost a subcontinent with 90 million people, there are others that barely have one or two million human beings. While Venezuela, for instance, has a per capita income of nearly 1,000 dollars, there are many countries with a personal income not greater than 200 dollars. There are countries with ample financial resources due to their international trade and others that hardly have an income of 19 dollars per capita from that source. Other countries have definite lines of contrast in degrees of development, with highly industrialized areas, large modern cities contrasting with sectors submerged in the deepest poverty. Thus, without underestimating universal criteria for foreign aid, it is necessary to consider its indvidual characteristics to avoid generalization that may lead to irreparable errors.

I have always believed that the controversy created by international aid is due less to its need and justice, than to the instruments used and the conflicts that occasionally occur between the aid giving and the aid receiving nations. Knowing as I do the idiosyncrasy of the North American people, I could never think that there would be a citizen in this country who knowing how two thirds of the world live, without access to minimum conditions of existence, could remain calm or indifferent. In this interplanetary era, with the world tightly knit together by communications, the distances between people participating in a civilization of abundance and people handicapped by the struggle for survival is unacceptable; and it is a situation which demands immediate action because it is a problem for today and not for future generations.

Fortunately, in Latin America we are becoming aware that progress depends primarily on ourselves, that development is a national effort produced by the internal dynamics of a society, and that whatever the sacrifices in economic fields or social areas, it is necessary to set our clocks ahead to make up for lost time without blaming anyone for what is happening to us. Regardless of the difficulties and setbacks suffered by our countries in recent years, there have been improvements that show positive signs of acceleration in our development, and a greater popular participation in our process of modernization. The rate of economic growth from 1950 up to now has been an average of 4.7% per year, approximately equal to the average rate of growth of the majority of the developed countries. A large majority of the Latin American governments, in the same period, have placed special emphasis on education, health, housing, distribution of land tenure, and an increase of economic opportunities searching for greater social mobility. Also, the experience of these years teaches us that if social development is impossible without vigorous economic growth, political stability is unattainable if this growth does not include the improvement of living conditions and a wider participation of the people in the essential national goals. The advances obtained by Latin America in this period have been gained with such a great effort in savings and self-help, that in the seven years of the Alliance for Progress domestic investment in the Hemisphere has been estimated at 150 billion dollars, of which only 6.7% represents contributions from public and private assistance from the United States.

But if there is agreement that development should be sought primarily by the underdeveloped, and that structural reforms cannot be postponed, it is also true that because of our weakness in trade and our accumulated indebtedness, it is not possible to hasten an orderly transformation, avoiding anarchic or violent trends, without continuous assistance from foreign capital. Unfortunately, the tendency in both foreign trade and aid has declined in the last few years. Latin America's share of world commerce has decreased, causing, therefore, an additional burden to our economies. These events indicate that international trade has been used more for the benefit of the wealthy countries than to the advantage of the poor nations.

The Latin American balance of trade has increased its deficit from 1.000 million in 1966 to 1.700 million dollars in 1967, indicating that for predominantly rigid economies, which most of the Latin American countries have, the protectionism of advanced countries contributes to further deterioration. This has happened with the restrictive measures adopted by the United States to improve its own balance of payments, and other steps taken by European countries because of the devaluation of their currencies.

It has been said that the crisis of industrialized countries is immediately reflected in higher poverty in underdeveloped areas and, paradoxically, the prosperity of wealthy countries is not always projected on the poor communities.

It is quite difficult to evaluate correctly the amount of additional capital that underdeveloped countries need to maintain a minimum rate of growth. The Conference of Punta del Este estimated this additional capital need for the Latin American Republics at 20 billion dollars over a 10-year period. The Conference held at Geneva in 1964—stressing the responsibilities of rich nations more than the need of less favored ones—merely advised the former to devote 1% of their gross national product to help poorer countries. None of these proposals have been carried out. Nor did Ambassador Stevenson's proposal in 1961—ratified by the United Nations General Assembly—to make the sixties a decade of development, attain significant momentum.

It is worthwhile to remember that at the time of the Marshall Plan, foreign aid given by the United States came to 2.1% of its gross national product and barely reaches .7% today. With the highest individual income in the world, the United States actually ranks 8th in foreign aid per capita.

Any partial approximation in the study of International cooperation can prove to be erroneous, emphasizing only one of these alternatives: trade or loans; public or private investment, technical or financial assistance. Foreign aid policy has to be considered as a whole. As far as international trade is concerned, there has to be a revision of the barriers that disturb the exchange of basic products and prevent the entrance of manufactured goods from Latin America to the world markets by means of quotas and other restrictions, as in the case of textiles. Considering the critical period that the emerging countries are going through, with progressively unfavorable terms of trade, it is in the interest of elementary justice to study formulas of preferential treatment, or at least cancel certain discriminations that some regional tariff agreements place against our exports.

As far as financing is concerned, it is obvious that credits which tend to favor a country's own balance of payments, or constitute instruments to open new markets, are not the best for the development of the third world. Economic aid needs not only to be increased in volume, but its condition should be modified to make it more efficient, introducing lower or no interest rates and such terms as to allow reimbursement only after the effort of development begins to produce the desired results. Also foreign aid should not be regarded by developing countries as a means to postpone urgent political and social changes, nor should it be regarded with a mentality of charity or a missionary spirit.

One of the reasons for disappointment and fatigue in foreign aid policies is the way in which lending countries explain it to their own public opinion. The amount of private investment in Latin America is often mentioned—482 millions in 1965 and 461 millions in 1966—but this figure should be complemented by the amount of earnings obtained by American investment in the area, which totalled 1.160 and 1.261 millions in said years. In the overall statistical analysis of aid, military assistance is included, as well as transactions also favorable to capital exporters, such as loans called "credit for suppliers". Usually when someone mentions loans given, little is said about reimbursement.

Since the beginning of the Alliance for Progress, total disbursements in loans from the Government of the United States to Latin America amount to 5.853.8 million dollars, while repayments reached 2.141.1 millions in principal, plus 734.4 millions of accrued interest. In other words, 50% of the total amount of those loans were repaid in the same period.

Apart from these figures which sufficiently demonstrate the trend of the aid for both sides, it must be taken into consideration that by contributing to the economic development of the poor nations, profitable markets are being opened for United States commerce, additional traffic is generated for its own transportation system and new activities are offered to commercial banks, thus creating stability that contributes to a better climate for private investment abroad and consequently, easier remittance of royalties and profits. It can be said that every dollar that goes into the economy of a less developed country returns to its lender in the

form of purchases of goods and services. In the specific case of Colombia, every dollar received through United States foreign aid is directed towards trade with this country. But in addition to funds from these loans, 42% of our exports revenue is used in the United States regardless of a chronically unfavorable balance of payments. Thus, foreign aid funds are represented overseas more in the form of industrial machinery, agricultural equipment, fertilizers, construction materials, and other consumer goods and services, than in dollars.

Accordingly, the unfavorable balance of payments that some industrialized countries have registered in the last years is far from being caused by foreign assistance.

It is also important to mention that in the midst of a debate in the Committee on Foreign Relations of the United States Senate, former Secretary of State Dean Rusk affirmed that about 700,000 persons in the United States were engaged in activities originating from foreign aid programs. Whereas in the Marshall Plan donations amounted to 90% of the available funds, the exact opposite has happened with the flow of loans to Latin America.

Of course, it is also necessary to convey the significance of foreign aid to less developed countries, because it represents an essential means of strengthening the basis of the economic, social and political life of the new nations. Assistance from the Agency for International Development to Colombia's multiple programs has been extremely useful to maintain an appropriate level of imports and by virtue of the counterpart funds in local currency, it has been possible to make higher investments in roads, electrification, housing and agricultural credit and finance projects from the private sector. On behalf of my Government I am pleased to recognize the benefits of this assistance to the success of our programs.

At the end of this century, Latin America will have at least 500 million people. For the United States to be an island of prosperity next to 20 nations in the throes of underdevelopment could be a very serious situation. War against poverty is a difficult strife, because it is not only the fight against it, but the determination not to live with it. It is true that no country has a mandate to protect the world from poverty, but when countries assume responsibilities in a historical moment, such responsibilities cannot be avoided. Isolationism in the face of the problems of Latin America would mean a retreat from the policy of Hemispheric solidarity in defense of our security, our dignity and our common destiny. A policy that the fifth President of this country stated a century and a half ago has bound the friendship of the New World ever since.

This policy requires a great amount of understanding and good-will, of stimulus and impulse. This is the role being fulfilled by the Pan American Society of the United States and the Colombian-American Chamber of Commerce. Among their members I have friends I have known for many years who are well aware of my enthusiasm for the Inter-American friendship. My deep gratitude to them for giving me the opportunity to speak to you with great sincerity that is in ultimate terms the best way to build optimism and hope.

REMARKS OF DR. MISAEL PASTRANA-BORRERO, AT THE BANQUET GIVEN BY THE ROTARY DISTRICT CONFERENCE IN AKRON, OHIO, ON MARCH 27, 1969

The Rotary Club of "El Chicó" in Bogotá, the capital of Colombia, interpreting the sentiments of human solidarity which are the basis of the Rotary movement throughout the world, in November, 1967 called the attention of all the other Rotary Clubs to the serious social, economic and cultural conditions existing in the countries of the so-called Third World. This appeal evoked an immediate and surprising response from Rotary Clubs in all Continents; from people of all races, religions and ideologies. This worldwide answer showed clearly that the problems of the underdeveloped countries lie deep in the conscience of mankind and are in urgent need of solution. These are also the reasons for this symposium, to which Rotarians from this section of the United States have invited fellow citizens of Colombia—a country beginning its development—for a frank and open discussion across the table to evaluate the instruments of international cooperation before the poverty and backwardness of the neighbor nations of Latin America.

It is impossible at the present time to ignore the facts of underdevelopment which determine the very existence of most of the people of the world, which threatens world stability and peace, because it will be unwise to assume that time alone can bring about changes that can no longer be postponed. One of the explanations for a less vigorous friendship between the United States and the Latin American countries, that perhaps has delayed the total integration of the Hemisphere in all its aspects, is the circumstance that too often our relations in the past have been conducted almost at government level, while industrial groups, labor organizations and civic associations have not fully participated in consolidating this friendship.

It is a fact that in today's interplanetary era the great causes of humanity loom larger than persons or nations, and problems which only a few years ago were confined to a city or a country, today have international perspective. As Archibald MacLeish wrote of the adventure which permitted the earth to be seen for the first time from the depth of space, it is a new concept which must change the minds of men and make them think in terms of "brothers who know they are truly brothers".

One of the fundamental features in the present era is the emergence of the Third World of revolution, underdevelopment and poverty. It is not that poverty is new, for it has been a part of the peoples' heritage from the beginning of history. What is new is the phenomenon which appeared after the Second World War, better described in the words of the Indian Prime Minister Nehru, "the people's awareness of misery and their impatience to be free from it". Of every three men in the world today, two live in poverty and hunger, and the demographic explosion will determine that in the next 25 years the population of the underdeveloped countries will increase more than in the last century. Advanced nations such as the United States, Russia, Europe, Japan and Oceania have 1,050 million inhabitants and the countries in the process of development 2,500 millions. At the present rate of growth, the population of the first group of nations at the end of this century will be only 1,200 millions, while that of the poor countries will be 4,500 millions. And in the same period Latin America, which today has 220 million inhabitants, will reach more than 500 millions, that is to say, two and a half times the present population of the United States.

But in addition to this population explosion of the underprivileged masses, the advances in communications resulting from aviation and electronic technology which have brought people closer together, have awakened at the same time new aspirations and demands. In Latin America we often speak of the "transistor revolution," because our isolated farmers, besides their working tools, have begun to rely on the company of the transistor, which has broken their loneliness and drawn them nearer to civilization, while at the same time it has made them aware of the great gap between their unlimited poverty and the wealth of other nations. The conscience of this situation thus nourishes the conflicts which frequently give rise to violence and hatred in these regions.

Another disturbing problem is revealed by the statistics relating to food production. Differences in productivity are great: while a North American farmer produces enough food for 44 persons and a European for 12, a farmer in the emerging countries rarely produces sufficient for more than two, and frequently only enough for himself. In the majority of our countries production growth is far below population growth, and it will certainly lead in the course of a few years to a situation which is intolerable in human terms and politically explosive.

Latin America is a unity based upon diversity and in many respects presents conditions different from those of the other underdeveloped regions. Per capita income, which on the average is ten or fifteen times less than that of the United States, is nonetheless higher than the average in most of the African and Asian nations. And although our countries have the highest rate of population growth, they still have fertile areas of uncultivated land, estimated in three and half times more per person than in the rest of the world. We are rich in mineral resources, with the exception of coal, and we have attained a higher percentage of literacy than other underdeveloped areas. Our population is young: 60% of the Colombian people are under 18 years of age. This makes Colombia a dynamic nation, but also gives rise to problems because this large proportion of young people constitutes a source of tension in its urgent demands for decisive and immediate solutions.

That is why underdevelopment is not only the most important social and economic issue of our times, but also the most important political problem of all times. I believe that notwithstanding the great volume of literature written on the subject, underdevelopment has not been contemplated by the leading citizens of the industrialized countries with the necessary attention to the simple statistical data mentioned, that in 25 years, that is to say, in a generation, 4,500 million people will live in misery, in a world in the midst of conquering the space, in a community of nations which conventional language is that of equality and justice, in which men participate more closely of the knowledge of technical progress and in which old religious and political fanaticisms, that justified the subordination to the more privileged ones, have been broken. This is the most important revolution known to humanity because if it is true that the one in 1789 searched for liberty, in this one men search for economic independence and for the improvement of their existence, even though it might not be for themselves but for their children. They expect to change the frustration of the past into the hope of the future.

Erroneously many political sectors consider that facing underdevelopment is a matter which does not concern the wealthy countries. Most certainly this requires, first of all, a great self effort and the commitment to undertake prompt social, economic and mental transformations, but it also needs a sincere international cooperation. It implies a new war concept (the Third World War, as it has been called), for which it is indispensable to move the forces of all the world community, and specially those of the nations which form the nucleus of the Western Hemisphere, since their values are principally the ones in danger. It is a policy that requires courage, intelligence and passion.

Undoubtedly world trade is one of the spheres in which international solidarity can be more clearly demonstrated, particularly inter-American solidarity. Per capita value of the Latin American exports has greatly decreased since 1950, precisely at a

time when it required a larger volume of income in order to acquire the necessary capital goods to accomplish industrialization plans and the technification of agriculture. 90% of Latin American imports are paid with proceeds from exports, thus the importance given by our Governments to foreign trade, since the improvements in this area make us less dependent on foreign aid.

Therefore, after the Trade Conference held in Geneva in 1964, the main concern of the underdeveloped countries has been to find adequate mechanisms to increase their resources through foreign trade. The deficit of Latin America's balance of payments amounted to 1,000 million dollars in 1966 and 1,700 millions in 1967. For example, the value of Colombia's coffee exports in 1953 and 1954, totalled 490 and 550 millions respectively, while last year this value barely reached 350 million dollars. This means that in the same 15-year period we accounted for a lower income from external trade, while our population grew from 12 to 20 millions. The truth is that our deficit in exports is far greater than the amount of loans we have received; loans, of course, in the greater proportion reimbursable.

Latin America has insisted in ending discriminations against their products, especially the preferential systems of the Commonwealth and the European Common Market; but it also hopes for the elimination of trade barriers affecting its commerce with the United States. It must be borne in mind that 50% of the export-import trade of the Latin American countries is with the United States, since their purchases in this country exceed 4,500 million dollars annually. The elimination of artificial barriers is a way to help our economies to become self-sustaining, at the same time offering the United States the expansion of its own markets. Latin America needs to diversitfy its exports, since the majority of these countries depend to a great extent on two or three products and some times only one. This diversification must be achieved preferably with those manufactured products utilizing raw materials and a high volume of employment. Such products represent today only a small percentage of the total exports of the zone. A commercial policy of this nature cannot be carried out without preferential treatment.

In the same manner, Latin America has been endeavoring to obtain agreements to stabilize, at fair levels, the prices of certain traditional basic products, without stimulating anti-economic production. The success of the Coffee Pact, to which the United States have efficiently contributed and which determines the economic conditions of 14 of the 21 Latin American countries, constitutes a clear demonstration of the soundness of a producer and consumer joint policy designed to prevent the cyclical prices of an article. It is sufficient to say that for every cent dropped in the price of a pound of coffee, Colombia loses 8 million dollars yearly.

Latin America is perhaps the area of the world with closer cultural, religious and language bonds, and with a very similar development process. Notwithstanding these circumstances, the interregional commerce is almost nil, since it only reached 10% of the total volume. This is due to the fact that the exports of the Latin American countries are more competitive than complementary, for lack of currency conversion and a great deficiency in transports and communications. In 1961, the Latin American Free Trade Association (LAFTA) and the Central American Market were formed. This has brought about a 30% increase in trade, in comparison with previous years. At the Conference of Chiefs of State of Punta del Este in 1967, decisions were taken to accelerate the integration of the 20 American Republics beginning in 1970, to be completed in 1985. Should this effort prove successful, it will benefit not only our 20 countries, but also the United States of America.

Notwithstanding the importance of trade, as we have already stated, it alone is not sufficient to help the poor countries to meet their minimum development goals. A coordinated action in trade, aid, private investment and sound economic development is demanded, with the effort of the countries themselves as the central point. Against the belief of many, Latin America has not been the most favored area in the United States aid programs, regardless of its geographic and political proximity. During the Marshall Plan, per capita aid in the recipient countries was 20 dollars, while presently in Latin America it reaches only 2.73 dollars. 90% of the assistance given to Western Europe for its reconstruction were grants. As for Latin America, 90% of this aid represents loans, given under similar conditions to commercial credits, both as to terms of payment and interest rates, with the result that today more than 50% of what is received in aid must be used for capital and interest reimbursement. While in 1946 the United States assigned 2.1% of its gross national product to foreign aid, 0.7% of this product is assigned today.

But the balance of payments crisis of the lending countries has determined that the assistance be a "tied aid"; in other words, it must be invested in the purchase of goods from the same country, which makes it more burdensome, since estimates have shown that the cost of such aid is 15 to 20% higher than the one given without such obligation.

I do not want to enter into an academic discussion as to the real value of aid for the recipient countries, and the real value of the burden for the giving countries. Aid is motivated by humanitarian goals, economic interests and the desire to avoid tensions and world disorder. In the last few years such aid has represented not more than 7% of Latin America's public investment; but this percentage is essential to maintain an adequate rate of growth and the necessary imports. On the other hand, it cannot be denied that for the industrialized powers the future expansion of their markets is closely related to an increase in the consuming capacity of 1,800 million human beings, living in the underdeveloped world.

In 1823 the then President of the United States called upon Latin America for a collective defense of this Hemisphere against the threat of imperialism from abroad. This policy of solidarity against possible extraterritorial aggression has sometimes encountered difficulties which have caused conflicts and unfriendliness due to erroneous interpretations. Latin America has always shown its loyalty in circumstances of real danger for this Continent. Such was the case during World War II in our fight against totalitarianism. We also did it during the Korean War, when Colombia, responding to the United Nations mandate, sent many of our young men to fight and die there. And we did it again during the missile crisis, when the world was on the brink of destruction. Robert Kennedy in his posthumous book "The Thirteen Days" comments on this event: "During the Cuban missile crisis, however, when it was an issue of great importance, when the United States was being sorely tried, those countries came unanimously to our support, and that support was essential". "It was the vote of the Organization of American States that gave a legal basis for the quarantine. Their willingness to follow the leadership of the United States was a heavy and unexpected blow to Khrushchev. It had a major psychological and practical effect on the Russians and changed our position from that of an outlaw acting in violation of international law, into a country acting in accordance with twenty allies legally protecting their position".

Between Latin America and the United States the factors that unite us are far greater than those that separate us, because we are not only a part of the same portion of the world, but we have been inspired by the same tradition of love and respect for human liberty and dignity.

President Madison, upon designating the first representative before the recent liberated world from Spain, outlined to him his principal objectives as follows: "To promote the most friendly relations between the inhabitants of this Hemisphere as having all a common interest, and as lying under a common obligation to maintain that system of peace, justice and goodwill which is the only source of happiness for Nations".

After 160 years these orientations should be maintained, if we want to strengthen the ties of friendship between our peoples. Identical purposes also inspire the thought and actions of the Rotary Clubs before these contemporary problems. This common obligation for peace, justice and goodwill is what has really moved our friends from Akron to convene this splendid Conference and offer us their known and traditional hospitality.

On behalf of Colombia, I thank you.

PROFESSOR CAMPBELL OF DARTMOUTH UNIVERSITY COMPARES UNIVERSITY AND CORPORATION

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. CLEVELAND. Mr. Speaker, my constituent, Prof. Colin Campbell, of Dartmouth, recently published a fascinating article in the Wall Street Journal. In this he compares the modern university structure with the organization of the modern business corporation. He shows how active student participation as demanded by some of the radicals is simply impractical.

In the course of making this demonstration he probes very knowingly into the fundamental structure of the universities. Overdiversification—conglomeration is the current fad-word to describe what I mean—is often a great problem. He reports, most disturbingly, that "Only about half of some university budgets are now used for instructional purposes." The rest is for research and, in some cases, I have noted, which he does not mention, to maintain large staffs whose sole purpose is to seek Federal funds.

I offer Dr. Campbell's excellent analysis at this point in the RECORD and recommend it highly to all readers of the RECORD:

COMPARING UNIVERSITY AND CORPORATION

(By Colin D. Campbell)

Two distinguished authors have recently criticized the organization of our universities. Jacques Barzun, a former dean of the faculties and provost of Columbia University, has written that our universities are suffering from "bankruptcy, paralysis, and futility." Irving Kristol has said that "no one any longer has a clear notion of what a 'university' is supposed to be, or do, or mean."

Like most large business enterprises, universities are corporations. They have charters, and trustees who are similar to corporate

directors. The trustees select the president—the chief executive of the organization. Can universities' organizational problems be attacked in the same way that business corporations typically solve theirs?

To some persons the selection of the board of trustees is, a basic source of difficulty. Suggestions for change usually include selecting trustees either from the faculty or the student body. In a business corporation, this would be analogous to selecting directors from representatives of either its employes or its customers.

A TRUSTEE'S RESPONSIBILITIES

Selecting trustees from the faculty could result in even more attention to research and less to the instruction of students. Also, trustees, as their title indicates, are responsible for the proper use of the bequests received from donors, just as corporate directors represent the interests of the stockholders. Since a university's resources may be used for current expenses or saved to provide further income in the future, a conflict of interest could arise: Faculty members would usually benefit most by expanding current expenditures. In addition, those faculty members, elected to the board could presumably benefit their departments at the expense of others. The struggles for representation might be intense and bitter. Such arrangements would probably factionalize the faculty and involve them in time-consuming activities other than teaching and research. Decisions on how to distribute the institution's resources among its various activities are probably best made by an executive who is responsible to an outside group of trustees, rather than to the faculty.

Some of the problems with student trustees would be similar. Consider the question of raising the tuition. Students might prefer to have increases in operating costs paid for by consuming the university's endowment—but this would not be in the interest of future students.

Students' concerns are usually matters decided by faculty committees rather than trustees. Also, students lack experience for the kind of financial and legal decisions that trustees make. Trustees, like corporate directors, usually meet only once a month. They do not, and probably should not, take part in setting up the curriculum, selecting the faculty or administering student discipline, just as corporate directors do not plan production processes or hire employes.

University trustees and corporate directors are usually selected in quite similar manner. Some university charters provide that trustees be self-perpetuating. In the "modern corporation" with its large number of stockholders and no one stockholder having a controlling interest, directors are also self-perpetuating even though stockholders go through the motions of voting. In other universities, an alumni committee nominates candidates for trustees, and those receiving the most alumni votes are selected.

Professor Barzun believes that excessive diversification is the source of much of the disorganization in higher education. Universities have become research centers, with an assortment of institutes financed by both the Federal Government and private foundations. They also organize technical assistance teams for foreign countries, participate in faculty exchange programs with foreign universities and administer programs to assist underprivileged urban groups.

Some universities have ceilings on student enrollment to avoid excessive size and disorganization, yet many new non-teaching activities have been added, and in these universities the shift away from strictly educational functions has been most rapid. Only about half of some university budgets are now used for instructional purposes.

Diversification has some advantages, but it undoubtedly creates strains on management. The "multiversity" loses the economic advantages of specialization. In business organizations, competition and the profit motive prevent carrying diversification too far: Inefficiencies would lower profit and induce owners and managers to simplify the organization. In non-profit institutions, checks on excessive diversification are undoubtedly weaker. Current attitudes of most educators favor expansion and growth. As Dr. Barzun has emphasized, universities are expected to participate in the solution of social problems. Nevertheless, decisions to expand into new areas must be approved by the trustees, and where errors have been made the fault is theirs.

THE LIMITS OF POWER

Professor Barzun also believes university administrators are ineffective because of their limited power over the faculty. This is blamed partly on "tenure," under which a faculty member cannot be discharged except for misconduct or failure to perform his duties. Both government agencies and business organizations face similar, but less rigid, limitations. Lack of control over the faculty is also blamed on the highly competitive market for professors. Most administrators are unwilling to try to influence their better faculty members because they fear that this might cause them to move elsewhere. Business firms have similar problems. Wherever labor markets are competitive and persons are free to choose where they wish to work, an employer is under pressure to provide pay and working conditions similar to those found elsewhere. However, the market protects universities also in their role as employers. Faculty members need not be paid any more than they can get elsewhere.

Both universities and business corporations still retain their most important technique of controlling employe performance—determining salary increases. A dean can reward those who support his policies and penalize those who do not. The resulting power of deans and department chairmen is substantial—despite the claims about the preponderant power of the faculty.

To the leaders of the student power movement, the principal reform needed is student participation in the organization. This proposal is neither realistic nor practical. Taken seriously, it would mean including students in the deliberations and voting of at least a dozen committees. In most universities, the important decisions concerning selection of faculty, courses offered, degree requirements, requirements for the major, student discipline and student admission are made by its faculty committees. Serving on these committees takes time and is difficult. Much of the work is routine and unexciting. That students would be willing to take on such duties is hard to believe. Many full-time students would not be able to do committee work.

Student committee members would not be subject to the same kind of organizational discipline that faculty members are. If student representatives did not perform their tasks conscientiously, the administration could do little about it. In contrast, the overall evaluation of a faculty member's performance is based in part on his contribution to such committees.

Of course, students are the persons served by universities and they should be given the best kind of education possible. But to improve education, student participation is probably no more necessary than consumer participation would be in the management of a business firm. Consumers typically get the kinds of goods and services they want even though they have no voice in the management. This is because firms that produce those goods most desired are most successful.

ATTRACTING STUDENTS

To survive, a university must attract a sufficient number of students. Unfortunately, the competition between private universities that must charge tuition and state universities where the tuition is nominal does not operate effectively. Even if state universities had less to offer, they would probably attract some students away from the private universities.

Significant competition also exists among the various academic departments. Faculty committees may formally decide what courses are to be put in the catalog, but unless students are willing to enroll in them their decisions will not mean much. There are few institutions that can afford courses or professors who cannot attract a reasonable number of students. If a department becomes unattractive, enrollment drops, students shift to other majors, and the department will be required to reduce its staff. The typical department will almost always react by improving its offerings.

The principal way to improve the quality of education is to induce students to want better education. This is not an easy task, but it is one of the purposes of Mr. Kristol's suggestion that all students pay the cost of their education either from their own funds or by loans from the Government. If students were required to pay the cost, one would expect them to be more discriminating about the kind of education they got.

EXPRESSION OF TRIBUTE TO CHINESE COMMUNITY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. ANDERSON of California. Mr. Speaker, I would like to call to the attention of my colleagues a resolution which was recently adopted by the Council for Civic Unity in San Francisco with regard to the Golden Spike Centennial Celebration.

The resolution, with which I am in agreement, accuses Secretary of Transportation Volpe of failing to recognize the contribution of the Chinese in the building of the transcontinental railroad during remarks at the Golden Spike Centennial Celebration on May 10 in Promontory, Utah.

Mr. Speaker, it is vital that we recognize the historical achievements of the many races, religions, and cultures which make up our great Nation. For too long now we have been negligent in giving credit to Americans of various nationalities and in acknowledging their efforts in bulding this land of ours.

It was sad indeed to learn that Secretary Volpe carelessly omitted to mention the work of the Chinese-Americans in the laying of the transcontinental railroad. It is this type of insensitivity which leads to discrimination and bigotry instead of understanding and brotherhood. I certainly hope that in the future, President Nixon's appointees as well as all public officials will respect the cultural enrichments that minority groups have provided to our society.

The resolution follows:

COUNCIL FOR CIVIC UNITY, SAN FRANCISCO, CALIF.

RESOLUTION

Whereas the lack of recognition of the contributions of the various ethnic, religious and racial minorities that have built this country has been a contributing factor in bringing us to our present state of civic disunity, mistrust and polarization, and

Whereas we feel that the omission of mention by Secretary of Transportation John A. Volpe of the contribution of Chinese immigrants to the building of the Transcontinental Railway at the recent Golden Spike Centennial Ceremony is another example of this lack of recognition and of the subtle racism that cripples our nation, and

Whereas the President's Commission on Civil Disorder prophetically warned in March of 1968, "To pursue our present course will involve the continuing polarization of the American community, and, ultimately, the destruction of basic democratic values", Therefore be it

Resolved that the Board of Directors of the Council for Civic Unity express our gratitude to the Chinese community for its contributions to the building of the West and for its continuing contributions to the enrichment of our Society, and be it further

Resolved that we express to the Chinese community our sorrow at the lack of recognition given to them in relation to the whole Railway Centennial Celebration and specifically the Volpe speech, and be it further

Resolved that the staff of the Council of Civic Unity be instructed to express to Secretary Volpe our disfavor at his harmful, if inadvertent, lack of respect shown to our Chinese community.

REA ESSAY WINNERS IN NEBRASKA

HON. ROBERT V. DENNEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. DENNEY. Mr. Speaker, annually a statewide essay contest is sponsored by the Nebraska Rural Electric Association on "What Rural Electrification Means to Me and My Community." It is my privilege today to insert in the RECORD, the winning essays of six of the State winners who reside in my congressional district. Later on this month these winners, along with others from Nebraska, will travel to Washington to see their Government in operation as part of their prize for submitting winning essays. The REA, through "lighting the farm," has contributed greatly to the progress of the American farmer.

The essays follow:

INFORMATION

(By Rebecca Reeker, 15, Sophomore, Battle Creek High School. Father, Gene Reek, R. R. 2, Meadow Grove, Nebr.)

(Contestant sponsored by the Elkhorn Rural Public Power District, Battle Creek, Nebr., in cooperation with the Nebraska Rural Electric Association.)

THE VALUE OF RURAL ELECTRIFICATION TO OUR HOME AND COMMUNITY

Time changes many things. In the space of less than thirty-five years, the Rural Electrification System has progressed from an idea in the minds of few, to the advantages for the convenience of many. Long range thinking of our Congressional leaders has now been made to benefit all Americans, and that is especially true of our rural populations.

When Senator Norris introduced a bill into Congress for the birth of the Rural Electrification Administration, did he foresee the future possibilities that all rural residents of his State of Nebraska would someday profit from his actions? Could anyone at that time look ahead to the day when all rural families would live as well, or better, than do their city neighbors?

The progress and growth of Rural Electrification over the years has been tremendous. The first consumers in our district could be counted in the hundreds, and now the number is slightly less than four thousand. Many of these first consumers used only the minimum amount of fifty kilowatts, and now many of these same consumers are using thousands of kilowatts every month. These families are now enjoying the total benefits of "Electric Living."

The value of electrification in our homes is now hundred-fold. Adequate lighting is indeed a blessing for all. The work saving and time saving conveniences to the housewife are numerous. Washing, ironing, cleaning, and cooking were once tedious and time consuming chores. Now, automatic washers, dryers, ironers, refrigerators, vacuum cleaners, and timed and automatic burners and ovens make these tasks pleasant completed easily and quickly, therefore adding more leisure time for family enjoyment. Radios, television, stereo sets, and electric organs are now common forms of entertainment for farm families. Electric heat, air conditioners, humidifiers, and dehumidifiers help to make our homes more comfortable. Small appliances add to our daily easy living, such as: razors, tooth-brushes, can openers, knives and knife sharpeners. Our Mothers will indeed praise these gadgets.

The agricultural workers surely appreciate all the advantages of Rural Electrification. From the smallest drills, saws, solder irons; to the massive grain driers, grinders, and mixers, welders, and many assorted motors, the farmers benefit every day from electricity. The water pumps, milkers, and bulk cooling systems make easier the work of the dairy men. Heat units, automatic feeders and waters aid all livestock producers. Electricity makes possible irrigation systems that are automatically timed and regulated.

Rural Electrification has not only benefited our rural residents but our urban residents as well. The job opportunities it has created for manufacturers, wholesalers, retailers, and storage facilities are many. Today, as never before, do we understand the statement, "Live Better Electrically."

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Lynn Kober, 16, Junior Emerson Sacred Heart School, Father: Don C. Kober, Wakefield, Nebr.)

(NOTE.—Contestant sponsored by the Northeast Nebraska Rural Public Power District, Emerson, Nebr., in cooperation with the Nebraska Rural Electric Association.)

A recent survey boasts that more than two million American homes now have electric heat. Approximately one-fourth are served by rural electrification. Statistics show that we, the farmers of America, especially are using more electricity in the Midwest than ever before. Farmers all over the United States are taking advantage of rural electrification more now than in any other time in the history of electricity. What really accounts for this rapid growth of popularity of the REA system?

I often pause a moment to take into consideration the immense benefits we obtain by this system of electrification. I somehow feel that rural electrification means much more than having all the power we need to run our television sets and radios. It means, in my opinion, to have electricity for heating, lighting, water, and other electrical appliances needed to operate the household and farm.

In my own community, the REA is providing the residents with dependable, high-quality service—power vital to the growth of each and every rural community. I've often wondered what our home and community would be like without this ever-improving system of electricity. The great benefits we now take for granted would no longer exist. Farm life would be ever so much more difficult without electricity. We now rely on electricity for everything from electric toasters to complex milking machines.

If you take a good look at a home, be it on the farm or in town, that is electrically served by REA, you would witness a multitude of household appliances such as toasters, stoves, T.V. sets, irons and refrigerators, which provide ease and entertainment for all of the members of the family. And on a farm, you are likely to perceive many electrical advantages utilized prodigiously by the farmer. Poultry farmers have electrically-powered equipment to feed and water hens and to take proper care of the eggs. The dairy farmer utilizes electricity for his milking machines and other electrical devices. Whereas the rancher has only to flick a switch and get the power needed to feed his cattle, on which his livelihood depends. And the rural electric system supplies all the power needed for farmers to bring in and take good care of his crops. What would these people do without this great necessity of electricity?

The future holds many challenges and opportunities for rural electrification. As the REA advances in technical changes, it will mean more man-power and job opportunities for many people. Industrial development will be getting more attention in the years ahead as rural electric systems help Nebraska move from an agriculture-dominated state into a diversified agricultural-industrial state.

The rural power systems are doing much more for our community. Their leaders are working to help insure improved rural community facilities such as water systems, better schools, more and better housing, improved medical facilities, and orderly community developments.

And so, the REA has become a vital factor in the life of all America. By its benefits, both in our homes and communities, it has hoped to make a better America by starting with the heart of America itself, the rural areas.

WHAT RURAL ELECTRIFICATION MEANS TO ME AND MY COMMUNITY

(By Donna Lynn Walford, 16, Junior, Gresham Public Schools, Father: Wayne Walford, Gresham, Nebr.)

(Contestant sponsored by the Polk County Rural Public Power District, Stromsburg, Nebraska, in cooperation with the Nebraska Rural Electric Association.)

This is the age in which we hear much about the generation gap. I was amazed when I learned that one short generation ago when my parents were small the Rural Public Power District was just coming into existence in Polk County. One generation ago rural residents were the people who squinted at their newspapers or homework by gas lamps. Wives stood for long hours over the family ironing using either "sad irons" heated over the wood range or gas heated irons. Ice was carried from the ice house to cool foods. Heat for cooking and warming the home was produced by wood and cobs carried in by the basketfulls. Wind-powered mills pumped water which had to be carried in pailfull after pailfull.

Almost as if by magic, electricity has raised the standard of living of the rural people of my community. Hundreds of electric powered appliances make our lives safer, more comfortable and luxurious. Use of these appliances actually adds hours to our day by freeing us of tedious, drudge-type jobs. We now enjoy all the comforts and conveniences that our urban neighbors enjoy, in addition to the pleasure of rural living.

Our generation has a hired hand who helps with the work around our farm home. This faithful servant powers our washing machine and drier, heats our iron automatically. He heats our range neatly and comfortably, refrigerates our food safely and freezes the leftovers to use another time. In the winter our home is heated and humidified comfortably and safely by this hired hand who can also cool and dehumidify on summer

days. He lights our way indoors and out. He powers my electric shears and runs my sewing machine. Why he even dries my hair, brushes my teeth, shines my shoes and dries my nail polish. Our friend pumps water for the livestock, water for the crops and water for my bath. He brings beauty to our lives by lighting our patio, watering our lawns and mowing the grass. He provides us culture and education each time I turn on the radio, television set or stereo. He works for us twenty-four hours a day, seven days a week. He never asks for a coffee break and refuses to take a vacation. We have never paid him more than $38 a month. You can hardly find that kind of hired hands any more. His name is Rural Electric.

You think our neighbors might be jealous? Not at all!!! They too enjoy the services of Rural Electric.

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Susan Fosler, 17, Junior, Seward Public High School; Father: Dale Fosler, Milford, Nebr.)

(Contestant sponsored by the Seward County Rural Public Power District, Seward, Nebr., in cooperation with the Nebraska Rural Electric Association.)

Somehow the Rural Electrification Administration never had much meaning to me as a teenager living in a rural area. However, with this essay I found some stimulating accomplishments of the Administration as well as some benefits rural people receive daily from this agency.

A slight review in the history of REA shows that it was established in 1935 by the President of the United States. A few years later Congress made it a permanent agency. The REA is defined as an agency of the Department of Agriculture which finances the extension of electric power to people in rural areas of the United States. This agency does not construct, own, or operate the electric facilities it finances but merely lends the money that enables various companies and associations to manage them.

We now have the background that set up the REA, but just how does the Public Power District of Seward County benefit me? In 1935, only one farm in every ten in the United States had commercial electric service. In the late 1950's, about 95 of every 100 farms had such service. Of these, more than half were served by REA-financed electric systems. I have grown up accustomed to the luxuries electricity provides. I naturally expect to always be able to have a hot bath. An electric tooth brush is now a common implement in any farm bathroom. I'd be lost if I couldn't dry my hair in twenty minutes, and the newest trend—electric rollers is another provision made possible by REA.

I'd hate to have to begin to prepare meals in a rural farmhouse of the 1900's. We have so many conveniences made possible by electrification that we seldom have time to appreciate them all. Fry pans, bun warmers, electric mixers, dishwashers, refrigerators, and freezers make every family completely dependent upon this modern convenience.

When a farm family has daughters no rural home is complete without a sewing machine to help keep up with the newest fashions. A steam iron helps to press professionally, to say nothing of the automatic washers and dryers that help in the process of clothing.

During the past winter months a vaporizer, heating pad, and electric blanket aided even the farmer through the last flu epidemic.

Our family, living in a rural area, several miles from any city can enjoy all the comforts and conveniences of living in a town and yet be free to make our living farming and carry on the type of farm life we enjoy.

A modern farm has more than 400 different uses for electricity. I have named only a few, perhaps the conveniences that are most important to me. Nevertheless, I have discovered just how much the REA has done to help raise the level of living in rural areas. This agency has enabled farm families to run their own farms more economically and efficiently and has given us the many conveniences that had previously been restricted to city dwellers.

I guess all that I can say is thank-you Rural Electrification Administration—for everything you have done to make the farmer's life just a little easier.

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Ed Havlovic, 16, Sophomore, Aquinas High School, David City, Nebr., Father: Joseph V. Havlovic, Brainard, Nebr.)

(NOTE.—Contestant sponsored by the Butler County Rural Public Power District, David City, Nebr., in cooperation with the Nebraska Rural Electric Association.)

Come with me on an imaginary airplane flight and I will show you the value of rural electrification in our homes and community. Fasten your seat belt—we're off!

If you look down to your left you will be able to see endless acres of tall, dark, green corn and ripe wheat fields carpeting the hills below with a mellow gold. Such abundant harvests are the result of electric irrigation systems.

On your right you will notice a modern farm. Electricity plays an important vital role in the maintenance of the farm as well as in the work and responsibilities of the farmer. Electric heating, electric watering, electric air conditioning, and electric lighting systems are necessities to the farmer in raising and caring for chickens and other farm animals. The dairy farmer finds electric milking machines not only economical, but also efficient. Electric milk coolers, separators, and other dairy equipment also aids the dairy farmer in producing top grade A milk and cream. The farmer also finds that electric fences provide the protection of his dairy herd while electric well pumps constantly supply fresh water for all farm animals.

The average farmer also discovers many "do-it-yourself" jobs much easier thanks to electric saws, drills, welders, sanders, lawn mowers, and many other useful power tools.

As you can see most every rural home is served by rural electrification. Electric heating, electric lighting, and electric air conditioning provide the farmer and his family with comfortable living all year long. The housewife finds her housework considerably easier, thanks to electric irons, dishwashers, garbage disposals, washing machines, driers, vacuum cleaners, sewing machines, and food mixers. Housewives are able to prepare meals quickly and easily with electric stoves, toasters, and grills. Housewives are also capable of preserving and storing food for long periods of time due to electric food freezers and refrigerators.

As we continue our "airplane flight" over the many rural farms one notices the many electric power lines and telephone wires that lead to and from the farms. Electricity, as you may have guessed, plays an important role in communications as well! The radio and television are not only entertaining and pleasurable but are also a source in information and communications. The radio and television provide the farmer with informative news, weather forecasts, as well as storm warnings. The farmer finds the telephone most useful in carrying out "business terms" or just a friendly conversation.

Although one may see the importance of rural electrification one seldom realizes the importance of electrification in the community. As we continue our flight, observe in the city, which we are approaching, the businesses and industries. Such modern businesses and industries could not exist without eletcricity. Electric signs advertise products and business. Electric adding machines, computers, and typewriters greatly aid office workers in doing their jobs quickly and efficiently. If you look below, you can notice the traffic that is constantly weaving throughout the city streets. Electric street lights insure traffic safey as well as city lights during the night.

That concludes our flight; prepare for landing! Made it! Ground at last! I hope by this imaginary flight that you will realize the importance and have a better understanding of rural electrification in our home and community as well. Electricity plays an important and vital role in the work and daily living of all people and this role is ever steadily increasing. As modern inventions progress forward, electrification is ever present serving man in countless ways as it has in the past and will continue to do so in the future. *Electrification* is here to serve *you!*

WHAT RURAL ELECTRIFICATION MEANS TO ME AND MY COMMUNITY

(By Richard Herink, 15, Sophomore, Leigh Community School, Father: Eugene F. Herink, R. R. #2, Box 43, Clarkson, Nebr.)

(NOTE.—Contestant sponsored by the Cornhusker Public Power District, Columbus, Nebr., in cooperation with the Nebraska Rural Electric Association.)

Just what does rural electrification mean to me and my community? I believe that it means fewer people starving in the world today. It also means that I, as a Future Farmer of America, my father, and all the farmers in my community, have the opportunity of becoming more prosperous.

There are many people in the world starving each day, and if the world's population keeps increasing at the present rate it will be doubled by the year 2,000. Stop and think what this will mean. In only 30 years from now there will be twice as many people to feed each day. Thirty years may seem like a long period of time, but by then the farm youth of today, like myself, will be at the peak of their earning capacity.

To realize how important electricity will be to a farmer in 30 years, we must look back 30 years, and see the great increase in the use of electricity in rural communities. Thirty years ago it was estimated that about eleven out of every 100 farms in the United States had electric service. Today more than 97 out of every 100 farms in the United States is served by electricity. Electrification has improved the living conditions of rural people. Farm families today can enjoy all the modern household conveniences that the people in the city have and enjoy. This was not true when my parents were my age. Because of electricity today, the farmers are realizing a higher standard of living then ever before.

Electricity has increased farm production and has raised the economic development of not only my community but all rural communities served by Public Power Districts.

In the past 30 years inflation has raised the cost of every commodity the farmers use today. The lone exception to this is electricity. In recent years as everything else has risen in cost, electricity has decreased in cost. Electricity has been a leader in revolutionizing farming, at the lowest possible cost. This is one major reason why electricity has helped almost every farm and rural community.

Agriculture is America's largest and basic industry. With more people on this earth than ever before, we need more food than ever before. The farmers in my community and all over the United States are depending upon electricity to meet this demanding need for increasing food production.

Electricity can fulfill this task in many ways. Two of the most important ways electricity fulfills this job in my community is through improved feeding practices and irrigation. These two alone can help the forever rising need of raising more food.

As I evaluate my home and the community in which I live, I realize that electricity has meant progress, convenience, and safety at a very nominal cost.

IT IS FAR BETTER, IN THE NATIONAL INTEREST, FOR THE DEFENSE AUTHORITIES TO "PUT OUT" THE FACTS ABOUT MILITARY SPENDING THAN TO HAVE THEM "FOUND OUT"

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. DONOHUE. Mr. Speaker, I am pleased to include, at this point, a very timely and constructive editorial that appeared in the Worcester (Mass.) Telegram newspaper issue of June 3, 1969, pointing up the essential need for Defense officials to release all the facts about Defense spending.

The article follows:

[From the Worcester Telegram, June 3, 1969]

LEASHING THE PENTAGON'S SPENDERS

The days are over when the military could have any amount of money for the asking. Defense Secretary Melvin Laird and Deputy Secretary David Packard are clamping down on the sloppiness and waste in defense contracts.

Under new directives, defense contractors will no longer be allowed to submit ridiculously low bids in order to "buy into" a long term military project. And both the contractors and the military services have been warned that unlimited "cost overruns" stemming from costly changes in design will not be tolerated.

If Laird can make his directives stick, there will be no more C5A, F111, nuclear bomber, and defense missile scandals of the sort that have cost this country an estimated $30 billion in sheer waste over the past 20 years.

The new guidelines are long overdue. So scandalous has been the waste in the Defense Department that it has led to a dangerous crisis in confidence in the American military planning establishment. A group of 45 congressmen has recently signed a report stating that the "military-industrial complex" has become an independent empire practically free of congressional control and threatens to turn the United States into a garrison state. It gobbles up 80 per cent of the national budget, sets foreign policy, starves domestic programs and keeps the world in fear of nuclear war, they say.

That is scary talk. Even though the congressmen are mostly liberals who are opposed to the Vietnam war and the antiballistic-missile system, their warning falls on many receptive ears.

But the situation as it has developed is partly the fault of Congress. Congress should have insisted on taking a closer look at the various major military projects. Instead, both armed services committees have allowed the military to grossly overuse the "national secrecy" argument in regard to defense proposals. By thus withholding information—or concealing their lack of hard information—the military planners more than once got themselves mired in projects that should never have been started without intensive research and discussion.

The Pentagon and the nation are paying dearly for the lack of candor shown by the military. The country today is profoundly suspicious of all Defense Department proposals, to the point where the military security of the nation may be affected, if confidence is not restored.

Like it or not, the Defense Department is essential to the continued survival of America as a free nation. It is not some evil conspiracy of contractors, generals and politicians. But the Pentagon has been far too reluctant to ride herd on its contractors, and it has even tried to cover up blunders of colossal size.

If Laird can clean out the Pentagon, he will be topping Hercules and the Augean stables bit.

PROUD DAY FOR ITALY

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. PUCINSKI. Mr. Speaker, the whole world joined on Monday in paying tribute to the 23d anniversary of the founding of the Italian Republic, for indeed this rebirth of Italy is one of the great achievements of our time.

The Italian people have demonstrated their great spirit of achievement when in 23 short years they were able to rebuild Italy from the ruins of World War II to one of the great nations of the world today.

I have in my district many Americans of Italian descent who are a living monument to the impressive contributions that Italians have made to the progress of the world since the very beginning of civilization.

Both the Chicago Sun Times and the Chicago Daily News carried impressive editorials marking the 23d anniversary of the founding of the Italian Republic, and I should like today to include these editorials in the RECORD.

These editorials reflect the high respect and the high regard that Americans of all ethnic backgrounds have for their Italian-American neighbors and for the people of Italy themselves.

The huge contributions of the Italians toward the world's progress in science, in drama, in literature, in medicine, and in philosophy itself are an inspiration to all of us.

The two editorials follow:

[From the Chicago Sun Times]

PROUD DAY FOR ITALY

This is a proud day for Italy and for all of Chicago's Italian-Americans. It is the 23d anniversary of the founding of the Italian Republic.

The end of World War II left Italy in a shambles. There was immense war damage, hunger and misery. But the Italians, a proud and hardy people, were determined to build a future.

Their first and proudest structure was a new government. In April 1945, the first representative body was given the job of putting together the regulations for the election of a Constituent Assembly. On June 2, 1946, the Italian voters cast their votes for a republic.

Italy's recovery from World War II, its welcome into the Atlantic Alliance by the nations it had fought against, its entry into the United Nations in 1955, are benchmarks of its comeback from the immense damage done by the war. We salute our friends of Italian extraction in Chicago and the people of Italy on this anniversary.

[From the Chicago Daily News]

ITALY: 23 YEARS A REPUBLIC

By a comfortable, though not overwhelming, margin of 12,717,923 votes to 10,719,284, the people of Italy exactly 23 years ago elected to become a republic instead of a monarchy. From the vantage point of this 23d anniversary, the choice was clearly a good one.

Modern Italy—good neighbor and strong ally—has come a very long way since the dark days of World War II—and since the dark years just after the war, when the Communists tried powerfully but vainly to draw the nation behind the Iron Curtain.

Chicago and Italy serve one another in many ways. Our city's cultural debt to the Italian people is great and growing. Modern Italy leans heavily upon Chicago for manufactured goods of many kinds.

But a more personal link is Chicago's people of Italian descent—a proud and sensitive and productive people whose inherited gifts add richness and flavor to this capital of the American heartland.

In their behalf, and in behalf of all Chicagoans, *I migliori auguri alla Repubblica Italiana.*

SOVIET NEGOTIATIONS A TACTIC

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. RARICK. Mr. Speaker, keeping the American people accurately informed is the greatest challenge to free speech.

Mr. N. Henry Josephs, 40 Wall Street, New York City, former special consultant to the Undersecretary of War, has prepared a treatise, "President Dwight David Eisenhower—Fruitless Efforts for Peace in Negotiations With Communist Russia."

Mr. Josephs' article covers numerous unsuccessful negotiations by President Eisenhower with the Russians—which the author realizes were tactics used by the Russians to gain precious time.

He points out that our leaders were lulled into a sense of false security—while the Soviets were utilizing the time to escalate their armament buildup.

He says:

This tactic has been successfully employed by every head of the Soviet Union ever since.

I insert Mr. Joseph's article in the RECORD, as follows:

PRESIDENT DWIGHT DAVID EISENHOWER—HIS FRUITLESS EFFORTS FOR PEACE IN NEGOTIATIONS WITH COMMUNIST RUSSIA

(By N. Henry Josephs)

I am not affiliated with any organization, I am not sponsored and all expenses are borne by myself.—N. HENRY JOSEPHS.

NEW YORK, *May 1969.*

"Abroad, in every major sector, we confront a formidable foe, an expansionist tyranny which respects only toughness and strength and still displays little interest in traveling the pathways to peace, with honor and justice. Today, the Communists reach ruthlessly for domination over Southeast Asia and are trying to break our will to foil the attempt. In the Middle East, month by month they move closer to testing our resolution. The same is true in Korea. Constantly they stir new troubles in every area

of weakness they can ferret out in Eastern Europe, in Africa and Latin America. It is one thing to call for a peaceful settlement of this struggle. It is quite another to call for retreat by America. The latter is the best way I know to stockpile tragedy for our children." (August 5, 1968)—Dwight David Eisenhower, Late President of the United States.

GENEVA—1955

In June of 1955 representatives from sixty countries gathered in San Francisco for a week-long celebration commemorating the Tenth Anniversary of the signing of the Charter of the United Nations with Dr. E. N. van Kleffens, of the Netherlands, presiding. Dr. van Kleffens made it clear that this was to be a commemorative meeting and invited the representatives assembled in the San Francisco Opera House to limit their speeches to commemorative purposes. This procedure was adopted in order to stay clear of any issues of substance that might offend the Russians.

Molotov, who headed the Russian delegation, was smiling and was most friendly. He went sightseeing and for the first time the Russians mixed at cocktail parties with members of the delegations of the other Nations. Through an intensive charm campaign, they left no stone unturned to win friends and influence people and moved in wherever there was a fertile field which could be exploited to their advantage.

This "charm campaign" encouraged us to agree to a Summit Meeting with the Russians in Geneva. This Summit Meeting was received throughout the world with great optimism and with a sense of hope that peaceful means for co-existence could be found and that wars in the future could, at last, be averted. The meeting in Geneva by the Big Four, United States, the Soviet Union, Great Britain and France, was held in an atmosphere of friendship. This, the Russians quickly propagandized as the new spirit, the "Geneva Spirit".

At the conclusion of the meeting, President Eisenhower cautiously announced that at the Geneva Summit "a beginning was made and * * * it is just possible that something to the great benefit of mankind may eventuate".

Khrushchev, in his usual bombastic manner, said that "The Geneva conference was of historical significance * * * its distinctive feature was the spirit of cooperation and mutual trust".

After Geneva, the Russians continued to beat the drums of the "Geneva Spirit" and, during the four months following, gave garden parties, exchanged special visitors with the United States, invited the French cabinet ministers to Moscow and Khrushchev and Bulganin accepted an invitation to visit Great Britain in the Spring of 1956. They skillfully lulled the world into a sense of peace and security. The French started to talk about reducing military service and the British introduced bills in Parliament recommending reductions in defense costs.

But when October came and the Foreign Ministers of the Big Four met again in Geneva to formalize the earlier agreements, the Russians, in their not unusual fashion, made an about-face and Mr. Molotov, the smiling, the amiable one, angrily hammered out a fresh Russian get tough policy.

The New York Times, commenting in its lead editorial (Dec. 4, 1955), melancholically said:

"One of the evidences of totalitarianism in government is the haste and precision with which policies can be changed. When Stalin died, Russia seemed to smile. When Lavrenti Beria, head of the secret police, was shot in December, 1953, some of the terror seemed to go out of Russia. When Premier Bulganin and party secretary Khrushchev or their representative, Mr. Molotov, smiled at San Francisco in June, or in Geneva in August, a sort of warmth spread around the world. But now these men smile no longer. We look around the world with a sense of dismay since the end of the foreign ministers' conference in Geneva, from which so much was hoped and in which so little was realized."

GENEVA—1959

Man is a chronic wisher for peace and meetings at the summit always revive his hopes that talks can avert war. This is why, four years after the first Geneva Summit, we agreed to meet again at the summit. However, this time we let be known that we would hold another summit meeting only if an agenda was agreed upon in advance. For this purpose, an East-West Foreign Minister's Conference was arranged to be held early in May, 1959, in Geneva.

This East-West Foreign Ministers' Conference opened in Geneva on May 11, 1959. After forty-one days and thirty sessions, fifty-four speeches (totaling 800,000 words, half of which were uttered by Russia's Gromyko alone) the meeting ended in a stalemate. President Eisenhower, in a secret letter to Khrushchev and as a last ditch effort to break the stalemate, warned Khrushchev that unless some progress was made at Geneva, the United States would turn down an East-West Summit Meeting. In a speech in Moscow, Khrushchev boasted that there *will be* a summit talk, regardless of what happened in Geneva "since the existing situation urgently requires it", a situation he himself created. (Time, June 29, 1959.)

Khrushchev was right, for in spite of all the Russian intransigence, we invited him to the United States. Thus, once again, we encouraged Communist Russia to continue in its belief that setting up obstacles, not removing them, was the way to accomplish their ends.

CAMP DAVID—1959

On September 15, 1959, at Andrews Air Force Base, Maryland, we officially received, as our guest, Nikita S. Khrushchev, the Chairman of the Council of Ministers of the U.S.S.R.

Except for pleasantries usually exchanged on such occasions, nothing significant was said by President Eisenhower or by Khrushchev. Whatever serious talk there was during the brief periods when they were alone, it was labeled as "exploratory". Later, President Eisenhower and Khrushchev after a two hours' talk, issued a joint statement phrased as follows:

"The President and the Chairman (Khrushchev) reviewed the relationship between the two countries and exchanged views in general terms on international problems. They agreed on the general line of their further discussion, which will take place on all these subjects following the Chairman's return from his visit throughout the country. They plan to meet for this purpose at Camp David from Friday evening, September 25, until noon on September 27. The atmosphere of the talk was friendly and frank, with agreement that the discussions should continue in this spirit to seek ways to achieve a better understanding."

At a state dinner given at the White House, President Eisenhower raised his glass to Khrushchev and proposed this toast:

"Now, today, it seems to me that our two countries have a very special obligation to the entire world. Because of our strength, because of our importance in the world, it is vital that we understand each other better. The Soviet Union and the United States must have a common purpose in developing the maximum of fact and truth, so that we may better lead this world, between us, into a better opportunity for peace and prosperity."

Khrushchev answered:

"The United States and the Soviet Union are too powerful to permit quarreling among themselves, * * * Russians believe their Communist system to be superior," he went on, "Americans may believe the same of their system. But surely we should not bring the quarrel out into the arena of open struggle. It is better to let history judge which system is right."

After his sight-seeing, hand shaking tour of the United States, Khrushchev arrived at Catoctin Mountains where he spent three days with President Eisenhower at Camp David. The communist propaganda machine blared out to the World the great "accomplishments" reached at this latest summit meeting, to which they gave the label of the "Spirit of Camp David". In truth, nothing in particular had been accomplished except that it was agreed that a Big Four meeting be held in Paris in the spring of 1960. The communique that was issued said:

"The Chairman of the Council of Ministers of the U.S.S.R. and the President of the United States agreed that the question of general disarmament is the most important one facing the world today. Both Governments will make every effort to achieve a constructive solution of this problem * * * With respect to the specific Berlin question, an understanding was reached, subject to the approval of the other parties directly concerned, that negotiations would be reopened with a view to achieving a solution which would be in accordance with the interests of all concerned and in the interest of the maintenance of peace * * * The Chairman of the Council of Ministers of the U.S.S.R. and the President of the United States agreed that all outstanding international questions should be settled not by the application of force but by peaceful means through negotiations * * *"

An editorial in the magazine America (December 12, 1959) evaluated the Camp David meeting, as follows:

"The spirit of Camp David, as we see it, is simply that cozy sense of well-being that has been lulling us to sleep since the end of September (1959). When this euphoria sweeps over the ordinary citizen, he says to himself: 'Relax. There's a rainbow 'round the corner. The Cold War was a bad dream—nothing but a misunderstanding between good buys who should have been pals all along.' When the spirit grips the columnist, he enlivens his prose with bright illusions: Khrushchev visits Red China, but puts a leash on Mao; Moscow permits a few cultural exchanges, and lo, there are rents in the Iron Curtain; the Kremlin approves a few washing machines, and the columnist sees consumer pressures dictating the course of Soviet policy. Sometimes, too, the spirit of Camp David seems to bewitch governmental officials at home and abroad. Then we hear that it is time to build bridges of understanding instead of walls of containment. We learn that the relaxing of tensions is a harbinger of disarmament and that soon we can trim defense costs. We even hear it whispered that accommodation is not appeasement; that we must give a little and that the time is ripe to seek a changed status for Berlin and East Germany * * * what are the facts, two months and a half, after the chummy palaver in the Catoctin Mountains? Moscow stands astride Berlin in the same threatening pose that created the desperate crisis of a year ago. The threat of unilateral action had been deferred but in no sense withdrawn * * *"

PARIS—1960

The Paris meeting and President Eisenhower's visit to Russia in June of 1960 were agreed upon at Camp David. They were un-

derstood to form together a much desired objective to reduce world tensions and make the Spirit of Camp David a reality.

Consultations were held (April 12, 13 and 14, 1960), in Washington, with our Allies, the Western powers. These consultations and conferences were attended by United States Secretary of State Christian A. Herter and Foreign Ministers Selwyn Lloyd of Great Britain and Maurice Couvre de Murville of France. The talks were joined by Foreign Minister Heinrich van Brentano of West Germany, Howard C. Green, Canadian Foreign Minister and Antonio Segni, the Foreign Minister of Italy.

In the meantime, Mr. Haggerty, presidential press secretary, flew to Moscow and there, with Russion officials, was working out the details of the President's visit. White House Secret Service men went to Moscow to consult with Russian security police to insure the safety of the President's tour. It was agreed that the President would appear on television and radio and would speak to the Russian people, the same as Khrushchev did when he toured the United States. However, the President's tremendous personal success during his historic journey, which took him to eleven nations and three continents, and the warm reception given him on his goodwill tour of Latin America in February and March of 1960, worried Khrushchev and some of the other Russian leaders. They began to show outward signs that they felt that they made a terrible mistake in inviting the President to visit the Soviet Union. The Central Intelligence Agency reported to Washington an item which puzzled our top officials. To commemorate President Eisenhower's visit, Russia was printing materials for magazines containing flattering and friendly pictures of our President and of our country. The Central Intelligence Agency had found out that this advance press run had been ordered stopped.

About the same time, efforts were being made by the Russians to compromise members of the White House Staff who were then in Moscow attending to the details for the President's trip.

"Unbeknown to the West, Khrushchev (or the thinkers around him) was seeking ways and means of avoiding, if possible, * * * the Eisenhower visit to the U.S.S.R. * * * One night, after a hard day's work preparing for President Eisenhower's visit to the U.S.S.R., members of Hagerty's staff had dinner and sought their uncomfortable beds in their Moscow hotel. They had hardly been settled in same, in monastic bleakness, when their phones began to ring. At the end of every line was an English-speaking Russian girl, friendly to the point of wanting to come up and make each man's night more comfortable. Hagerty stayed that night at Spaso House with Ambassador Thompson. When he was informed of the phone calls to his people, he confronted a Russian official at a ceremonial luncheon the following day and boldly accused him of the attempt to compromise members of the White House staff. The official looked blank." (William Randolph Hearst, Jr., Bob Considine and Frank Coniff in "Khrushchev And The Russian Challenge", page 234).

On May 5, 1960, Khrushchev announced that an American U–2 reconnaissance plane had invaded Soviet territory on May 1, in "an aggressive provocation aimed at wrecking the summit conference" and that it had been shot down and its pilot, Francis Gary Powers, arrested for spying. On May 11, Khrushchev, speaking at a display of the alleged wreckage of Powers' plane and equipment, expressed doubt that President Eisenhower would now be welcomed in Moscow.

George E. Sokolsky (New York Journal American—May 13, 1960) in an article entitled "Why Does Mr. K. Fear Ike's Visit?" discussing Khrushchev's efforts to stop the President from visiting Russia, said:

"It is beginning to appear that Nikita Khrushchev wants to call off the Summit Conference or President Eisenhower's visit to Soviet Russia or both. * * * The visit of President Eisenhower to Russia in June would bring cheer and good-will to the Russian people. * * * Khrushchev is doing everything conceivable to break down the will of the Russian people to receive Eisenhower with enthusiasm. * * * Khrushchev's present conduct is making it increasingly difficult for President Eisenhower to go to Russia and the efforts are so persistent and so irritating that they are becoming unmistakable and sharply antagonistic. Khrushchev's game apparently is to get Eisenhower to decline to go. Then the Russian will enter upon a world-wide denunciation of Eisenhower and the United States. If President Eisenhower sits tight, moves according to schedule, Khrushchev may find himself in the embarrassing position of being forced to tell Eisenhower that he does not want him to come."

Khrushchev, although delighted over the U–2 incident, was not yet certain whether it was good or bad to withdraw outright the invitation to Eisenhower to visit Russia. Instead, he mapped out a better plan. He announced that he would go on with the proposed Paris meeting and, on his arrival in Paris, he pledged to "exert all effort to make the conference a success, to enable it to result in the further lessening of international tension, in the consolidation of peace and security of nations."

But, on May 15, in separate private meetings with British Prime Minister Harold Macmillan and French President Charles de Gaulle, Khrushchev said he would not participate in the summit talks unless the United States terminated all flights over the Soviet Union, apologized for its past "aggressions" and punished those responsible for the flights. Informed by Macmillan and de Gaulle of Khrushchev's stand, President Eisenhower told the Allied leaders that the flights had been halted and would not be resumed, but he rejected the other demands.

On May 16, the four heads-of-government met in the Elysee Palace. At this meeting, Khrushchev asked to be heard and for one hour he subjected President Eisenhower to one of the bitterest attacks ever heard. Hitler, in his most despicable moments, could not have used more foul language than Khrushchev did on this occasion. At the end of his speech, he brusquely withdrew his invitation to President Eisenhower to visit the U.S.S.R. Macmillan and de Gaulle pleaded with Khrushchev to withhold publication of the speech and later Macmillan visited Khrushchev and urged him not to wreck the conference. De Gaulle tried to save the Summit Meeting and, after one afternoon and night of harried conferences, he asked that all meet the following morning, May 17, "to ascertain whether it is possible for the summit conference to begin the study of the questions which we agreed should be taken up." De Gaulle, Eisenhower and Macmillan showed up, but Khrushchev went for a ride in the country. The three Western leaders were forced to announce that because of Khrushchev's absence the "planned discussions could not take place".

On May 18, in a hectic two and a half hour press conference attended by nearly 3,000 persons, Khrushchev denounced United States' actions as "thief-like", "piratical" and "cowardly" and called President Eisenhower a "fishy" friend. Most of the newsmen present interrupted Khrushchev repeatedly with boos. Khrushchev booed back at them.

ONE MORE SUMMIT?

The declared policy of the new Administration in our relations with the Soviet Union was clearly stated by President Richard M. Nixon when he said that "We are in an era of negotiation and we hope the era of confrontation has passed". I am in favor and I support the President's plans to enter upon direct negotiations with the Soviet Union, in the hope that a system of limitations and control of armaments could be developed by mutual agreement.

However, it is one thing to continue our efforts for peace through renewed negotiations with Communist Russia and quite another thing unilaterally to withhold the development of minimum safeguard systems of our own while giving the Soviet Union further additional time in which to develop and build, which they will undoubtedly do, the kind of weapons that would give them an effective and deadly first strike capability against the United States. It can only be suicidal for us to allow another period of negotiations to further strengthen Russia and weaken ourselves.

Recently, in the Senate it was said, in a derisive manner, that some of us discovered that "Suddenly, the Russians are eight feet tall". Let us be honest and recognize the fact that the present strength of the Russians in missile sophistication and missile inventory did not come about "suddenly". The tactic of negotiations has always been employed by the Russians for the purpose of accumulating military strength. They have, during these past fifteen years, bent all their efforts and spent most of their national wealth to build up and, indeed, did build up the missiles which we now have to reckon with.

Two examples should suffice as a sober reminder of Communist Russia's tactic of employing negotiations to cover up eventual deceit.

During the time period consumed by the Geneva and Camp David talks, the Russians developed and built ballistic missiles which they tested (1960) by shooting some of them in the Pacific, right in our back yard, from a firing pad in Russia, more than 7,700 miles away. In June, 1961, Khrushchev solemnly declared that "the Soviets would resume nuclear weapon tests (only) if the United States resumed such tests." Three months later the Soviet Union, with less than twenty-four hours' notice, broke a thirty-four month moratorium and exploded in rapid succession (September 2, 1961) fifteen nuclear tests, all in the air, and by November 30, 1961, detonated more than thirty bombs, one of them the largest ever detonated by man, a bomb of more than fifty megatons.

The Russians did not "suddenly" become eight feet tall then any more than now. The explosions of the nuclear tests in the air on one day's notice and the detonation of more than thirty bombs of high megaton content took a lot of time in developing, building and preparing for the actual firing. The Russians gained this precious time by keeping us busy in fruitless negotiations.

Stalin said (as early as the Fourteenth Communist Congress—Dec. 18, 1925) that periods of negotiations between the world of the bourgeoise and the world of the proletariat are necessary to international communism and ultimate world conquest. Such periods offer "periods of accumulation of strength which have great significance for further revolutionary initiatives." This tactic has been successfully employed by every head of the Soviet Union ever since.

Negotiations, yes! But not at the expense of our own security. Not without strengthening our own built-in physical safeguards against deceit or surprise attack. Not without an antiballistic missile system (ABM) of such second strike capability that Communist Russia will not misjudge. For, another summit meeting with Communist Russia may be *our last summit.*

COMMISSION ON OBSCENITY AND PORNOGRAPHY

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1969

Mr. SAYLOR. Mr. Speaker, my district has been flooded with obnoxious pornographic literature. The colloquy in the House initiated by our distinguished colleague from Ohio (Mr. WYLIE) is extremely timely because I have been informed that the Commission on Obscenity and Pornography is due to release an interim report within the next week on the results of its investigations to date.

The Congress made a small error in writing the legislation which created the Commission, because we did not call for a report before January 1970. I will take my share of the blame for that oversight in that I was one of the original sponsors and should have insisted on a cutoff date.

If my information is correct, the Congress is indeed fortunate to have persons serve on the Commission who recognize the gravity of the situation confronting us with respect to the flood of pornographic literature. The Commission is to be commended for its proposed action to publish a report on its activities to date.

In fact, Mr. Speaker, the 18-member Commission is meeting this very day to decide on the final contents of the interim report to Congress. My colleagues will be pleased to learn as I was that the Commission is also contemplating the publication of a model Federal statute dealing with the subject of pornography; however, there is some question whether it will be released at this time. I want to go on record as saying that I believe it extremely important that this House have the benefit of the Commission's investigations in the form of that model statute.

Perhaps the Commission is hesitant to make a specific recommendation to the Congress before the deadline. I am sure they feel that more study, time, and exhaustive deliberation is needed before a model statute is proposed. I can sympathize with this feeling—the Commission and the Congress want the right law, an enforceable one that will solve the problem. I submit that the Congress desperately needs the guidance it can receive from the experts on the Commission, and now is the time to obtain that guidance. The Commission's job is not done with the publication of an interim report; the response of the Congress to the model statute may provide new avenues of approach to the problem, but we will continue to need the assistance of the Commission which we created.

It is my hope, Mr. Speaker, that the Commission will give us the benefit of their investigations and help us find a way to put a stop to this filthy junk which is being sent unsolicited through the mails and which permeates the Nation's movie houses. I am one of those 158 sponsors of legislation which calls a halt to this traffic.

I admit to not being an expert on pornography, and I admit that the deliberations of the Commission on Obscenity and Pornography could influence my own approach to the problem of writing an enforceable law. I would like the guidance of the Commission now—not 7 months hence. I am sure that other Members of the House feel as I do.

TRUMAN WARD

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1969

Mr. RYAN. Mr. Speaker, we returned to Washington on Monday to find that Truman Ward, who has been a friend of many of us for many years, had suddenly and unexpectedly passed away. It seems difficult to imagine that his gruff but friendly voice, usually spiced with some quip or cheerful comment, will not be at the other end of the phone when we call his office in the future. Mr. Ward was a familiar face to all Members and their staffs ever since he first arrived in Washington in 1921 and became the Democratic printer. All will attest to his affability and easygoing manner, and everyone will agree that his dedicated and unselfish service will be difficult to replace.

Besides serving as clerk of the majority room, he also served unofficially as a placement officer for newcomers to Capitol Hill and politically displaced staff members. As the majority printer, he worked hard and often under trying circumstances for the Members. He had the singular capacity to work with several hundred Members of the House, each one of whom invariably thinks his own requests are more important than anyone else's, each one of whom invariably expects immediate service. Yet Truman Ward managed to keep all appeased, and all of the printing requirements served.

Mr. Ward belonged to the Capitol Hill Metropolitan Baptist Church where he served diligently as a member of the board of deacons since 1943. He was as devoted to his religion as he was to the House of Representatives. Both the Members of the House and the congregation of the Capitol Hill Metropolitan Baptist Church will miss his presence, his outgoing nature, and his scrupulous integrity.

Mr. Speaker, I would like to extend to Truman Ward's family and his staff my deepest sympathy.

WHAT IS RELEVANT EDUCATION?

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. SAYLOR. Mr. Speaker, out of the confusion and crisis-like atmosphere which surrounds today's universities, it is refreshing to read an article by an educator who has not been stampeded into mouthing the jargon of the radicals and militants and who is able to take a long look at the kind of education afforded today's students in terms of its "relevance." All too often we have heard only about the complaints of the militant students in terms of "educational relevance." I am pleased to bring to my colleagues' attention the other side of the story.

Dr. William W. Hassler, president of Indiana University of Pennsylvania which is located in my district, has spoken out on the subject of educational relevance in the pages of the Johnstown Tribune-Democrat. I believe his comments will be of particular interest to those seeking a calm and reasoned response to the cries of the campus radicals about today's education. The article follows:

IN MY OPINION—EDUCATIONAL RELEVANCE: NOW AND LATER

One of the problems of great concern to both high schools and college students today is the question: Is my education relevant?

Much discontent arises when the answer is "no"; when students cannot relate what they are learning to the world about them.

A great deal of the controversy over the role of relevance in education arises from a failure to distinguish between what is immediately relevant from what has long-term relevance. From the standpoint of short-term relevance, there is no dispute about the desirability of including relevant material in the curriculum.

For example, it is inconceivable that today's student should not become acquainted with computers and modern scientific instruments, as well as know the significance of RNA and DNA, air pollution, the population explosion, space exploration, ghetto problems and the world's political situation.

This type of relevant subject matter will make learning more interesting and at the same time help the student make a better contribution to society.

However, near-term relevance involves knowledge and skills which will in general tend to improve present-day society but not radically change it. The lesson of history is that knowledge and learning which have long-term relevance are the types which creatively mold a new society. This means that much of the learning and research that has long-term future implications may be totally useless and irrelevant to today's society.

This principle can be illustrated with numerous examples, but let us consider just a few. Over 100 years ago an Austrian peasant named Gregor Mendel entered a monastery at Brunn. His interest in farming led him to study the hereditary characteristics of ordinary garden peas. For eight years he devoted himself to this study, which resulted in the discovery that he could predict the characteristics of successive generations of "mated" peas. Mendel published his laws of heredity in a local scientific journal which collected dust until 35 years after his death. Then in 1900 Hugo deBries discovered Mendel's article and realized its significance. He and other eminent biologists used Mendel's work as a basis for the development of the remarkable field of genetics which has made possible the marvelous breeding of desirable characteristics in plants and animals.

What had been "useless" research and knowledge by Mendel later constituted the foundation for a biological revolution with immensely practical applications.

Another example of the importance of long-term relevance in education is illustrated by the nuclear studies of Drs. Hahn

and Stresseman prior to World War II at the Kaiser-Wilhelm Institute in Berlin. These two eminent scientists were bombarding uranium with subatomic particles when they suddenly obtained a strange reaction. At the time they were not clear as to its significance, let alone realizing that it had any practical value. However, their mathematical assistant, Lisa Meitner, deduced the fact that Hahn and Stresseman actually had split the atom, formed radioactive degradation products and released tremendous energy.

Being a Jewess, Miss Meitner was exiled by the Nazis, whereupon she fled to Denmark. Here she excitely told her story to Dr. N. Bohr, the famed Danish atomic scientist who immediately flew to America to alert Albert Einstein at Princeton to the fact that German scientists were on the track of atomic energy. Dr. Einstein in turn sold President Roosevelt on the necessity of initiating a crash program in atomic energy for this country.

Again, it is important to realize that the initial experiments involved in splitting the atom were done as a matter of theoretical interest with no thought of practical applications. But what development could be more relevant to the nuclear generation that succeeded this discovery?

The point I wish to make is that both near-term and long-term relevance are important; the former to the improvement of contemporary society, the latter for the creation of a new way of life.

MILITANT WELFARE—A HARD LESSON IN NONCHARITY

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1969

Mr. RARICK. Mr. Speaker, it is said to be more blessed to give than to receive—and so aspires the militant National Welfare Rights Organization, who not only want to receive, but also to give—give orders—that is, to the professional welfare workers.

And the sad commentary on this welfare burlesque is that those who are truly in need will be hurt by it all.

I insert a news article as follows:

[From the Washington Post, June 1, 1969]

RADICALS' DEMANDS STUN AND POLARIZE WELFARE LEADERS

(By Eve Edstrom)

". . . or get off the pot." The full, obscene demand was shouted over a seized microphone last Sunday night as more than 5000 of the Nation's social welfare leaders convened to hear an opening address by their president.

In stunned silence, those who had devoted decades to helping the poor heard themselves called "racist pigs," and "fat cats," and members of the "white imperialistic oppressive society."

"Are we going to have too much self-respect to allow a minority in this world to . . . on the rest of humanity?" another speaker shouted.

The platform had been taken over by dissident students, new organizations of militant social workers, and welfare mothers. Two deep, they lined the vast stage in the grand ballroom in the New York Hilton.

When one of the captive audience attempted to lead a mass walk-out, a human chain blocked the exits. Welfare mothers, under the direction of the dashiki-clad Dr. George A. Wiley, said nobody was going to leave until thousands of dollars were anteed up for more of the poor to attend conference conventions. With that, plastic ice buckets were passed around for contributions.

The temporary ballroom dividing wall had to be removed to free the delegates before the 96th annual forum of the National Conference on Social Welfare could begin. Some three hours late, outgoing president Arthur S. Flemming began his opening address: "An Action Platform for Human Welfare."

But the chaos was not over. Wiley and his welfare mothers had set the stage for others to do their thing during the remaining days of the conference—black social workers, Spanish-speaking people, militant students, an Indian who inveighed against the raping of squaws, and a young girl who shrilled that she was a former mental patient and an ex-drug addict.

After four days of confrontations and conciliations, a delegate sat outside the ballroom where the Conference was coming to a close.

"I said to myself this couldn't be happening to US!" he said.

"What am I going to do? Just say a tired liberal is going home."

There were many like him, people who had come prepared to adopt a platform for bringing economic and social gains to the poor.

They had scheduled workshops to "tell it like it is" and to stimulate a "live" confrontation. Indeed, they were going to discuss the "challenge to the professional—can you train the nonprofessional?"

The nonprofessionals are still laughing. The time for well-meaning words is over, they said. The time for action is now.

The failure to silence the militants was a conscious strategy of Flemming, who also is president of the National Council of Churches and president of Macalester College in St. Paul, Minn., where former Vice President Hubert H. Humphrey is teaching.

Despite contrary advice from some of his board members, Flemming wanted to keep the avenues of communication wide open and, by not stopping anyone from speaking, prevent the possibility of violence.

And so it was with some pride that at the end of the conference, Flemming turned over the gavel to the new president, Wilbur J. Cohen, with the words: "I did not use this gavel once this week—I didn't think it appropriate."

Yet the conference that began with threats being made in public ended with one made in private.

Three representatives of the National Association of Black Social Workers cornered Cohen and one said: "We are going to make trouble for you in Chicago," the site of next year's meeting.

The three were angry with Cohen for giving what they characterized as a "law and order" speech. Cohen never said "law and order" but he declared he opposed violence and threats under any guise.

Nor were Cohen's credentials as a former HEW Secretary and long-time battler for liberal causes sufficient.

Ron Lewis, a Negro faculty member at Berkeley's School of Social Welfare, scoffed: "Did you say that guy was a former Secretary of Health or Welfare of something? No wonder the country is in the shape it is in. He's a negative force. He has no vision. He wants to take us backwards, undo everything we've accomplished this week."

In truth, Cohen's speech was an attempt to temporize some of the decisions that had been made during the week by the polite and patient Flemming.

Wiley, for example, had demanded that the Conference contribute $35,000 to pay the way for 250 poor people to attend next year's conference. And the conference had agreed.

But that vote must be ratified by a mail ballot which will call for an increase in member agency dues. There already is talk that many members would prefer to desert the conference than "pay blackmail" to Wiley's National Welfare Rights Organization.

However, Wiley's initial success caused others to become bolder.

By Tuesday night, the National Association of Black Social Workers had captured all microphones and listed numerous demands, in their representation on policy-making boards.

The conference again was halted until one of the dissidents cockily announced: "This assembly may now proceed with business due to the fact that the board of directors has pretty much accepted the demands made upon them."

By the time the conference had ended, a radical shift in power to give minorities a far greater voice than their numbers actually warranted was underway.

Of all professions, the social welfare workers should have been prepared for the confrontations that took place. But, as one observer said, they thought they were immune from attack because their lives have been spent helping the helpless.

HOUSE OF REPRESENTATIVES—*Monday, June 9, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let not mercy and truth forsake thee; bind them about thy neck; write them upon the table of thine heart.—Proverbs 3:3

O God, almighty and eternal, Supreme Ruler of men, without whom no nation can be great, no people can be good, make us mindful of Thy presence, eager to do Thy will, and willing to walk in Thy way.

May the light of Thy spirit enlighten our spirits that we may see the truth clearly, follow it courageously, and live with it confidently, knowing that it is the truth which makes and keeps men free.

Guide Thou our President and all who confer with him that out of conferences may come plans for the ending of war and procedures for ushering in peace. So may it be for Thy glory and for the good of all mankind. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, June 5, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 3480. An act for the relief of the New Bedford Storage Warehouse Co.

THE LATE HONORABLE SENATOR GUY CORDON

(Mr. WYATT asked and was given permission to address the House for 1 minute.)

Mr. WYATT. Mr. Speaker and my colleagues, it is my sad duty for me to announce to the Chamber the death yesterday in Washington of former Senator Guy Cordon of the State of Oregon. Senator Cordon served with great distinction in the U.S. Senate representing our State from 1944 until January 3, 1955. Since that time he has made his home here in Washington and has shown his interest in the work of Congress on many, many occasions. He was a very close personal friend of mine and had the really great distinction, as far as my part of the country was concerned, in serving as chairman of the Senate Interior Committee and simultaneously as chairman of the Interior Appropriations Subcommittee which has happened very, very few times in the history of the Republic.

My heartfelt sympathy goes to Mrs. Cordon and members of his family.

Guy Cordon was an outstanding Senator from Oregon. He was highly esteemed by his colleagues in the Senate for his tremendous ability, his impeccable integrity, and his contribution to the Senate in legislating in the areas of conservation, and water and land resources. He was recognized as the expert in the Senate in these areas. His unswerving honesty and integrity were his hallmarks. He had the complete trust of his Senate colleagues regardless of political persuasion.

During his lifetime Senator Cordon diligently followed the tenets laid down in the Sermon on the Mount. It was my privilege to know him and I count him as one of the finest men it has been my good fortune to know. He represented the State of Oregon, and served the Nation well, and with dedication and loyalty. With all his great ability and knowledge he was a very kindly man, who was quick to help others, regardless of their station in life.

Senator Cordon had a tremendous capacity for understanding and tolerance of men. Any unkindness, or any suggestion of pettiness, were completely alien to his great character. As we pass through life we meet and are associated with many wonderful people. Those of us who were fortunate enough to have known Guy Cordon counted him as a truly great person. We shall sorely miss Guy Cordon—but our memories of him as a great, good man will endure.

GENERAL LEAVE TO EXTEND

Mr. WYATT. Mr. Speaker, I ask unanimous consent that all Members desiring to do so may include their remarks at this point in the RECORD within 5 legislative days.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

CONCENTRATION CAMPS: AMERICAN STYLE

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, a number of colleagues and myself have introduced H.R. 11373 which would repeal that section of legislation commonly referred to as the McCarran Act which permits the establishment of emergency detention camps. The passage of that legislation with this section was, in my judgment, one of the low points in the history of this country, and we should immediately move to correct that blot on our democratic process.

Citizen groups all over the country are marshaling support for those measures which would repeal the legislation authorizing emergency detention camps. I am proud to state the Commission on Human Rights of the city of New York unanimously adopted a resolution on this subject calling for the repeal of this heinous legislation. For the information of my colleagues, the resolution follows:

STATEMENT BY THE CITY COMMISSION ON HUMAN RIGHTS REGARDING THE EMERGENCY DETENTION ACT

The City Commission on Human Rights views with grave concern the danger to civil liberties inherent in the continued existence of the federal Emergency Detention Act of 1950 and calls for its repeal.

Subtitle II of the act provides that in the case of an "internal security emergency," any person who *probably* will engage in, or *probably* will conspire with others to "engage in acts of espionage" can be incarcerated in detention camps.

Further, persons detained will not be brought to trial, but instead will be judged by a Preliminary Hearing Officer and a Detention Review Board, wherein the person detained will be required to prove his innocence while government is not required to disclose evidence or produce witnesses to justify the detention.

Such procedures, in our judgment, directly violate constitutional guarantees including due process of law, and run counter to the entire tradition of justice and fair play in our American democracy.

The Commission regards other existing laws and procedures as entirely adequate to safeguard our internal security.

The Commission recalls the experience of Japanese-American citizens during the Second World War who were jailed solely because they were Japanese. This and the European tragedy during the same period and the excesses of the "McCarthy era" are dangerous examples of what can happen when due process of law is circumvented.

Detention camps are not the answer to the social ills which threaten the fabric of our society. In the present context, a revival of the idea of preventive detention would clearly be aimed at those who exercise their right to open protest against minority groups and against the poor. Guilt by association could become the guilt of common dress, of collective rhetoric, of a dark skin, or a Spanish accent, or of being poor. The law then approaches justice in group, rather than individual terms in direct contravention of American democratic traditions.

The Commission unequivocally opposes any revival of such measures and calls on President Nixon and Attorney General Mitchell for their suppport in achieving the quick repeal of the Emergency Detention Act.

It also calls upon the Congress of the United States and all municipal, state and Federal authorities to exert their influence to bring about the repeal of this abhorent statute.

Unanimously adopted by the Commission.

A FIRST STEP

(Mr. KOCH asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KOCH. Mr. Speaker, on May 15 of this year, I criticized the President for his failure in not having broken new ground when he made his major speech on Vietnam. On that date, I introduced a resolution in this House to the effect that it was the sense of Congress that the President should call for an immediate cease-fire and should direct an immediate unconditional withdrawal of 100,000 U.S. troops from Vietnam.

I am heartened by the fact that the President by his announcement authorizing the immediate withdrawal of 25,000 U.S. soldiers from Vietnam has taken a cautious but new step and I want to praise him for that. His statement indicates that he intends to escalate that withdrawal and I will support such action on his part. I hope that he will now call for an immediate cease-fire and end thereby the American casualties which continue to occur each and every day that the fighting continues. I urge my colleagues to indicate their support of House Concurrent Resolution 256 which reads as follows:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that the President should call for an immediate cease-fire and should direct an immediate unconditional withdrawal of one hundred thousand United States troops from Vietnam.

Let us, by supporting this resolution, inform the President that his first step has received our support and that we call upon him now to take the further steps necessary to end our tragic involvement in this war.

TROOP WITHDRAWAL FROM SOUTH VIETNAM

(Mr. MONTGOMERY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MONTGOMERY. Mr. Speaker, I would like to commend President Nixon on his decision to withdraw some 25,000 American troops from South Vietnam.

Following my tour of Vietnam this past Christmas, I reported to this body on February 4 that the South Vietnamese were capable of assuming more responsibility in fighting the war. At that time I recommended to Secretary of Defense Melvin Laird that some American troops could be brought home without affecting the overall fighting efficiency of our men.

To me the most important reason for beginning a partial troop withdrawal is we will be forcing the South Vietnamese to accept more responsibility in defense of their country. I still feel they are fully capable of shouldering a larger share of the burden and feel strongly the time has arrived for them to do so. I am hopeful the situation will permit us to bring additional troops home later this year.

AUDITING BREACHED CONTRACTS

(Mr. PODELL asked and was given permission to address the House for 1 minute.)

Mr. PODELL. Mr. Speaker, every Member of this House has asked how we can restore fiscal responsibility to all

forms of Government procurement of goods and services. I believe we have found a reasonable answer in the form of H.R. 11493, which has commanded a significant bipartisan, national response here in Congress. As of this morning 128 Members of this House have cosponsored this bill, including senior and junior Members of both parties and from all parts of the Nation. I wish to thank the Members of the House for their response.

This legislation, in essence, calls for the automatic auditing by the General Accounting Office and report to the Congress on all Government contracts that are late in delivery or with cost overruns in excess of 10 percent of the agreed-upon contract price. This is merely a full disclosure measure, particularly needed in light of the major governmental expenditures coming up in the future. I think it is essential that we have an agency responsible to the legislative branch of Government, publicly revealing any abuses perpetrated with money that we appropriate.

Additionally, it is a fact that the legislative power has been steadily seeping away from our branch of Government to the executive branch. It is essential that we restore the present imbalance which to a major extent this measure will do.

May I emphasize that I am not criticizing any Members of Congress or the military. This is not an antimilitary bill, nor is it an antibusiness bill. It is merely to redress the Government balance on behalf of fiscal responsibility. We are placing with this measure any agency and contractor on notice that sloppy accounting, nonenforcement of contracts, and nonperformance by civil servants will not be tolerated. This bill will put an end to this kind of practice.

The General Accounting Office has done a marvelous job in the past on given contracts. My faith is based on its previous performance. Any sums we would have to spend to make it able to perform such expanded functions would pale beside what the Nation will lose if we continue down the same fiscal road. I emphasize again that this is not an antimilitary, antibusiness, or partisan measure. It is above partisanship and regionalism. My office is holding it open for further sponsorship, and I welcome further support from the Members of this House.

ANTI-BALLISTIC-MISSILE SYSTEM

(Mr. BURLESON of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURLESON of Texas. Mr. Speaker, prominent in the news media are the voices of those in opposition to the development of an anti-ballistic-missile system. In recent days some of the critics have expanded their attack to include military preparedness.

I question no man's motive or his convictions. I do question judgments as to the kind of world in which we live. I question the appraisal of the nature of our adversaries and a willingness to trust their intent.

With the impression that the preponderance of expressed opinion is on the side of opposition to the ABM, and because of stories on waste and extravagance in some military purchases, which seemingly serves as a catalyst for broad criticism of our entire Defense Establishment, I have requested a special order for tomorrow to discuss this matter. It seems to me the time has come to take a stand on this vital issue and I invite you, regardless of your position, to participate in a discussion on this matter.

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. BURLESON of Texas. I yield to the gentleman from Illinois.

Mr. ARENDS. I appreciate the remarks that the gentleman has just made. Like yourself, I think it is high time that those of us who are in support of the ABM get on the offensive. I will listen with real interest to your speech tomorrow, and hope that many of us may cooperate in your endeavor.

Mr. BURLESON of Texas. I thank the gentleman very much.

PRESIDENT NIXON'S ANNOUNCEMENT OF IMPENDING WITHDRAWAL OF TROOPS

(Mr. TIERNAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. TIERNAN. Mr. Speaker, I was pleased at President Nixon's announcement of the impending withdrawal of 25,000 American troops. I hope that this proves to be but the first of several steps on the road to peace in Southeast Asia. I feel that this will help to create a more independent South Vietnamese Government and I think it will serve as an inducement to both the North Vietnamese and the Vietcong to negotiate more seriously at the Paris peace talks.

It is important, however, that President Nixon be urged to continue in this direction. We all realize that there are many problems that were not dealt with at the Midway Conference; problems of great controversy and of wide significance. I am hopeful that the Nixon administration will soon be discussing these problems and others in an attempt to continue what I consider to be the beginnings of a more constructive U.S. policy for South Vietnam.

THE PLATFORM OF JOSEPH A. YABLONSKI

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, only a little over a week has passed since the electrifying news that Joseph A. Yablonski will run for president of the United Mine Workers of America. It is not only the fact that a great personality with experience and know-how has announced his candidacy; it is highly significant that Mr. Yablonski has drafted a platform which is a vertiable Magna Carta for the coal miners of America.

In the brief period of days since Mr. Yablonski announced his candidacy, coal miners in many States have rallied to his banner. He has provided, and he will provide, a great beacon of hope for thousands of miners who have worked, sweated, bled, and suffered while the top leadership of their own union has corrupted the trust placed in that leadership. The supine and callous attitude of the top dogs in the UMW hierarchy has written a sad and sorry chapter in the labor movement. But a new day is dawning for the United Mine Workers of America, Mr. Speaker.

In an address to several hundred coal miners and their families on Sunday, June 8, at Lowell Phipps Park in Gilbert, Mingo County, W. Va., I stated:

I predict that 1969 is the year when the United Mine Workers of America will return to its former days of glory under John L. Lewis, and will once again be a clean union, an aggressive union, a union which doesn't get in bed with and call the coal operator 'sweetheart', a union which stands up and protects the coal miners when their greivances come up the chain of command, a union which takes care of the rank and file first, and doesn't think first of the salaries and pensions of the top brass.

Mr. Speaker, because Mr. Yablonski's platform so well represents the type of leadership which is urgently required in the United Mine Workers of America, under unanimous consent I include the text of the announcement of his candidacy and his personal biography:

STATEMENT BY JOSEPH A. YABLONSKI ANNOUNCING CANDIDACY

Today I am announcing my candidacy for the Presidency of the United Mine Workers of America.

I do so out of a deep awareness of the insufferable gap between the Union leadership and the working miners that has bred neglect of miners' needs and aspirations and generated a climate of fear and inhibition. For thirty-five years I have been associated with the Union. I have seen this organization stand as the only bulwark against the oppression and greed of the coal operators and the insensitivity and corruption of government in the coal mining areas. I have seen the courage and determination of coal miners and union organizers under the leadership of John L. Lewis against the combined power of industry and government who were determined to break the Union's will and return the miners to their subterranean serfdom. Years later we participated in the establishment of the pioneering Welfare & Retirement Fund and built an unprecedented chain of hospital and health care facilities throughout many coal mining regions.

In an otherwise harsh and hostile environment, the miners relied on their Union, trusted their Union and gave the Union their undivided loyalty. But in recent years, the present leadership has not responded to its men, has not fought for their health and safety, has not improved grievance procedures, has not rooted itself in the felt needs of its membership and has rejected democratic procedures, freedom to dissent and the right of rank and file participation in the small and large issues that affect the Union.

In recent months the shocking ineptitude and passivity of the Union's leadership on black lung disease—not to mention its ignoring this massive disability of its men for years—became apparent to the nation, not just to those inside the Union. The leadership's inaction toward obtaining workmen's compensation laws, outside of Pennsylvania, to include payments for black lung disability became apparent to the nation. The abject

follow-the-leader posture of the leadership toward the coal industry became apparent to the nation. I have been part of this leadership. I participated in and tolerated the deteriorating performance of this leadership—but with increasingly troubled conscience. I will no longer be beholden to the past. I can no longer tolerate the low state to which our Union has fallen. My duty to coal miners, as I see it, is not to withdraw but to strive for leadership of this Union, to reinvigorate its activity with its idealism and to make it truly a Union of 110,000 working miners rather than a Union of inaccessible bureaucrats.

I know the coal industry. I have worked in the mines and know the agony of it. Like most coal miners, I have lost dear friends, and beloved relatives in the mines. When my father died in the mines, I took his place as did so many sons of fallen miners. I know from involvement the experience of organizing miners and administering their affairs within the Union and with industry and government. And I know that the coal industry is booming, with record production and profits—a state of affairs that dramatically changes the economic environment for miners from one of decline to one of growth. Thus, the miners have an even greater claim on safer working conditions, broader economic benefits and considerations from managements. Coal is the most inexhaustible and promising multiple energy source for the remainder of the century. Men make this possible by working in inhumane conditions in the dark and under the ground. These men must never be subjugated by King Coal.

At this point, I want to state clearly the program that I will run on for the nomination and election to the Presidency of the UMWA. This program embraces the most fundamental issues confronting our Union and, as such, I welcome discussion and debate with any other candidates.

1. The occupational violence to life and limb in the mines requires engineering, legal and individual safeguards, not profuse mouthfuls of fatalism. Coal mining is this nation's most dangerous occupation; traumatic accidents take the lives of one out of 300 coal miners every year, at a rate fourteen times as high as the national average for all workers, and thousands of other miners are injured annually; "black lung" disease seriously attacks the lungs of half the miners literally to strangulate their ability to breathe. If elected, I will initiate a series of immediate and longer term improvements along these lines:

a. Expand the Safety Division of the UMW to guarantee a response to safety complaints of miners and to protect miners who make reports. The Division will support effective mine safety committees whose sole purpose is safety and not the perpetuation of incumbent Union leaders in office.

b. Vastly expand Union and publicly supported research in health and safety. The government spends billions in subsidies for various industries. I pledge that the government will receive the strongest persuasions to pay attention to miners' lives over industry profits.

c. Undertake independent investigation of all coal miner complaints in order to monitor the work of Federal and State mine inspectors. No matter how well the pending mine health and safety law is written, it will not be adequately enforced without an adequate Union fighting for its men's health and safety.

d. Push for continual Federal and State legislative and administrative improvements in response to new facts and innovations for health and safety. Included here are workmen's compensation payments for black lung, greater payments for other injuries, and the establishment of a worker's legal right to sue the coal operator for negligence resulting in the worker's injury.

e. Assure that every labor-management contract from now on contains all possible safety and health protections and a special coal operator safety fund for advanced safety improvements beyond the law.

f. Push for adoption by management of the principle that miners are to be paid during the period when a mine is temporarily closed because of the negligence or lack of care by a mine operator.

g. Provide information, assistance and protection to all mine safety committees for dissemination to the men.

h. Work to eliminate the present Federal Coal Mine Safety Board of Review. Appeals from inspectors' orders or closures should be made directly to an expert commission of mine inspectors selected by the Director of the U.S. Bureau of Mines. These inspectors will investigate and reverse or sustain the finding of the original inspector. Appeals from this decision would go directly to a court.

2. I will immediately call for a special convention of delegates (*democratically elected by secret ballot by all local unions*) in order to establish procedures under which every member in each district can determine by secret vote the selection of District Officers and the rules which govern his District.

3. In order to give greater opportunities to younger men for leadership positions in the Union, I will recommend (*and work for*) mandatory retirement of all Union officials at age 65—without special compensation or plus retirement plans. An organization without the nourishment of youth is destined for decay. I will work to obtain the brightest young minds from our Universities and from the grass roots of coal producing states for staffing and leading our Union to meeting the pressing problems of today and tomorrow.

4. I will modernize present antiquated grievance procedures in order to create stability in the Union. This will restore confidence of the membership in the Union and eliminate the unjustified discharges of large numbers of miners and the prolonged work stoppages which result therefrom.

5. I will strengthen and improve the financial structures of the local unions so that they can generate local initiative to meet local challenges. Improved financial structures used for local union purposes are essential to a strong horizontal and vertical Union organization.

6. I will impress upon the Trustees of the Welfare and Retirement Fund the need to liberalize eligibility rules and Fund benefits and make needed reforms. At the next contract negotiations with the coal industry, I shall demand a substantial increase in the 40¢ per ton royalty (unchanged since 1952) that goes into the Fund for pensions to retired miners. The rising cost of living and the spectacular profit registered by coal corporations demand this increase.

7. I will use the financial and political resources of our Union to advance the betterment of members and their families. For example, my Administration will establish credit unions and other financial services to all members with the help of the expertise and assistance of the National Bank of Washington which our Union owns. We will also address ourselves to the grossly inadequate level of taxation of coal companies in the various states and communities which deprives these communities of needed educational and social services. Better schooling for miners' children and the creation of a scholarship fund in all coal mining areas will receive our closest attention. The coal industry has a broad responsibility to the community that provides it with such massive profits and we intend to see that that responsibility is observed. No longer will this Union tolerate the coal industry's control over state and local government to the detriment of the coal miner. I will not tolerate this Union being subservient to the coal industry in Washington.

8. A Union must retain an arms length relationship with management. All the dealings of Union leadership must be open and observable by the membership—including Union reports. Union relationships with other organizations and Union expenditures. Openness in Union activities includes making it easy for a member to obtain information. I pledge an open Administration that encourages, even demands, active participation by the membership collectively and individually. I pledge an end to demeaning and unproductive ties to the coal industry including the severance of the Union's membership in the National Coal Policy Conference. This Conference has as its purpose the opposition to air pollution controls and the promotion of coal. Whatever stands we take on these issues, we should arrive at and take alone. We must no longer compromise our stands in an industry-dominated organization that cares little about the working man. The Union's annual contribution of $75,000 to $100,000 to the NCPC will be devoted instead to the UMWA's Safety Division.

9. There are thousands of miners who are still not members of our Union. These men work for wages ranging from $12 to $16 a day; these men are often sick and old and therefore can be exploited by inhumane managers in inhumane working conditions because they have no other employment opportunities. Who cares for these men? The Union must care for these men and develop an organizing drive that is substance, not form or rhetoric. If elected, I will never allow this Union to forget our poorer brethren.

10. Merit, not kinship, shall be the basis for advancement in administrative positions under my Administration. Moreover, if elected, I shall make it a policy that no relatives of mine, no matter how meritorious, shall be added to the Union payroll. I make this one exception to the merit criterion to emphasize that there will be no crew of my relatives coming on the Union payrolls.

11. To encourage the practice that every miner shall have a hearing, I shall establish a special grievance and complaint office at the Washington headquarters to which miners can write. The officer in charge shall report directly to me. This grievance officer shall have powers to inquire into the grievance and to make strong recommendations for its resolution to the proper Union authorities. At the end of each year, he shall prepare a report on grievances and how they were handled and make it available without cost to any Union member requesting a copy. To increase the diversity of expression, I shall thoroughly change the now rigid, hero-worship-ridden, *United Mine Workers Journal*. Guest editorials and letters to the editor will be encouraged. Dissenting views will be published. There will be far fewer pictures of the Union President and other high officers and more space devoted to the problems and dreams of interest to coal miners. There will be reports of new developments and new findings of our expanded technical staff of engineers, lawyers, physicians, economists and other skills to serve the members with unremitting dedication.

I want to begin now to listen to the miners and to their suggestions as to how our Union can be improved. To that end, I am today opening a Clarksville, Pennsylvania office at my home and I ask any miner who wants to help to write to me today at my home in Pennsylvania (412) 377–2616.

The above program is phrased in positive terms. Quite obviously the fact that these points have to be stated as desired objectives instead of attained realities reflects seriously on the present leadership of the UMWA. Suffice it to say that there is the deepest urgency for competency, hard work, and alertness. These qualities are not now being bestowed on our membership and our miners know it. They are disturbed, disaffected, alienated, at times, even hostile to the Union's leadership and present administra-

tion. There is no use hiding this fact; there is only use in recognizing it as a basis for rebuilding the organization and defining anew its mission.

Every Union should have a vision of the future. Our Union must realize that its responsibilities include adequate payment for work done, adequate compensation for injuries, adequate corporate investment in healthful and safe working environments, and adequate retirement benefits. But the Union's responsibility goes beyond this level of achievement. Unions represent men and women who are part of communities, are citizens of states and a naiton. The public environment affects the well-being of miners and their families. What good is a Union which reduces coal dust in the mines only to have the miners and their families breathe pollutants in the air, drink pollutants in the water and eat contaminated commodities? What good is a Union that achieves an acceptable wage rate and then condones the reduction of that wage by frauds and abuses in the marketplace and waste or corruption in government? If the coal miners of this nation elect me as their President, I pledge them this broader vision of a Union's responsibility.

I look forward to a fair nomination and election contest—one that will illuminate the issues and surround them with rational debate and the fullest participation of every miner. I look forward to visiting miners throughout the coal regions, who are my old friends, and making new friends with miners and their families. The election process is a test of any organization's incumbent leaders to tolerate the prospects of change. It is my hope that the present leadership of the UMWA will pass this test honorably, and encourage honest, democratic procedures. That is all I ask of them. For the rest, I shall rely upon my program and my energies to win this election and forge a truly United Mine Workers of America.

BIOGRAPHY OF JOSEPH "JOCK" YABLONSKI

Mr. Yablonski was born on March 3, 1910, in Pittsburgh, Pa. He attended public schools in California, Pa., until he undertook his first job at the age of 15 at a coal mine owned by Jones & Laughlin Steel Company. As the oldest son in his family, his earnings went for family support.

Mr. Yablonski worked in the coal fields in various capacities throughout the Depression and was actively engaged in the labor strife of the 1920's and 1930's, serving as a picket, worker, and as a labor organizer.

His father was killed in a coal mine accident in May of 1933.

Mr. Yablonski participated in organizing Vesta # 6 in 1933 for the United Mine Workers of America.

One week after transferring to the Cresent #1 mine in 1934, which had over 1200 members, he was unanimously elected President of Local Union 1787 of the UMWA and Chairman of the Mine Committee.

He was elected to represent 15,000 members of District 5 as the Executive Board Member of District 5, for eight years from 1934–1942. The Executive Board represented these men in the International UMWA and also conducted negotiations on wages, hours, and working conditions with the coal industry.

In 1942 he was elected to represent approximately 35,000 coal miners on the International Executive Board of the UMWA. Mr. Yablonski then served as a trouble shooter for John L. Lewis on Union problems of all varieties, traveling throughout the United States and Canada. He has served continuously in this capacity for 27 years and has been re-elected by the UMWA membership of District 5 seven times during this period.

Mr. Yablonski has also served as the United States representative, Coal Division, at the International Labor Organization Conference in Istanbul, Turkey—1956.

He was appointed as a member of Governor Lawrence's Bituminous Mine Law Study Commission in 1960. This work served as the basis for the revision of the Pennsylvania mining law.

In 1965 Mr. Yablonski personally intervened with Governor Scranton to successfully demand an amendment of the Pennsylvania law to grant compensation for coal dust disease (coal workers pneumoconiosis).

He was elected and served as both President of District 5 and as a member of the International Executive Board, from 1958 to 1966.

In 1954 he organized the Centerville Clinic, Inc., a non profit corporation designed for group medical practice for coal miners. The clinic has a budget of over $1 million. Since 1954 he has served, without compensation, as Chairman of the Board of Directors.

He resigned as President of District 5 in 1966.

In 1965 he was appointed by the President of the UMWA as a member of the UMWA Organizing Committee with responsibilities throughout the country.

In March 1969, Mr. Yablonski was elected by the Board of Directors of the Brownsville General Hospital as the Chairman of the Board to serve without compensation.

In May of 1969, Mr. Yablonski was named Acting Director of Labor's Non Partisan League—the legislative arm of the UMWA.

Mr. Yablonski has been married to the former Margaret Wasicek for over 33 years. Mrs. Yablonski is a successful playwright and she has worked with Mr. Yablonski on several plays. They have raised two sons and one daughter. The two sons are now attorneys. Their daughter has a masters degree in social work from the University of West Virginia.

SUMMARY OF POSITIONS HELD

Member of the International Executive Board of the United Mine Workers of America and former President of District Five, United Mine Workers of America;

Represented the United Mine Workers of America at the Coal Mines Committee Meeting of the International Labor Organization held in Istanbul, Turkey;

Member of the Bituminous Mine Law Study Commission of the Commonwealth of Pennsylvania;

Member of the Governor's Advisory Committee to study revisions of the Pennsylvania Clean Stream Laws;

Member of the Allegheny County Air Pollution Control Advisory Committee;

Elected as a voting delegate to the Democratic National Conventions of 1956, 1960, 1964, and 1968;

Member of the Pittsburgh Public Schools Vocational Educational Survey Community Resource and Advisory Committee;

Member of the Citizens' Assembly of the Health and Welfare Association of Allegheny County;

Member of the Governor's Coalworkers' Pneumoconiosis Advisory Committee;

Chairman of the Board of Directors of the Centerville Clinic, Incorporated; and

Chairman of the Board of Directors of the Brownsville General Hospital.

GUERRILLA WARFARE—U.S.A.

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, a composite analysis of the crime and violence in our cities is presented in an article entitled "Sabotage" from the June 1969 American Opinion magazine by David Emerson Gumaer. I include this report following my remarks at this point in the RECORD:

SABOTAGE—THE GUERRILLA WARFARE HAS BEGUN

(By David Emerson)

(David Emerson Gumaer spent two years as an undercover operative for the Intelligence Division of a major metropolitan police department. His assignment was to infiltrate and report on Communist and New Left activities—specifically inside the Communist W.E.B. DuBois Clubs. Accepted as a fellow revolutionary, operative Gumaer was soon working in the National Office of the DuBois Clubs, and rose to key positions inside the New Left. Mr. Gumaer is now a Contributing Editor to The Review Of The News, an outstanding new national newsweekly.)

In the early morning hours of September 29, 1968, a team of saboteurs attacked a United States Navy and Marine reserve training center in Eugene, Oregon, dynamiting a huge crane and burning four dump trucks, a trailer, a personnel carrier, and causing fire damage amounting to $106,000. As the center's commanding officer, Lt. Commander John Gobel, put it: "This was no amateur job."

Two days after Christmas in 1967, a devastating explosion ripped through the Atlantic Research Corporation munitions plant in Hanover, Massachusetts, killing one man and severely injuring fourteen others. The plant, engaged in vital, high-priority defense work, was a key preparations facility for supplying anti-personnel mines for the War in Vietnam. State fire marshals, plant security personnel, and the F.B.I. began a probing inquiry into the blast, which had peppered the area with critical particles of explosives, some no larger than the head of a match. Again, sabotage.

No less than nine days later, another of these "unexplained" explosions destroyed a munition's production line at the Army's Rocky Mountain Arsenal northeast of Denver, killing one man and injurying ten others. The highly secret plant had been engaged in the production of weapons for chemical warfare and other ultra-secret projects.

At a Strategic Air Command base near Charlevoix, Michigan, yet another highly suspicious fire destroyed seventeen mobile trailers containing electronic equipment vital in determining the accuracy of bombing missions. As reported in "Secret Sabotage War Raging Across America," a recent article in *Saga* magazine, another military trailer loaded with ammunition was hauled away from the flaming area "before it ignited and started a chain reaction that probably would have blown up the entire base."

In the pre-dawn hours of September 10, 1968, a team of saboteurs slipped into a barbed-wire enclosed National Guard Armory at Van Nuys, California, dynamiting one military truck and damaging four others. The Army vehicles belonged to a military unit *whose records had been altered by the saboteurs to show readiness for combat in Vietnam.*

In Tampa, Florida, after saboteurs had repeatedly cut telephone cables and destroyed telephone poles (disrupting service to some thirty thousand telephones in the area), they removed the manhole covers over main telephone lines and "severed three cables used by the Strategic Air Command to connect the SAGE (semi-automatic ground environment) defense system that is responsible for detecting hostile missiles approaching the United States, and the base deploying high-altitude Bomarc missiles designed to intercept and destroy them."

Sabotage. Perhaps the most colorful form of subversive warfare, and quite probably one of the most important single problems now facing our nation's defense security. *Sabo-*

tage. A subject almost entirely ignored by our "Liberal" news media.

WHAT IS SABOTAGE?

Sabotage is far from a new concept. The term is derived from the French word *sabot,* a type of wooden shoe worn by peasants and workers in some of the European countries. During the bloody French Revolution, and in its aftermath, the *sabot* came to be regarded as the revolutionary symbol of rebellious workers and agitators who threw their wooden shoes into factory machines and trampled the properties of the middle class and the wealthy.

Although sabotage was used effectively during World War I, it was employed in epic proportions during World War II. Hitler's National Socialists (Nazis) regarded it as an especially potent weapon and prepared for it long in advance of the War, as did Stalin's Communist cadres—which became absolute masters in its execution. When the Communists were attempting to take Greece in 1948, in the month of August *alone,* Red saboteurs wrecked or destroyed 91 trains, 153 railroad stations, and 21 factories.

Sabotage is a complex operation even where just one agent is involved. Like Intelligence, it is an exact science demanding exceptional technical, military, economic, and psychological preparation. As Ladislas Farago notes in his authoritative *War Of Wits,* sabotage "requires large standing organizations both at headquarters and in the field, both at home and abroad. . . ."

"When employed on a nation-wide scale," relates Farago, "in an armed conflict or in a cold war, sabotage organizations cannot subsist in the field as totally independent and self-contained units. Even though composed entirely of citizens of the country being attacked, organizations cannot survive when left to themselves. In order to be effective, they have to be organized, directed, and supplied from abroad."

Sabotage can be carried out in a variety of ways and on many scales. It may be aimed at major targets, such as missile bases, factories, or munitions plants, or even entire regions of strategic importance. To merely list the *known* cases of direct, indirect, psychological, and maritime sabotage which the Communists have performed within the United States would take the pages of a good-sized telephone directory.

WHAT THE EXPERTS SAY

In 1948, former top Communist leader Benjamin Gitlow, who defected from the side of the enemy, wrote a major expose of Communist operations in the United States. In his revealing book, *The Whole Of Their Lives,* Mr. Gitlow noted:

"In Leningrad the O.G.P.U. runs a mysterious school . . . [where] the fine art of sabotage is taught to those who have passed an exacting screening to determine whether they are fitted for the kind of work in which they will be trained. The Communist students learn how to dynamite a bridge, derail a train, set fire to a warehouse, seize and make use of existing telegraphic and radio communications. They learn how to fight police during demonstrations, and how to develop the militancy and courage of the demonstrations. Methods of gangsterism are improved on, lessons given on how they are applied . . . a brew of crime and violence mixed together in a sadistic hall of horrors in order to produce the strong-arm men of the blackjack, dynamite, and automatic. The German Communist Party had thousands of these desperadoes who spearheaded street brawls, riots, and armed uprisings in Germany in the early thirties.

"In the Spanish Civil War, the Communists put their Russian-trained saboteurs into a special battalion to eliminate the forces who opposed Communist domination of the Republican cause. Many American Communists who went over to Spain with the Abraham Lincoln Brigade served in this battalion of terror and murder. These Russian-trained Communist commandoes form the iron core of resistance movements of Europe. They are kept in readiness in every European country. Given the signal, they will set Europe to the torch . . . the opportunity to put the whole continent under the hammer and sickle."

Now, thanks to "Liberalized" immigration, these same Communist shock troops are moving among us with impunity and training revolutionaries for paramilitary activity in the streets of America. The Supreme Court has helped by voiding virtually every anti-subversive law protecting the United States (as well as every individual state) by a series of decisions favoring the Communists at the expense of our nation's defense.

As early as 1951 the House Committee on Un-American Activities presented the testimony of F.B.I. Director J. Edgar Hoover, who declared that "The Communist Party of the United States is a fifth column if there ever was one." Mr. Hoover said that at that time there were 74,000 members of the Communist Party in the United States; but, more importantly, that "for every Party member there are ten others ready, willing, and able to do the Party's work." Which means that in a time of national crisis this country "would have nearly 825,000 persons who are either spies, traitors, or saboteurs working against us from within."

And that was *eighteen years ago.* Today, with the Supreme Court decisions which have freed the Communists to work within our nation's defense plants and strategic installations, that figure takes on even more startling significance. In fact, on May 24, 1967, Lt. General Arthur G. Trudeau, former Chief of Army Intelligence, warned Congress that radical student organizations, pacifist groups, and nearly all "Civil Rights" groups are now "honeycombed" with Communists taking orders from Moscow. Appearing before the Senate Internal Security Subcommittee, General Trudeau urged passage of anti-Communist legislation to fill the gaps in present security laws.

Former Intelligence Chief Trudeau quoted Boris N. Ponomarev, head of the foreign section of the central committee of the Russian Communist Party (C.P.S.U.), as having boasted that "the revolution in the United States has begun." Comrade Ponomarev, said General Trudeau, is using anti-war organizations in America to pursue Communist aims. He also revealed that Yuri Andropov, the Number Four man in the Soviet hierarchy, had been named head of the terrorist K.G.B., the Russian secret police. "A high policy official in charge of the K.G.B. can only mean trouble for our country," Trudeau said. "We can expect more espionage, more sabotage, more demonstrations, and bolder actions by Communist agents, directed centrally from Moscow and aimed primarily at Washington."

And General Arthur Trudeau's prophetic warning has proved to be unerringly accurate, as witnessed by these dramatic events in the two years since his testimony:

A ninety-nine-car ammunition train carrying 750-pound bombs, 3.5-inch rockets, 105-millimeter howitzer shells, and mortar shells, was "mysteriously" derailed by persons unknown while passing through Chadbourn, North Carolina. If the ammunition had exploded, said the train engineer, it would have blown up everything within twenty miles.

Another train carrying fifteen freight cars of ammunition and bombs was similarly derailed while en route through a heavily populated section of Milwaukee. Again, miraculously, the ammunition failed to explode on impact.

A boxcar loaded with tons of 175-millimeter shells was blown up by persons unknown on a railroad siding in Corning, Arkansas.

Saboteurs nearly succeeded in destroying sixty-one multi-million-dollar T-38 jets at Williams Air Force Base in Arizona by infiltrating the base and sabotaging the landing gear of each plane. The damage was discovered shortly before takeoff.

Marksmen firing .22-caliber bullets destroyed Illinois Bell Telephone cables servicing a Nike missile base near Arlington Heights, Illinois, and the Glenview Naval Air Station. Several months later the sabotage was repeated in the same manner at the same spot, again cutting off vital service. Earlier, on January 18, 1967, Rear Admiral Richard Fowler, Chief of United States Naval Air Reserve Training, was killed in an unexplained fire in his home at Glenview Naval Air Station. *Less than two months later,* a similar fire killed Rear Admiral Howard A. Yeager, commandant of the Ninth Naval District, and two others staying in his home at the Great Lakes Naval Training Center. Admiral Yeager's home in Great Lakes was but twenty miles from Glenview Naval Air Station where Admiral Fowler was burned to death.

For over three months last year, beginning on May eighth, the Illinois Bell Telephone Company experienced a wave of sabotage to its lines in Waukegan, Wadsworth, and between Grayslake and Libertyville, when over three thousand telephone cables were severed and switching boxes stolen. A hacksaw blade was found embedded in one of the cables—eleven feet above the ground.

During the past two years, oil wells, pipelines, and service stations in the area between Baton Rouge and Lake Charles, Louisiana, have been destroyed by saboteurs using dynamite—causing in excess of one million dollars in damages.

A "mysterious" fire at the U.S. Navy's Submarine Base in Groton, Connecticut, disrupted a major phase of submarine training on the entire East Coast and caused half a million dollars in damage to a special facility used for the training of sailors in submarine escape maneuvers. The only other facility of its kind is located at Pearl Harbor, Hawaii.

Just seventy-five miles southwest of Hawaii last January fourteenth, the world's largest aircraft carrier, *U.S.S. Enterprise,* was ripped by a dozen explosions and a devastating fire that killed some forty sailors and injured eighty-five others. The nuclear-powered, 90,000 ton carrier, with a crew of 5,400, was engaged in war exercises off Kahoolawe Island when a bomb "broke loose"[1] from one of the airplanes on deck, destroying fifteen aircraft and charring the ship to the waterline. The *Enterprise* was preparing to return for a fourth tour of duty in Vietnamese waters.

Oddly enough, the usually gloating Communist *Daily World* carried the *Enterprise* disaster quite prominently as a straight news item with little editorial propaganda. The Red publication reported that "U.S. carrier accidents have killed more than 200 seamen since 1966. A fire aboard the *Forrestal* (July 29, 1967) took 134 lives, and a similar accident aboard the *U.S.S. Oriskany* killed 43 sailors in 1966. Both ships were cruising off Vietnam." Another carrier cruising those

---

[1] Last January, during the Communists' "counter-inaugural" demonstrations in Washington, D.C., military intelligence uncovered an incriminating letter written to Roger D. Blacklow, a member of the staff of the subversive New Party. The letter was from his brother, William Blacklow, a sailor aboard the *U.S.S. Glennon.* In that letter William Blacklow told of a fellow sailor named "Bas," whose mother has been very active in the programs of the Far Left. Blacklow revealed that his friend "became a boss torpedos' mate—ironic or what? —; he feels no regrets. Who else, he points out *is in a better position to not push the button?* He wears his peace medal in place of his dog tags to personnel inspection. *Get the picture?"*

waters in 1966, the *Franklin D. Roosevelt*, was also mysteriously gutted by an "accidental" fire. In fact, that *Forrestal* disaster occurred *just seven minutes before the ship's planes were to take off on a bombing run over North Vietnam*. Mighty convenient "accidents"—for the Communists.

Four men were killed and three critically injured by a "mysterious" explosion at the Army Ordnance munitions plant ten miles west of Burlington, Iowa, on June 22, 1967.

Near Minden, Louisiana, an Army munitions plant was almost destroyed by a series of "mysterious" explosions in the bomb-loading section of the military plant furnishing war material for Vietnam.

At the Crane Naval Ammunition Depot in Indiana, three defense workers were killed when munitions destined for Vietnam exploded "mysteriously." Another similar explosion occurred at the same depot *two weeks later*, killing three more workers and injuring another four.

On May 26, 1968, somewhere between Norfolk and the Azores, the U.S. nuclear submarine *Scorpion* disappeared with ninety-seven men aboard. Exactly four months earlier the Israeli sub *Dakar* disappeared with sixty-nine aboard off the coast of Cyprus, and on the same day the French sub *Minerva* disappeared in the Mediterranean with a crew of fifty-two. Five years earlier on April 10, 1963, another U.S. Navy atomic submarine, *Thresher*, sank under equally mysterious circumstances in the North Atlantic.

Retired Admiral Daniel V. Gallery, taking all those strange disappearances into consideration, suggests in his recently published book, *The Brink*, that the *Scorpion* and others "might have been bombed to the bottom of the Atlantic by the Russians." Admiral Gallery reveals that the Reds have discovered "how to track nuclear submarines . . . not through the use of comparatively short-range sonar, but by means of homing in on the sub's atomic reactor from ranges as great as twenty miles."

Interviewing a former member of Air Force Security, who had been part of a sabotage alert team while stationed in Germany, this reporter was informed of a number of shocking acts of sabotage against our military bases, apparently by enemy agents within our own armed forces. My informant related the following incidents from his own experience:

After the tragic crash of an F102 interceptor on one of the Tactical Air Command bases in Germany, during an "operational readiness inspection," authorities became suspicious that something might have been placed inside the jet engine scoop of the fallen craft. A quick check of all other jets on the base revealed a wrench placed inside the engine of a plane that had been on the ground just a short while and was preparing to take off within minutes. It was definitely sabotage.

Hydraulic fluid was frequently drained out of the brake systems of multi-million-dollar jet bombers of the Strategic Air Command, and emergency warning lights on the control panels rendered inoperable by removal of bulbs.

Vital telephone lines were repeatedly cut in strategic locations inside air base buildings, disrupting communications of the Air Defense Command. Similar sabotage was reportedly widespread on bases in the United States.

Electrical wiring on sensitive Air Defense Command radar-scope tracking dishes was repeatedly reversed in such a manner that advance warning of an enemy missile attack would be impossible. Other radar installations were simply blown up by saboteurs.

Now, there will be those who feel that the examples given here are not sufficient to prove that we are in the midst of an all-out attack of Communist sabotage. And rightly so. Some of the incidents, to be sure, might well have been the result of human error or carelessness. And since we have only barely scratched the surface in this random sampling of incidents, we shall return in a moment with another series of unusual "accidents," which in our estimation point to something very wrong somewhere. First, however, a few other matters should be weighed and considered.

WHAT INVESTIGATION REVEALED

As far back as 1949, Communist plans for revolution were being uncovered in sworn testimony before Congressional investigating committees. At that time Herbert A. Philbrick "surfaced" after nine years within the Communist Party for the Federal Bureau of Investigation, exposing in detail a major part of the Red program. Testifying before Judge Harold Medina in New York, Philbrick explained how sabotage had been one of the main courses at the Boston School of Marxist Studies. In his famous book, *I Led Three Lives*, the former counterspy revealed that the Communists, who are planning for revolution in America, had no intention of taking over a totally decimated nation. He explained that:

"Instead the plan was to incapacitate temporarily entire plants and their crucial machinery by knocking out power supplies, wrecking transmission lines, conduits, cables, generators, transformers—any facility which would render productive machinery useless to the governing authorities, but leave it essentially intact to be restored immediately by the revolutionary forces. In concrete terms, they would not destroy rail locomotives and rolling stock, but would merely deny their use by ripping out the track. The saboteurs would strive for complete paralysis of the critical points—bridges, dams, water-supply lines, communications.[2]

During that same period, it was learned by Intelligence agencies that a highly secret revolutionary blueprint had been delivered to Communist leaders across the country. In precise military fashion, the chilling strategy was laid out step by step in the following manner:

Strategic objectives were carefully mapped out in hundreds of cities, with "Operation Center" established at the Communist headquarters in New York and "Relay Centers" in cities like Los Angeles. When the hour strikes for action, perhaps in the dead of the night, riots and fires will be started in industrial cities to dissipate the police and fire departments.

While the police are busy trying to quell the riots and cover the fires, picked bands of guerrillas will seize radio and telephone stations to control communications. Bridges will be blocked or bombed to bring transportation in the cities to a standstill. Power will be shut off, as well as gas supplies. The entire pattern is to create immediate panic.

Special squads will capture the police department and will scan records to find out who has firearms. These people will be forced to give up these weapons, while guerrilla units will break into all stores selling guns and ammunition, seizing everything which might be used to quell the insurrection. Terror will be spread all through the night by the "liquidation" of opposing units so that complete panic will reign by morning.

One year after Philbrick's testimony had helped convict eleven top Communist leaders who had advocated the violent overthrow of the U.S. Government, a newspaper in Denver, Colorado, carried this bold headline: "Colorado Reports Sabotage Plot." This startling expose of September 16, 1950, less than three months after the Communists invaded the Republic of Korea, should have made front-page news. It didn't. Instead, the tiny article was buried in the back of the paper. In its entirety the article revealed that:

"Attorney General John W. Metzger claimed tonight the Communist Party had completed plans to sabotage Colorado's radio stations, utilities, and state and city governments on orders from party headquarters. Metzger said he had 'unimpeachable' information that 75 party members met here [Denver] last night to perfect the master sabotage plan for the state.

" 'Each one of the 75 persons at the meeting was given a specific job, such as bombing a radio station, or the telephone company, or the public service company. This was not the first report, nor the first such meeting,' he said."

And that's *really* just the beginning.

In 1953, Mrs. Karl Mundt, wife of the U.S. Senator from South Dakota, was on a tour of Hoover Dam, one of the largest hydroelectric generating plants in the United States. In the newsletter of the National Federation of Republican Women's Clubs she described how the control room operator had pointed out that "If I push *this* button I can turn off all the lights in San Bernardino; and if I push *this* one I can turn off the water in Los Angeles." When asked, "What would happen if the wrong person should get in here some time and start pushing buttons?," the operator shook his head and replied: "*The wrong person pushing buttons in here could play havoc with the entire West Coast area.*"

Mrs. Mundt then recalled a meeting of the Communist Party which she and her husband had infiltrated in Denver some nineteen years earlier; a meeting presided over by a professor from the University of Colorado:

"He was presenting a Communist plan for seizing control of the government of the United States. Several times during the evening he repeated the phrase: "An invasion of this country may not be necessary. If we play our cards right—it can be taken from within."

On the wall was a large map of the United States, but it looked strangely unfamiliar. All the boundary lines of the States had been erased, and the country was divided into nine sections controlled by river authorities similar to the Tennessee Valley Authority (T.V.A.).

He turned to the map: "Here we have a picture of this country controlled by nine river authorities all of which are dominated by the central government. The T.V.A. is now a reality and I'm happy to tell you that we have some of our Party members planted there. We must have more Valley authorities. There must be an M.V.A. and a C.V.A. and so on until the nation's light and power is controlled from a central source.

"We are not interested in cheaper power for the people. What we want is to get our members planted in vital spots where at a given signal by merely pushing a button or pulling a lever they can plunge the country into darkness and disaster."

After considering the above quotation, the famous Northeast Blackout of November 9, 1965, takes on an even more sinister connotation. What many are unaware of, however, is the fact that hundreds of other equally mysterious power failures have occurred from coast to coast both before and after that event. After the Northeast Blackout plunged 30 million people over an area of eighty thousand square miles into darkness, investigators for the House Commerce Subcommittee expressed fear that "foreign saboteurs could duplicate the blackout that paralyzed New York City. . . ." According to Subcommittee Chairman Walter Rogers (D.-Texas), "Saboteurs could purposely maladjust the

[2] Several years ago a former U.S. Army Sergeant was sentenced to thirty years imprisonment after the F.B.I. had arrested him on espionage charges. He later admitted that, during the last year before his arrest, his assignment from the Soviets was to supply them with "blueprints, drawings, and plans of the sewer lines, water supply systems, telephone and electric power systems" in the Greater New York area and Long Island.

equipment, particularly if Canada fell into the hands of a foreign power."

On December 2, 1965, three weeks after the Northeast Blackout, while Congressional probers were still in the dark as to what had really caused the power failure, another massive electrical failure struck the Southwest, affecting an area of twenty thousand square miles. This time, power was cut off from four strategic military installations: Fort Bliss Army Base (which maintains an Air Defense missile school) and Biggs Air Force Base (a key Strategic Air Command installation)—both located in El Paso, Texas; and Holloman Air Force Base and the White Sands Missile Range in Alamogordo, New Mexico. Over a million residents were affected.

Just five days later, on the anniversary of Pearl Harbor, a large section of Staten Island, New York, was hit by a similar power failure. The following month, on January twenty-eighth after the National Power survey report had pushed the creation of a national grid controlled by a central source—exactly as was called for at that Communist meeting attended by the Mundts in Denver—the lights went out simultaneously in parts of Iowa, Minnesota, Nebraska, South Dakota, and Illinois.

There are, alas, many more such examples.

On June 5, 1967, a massive power failure hit four states. Two weeks later in another section of the country, the *Evening Journal* in Wilmington, Delaware, reported that "The power failure which struck northern Delaware early this month might have been averted except for sabotage of a 500,000 volt power line in western Pennsylvania. . . ." Wilmer S. Kleinbach, manager of the area's power pool system, said that someone deliberately damaged three towers on the line by driving a crane into the wires. The following year a lone saboteur crashed a tractor into one of the electrical towers of the Pacific Gas and Electric Company in California, cutting off power in five communities near San Francisco.

Last September twenty-ninth, a massive power failure hit the Orange and Rockland Utilities Company in New York City, New York, cutting off all electricity in two New York counties and parts of New Jersey and Pennsylvania. Cause of the blackout—"unknown." As recently as January of this year an unexplained series of blackouts in the Boston area has affected 250,000 people in thirty communities. As this article is being written, in fact, it has been reported that a large section of Fairfield County in Connecticut is having its share of similar disturbances.

Are these incidents merely warming up maneuvers? Do the Comrades have more of the same in store for America? There are those in positions to know who think that what we have experienced thus far is but a small sample of what we can expect in the near future.

For instance, the *Allen-Scott Report* of February 16, 1968, revealed that "battle plans" of militant Black Nationalists were being studied by government investigative agencies which considered them to be "as foreboding as those captured from the Vietcong in advance of their 'terror attacks' in South Vietnam." The syndicated report told of revolutionary documents circulated in Negro communities written by such violent Communist terrorists as Stokely Carmichael (currently a leader of the Communist Black Panther Party), and Robert Franklin Williams (leader of the Communist Revolutionary Action Movement).

In a follow-up article that April twenty-third, Allen and Scott told of a veritable army of Communist-directed militants descending on Washington, some of whom were "experts in making fire-bombs" and known to have "served as 'paymaster' for fires set" during the previous summer's riots. The report also unveiled a Red plot which included the sending of a gasoline-filled truck into the underground parking area of one of the Congressional office buildings. The rolling fire bomb was to explode and create a diversionary maneuver to draw police and federal troops away from the Capitol building—from which teams of hard-core Black Nationalists were to rush from several directions. Thanks to an undercover informant for the F.B.I., the plot failed.

In a special Report of the House Committee on Un-American Activities issued on May 6, 1968, the Committee's Chairman stated: "There can be no question about the fact that there are mixed Communist and black nationalist elements in this country which are planning and organizing guerrilla-type operations against the United States." The document, entitled, "Guerrilla Warfare Advocates in the United States", went on to relate that "Communist elements in the United States . . . are actually recruiting and training . . . for guerrilla warfare . . . the sabotage of public facilities . . . hit-and-run attacks with guns, bombs, *and poison darts.*"

Speaking at the Industrial Management Club at Lockport, New York, last January, former F.B.I. undercover agent O. W. Nelson Jr. told a shocked audience that there is *already* a trained, Communist-sponsored guerrilla army in the United States. Now news editor of the *Lockport Union-Sun & Journal*, Nelson revealed that the most worrisome Communist operatives in this country are the "sleepers"—Communists who pose as ordinary American citizens, although "dedicated Reds who, when *they* are called, will do their jobs and do them well." He said that no one but a few top Communists in Russia and China knows exactly how many "sleepers" are moving among us, and that many of them have been trained by Comrades who had fought on the side of the Communists in Spain during the Thirties; trained in "how to blow bridges, wreck trains and radio stations, wreck communications."

According to the House Committee on Un-American Activities, a number of Americans have actually been trained in this sort of guerrilla warfare in Red Cuba by agents of the Vietcong. Traveling to Havana by way of Mexico City, a steady stream of young revolutionaries is sent to a Communist training camp called *Ciudad Escuela Cumilo Cienfuegos,* not far from Minas de Frio in Oriente Province, the mountain stronghold from which Castro waged his guerrilla war against the Batista government. As reported in *Saga* magazine, that is where the "trainees are taught how to form *guerrillero* bands of ten to twenty men (the most effective size), how to select leaders and spies, and how to establish operations and sabotage sections. They are tutored in weapons, propaganda, night maneuvers and other tactics. Detailed instructions are given on how to make and use homemade explosives, such as grenades from condensed milk cans packed with dynamite and steel scraps. The American college kids also learn how to make bombs and incendiaries—little gems composed of acid, potassium chlorate and common table sugar."

For those young Americans not quite hardened enough for the more demanding guerrilla training, the Cuban Communists have provided a milder course in political agitation, propaganda, and civil turmoil—this one at *El Cortizo* training camp, in Pinar del Rio Province. There, they learn how to advance the Red cause by sabotage of official or public vehicles; slowing down public communications services; rumor-spreading and propaganda; political indoctrination of school children; and, countless other Red tactics to further the revolution.

In the *Saga* expose, "U.S.-Cuba Underground," we learn that:

"Really tough militants who are bright and fanatically dedicated are sent to Prague, Czechoslovakia, and even to Moscow for super courses in espionage, sabotage and propaganda. With nobody able to check on their whereabouts these elite are whisked to Europe. They can be gone for as long as six months, traveling on Cuban papers, without arousing the official curiosity of our State Department. That's time enough for the most thorough training in a score of fields."

These Communist-trained revolutionaries have apparently learned their lessons well, as evidenced by the rash of arson and bombings that has swept the nation. In fact, this past March thirteenth, the F.B.I. Chief of Internal Security, Charles D. Brennan, told more than three hundred prosecutors attending the convention of the National District Attorneys Association at Las Vegas that "There will be a continuation of arson and bombings. . . . As I see it, it will get worse before it gets better." Naming the Communist-controlled Students for a Democratic Society (S.D.S.) as the chief firebrand in the current blaze of sabotage, Chief Brennan also cited the Communist Black Panthers as having joined in the campus revolution and "reaching down into the high schools where they are teaching this reverse racism."

Earlier, in the year-end report of the Federal Bureau of Investigation, issued on December thirty-first, Director J. Edgar Hoover stated that the S.D.S. "advocates what many of its leaders and members call revolutionary communism," and that two of its national officers "publicly identified themselves as communist, 'with a small c,' as many New Left adherents do to signify that while they are communists they are a brand apart from those in the old-line communist movement." Mr. Hoover told of an S.D.S. national convention held during June of 1968 on the campus of Michigan State University, at which time "a workshop was held dealing in sabotage and explosives."

What was *not* mentioned, however, was that last October during a similar convention in Boulder, Colorado, members of S.D.S. were given a detailed, twenty-page sabotage manual which contained diagrams and directions on how to prepare Molotov cocktails, incendiary time bombs, bangalore torpedoes, mines ("to blow up autos, trucks, and light tanks"), train mines ("explodes when the train passes over the contacts which close the electric circuit"), pocket incendiary bombs ("place these in movies, cars, files, mailboxes, next to inflammables . . ."), booby traps, and other frightening deadly devices. Members of S.D.S. were shown diagramatically how to build tank traps; how to use sabotage on the highways by placing a "greased steel cable which does not reflect the light" diagonally across a road to cause auto accidents; how to sabotage motors, dynamos, electric installations, generators, and machinery; and how to destroy iron and steel beams of buildings and bridges. According to F.B.I. Director Hoover: "The aim of the S.D.S. attack is to smash first our educational structure, then our economic system, then, finally, our government itself." And they are *openly* pursuing just that course.

A wave of terror such as swept Cuba shortly before that country was taken over from within is beginning to take shape here. Yet, oddly enough, the Establishment media conveniently ignore all Communist complicity. Consider, if you will, *these* incidents:

During the second day of a student strike at San Francisco State College last November seventh, Communist-directed militants running the strike exploded a bomb and set several fires in restrooms and faculty offices. Shortly afterwards, campus police arrested Paul Okpokam, a bearded drama student from Nigeria, who was carrying a package of explosives.

A month later arsonists at the same college caused a $100,000 fire on the fifth floor of the school's administration building, where some weeks earlier militant black students had held thirty-four college employees hostage for four hours.

On December fourth, last year, a small explosive device blew out windows in the Andrew Jackson High School in New York City during a wild student demonstration. It was reported that "Bomb squad detectives described the device as a 'military simulator,' a pyrotechnic device used in military maneuvers."

As San Francisco State College prepared to reopen for the spring semester last February sixteenth, the second bomb in four days exploded, shattering windows and injuring a campus security officer. Inspector Daniel Mahoney said that saboteurs used a seven-inch pipe packed with explosives. Less than three weeks later a freshman from East Palo Alto, California, was found screaming in a hallway of that college—his hands charred, three fingers blown away, and his face a bloody mess—after a homemade bomb exploded as he attempted to hide it in a locker room. Two more powerful bombs were found nearby, along with six sticks of dynamite. Detectives said that "a steel pipe filled with blasting powder and connected to a battery and a clock blew up while it was being attached to a bank of lockers."

Two bomb disposal men from Westover Air Force Base removed a time bomb from a restroom at Amherst College in Massachusetts last March eighth, while student protesters marched around the building picketing Colt Firearms recruiters on campus. Colt has the exclusive contract for the M16 rifles used in Vietnam.

On March twenty-first, several hours after a $600,000 fire swept the science building at Lane College in Jackson, Tennessee, a black militant group reimposed their boycott of classes. Firemen trying to put out the blaze were hampered and harassed by the students.

On April eleventh, a homemade bomb exploded at the University of California at Santa Barbara, critically injuring a caretaker.

Perhaps the most bizarre incident of all was one that happened last January nineteenth at a high school in Brooklyn, New York. As school teacher Frank Siracusa was leaving a classroom that morning he was attacked by three militants and kicked and punched to the floor. "One of the youths then squirted his clothing with lighter fluid from a water pistol and set fire to him with a cigarette lighter."

The work of deranged individuals? Or a carefully directed scenario prepared by traitors intent upon destroying our nation piece by piece. Actually, both descriptions are accurate.

But, that's not all. This business has been escalating for a decade.

On May 28, 1961, demolition experts destroyed three electronic relay stations along the Utah-Nevada border—stations of strategic importance which carried the greater part of our transcontinental communications. The following month, on June thirteenth, both San Francisco and New York experienced simultaneous power failures of "mysterious" origin. This was followed two days later by the burning of a large pier in the Hudson River, temporarily closing one of the two principal traffic lanes heading north out of Manhattan.

And that was eight years ago. Sabotage of that nature has increased tenfold in the meantime, and very few of the saboteurs have been captured.

On the afternoon of August 9, 1965, Air Force personnel began hauling the charred bodies of some fifty-three men out of the blackened launch tube of a Titan II missile silo northeast of Little Rock Air Base near Searcy, Arkansas. A "mysterious" explosion had ripped through a diesel engine located in one of the rooms ringing the launch site, trapping the men fifty feet below the surface behind a seventy-five-ton electrically controlled door that had been short-circuited. An escape tunnel normally open to let construction workers pass in and out had been closed when the blast occurred. Air Force officials were "not able to explain why."

In late October 1966, a building used to dry gunpowder at the Olin Mathieson Chemical Corporation in East Alton, Illinois, was destroyed by an unexplained explosion which ruined a quantity of material destined for Vietnam. Shortly before that mysterious "accident," this reporter had been attending a key Communist gathering in Chicago (for Police Intelligence) at the home of an I.I.T. professor. During the course of the evening I happened to overhear a young black militant tell several Trotskyite Comrades that "it sure would be a shame if someone dropped some nitro and blew the damn place up." *As an employee of the East Alton plant,* he admitted that he was in a good position to "raise a little Hell there."

On March twentieth of last year saboteurs dynamited a sixty-five-foot electrical tower furnishing power to the Lawrence Radiation Laboratory at Livermore, and its multi-million dollar cyclotron on "the hill," at the University of California at Berkeley. The powerful blast, which occurred in a remote, hilly section of Tilden Regional Park, toppled the tower, severing the 115,000-volt power lines and causing periodic blackouts throughout Alameda and Contra Costa counties. Lawrence Radiation Laboratory, which designs and tests both atomic and hydrogen weapons vital to our nation's defense, is one of the major research and development plants for America's nuclear weapons systems.[3]

Less than three months later, on June 4, 1968, the *Chicago Tribune* reported that saboteurs in Oakland, California, "apparently trained in demolition techniques, used plastic explosives to topple three seventy-foot electrical transmission towers today. The explosions knocked out six 115,000-volt transmission lines and several 12,000-volt lines strung on nearby towers. Service to 30,000 customers was interrupted.

"The Federal Bureau of Investigation immediately sealed off the area high in the hills above Oakland and launched an investigation into the attack—the ninth in the area since February 1."

On October third, the second explosion within twenty-four hours shattered more than 260 windows in the Alameda County Courthouse in Oakland, California, shortly after Communist Black Panther leader Huey Newton had been sentenced to prison for murdering a policeman. A search of the area produced another explosive package jammed under a gas main next to the courthouse, about seventy-five feet from a ladies room at the Oakland Hall of Justice where one had exploded the day before. The unexploded bomb had been attached to an alarm clock and triggered to blow up at three o'clock that afternoon.

In mid-November 1968, F.B.I. agents charged Army deserter Daniel Carroll Guirkins, age twenty-two, with the bombings of the Alameda County Courthouse in Oakland and the R.O.T.C. headquarters at the University of California. Shortly after his arrest a month earlier, the F.B.I. discovered that his apartment contained a large quantity of "dynamite, detonators, timers, plastic explosives, 'How-to' books on dynamiting," and other interesting material. Guirkins' accomplices included a thirty-year-old Iranian national and "peace" advocate, Anthony Richard Tankersley, and his wife Susan.

A brief search of the Tankersley's home yielded a "rich treasury" of explosives, dynamite, blasting caps, an electronic detonating device, detailed area maps, and a list of potential targets which included *industrial areas, microwave stations, and defense plants.* Also seized were U.S. Army manuals on booby traps and mines, and numerous Communist tracts on guerrilla warfare. By the time authorities issued an all points bulletin for the Tankersleys, the two were reportedly en route to that special conference of the Marxist Students for a Democratic Society at Boulder, Colorado. Also arrested for sabotage was Joseph Cowan, who like the others was found to have ties with radical Leftists across the nation. As one top federal official said in reference to this wave of sabotage attacks in San Francisco: "There is nationwide coordination. There's no doubt about it." All of the sabotage suspects had been students at the University of California.[4]

Early this spring it was reported that finally, *after twenty-five years,* the Justice Department has begun to crack down on Communist saboteurs by enforcing the national defense sections of the sabotage statutes (Section 2155, Title 18, U.S. Code). As reported in the *Chicago Tribune* of February 22, 1969, the first indictment was brought against S.D.S. leader Michael Siskind on December 19, 1968, after he had pleaded guilty in the firebombing of an R.O.T.C. building at Washington University in St. Louis. Judge Roy W. Harper, in sentencing him to five years in prison, told Siskind that as a judge he had earlier presided over the trial of Communists charged with violation of the Smith Act, and that "The group you belong to is committed to the very thing they were."

The second indictment, detailed in *Combat* newsletter, was brought against S.D.S. member Cameron David Bishop, a former student at Colorado State University, who is currently being sought by the F.B.I. Bishop was charged with a dynamiting last January twentieth at Golden, Colorado, which interrupted power to Coors Porcelain Company, manufacturers of nose cones for sidewinder missiles and armor plate for military helicopters used in Vietnam. The four-count indictment also accused the S.D.S. activist of dynamiting another power-line tower on January twenty-fifth, and two more on the twenty-eighth.

Although the *top flight* Red saboteurs never seem to get caught, a number of lower echelon New Left bombers have been less careful than their professional mentors. Three years ago this May, police in Fort Lauderdale, Florida, rounded up a gang of youths who had stolen materials to manufacture plastic bombs, nerve gas, and the dangerous mind-altering LSD. Seized in the raid was an elaborate blueprint for a "full-scale assault on one of Fort Lauderdale's

---

[3] Actually, that minor bit of pyrotechnics wasn't really necessary to sabotage this strategic research center. The enemy has already gained access to its inner sanctum. As recently as three years ago the laboratories employed such subversives as electronics technician William A. F. Maertens, a member of the Berkeley campus W. E. B. DuBois Clubs, youth arm of the Communist Party. More recently, the research center has been giving "Q" clearances to such individuals as Garrett Boer and Sam Mendocino, local leaders of the subversive Women's International League for Peace and Freedom and other like-minded organizations.

[4] The "Weekly Intelligence Summary" of Military Intelligence has revealed that "The New Free University (NFU), composed of a group of University of California, Santa Barbara (UCSB) students . . . announced that classes on tactics and practices of guerrilla warfare taught by guest lecturers would be conducted regularly on Monday, Wednesday and Friday beginning 7 March in Building 2292, UCSB [which] authorizes NFU activities to be conducted in campus facilities. Classes will be conducted in: How To 1) Hold a building against police attack, 2) Conduct hit and run missions, 3) Defend yourself against police harassment, 4) Sabotage military, industrial and police functions, and 5) Get community involved through terrorism."

largest banks," 131 sticks of dynamite, and numerous chemicals. Of the ten youths arrested, one was carrying a vial of deadly curare poison strung around his neck, and another was armed with a straight-razor.

Last summer, during the Democratic National Convention in Chicago, police and F.B.I. undercover agents discovered and prevented a Communist plot to create wholesale sabotage during the "Yippee" demonstrations. The Red plans included the burning of five major loop hotels, the dynamiting of sewer systems to destroy telephone cables, the firebombing of the Grant Park underground parking lot, the assassination of leading Democratic contenders, the murder of some sixty policemen assigned to guard the International Amphitheater, and the throwing of grenades into various police stations in the city.

On September 27, 1968, the month following the Democrat Convention, Chicago police intelligence uncovered *another* Red plot which called for the firebombing of two loop department stores during a "Peace" march down State Street the following day. When police arrested three hippy-type members of the Heavenly Blue Lights, a militant group working with the Communist Chicago Peace Council, they found a secret laboratory in their basement apartment which was being used to make bombs of all kinds. In one room the police discovered two quarts of sulphuric acid and an equal amount of nitric acid, as well as four-dozen bottles stuffed with cotton and rags to be used as Molotov cocktails. It was revealed that some of the bottles were "designed to be filled with the acids and used as weapons against police officers during the planned havoc during the demonstration."

The *New York Times* of November 12, 1968 carried an equally disturbing story about the arrest of nine young men and two girls who had been apprehended in raids in Detroit—after the F.B.I. uncovered a major sabotage plot by the "anti-Establishment hippie types." The group had taken part in the bombing of a C.I.A. recruiting office in Ann Arbor, a suburban draft board office in Roosevelt, the St. Clair Shores school administration building, and a policeman's private car. The young saboteurs also dynamited an Army recruiter's automobile and the University of Michigan's Institute of Science and Technology—*which had been working on classified Government radar research.*

And just this past April twelfth, the F.B.I. uncovered a plot by college students to dynamite national shrines in Boston and Philadelphia. Lieutenant George Fencl, chief of the Philadelphia police civil disobedience squad, reported that members of the S.D.S. "had gone into the community near the Temple (University) campus and attempted to solicit residents to make explosive devices." He said that some S.D.S. members had distributed sabotage manuals detailing how to place homemade bombs against the shrines. Similar sabotage tracts had been issued to some 327 anti-war groups across the nation in February of last year after preparation in Toronto, Canada.

The twelve-page Canadian sabotage documents described how to construct incendiary time bombs, explaining at length why sabotage is the necessary and proper next step in the Red movement. The Communist directives suggested that the young anti-warriors carry out an act of sabotage against a draft board, an induction center, or some government installation, *perhaps once every three or four months.* A final bit of advice to the would-be saboteurs was that: ". . . they must not be arrested. They must not make mistakes. They must remain out of jail in order to be able to strike again and again and again."

For several years now, various Leftist groups have been distributing pamphlets using guerrilla warfare in the United States. One of the most widely read, published by the Students for a Democratic Society, is entitled: "Revolutionary Warfare," by Eqbal Ahmad. In it, we find the statement: "The use of terror by guerrillas is highly selective. . . . It is employed partly as an instrument of subversion . . . it aims at maximum psychological effects." Another Red pamphlet currently making the rounds is one titled, "Sabotage: Its History, Philosophy and Function," by Walker C. Smith.

Also being given wide distribution are copies of *The Crusader,* publication of the Communist Revolutionary Action Movement. Written by Communist Robert Franklin Williams and Red Chinese experts on guerrilla warfare, the inflammatory pamphlets detail instructions on how the so-called Afro-American freedom fighters intend to take this country using such quaint methods as sabotage, assassination, and wholesale strategic arson. Echoing the R.A.M. directives is *The Black Panther,* publication of the Communist Black Panther Party, which has been running a series of helpful hints on sabotage. The issue for November 16, 1968, in fact, devoted a full page to describe the construction of "Grenades and Bombs: Anti-Property and Anti-Personnel."

Perhaps the most flagrant publications of the Left are those of the subversive Underground Press Syndicate, which consistently promote three main themes: narcotics. homosexuality, and Marxist propaganda. In the March 17, 1968 issue of *Open City,* published in Los Angeles, contributing editor Robert Igriega writes of the "New Peace Tactic—Sabotage."

Open City reporter Igriega describes in his article a very detailed "backyard sabotage manual," supposedly distributed by the C.I.A. among Black Nationalist groups—"re produced outside official channels," of course. The C.I.A. manual "went into an infinite variety of ways to make napalm (mixing gasoline and egg-white, for instance), and describing how to devise your own detonator (without breaking the filament, fill a light-bulb with black powder: when the light's turned on—boom)." Accompanying the article were diagrams showing the reader how to make a "chemical fire bottle." The caption read: "This incendiary bottle is self-igniting on target impact."

In a later issue of *Open City,* contributing editor Alex Apostolides, a member of the Communist W.E.B. DuBois Clubs, related his interview with several members of the so-called Peace Movement. In his article, "Will Pacifists Resort to Sabotage?," Comrade Alex tells us that "well-conducted sabotage raids against key facilities would hobble the war effort." Quoting from another U.P.S. publication, the *Los Angeles Free Press,* he revealed that members of the Port Chicago Vigil, a Red group in Northern California, "had sought unsuccessfully to put sugar in the gas tanks of munitions trucks." Pursuing that subject, Apostolides wrote:

"Ninety per cent of the napalm for Vietnam goes out through Port Chicago. Inside the fence there are stacks of napalm bombs 50 feet high and half-a-block square—hundreds of stacks like this. If one went. They'd all go. I asked one of the guys in the Vigil if he'd ever thought of throwing a grenade in the middle of one of those stacks. He says he thinks about it all the time."

Interviewing other Movement "pacifists," Comrade Apostolides said that "spontaneously and simultaneously *all of them, with no exceptions, were thinking about sabotage*—as was he. Apostolides speculated that "people in the Movement might be willing to engage in sabotage against property . . . blowing power lines in the desert, for instance. But . . . once this was started, *other groups would shortly afterwards carry out actions that would result in deaths. . . . One intriguing terrorist-guerrilla action has been suggested that is well within possibility under today's conditions. This would be the systematic assassination of Southern whites."*

As a final example of what this nation is up against, we quote from a chilling expose by Conservative columnist Ed Montgomery, which appeared on March twenty-third in the *San Francisco Examiner and Chronicle.* Reporting on the formation of a terrorist organization known as the Revolutionary Party, Mr. Montgomery revealed that the militant underground group making up the top echelon was the Maoist Red Guard, comprised of members of the subversive Resistance, the Communist-oriented Students for a Democratic Society, and the paramilitary Communist Black Panther Party.

Headquartered in Menlo Park, California, the weird revolutionary cabal has set a target date of 1973 for a nationwide Communist takeover, preceded by assassinations and bombings. According to "inside" information revealed to Mr. Montgomery by a former Red Guard member of S.D.S., another leading Red Guard terrorist (an instructor at the subversive Midpeninsula Free University) has prepared an assassination list of community leaders and has revealed that "young revolutionaries, including scores of black militants, are being trained in a camp near Havana" to to the job.

Revolutionaries attending a strategy meeting in the home of the Red Guard instructor were counseled to do the following:

Create as many police confrontations as possible. Scream "police brutality" and discredit the "pigs" to win public sympathy.

All police and members of their families must be killed and law enforcement demoralized.

All jails and prisons must be opened and inmates liberated.

All counter-revolutionaries, or imperialists, who would fight "liberation" must be cut down.

Terror is a necessary weapon and must be used "to get the cooperation of the masses."

Don't fight the draft. Go to Vietnam and shoot your commanding officer in the back.

Become an airplane mechanic and learn to sabotage planes.

The Army can be won over from within. The police and the leaders of the establishment are our prime objectives.

The revolution has already begun, in the ghettos and in Berkeley. When the time comes weapons and explosives will be available.

And the time *has* come. The revolution has already begun. By the enemy's own admission. And *sabotage* has been, and will continue to be, one of the Communists' most formidable weapons—unless drastic measures are taken at once. Now is the time to act to pull down the curtain of silence about all of this—so that the people of a thoroughly informed America can know their enemy and destroy him. *Now,* while there is still time.

USE OF AIRCRAFT CARRIER "YORKTOWN" IMPROPER

(Mr. WEICKER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WEICKER. Mr. Speaker, I am requesting from the Secretary of the Navy an explanation as to why a U.S. aircraft carrier, Navy personnel, and Navy equipment, paid for by taxpayers of the United States, were allowed to be used to make a motion picture glamorizing the sneak attack on Pearl Harbor on December 7, 1941.

I also ask how such a film promoted the best interests of the U.S. Navy?

I think that we should have answers

to these questions, especially since the Defense Department has had a policy of restricting the use of Government equipment or military personnel in any picture produced for private profit.

I would call to the attention of my colleagues, the column in the New York Daily News of May 14, written by Mr. Ted Lewis on this subject, which I am simultaneously inserting in the RECORD.

Mr. Lewis points out that permission for the Navy to cooperate in the production of this film was given in the closing days of the previous administration with hints of wheeling, dealing, and cronyism.

I do not feel that it is fitting or proper that the aircraft carrier *Yorktown* should be used as a prop for the movie "Tora, Tora, Tora," which portrays the Japanese version of the sneak attack on Pearl Harbor that took so many American lives.

I feel it is bitter irony that while in a watery shrine of the hulk of the battleship *Arizona* are entombed the bodies of 1,100 U.S. sailors, the U.S. aircraft carrier *Yorktown*, flying the colors of wartime Japan, was being used to film a motion picture glorifying the sneak attack that killed these men.

The use of our military by private entrepreneurs to produce for profit Hollywood versions of tragic moments in our history when we were right in the midst of a very real present tragedy is a national disgrace.

It seems to me that the whole area is a proper one for congressional factfinding, and I have requested such of the chairman of the House Committee on Government Operations.

The article referred to follows:

SOME PICTURE, SOME SUBJECT, SOME GALL!

(By Ted Lewis)

WASHINGTON, May 14.—In the last few weeks of the Johnson administration the Navy, it now turns out, was given a go-ahead to cooperate in a Hollywood motion picture production glamorizing, if not glorifying, the Japanese sneak attack on Pearl Harbor.

Some picture. Some subject—all about this country's most horrible naval disaster as seen through Japanese eyes. What FDR called "the day of infamy" getting the specialized Hollywood extravaganza treatment, on a slant-eyed basis, with the assistance of the United States Navy.

Oh sure, we now love the Japanese whom we used to hate. We also now love the Germans. And who knows, looking far ahead, whether some day we might even love the Communist Vietnamese whom we now hate.

So, what! Only this: that the American flag still flies over the sunken hulk of the battleship *Arizona* in Pearl Harbor and in that watery shrine are the bodies of 1,100 young sailors drowned on Dec. 7, 1941.

Is it then fitting and proper for the aircraft carrier *Yorktown* to be a stage prop in the Darryl Zanuck-20th Century Fox movie "Tora, Tora, Tora"? What a role for the *Yorktown* to play, that of a Japanese aircraft carrier on the sneaky Pearl Harbor mission, with Japanese flags run up, Japanese vintage-1941 planes on deck, and even Yankee enlisted men decked out in Japanese naval uniforms.

HOW THE BIG DEAL WAS SWUNG

All these details concerning how willingly the Navy was suckered into helping Zanuck make a picture for private profit have to be credited to the CBS Tuesday night television show "60 Minutes With Harry Reasoner." The whole indecent exposure job was factually solid, based on brilliant reporting, and a checkup today at our end only added to, rather than subtracted from, the disgusting revelation of the Pentagon's idea that the Navy could improve its public image by assisting in a film keyed on the theme of Pearl Harbor from the Japanese perspective.

The cast of characters in and around the Johnson administration responsible for the nauseating use by Hollywood of Navy equipment and personnel is pretty well determined. Darryl Zanuck has admitted he put the arm on Jack Valenti, head of the Motion Picture Association, to get through red tape in the way of Navy cooperation. Valenti has said he first wrote a letter to, and then phoned, Defense Secretary Clark Clifford, and that Clifford passed the buck to Paul Nitze, deputy defense secretary.

Nitze says he brought up the matter at a sort of routine staff meeting and public relations deputy Phil Goulding was strongly opposed, but Navy Secretary Paul R. Ignatius was for, like Nitze. All this happened last January, which just goes to show how long it takes for a controversial decision with a political odor to it to leak out if the principals don't want to point with pride in public.

A LAMEDUCK WAY OF DOING THINGS

The Nitze-Ignatius go-ahead-with-Hollywood decision as we get it, took into consideration the close ties that Clifford and Valenti had with LBJ. If so, it reflected the way judgments are often made in the last days of a lameduck administration.

Otherwise, Zanuck would have been told that the Navy wanted no part of his film project. This would have been in line with a Defense Department directive issued years before which prohibited use of government equipment or military personnel in any motion picture produced for private profit.

That directive was drawn up after Zanuck, back in the fall of 1961, had used 700 combat troops from American forces in Germany as extras in his effort to recreate on film D-Day in the picture "The Longest Day."

Those troops were assigned to Zanuck's command by his friend Gen. Lauris Norstad, then supreme Allied commander in Europe.

What upset the Pentagon about the Norstad-Zanuck deal was that at the very time troops were moving out of Germany for the filmmaking in France, President Kennedy had called up thousands of reservists and national guardsmen back home because of the serious Berlin crisis.

BUT D-DAY WAS SOMETHING TO BE PROUD OF

Otherwise, no one could quarrel too much with military cooperation in connection with a movie production recreating D-Day, a moment in history all Americans have pride in recalling. Pearl Harbor is different. We got hit in a sneaky, dirty way. It was a disaster, and if Zanuck doesn't complete his "Tora, Tora, Tora" by Dec. 7 this year for box office receipt purposes, it will be a victory for all solid, sane Americans fed up already with Hollywood distortions of sex and history.

Even the title of Zanuck's production recalls a phase of the Pearl Harbor "day of infamy" that will always disturb many Americans. Tora means tiger in Japanese. "Tora, Tora, Tora" was the code word passed by Japanese aircraft to the Nipponese carriers that the attack on Pearl Harbor had begun.

In our book every ethical patriotic standard of decent conduct has been besmirched by this Navy-Zanuck tieup aimed at making a smash hit out of a Japanese-slanted Pearl Harbor film production. There is a war on in Vietnam, and out of San Diego sails the aircraft carrier Yorktown, bound for Honolulu, with 40 Japanese planes on deck, the type used in 1941. Yes, the Navy carrying Zanuck's cargo to him, above board!

WITHDRAWAL OF AMERICAN TROOPS FROM VIETNAM IS COMMITTAL TO DE-AMERICANIZE THE WAR

(Mr. RIEGLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. RIEGLE. Mr. Speaker every American can be thankful for President Nixon's decision to begin the staged withdrawal of American troops from Vietnam. With 25,000 U.S. troops scheduled to come home within the next few weeks, clearly other troop withdrawals will follow on a scheduled basis.

While the size of the initial reduction is modest, its meaning for the future is monumental. The real significance of this first troop withdrawal is that it finally commits us to de-Americanizing the Vietnam war—by shifting the combat responsibility back to the South Vietnamese where it belongs. The implementation of this combat transfer should have the effect of reducing the American loss of life.

As one who has long fought for this new policy, I am convinced the President is on the right track.

Further, every citizen should recognize that this initial reduction almost certainly means that the United States will not later turn around and send additional U.S. troops to Vietnam. Now other free Asians must recognize that future military manpower needs in Southeast Asia must come from their ranks, not from the United States. After 8 long years, this is the beginning of the end of the war.

Now we must continue to make every reasonable effort to negotiate a political settlement—while we carefully scale down the excessive U.S. commitment.

Staged de-Americanization offers the South Vietnamese a fair, fighting chance to reassume the burdens of their war. This leaves the enemy the choice of either negotiating a political settlement in Paris—or fighting an interminable war pitting Vietnamese against Vietnamese.

Thus the answer to this conflict now can be found in Paris—and the interests of both sides suggest that this answer be found and found quickly.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. RIEGLE. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Mr. Speaker, did I understand the President had a commitment not to send additional troops to South Vietnam as he withdraws these troops?

Mr. RIEGLE. It is my opinion that it is not his intent to send additional troops. I would not suggest that there is a formal commitment with respect to this point. This is why I used the words "almost certainly" in my earlier statement.

Mr. ROGERS of Colorado. Is there any evidence that that is true—and I have had several telephone calls—suppose a mother calls and says her son is scheduled now to go to Vietnam. Does this mean the son will not have to go as the result of this peace effort?

Mr. RIEGLE. I would say to the gentleman, the thrust of my remarks is to suggest I do not think additional troops will be sent which would increase the aggregate manpower levels. I would not suggest we would not be sending replacement troops to relieve men presently in the field. I speak only of aggregate combat levels.

JAPANESE FISHING FLEET VIOLATING ALASKA'S CONTIGUOUS FISHING ZONE

(Mr. POLLOCK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. POLLOCK. Mr. Speaker, on June 4, the Bureau of Commercial Fisheries reported a Japanese fishing fleet was violating Alaska's contiguous fishing zone in Norton Sound. Patrol aircraft sighted the fleet of two mother ships and 31 gillnetters. Thirteen of the Japanese gillnetters were within 12 miles of shore; four were less than 4 miles offshore.

The Coast Guard cutter *Storis* was dispatched to the scene and seized two Japanese gillnetters within the 12-mile zone. The *Storis* was required to fire three warning shots across the bow of one of the two fishing vessels when all other attempts to halt her failed. Boarding parties were placed aboard the two Japanese boats and they were brought into Nome this morning.

The *Storis* also located 38 Japanese nets out within the 12-mile line.

Since 1965, three Russian and five Japanese fishing vessels have been seized for illegally fishing within Alaskan territorial waters. We can only guess at the number of similar violations which have gone undetected.

Mr. Speaker, I regard this illegal harvest of Alaska's valuable fisheries a serious transgression and call upon the Justice Department for stern measures to halt this continuing violation. Again I commend the efforts of the U.S. Coast Guard in this most difficult situation, for theirs is the responsibility to patrol these transgressions of foreign fishermen over many thousands of miles of Alaskan coastline, which comprises 54 percent of the total coastline of the United States.

J. EDGAR HOOVER REPORTS ON SDS

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, the greatest authority in America on intelligence matters, J. Edgar Hoover, Director of the Federal Bureau of Investigation, in the June 1969 FBI Law Enforcement Bulletin, reports on the new left, SDS and related outfits. All Members of Congress should weigh and digest this authentic material:

MESSAGE FROM THE DIRECTOR

(By J. Edgar Hoover)

As the current academic year draws to a close, it should be readily apparent that the students in the New Left revolutionary movement are not on college campuses to seek education. Rather, this conglomerate of malcontents is engineering a drive to destroy our educational system.

More and more, the New Left is being controlled by the followers of Karl Marx through the Old Left organizations of the Communist Party, USA (pro-Moscow), the Progressive Labor Party (pro-Peking), and the Socialist Workers Party (Trotskyites). Not since the New Left came into being has the influence of Marxism-Leninism been so strong.

The Students for a Democratic Society (SDS), largest of the New Left groups, is rapidly gaining a definite Marxist-Leninist coloration. At the SDS National Council meeting in Austin, Tex., in March, one of the organization's top leaders was quoted as stating, "Our primary task is to build a Marxist-Leninist revolutionary movement."

While the New Left movement may or may not make the dean's list this year, it rates an A plus in revolutionary exploits. The SDS and its adherents have rocked campuses from coast to coast with violence, riots, and sabotage. At the SDS National Convention last summer a workshop on violence and explosives was held. Literature explaining how explosive devices can be manufactured and used against Selective Service installations, ROTC buildings, and university facilities has been distributed. The results are a disgrace to a society which owes its very existence to democratic processes under the rule of law.

Many of the criminal acts of the New Left were, and are, committed as expressions of rights under the first amendment. Corruption of the first amendment will be a better term for such antics. Certainly, free speech and dissent are not synonymous with despotic obstruction and force. The wild and insatiable demands of the New Left for unlawful power and its blind determination to silence and destroy all who stand in its way are tyrannical acts of the first order.

Under the first amendment, a person may hire a hall and speak on any subject to as many people as he can persuade to listen. However, he has no right to disrupt classes and assemblies and prevent other persons from hearing a speaker of their choice. Neither the New Left nor any other group should be allowed to plunder, riot, and terrorize our educational institutions and impose its will upon a majority of students who do not share its views. Crime under the ivy-covered arches of a college campus is no more excusable than crime in our city streets.

SDS leaders know that if a revolution is to be brought about, they must inject more discipline and organization into the movement; the antidiscipline, freewheeling, individualistic, anarchistic mood of the New Left must be controlled and molded into a strong, centralized, Marxist-Leninist revolutionary force. The Old Left groups, of course, are working hard to capture at least a part of the movement.

The pro-Peking Progressive Labor Party (PLP) already has a strong beachhead inside the national SDS. On some key issues, the PLP comes close to having enough strength to swing votes in national meetings. While considerable factionalism now exists within SDS ranks on "how to bring about a revolution," the pro-Peking, the pro-Moscow, and the Trotskyites all agree on one major point—students alone cannot bring about a revolution. One well-known communist youth leader wrote, "We must view the worker-student alliance as a mutual necessity and do everything in our power to insure its growth and endurance." The PLP and the Trotskyites also supported similar linkage of the students and "workers."

Not all SDS members accept the Old Left organizations. Many feel that SDS can promote a viable revolutionary youth program without stringent controls and free of parental tutelage from a foreign or internal Marxist party. Whether this is possible or not remains to be seen, and the answer may be decided at the SDS National Convention this summer, where this issue will be bitterly and hotly contested.

Meanwhile, as basic fact looms. Never before in this country has there been such a strong revolutionary Marxist movement of young people which is so eager to destroy established authority. Furthermore, the New Left movement has made it emphatically clear that mere change and revision are not its objectives. Armed with a long list of "nonnegotiable" demands, its immediate goal is the complete overthrow and control of our educational systems. We all know what its ultimate goal is.

Concessions and appeasements will not satisfy those bent on anarchy and nihilism. America should take note before it is too late.

COVINGTON, IND., HONORS AUTHOR WHEELER McMILLEN

(Mr. MYERS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MYERS. Mr. Speaker, a good friend of mine and longtime friend of my family has just had his most recent book published. Wheeler McMillen has written a number of books, but this newest release is about his experiences early in his life as the owner and editor of a small weekly newspaper in a county seat town along the Wabash River in western Indiana. Wheeler McMillen, or "Mac," as his close friends know him, selected as the title of his new book, "Weekly on the Wabash."

This book is a most revealing and humorous description of the community's political, economic, and social structure. He presents a most interesting view of the town as he saw it as a young stranger arriving in the town of 2,000 on a snowy day in 1914. He describes many of the town's citizens of that time using actual names and events. He also relates in a most interesting style the vital issues of the period and the role of the county weekly newspaper in handling them.

Wheeler McMillen, besides being an editor and author, has had a distinguished career in the field of agriculture. He has served as president of the American Association of Agricultural Editors; editor in chief of the Farm Journal, 1939–55; and vice president of Farm Journal, Inc., 1955–63.

Last Saturday, this town, the setting and inspiration for "Weekly on the Wabash," Covington, Ind., demonstrated its gratitude and pride by welcoming its native son back home on Wheeler McMillen Day. It was a great day for Covington and its citizens. "Mac" personally autographed hundreds of his books and visited with his many friends.

Wheeler McMillen joins the list of many well-remembered persons in history who have called Covington, Ind., their home. Some of these names are Daniel W. Voorhees, known as the Tall Sycamore of the Wabash, serving both in the House of Representatives and the Senate; Edward W. Hannegan, whose slogan "Fifty-Four Forty or Fight" was a famous chant when he served in the Senate; Lew Wallace, statesman, soldier, and author of "Ben Hur," whose statue stands in Statuary Hall in the Capitol; Enos H. Nebecker, who served as Treasurer of the United States; Cecil Harden, who served in the House of Rep-

resentatives for 10 years; and David M. Shoup, former Commandant of the U.S. Marine Corps.

The citizens of Covington, where I was born and call my home today, are proud to add the name of Wheeler McMillen to this list of sons and daughters who have been recognized nationally for their major contributions to the development of this Nation.

SUPERSONIC AIRCRAFT

(Mr. THOMPSON of Georgia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THOMPSON of Georgia. Mr. Speaker, I have recently had the opportunity to examine the British-French Concorde, the mockups, and the Bristol plant wherein 002 was assembled.

There is a great debate in progress today whether or not this aircraft, along with the Russian supersonic, will capture from the American aircraft industry a large share of the international aircraft market.

In order for a supersonic transport to attract numerous orders from the various airlines throughout the world, the aircraft must be economical for airline use and must be able to operate at a profit as well as having widespread public interest.

There is no denying the fact that the British-French Concorde is a pioneering effort and encompasses many new and novel approaches to aircraft construction as well as passenger air transport. I do not have any doubt that this aircraft will be able to fly at supersonic speeds though at this point neither of the two prototypes have.

However, I am inclined to believe that because of the useful load limitations of the Concorde it may well be necessary for the Concorde to make an intermediate stop on many runs to take on additional fuel if they are to carry a full passenger load. Further, it appears that an almost full passenger load will be demanded by economics. Taking into consideration such factors as the inability to operate profitably with the incomplete payloads, limited range, and so forth, it may well turn out that the Boeing 747 or new Lockheed 1011 will have greater public acceptance and moneymaking potential for the airlines than the Concorde.

Everyone recognizes the fact that the British pioneered with their Comet jets the use of pure jet passenger transport. However, they rushed into the production of these aircraft without having adequately tested all aspects.

It is my hope that such will not prove to be with the Concorde and I am of the opinion that it is better for the American airframe manufacturers to delay for an additional year the decision as to whether to produce an American SST until more information can be learned from the British-French Concorde and Russian SST's. With this information, we will be in a position to produce, should it be demanded, an aircraft superior to that of any foreign country.

Mr. Speaker, as important, however, as speed is becoming, comfort and spaciousness are also important. In fact, with the new 747, Lockheed 1011's and DC–10's, the traveling public will become so spoiled to the spaciousness of these aircraft that the small tubelike confinement of the SST will prove to be unattractive after having been exposed to the luxury of the 747 and Lockheed 1011 aircraft. This is true even though several hours may be cut off the transatlantic flight with the smaller, confined SST. An additional point to consider is that the 747 does not need intermediate stops for taking on additional fuel as does the Concorde when traveling great distances.

Mr. Speaker, I am of the opinion that a year's delay in making the final decision on producing an American supersonic transport will in no way cost the American aircraft manufacturers any appreciable amount of the foreign market, but, in fact, may enable ourselves, by having this additional time for engineering, to produce a much superior airplane.

However, under no circumstances should the United States allow its airframe manufacturers to be placed in the position whereby they would lose the share of the international aircraft air market which they now hold, but this should in no way be advanced as a reason to promote competition for a foreign proposal, the Concorde or the Russian SST, which may well be uneconomical and not feasible for profitable international airline operations.

It will be my purpose to vote to continue research and planning and to advance aircraft designs and study in the SST as well as the hypersonic field.

I will shortly advocate to the chairman of the Interstate and Foreign Commerce Committee, Congressman HARLEY STAGGERS, that a study be conducted as to whether the United States should not consider skipping the mach 2.5 type aircraft and proceed toward a mach 4 or 5 aircraft which could be marketed and produced in the last quarter of the 1970's. We must bear in mind that technical research is progressing at such a rapid rate that it may be feasible to skip producing the first stage SST and produce a better and more advanced model. The sonic boom of the current SST at the altitudes at which these aircraft operate, will limit their use to overwater flights, whereas an advanced hypersonic aircraft may well operate at such extreme altitudes so as to render a flight from San Francisco to London feasible without having the unacceptable sonic booms now produced by the current generation of SST's.

We must all keep sight of our primary objective which is to provide the best means of transportation which will enable the airlines to profitably function and which will continue the predominance of the United States in the aircraft manufacturing field. To such an end, we must continue funding for research and development but not be prompted into premature production of an aircraft which may be technically surpassed in a very short time unless it is determined that the production of this aircraft will be of an economic benefit and maintain the predominant position of American aircraft manufacturers in the world market.

PERSPECTIVE ON DEFENSE

(Mr. EDWARDS of Alabama asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. EDWARDS of Alabama. Mr. Speaker, the military services are being criticized today in Washington as seldom before in the history of our country. It seems to be open season for shooting at the Pentagon.

Certainly some of the criticism is justified. There is no reason why waste in military spending is any more tolerable than waste in any other Government program.

The critics have revealed some serious cost overruns in military contracts, and these should be corrected. I have helped in uncovering some of the excessive spending.

Furthermore, somebody has made mistakes of judgment in tragedies like the capture of the *Pueblo* ship. The military people, at least as much as others in Government, must be accountable to the American public for their actions and for their use of the taxpayer's money.

But it is essential that we make a distinction here between the responsible critics and those who jump to criticize anything connected with the services, thereby undermining public confidence in the forces upon which we depend for our national security.

Some of these people fight the military because they feel that if we voluntarily reduce our military strength the Communist world powers will do likewise.

They think world tension would be reduced and peace be attained if we only prove to the Russians we want peace. And to achieve that goal they oppose any military projects which seem most easily criticized.

Last week President Nixon discussed this matter in his speech at the Air Force Academy in Colorado. And in my opinion he did an excellent job of setting forth the real issues.

He said he could not go along with the idea that if we reduce our forces the chances for peace would improve.

He rightly emphasized that America has a vital interest in world stability and that we must meet our responsibilities both at home and abroad to serve that interest. We cannot retreat into a shell and play like the problems do not exist.

Decisions in military policy can be very difficult to make. They involve scientific conclusions when often the scientists themselves disagree sharply.

They involve expenditures of money in great amounts when the pressures for spending in other ways are also very great. And they involve human life.

The President said last week that as Commander in Chief, if any mistakes in military policy have to be made he would rather provide for too much security rather than too little.

He understands that the Defense Establishment must remain in the hands of civilian control, and that there are proper limits to the total spending and the impact of the Defense Department in the overall structure of our country.

But in what I felt was the real heart of the speech, he said that defense decisions must be made on the hard realities of the offensive capabilities of our adversaries, not on what we hope are their intentions.

In other words, we cannot sit by and watch the Communist powers build their military potential greater day by day and assume that they are doing it just for the fun of it or because they are only trying to keep pace with us.

We have traveled that road too long already.

Soviet Russia has built up its strength on the seas to a very great extent, has advanced in the military use of space at least as far as we have, and has maintained enormous conventional army strength as last summer's invasion of Czechoslovakia testifies.

No. We cannot watch all this and believe that tension will be reduced if only we cut back on our own strength. The contrary is closer to the truth.

All the lessons of recent history show that we cannot rely on what we are told about the good intentions of Soviet Russia, or the logical thinking of the Communist Chinese.

President Nixon said we have to make defense decisions based on what our adversaries can do, not on what we hope they might do. I think most Americans will agree.

THE PRESIDENT'S EFFORT TO BRING ABOUT AN HONORABLE AND LASTING PEACE IN VIETNAM

(Mr. ADAIR asked and was given permission to address the House for 1 minute.)

Mr. ADAIR. Mr. Speaker, President Nixon's meeting on Midway with President Thieu of South Vietnam was an important step in Mr. Nixon's efforts to bring about an honorable and lasting peace in that area. The two Presidents demonstrated their unity of purpose. Through the announcement of the withdrawal of 25,000 American troops, they also demonstrated that South Vietnam's Armed Forces are acquiring the strength to carry more of the burden of deterring aggression.

These actions by Presidents Nixon and Thieu should signal Hanoi that it is in their own interest to begin serious negotiations. The withdrawal of American troop should be a signal to the world of our desire to get on with the business of settling this war on an honorable basis. It should also be a signal that the time has come for some reciprocal action by Hanoi . . . some sign that Hanoi desires peace and is willing to take steps to stop the killing and bloodshed that its subversion and aggression have brought to that troubled land.

TROOP REDUCTION IN VIETNAM

(Mr. FINDLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FINDLEY. Mr. Speaker, the President's announcement of a 25,000 troop reduction in Vietnam is a historic milestone. The first combat forces went to Vietnam in 1963 on the orders of President Kennedy. There has not been a reduction in total forces there since that occurred. It is interesting to recall that periodically in the intervening years numerous spokesmen of previous administrations have spoken hopefully about the day when the troops would come home. Actions speak louder than words. The President's decision to bring home 25,000 troops is indeed an action which will cause rejoicing throughout the country. For the first time since this war began, the United States is taking clear and unmistakable steps to lessen the level of U.S. participation.

Moreover, the meeting on Midway Island reminds us of the battle which, in the words of President Nixon, was "one of the major turning points in World War II." Today it also gives us confidence that we have now reached the turning point in our military involvement in Vietnam. Following as it does just 3 weeks after the President's May 14 speech, it reaffirms the desire of the American people and their leaders, for peace. It demonstrates that the President has set as his goal the immediate deescalation of the Vietnam war.

I for one am greatly relieved to see that this first step has been taken. It is clear that this is the only way to measurably reduce our involvement in Southeast Asia and the consequent loss of life. I applaud the President for his decision.

CHANGES IN WELFARE PROGRAM

(Mr. COHELAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. COHELAN. Mr. Speaker, I have today introduced a bill designed to make very modest but essential changes in our public assistance programs. To be effected through amendment of the Social Security Act, they would help to correct very serious inequities in local welfare systems and in the financial burdens of State and local governments. These are the changes proposed in my bill:

First, an increase in the Federal share of public assistance expenditures. I suggest that the Federal Government pay 90 percent of local welfare program and administration costs. This formula would apply to payments to the aged, blind, disabled, and families with dependent children, to medicaid programs, and to emergency assistance and administrative expenses. Local and State governments are sorely pressed to meet their sharply rising costs, and one of the most tragic shortcomings is their inability to meet the welfare needs of their communities.

I am sympathetic to the fiscal crisis local governments face, but I feel that we cannot let the poor and the needy suffer the full brunt of problems brought on by the eroding of local tax bases. An increased and uniform contribution from the Federal Government for one of the major local costs will do much to correct this situation.

Second, to provide a national standard for minimum welfare benefits and a national eligibility standard in all 50 States. The disparity of welfare payments is not a reflection of the disparity of need, but of the disparity of concern and ability to pay. Public assistance is a national problem, and we must legislate arrangements to cope with it on a national basis.

The Supreme Court's recent decision ruling against State residency requirements as a prerequisite for welfare assistance makes even more urgent the need for assuring consistency in these standards.

Third, remove the restrictions on the number of children eligible for payments under the aid-to-dependent-children program. The effect of this restriction, authorized in the 1967 amendments to the Social Security Act, was postponed 1 year, but unless the controversial child-welfare "freeze" is repealed, it will go into effect on July 1, 1969. Intended as a deterrent to providing welfare assistance for illegitimate children, its actual effect is to impose an even greater hardship on America's dependent children, who are not responsible for their poverty nor able to help themselves in any way.

Mr. Speaker, I have no illusions about the ability of these proposals to solve fully the problems of poor people, unable to work or unable to find jobs. But they are measures which will first permit a strong, wealthy nation more easily to help its poorest citizens; second, assist, State and local governments to cope with their growing and nagging welfare programs; third, introduce more fairness, consistency and administrative efficiency into the public assistance programs; and fourth, remove the invidious restrictions now placed on Federal payments for aid to families with dependent children.

The President's Commission on Income Maintenance has been studying the problems of public assistance programs in an effort to devise more effective and efficient methods of coping with these problems. It may well be that their ultimate solution, both for those who are the unfortunate victims of poverty and for the society which must care for them responsibly, lies in Federal income maintenance and job assurance programs. The Commission will present its recommendations at the end of this year, but in the meantime it is our responsibility to help meet the financial crisis of our cities and ameliorate the problems of our poorest citizens.

CONFRONTATION AT BERKELEY, A REASONED RESPONSE

(Mr. LEGGETT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LEGGETT. Mr. Speaker, as a citizen and a legislator I am truly grieved at the escalation of vituperation and violence at the University of California at Berkeley. As the press, both underground and conventional, continues to report stories of anarchistic provocations on the one hand, and violent responses on behalf of the bodies charged with maintaining order on the other, shock wave after shock wave is felt by those of us who are dedicated to the maintenance of a free society.

Angry and disillusioned young people are confronting an "establishment" which they believe to be totally the antithesis of their interests and ideals while another hostile group seeks to reestablish order in ways which only feed the appetite for confrontation.

The careless use of gas distributed by helicopters represents "equal treatment under the law" only in that all, rich and poor, black and white, young and old are gassed alike. This type of know-nothingism pushes the radicals further toward anarchy and serves to convince moderate and neutral students and those who sympathize with them that it is impossible to work within the system as we know it.

Personally, I condemn those groups and individuals who provoke confrontation by the physical seizure of property. I reject the assertion that demands are "nonnegotiable" and that total capitulation by university officials is the only road to stabilization. On the contrary, I believe that such folding under pressure can only maintain violence.

It is unfortunate that this domestic anguish has descended upon us while we are fighting an unpopular war and expending our riches for it. Problems must be solved as they appear, however, and within a practical framework.

As H. Chapman Roe remarked in a recent address before the Cleveland Bar Association:

> But if we yield to the demand of any generation or group for speed at the cost of fairness, speed at the cost of trampling on the hard-won equal rights of others, in short, at the cost of law, then on the brink of success in the age old struggle of mankind with poverty and hunger, we could see our progress brought to a grinding halt.

In this context I would like to call the attention of my colleagues to the remarks of Chancellor Roger Heyns of the University of California at Berkeley. His remarks were addressed to the Academic Senate on May 23, 1969.

Chancellor Heyns has taken a reasoned approach to the problems at Berkeley and I think that the solutions which he outlines could be used throughout the country as other academic institutions find that they are under siege.

I call upon the Governor, the faculty, the regents, the students, and the citizens of California to support Chancellor Heyns as he attempts to move the university into a meaningful and mutually satisfying relationship with all persons of good will in the community.

It must also be remembered that Chancellor Heyns and his colleagues are charged with the continuing responsibility for educating thousands of students even as tumultuous changes are occurring.

Chancellor Heyns' remarks and the remarks of Charles Hitch, the president of the University of California follow. I have also included an article from the publication Outcry, which in my judgment is representative of an utterly unreasonable approach to the issue of "the people's park."

The Dr. Milton Eisenhower Commission on Violence should certainly be called into action by the President and Justice Department to review this tragic situation.

The material follows:

REMARKS OF CHANCELLOR ROGER W. HEYNS TO BERKELEY DIVISION, ACADEMIC SENATE, MAY 23, 1969

We are meeting today in tragedy and outrage. One man is dead, many have been injured by shots, nightsticks, rocks and lead pipes, many have been tear gassed, and many more have been severely inconvenienced. I deeply regret these injuries and am appalled by the violence. Not only are these events tragic, but their effect on the morale and educational functions of the University gives us additional cause to grieve. The very reason for this meeting is the violence in our midst and the evils it works. We would not be here today if the issue were solely the decisions about the design and use of University property.

The authority to use force is normally given exclusively to law enforcement agencies in order to prevent men from doing private violence to each other and in order to minimize the amount of violence in society. The grant of this awesome power imposes obligations to employ it with restraint. When officials use force excessively, the very authority to use force is undermined. Implicit in the grant of this authority is our right to expect that officers will use force only within the law. But we also have the duty to correct any excessive use of official force if it does occur. In the past few days, I have done everything in my power to prevent any excessive use of force. As you know, I have no authority over law enforcement, but I have expressly requested that tear gas not be used on the campus, that the National Guard not be assigned to patrol on campus, that if the Guard must be assigned to campus duty that their bayonets be sheathed, and that the use of helicopters over the campus be stopped. We had no reason to believe that firearms would be used. As you probably know, all police officers are restricted in the use of firearms by state law. In addition, our Campus Police Department has the policy that firearms shall not be used except when necessary for the preservation of life. I have instructed Chief Beall to investigate the facts of every reported use of firearms. I have also urged—and here I have encountered no disagreement from anyone—that all non-University forces be removed as soon as order is assured.

There are two immediate aspects to this situation. When will we be able to conduct our classes and work normally? And when will outside police and the National Guard be removed from the campus?

Consistent with my responsibility for the safety and orderly operation of the campus, I will continue to do everything possible to have these forces withdrawn as soon as the risk of disruption and vandalism permits.

In the past two days we have been able to reduce the number of non-University law enforcement officers as a step in the direction of reducing conflict. Hopefully, we can continue to do so.

In our concern about the abuse of force, we should remember that the obligations of self-restraint apply to everyone. The original appropriation of University property by people with no claim to it was an unjustified aggression, and, obviously, it was an unjustified use of force for hundreds of people to attempt to retake the land last Thursday. These acts did not minimize violence—they provoked it.

The use of violence and the threat of violence also have political implications. They undermine good University government to decide difficult questions in the haste and panic of responding to confrontation. It also undermines good University government to permit the users of violence and coercion to dictate the timing and procedures for the review of University decisions and to frame the alternatives open to us. It is just as wrong for us in the Senate to make educational decisions off the top of our heads as we deal with an emergency as it is for the Regents to do so. I hope we will not make the same mistakes we accuse others of making. You have asked for the facts. Let me give them to you.

Soon after I arrived in Berkeley, I learned that many residents held the University responsible for the deterioration of housing and other property in the south campus area. That charge was made in the urban renewal hearings held in the spring of 1966, and with good reason. Ten years earlier the University had said it was going to acquire certain lots in the south campus area but had not done so. In 1956 the University designated the land it intended to acquire, had an understanding with the City of Berkeley about the boundaries of its program, and declared that all the land would be acquired by 1961. The Haste, Dwight, Bowditch lot was part of that land program. Property owners, aware that the University would acquire their land, had no incentive to maintain and improve it. Strict building code enforcement was not warranted and the buildings began to deteriorate. Although other factors also contributed to the deterioration, the University shares some of the responsibility.

I reviewed this situation and decided the matter should be brought before the Regents. I spoke to Acting President Harry Wellman, and he concurred that the Board should either complete the land acquisition program or make clear that it did not intend to do so. Early in 1967, I sent a proposal to acquire the land to the Building and Campus Development Committee for its review and comment. BCD discussed the program on June 1, 1967, including the proposal that the Haste, Dwight, Bowditch lot be used as a site for playing fields. The President of the student body was and is a member of BCD; in this role he is able to inform students, and bring their views to bear on building projects, priorities and plans. The student body President was invited to attend the June 1st meeting. The minutes of that meeting indicate he did not attend. At that meeting BCD passed a resolution urging the completion of the Berkeley campus land acquisition program. I then presented the proposal to the Regents at their June meeting in Santa Cruz. I emphasized the University's partial responsibility for the deterioration of housing. I also called attention to the high crime rate in the area. I told the Regents that the campus had a pressing need for land and that the Haste, Dwight, Bowditch land would be used for playing field space.

The campus had just lost Union Field when Zellerbach Hall was built, and this area was a suitable replacement. The intramural staff reported that at current levels of demand for recreational and playing field space, the new area would be scheduled for full-time use. The long-range development plan calls for the building of at least one playing field in addition to the Haste, Dwight, Bowditch field, and even that would leave Berkeley behind other campuses of comparable size.

The Regents agreed to acquire most of the land in the south campus land acquisition program and Regents funds were used for the purpose because state funds were unavailable. We immediately began acquiring the property in order to clear it and build a playing field. It took about one year to clear the site. We had hoped immediately thereafter to begin the preliminary work and build the playing field. Unfortunately, we were turned down at that time when we applied for necessary funds to begin work and therefore were delayed until this year. By March of this year

we had tentatively determined that with gifts and other funds the project could start soon. On April 4th the Capital Outlay Review Board committee met at Berkeley, and we learned that the playing field had high priority for funding. Therefore, we knew the field could finally be built as planned. Some two weeks later, on Friday, April 18th, the *Berkeley Barb* carried an announcement that "a park will be built this Sunday . . . on land owned by the University," describing plans for the park, urging readers to bring shovels, and the like, and declaring that they would not be moved out by police.

In retrospect one inevitably speculates, and people do, that if we had begun grading and fencing immediately, the problem might have been smaller. Under normal procedures we would begin work at the end of the spring quarter and have as much of the area as possible ready for student use this fall. On April 20th, the "people," unrestricted by bureaucratic requirements, began their work. We considered the fact that there might be trouble in that area, and decided that it would be best to treat the matter gently, to indicate in our acts and statements that we intended to proceed with development of the playing field and recreational space but that we would not immediately ask people using the area to leave. After all, we had permitted parking there, and saw no reason why the land could not be enjoyed until our work would begin.

Within a week, we were besieged with complaints and inquiries about the land. The neighbors were concerned and disturbed. The city was beginning to have health, safety and police problems and was becoming apprehensive about the development; and indeed, after reading some of the public statements made by people working there, we were becoming increasingly apprehensive. Therefore, on April 30th we issued a statement to the campus indicating some of the history I have summarized here and setting forth our willingness to approach the problem in a reasonable manner. We indicated that, although we intended to proceed with the use for which the property was acquired, we would seek the views of concerned persons on three aspects of the site: (1) a design which would assure the park-like character of the area; (2) possible uses of the area by the community; and (3) possible alternative sites on which the University, the community, and the city might jointly create a park facility. We recently redesigned a road and a bridge to preserve a redwood grove on this campus, and I believe I am fully sensitive to the need for park areas. For the next week we solicited views and advice. On the basis of these talks we became convinced that many students, faculty, staff and others were interested in a recreational area of greater diversity than the playing field we originally planned. There was interest in a children's playing area, other kinds of recreation such as volleyball and basketball, places to eat lunch, and a park area that people could enjoy, and ,if possible, work in. Planting things is not a new concept to the University. Students who live in Albany Village have been planting their own gardens in Gill Tract with University permission.

On the same day, members of my staff met with the Telegraph Avenue Concerns Committee. Although both sides were in good faith, the results of the meeting turned out to be inconclusive, largely because of legal problems of University liability on the proposals discussed.

My main concern at this point was not that we would be unable to design the site with diversified recreational possibilities. In fact, we promptly asked the campus architect to prepare designs which would provide opportunities for diversified recreation. My concern was that we would not have the freedom to do so. The attitude of people working in the park was becoming increasingly belligerent, and the development was proceeding on a scale which heightened the danger that if the University did not assert its ownership soon, a massive confrontation might result. The area was becoming an increasing police problem, and a growing disturbance to many neighbors. There were various structures, tools, and activities on the site which presented a serious hazard of injury to children or others and for which the University might be liable. At this time, it was probably a mistake on my part not to inform the campus community that we were facing this serious problem. I suppose I assumed that most of you were aware of the threats of violence already being directed at the University if it should seek to develop its own land. On May 9th leaflets were circulated over the south campus area, pledging "to wage a war of retaliation against the University if it begins to move against the park. . . . If the University attempts to seize $1.3 million land now claimed by the people, we will destroy $5 million worth of University property."

At that point my dilemma was how to be responsive to the creativity and genuine interest shown by some persons associated with the park without being further maneuvered into a situation that might result in a street fight. I know there are some among you who believed that at this point it was already too late. We have been told by newsmen and others familiar with the development of the property that after the first couple of days any move by the University to develop its land would have resulted in a street fight. We were reluctant to be that cynical. We still believed that it was worthwhile to try to develop a plan which would incorporate the interests of those who had worked on the park into the University's own development.

On May 8th I asked the Chairman of the Committee on Student Housing and Environment to help me develop a procedure—he called it a plan for planning—that would enable us to find a constructive solution. I established the broad conditions that would have to prevail: The functions of the area would have to relate to University needs for recreational space; the area would have to remain under the control of the University; and that it must not present police or other control problems; and that it must not be used as a public meeting area. I told the Chairman of the Committee I would be willing to set aside three weeks to devise a plan for the area. But I stated that I could proceed on this basis only if a responsible group could be found among the park developers who could assure that further development of the park be stopped. I did *not* say that *use* of the existing area stop, but that no new work would be undertaken. The Chairman of the committee reported back to me on May 12th that he was unable to find a responsible group who would agree to this condition. The anonymous developers could not form a responsible group with whom we could deal. I think you should know the basic reason for this failure. The representatives of the people refused to participate because they refused to accept the basic premise: that the design and use of the area was finally the responsibility of the University, no matter how flexible the design or liberal the use. As a result, the Committee's work fell into abeyance and we had to recognize that our efforts to secure joint planning and rational discussion had failed and we had to act quickly. We reviewed the entire situation again with city officials, whose familiarity with the south campus area and the people involved goes back to last year's violent struggle over a city street and who have the responsibility for policing the site. After much deliberation, I reluctantly concluded that in this choice among evils I had no feasible alternative except to fence the area. I sent a statement to the campus and the community on Tuesday, May 13th, saying that we were going to put up a fence in order to give us time and opportunity to plan and consult. As I said in the statement, this was regretfully the only way the entire site could be surveyed, soil tested, and planned for development. We had tried all other alternatives and failed. The fencing *in no way precluded or was it intended to preclude* the use of the area for a park after the entire site was planned and developed. Nor did it preclude participation by students and the community in the planning.

The area was posted the next day and on the following day the fence was erected.

Did we take into account that there was a risk of a confrontation? Of course we did. We had been told that there would be one. Our decision as to the timing of the fence was a product of the desire to talk as long as possible in the hope of avoiding a confrontation, and then, when these efforts failed, to act quickly, again in order to avoid a larger confrontation. Furthermore, we had reason to hope that a confrontation could be avoided because I thought I had made clear in my statement of May 13th that the purpose of the fence was *not* to destroy the park, but to formulate plans that might accommodate it. We had hoped that our obvious efforts to respond to some of the aspirations of the people working in the park would limit the confrontation to those who wanted it in the first place.

In fact there may well not have been a confrontation if that unfortunate Sproul-steps rally had not sent a crowd to take the park.

We would have been derelict in our duties had we not also planned against the possibility that there might be conflict. Unfortunately, avoidance of confrontations cannot be the ultimate value, regardless of other social costs and compromised principles. The fact that other people are going to use unjustifiable force is no excuse for one's not doing the right thing. If provocation of irrational violence and coercion were to veto decisions, no southern school would ever be desegregated. Avoidance of confrontation is an important value, but it is not an absolute. I have not given the public or Regental hostility a veto over my best judgment, and I cannot give a veto to those in the streets.

Why didn't we get an injunction first? We concluded, on advice of counsel, that an injunction would be ineffective under the circumstances and would not avoid the kind of trouble we sought to prevent.

Were students aware and consulted about the plan to build a playing field? The plan was announced to the press as early as 1967. Members of my staff met and discussed it with the Committee on Student Housing and Environment as the site was being cleared. The Committee had expressed concern about the clearing of the site. As I indicated earlier, when the matter was referred to the BCD, we relied on the student body president to comment and to call it to the attention of the students. Students participating in the intramural program supported the plan. We did not make an extraordinary effort to subject the plan to student debate, but at no time in the basic planning process was there reason to believe that the proposed use of this land did not meet an important student need or would encounter student opposition.

Another question concerns the long range development plan. Isn't the site supposed to be used for student housing? Yes. And the site across the street is ultimately intended for a playing field. However, for us to complete that aspect of the plan, funds must be found to relocate some facilities and build a social science complex. A realistic assessment is that we will not be able to do this for some 10 years. Therefore, the Haste, Dwight, Bowditch site will, as we told the Regents, fill a need for playing field space during that time.

I believe my summary to this point has answered many of the questions posed in the call to this meeting. Others have been answered in the press and in other statements.

The Policy Committee has informed me that the faculty member who drafted the 15 questions prefers that I not report a response to all of them at this time. I have therefore prepared a written response to each of the questions and have given a copy to the Secretary of the Division. If later in the meeting the body wishes a further response to any of those questions, I will be happy to read the responses if the chair so advises.

What are we doing to resolve the controversy? We are moving in two directions. The first proceeds on the assumption that the land remains under University control, and would be designed to meet the various recreational interests I have referred to. Let me be more specific.

Most of the people we have talked to agree that some of the present site should be used for some playing field space. The issue seems to be how much of the area should be devoted to playing fields and how much to other purposes. The campus architect has prepared a preliminary design which limits the playing field dimension to that which would be used for softball and thus leave park space in the same area now developed by the persons who worked on the land. That design also includes an area for a children's play lot in the northeast corner and the volleyball and basketball area in the southeast corner. It includes trees, benches and places to sit, eat lunch, etc. I believe it important that work on the noncontroversial west portion of the site begin promptly. As to the remainder of the site, we will try to bring these design questions to a conclusion very soon.

I have made clear that I cannot turn University land over to community control. However, based on the reports submitted to me by the campus architect, I am hopeful that the design he has proposed could gain acceptance as the best use for the entire site. I do not want to prejudge that matter. I have no objection to reserving some of the site for spontaneous designing if the Chief Campus Architect and others can work out the details satisfactorily.

The second alternative appears at the moment to be more promising. It follows from suggestions that the University lease a portion of the land to some other agency. The possibility is being discussed that the City might lease an area to be used as a park subject to conditions which are satisfactory to all parties. While it has not been given any official status and many problems exist, this is a viable alternative and is being actively pursued. It is being discussed with the President and City officials. It will undoubtedly be discussed at the next meeting of a group of City officials, students and interested parties from the park, a meeting which will take place later this afternoon and will probably require my leaving before this meeting adjourns. Everyone recognizes the urgency and everyone is working to arrive at a prompt solution. Much as you would like to have me do so, I cannot state a time at which these deliberations will conclude successfully. I hope very soon.

One immediate question is what happens to the fence. As long as the issue remains that of possession and control, the fence must be left up. If the fence were to come down before a plan was adopted, then the chances of ever in fact being able to devote the property to the proposed use without even greater physical conflict are very small. After all, our crisis did not start because reasonable people from the street came in to discuss possible uses of University land. Rather, they occupied it, declared their contempt for its legal ownership, and announced their intention to resist any effort of the University to possess it. We must recognize that for some this attitude has not changed. I was just informed that this morning two persons prominent in the park issue made a public appeal for thousands of persons to converge on Berkeley and take down the fence. Until this kind of call for confrontation is clearly and publicly repudiated, our attempts to eliminate the presence of law enforcement personnel would be simply irresponsible.

What happens after the issue of possession is clear is a function of what plan is adopted. If we follow the plan that is feasible of the University retaining control, it is clear that the playing fields and the children's area will require appropriate fences. The area proposed for the park as individual recreational area would not require a fence after a plan is agreed upon and necessary work completed. If the alternative of a City lease is followed, the decision about the fence would be the City's. The City's decision would be based on the agreements it reaches with the people concerning the conditions surrounding the development and use of the park. These considerations indicated that the future of the fence depends on the outcome of sensitive discussions now going on.

The phenomenon of the People's Park illustrates the complexities of University administration these days. It replicates almost exactly the situation which Buell Gallagher described in the announcement of his resignation.

In its simplest terms, the satisfactory solution to a complex problem such as this requires freedom to choose among a large number of alternatives. It is a fact of our life that the range of alternatives available to us is progressively narrowing as a result of two factors: The intransigent determination of radicals to make extreme demands and to provoke confrontation. This means that the number of alternatives they will consider is very narrow. The other set of forces is more complex; it consists of public opinion, informally stated, and manifested in the position of their representatives. The range of solutions they can accept is more and more limited, as public anxiety grows and as the obvious need for the protection of the community grows.

This is not the occasion to elaborate on this analysis, but I believe that Berkeley faculty members are sophisticated enough to realize that the continued existence and health of the University of California at Berkeley cannot be guaranteed unless we work within the options available to us. Which one of you can honestly say that he, in my position, would set aside all the University's development plans and instead allow University land to be used by anonymous and leaderless people to do with what they wished. While the analogy is not perfect, it may make the point: a conservative landlord was confronted with an unauthorized tenant whose original announced intention was to create a "cultural, political, freakout and rap center of the western world," and I was the business manager.

Both conservative and radical forces limit our choices. Each can and does respond in ways that disrupt the University or interfere further in our autonomy. Neither of these groups has the best interests of the University at heart. One can legitimately question administrative decisions but criticism oblivious to this conflict of forces is irresponsible. Every segment of the community has the right and responsibility to make its views known. I recognize their desire to be sure that the administration is not unduly influenced by only one segment, by providing counterpressure. But there is a point, at which the decision must be made and then it is the responsibility of all members interested in the unity of the institution if not to support that decision, at the very least to oppose the use of force to get the decision changed.

University faculties all over this country have had occasion to evaluate the performance of all types of men in threading their way through these strong opposing forces that threaten to reduce autonomy. This faculty has had several opportunities of this sort.

By and large, the solution at many universities, including this one, has been to look for someone else, or suggest some self-initiative on the part of the administrator himself. As a contribution to institutional theory, it might be a good idea for some faculty somewhere, at a time of acute crisis, to try the idea of giving an administrator some support, some running room and some protection from coercion.

Mr. Chairman, that completes my report.

To the University of California Community:

All of us are saddened and disturbed by what has occurred in Berkeley this past week, and I have thought very carefully what I might say to you to help ease the situation. One of the things that we all can do is to make sure we have the facts; on many campuses rumor has outstripped reality.

There have been rumors that Chancellor Heyns called in police forces from outside Berkeley and the National Guard. This is not true. The outside forces were called by civil authorities.

There have been rumors that students have been killed during the demonstrations. This is not true. I am profoundly sorry that a young man visiting Berkeley did die from injuries incurred on Thursday last, and that some students, law enforcement officers, and others have been injured, but no students have lost their lives.

There have been rumors that Chancellor Heyns is responsible for determining the tactics used by the police and National Guard forces in controlling disruptive behavior. This is not true. I deeply regret that those in authority decided that certain tactics were necessary to protect persons and property, but these and other tactics are not the responsibility of University authorities. The outside forces are under the direction of the Sheriff of Alameda County.

I have utmost confidence in Chancellor Heyns. He is pursuing the solution to this terribly complex problem in all good faith, but he cannot do this job alone. The University's ability to survive and learn from this crisis will depend on all of us: students, faculty, staff, and community. We will need goodwill and sympathy and constructive ideas and actions—from all sides. We will need to be self-critical and understanding of all views. We must have a lowering of the scale of violence, and it is the responsibility of each of us as individuals to refrain from inflaming the situation at Berkeley or at any other campus.

CHARLES J. HITCH,
President of the University.

MAY 22, 1969.

[From Outcry in Berkeley]

WHO OWNS THE PARK?

Someday a petty official will appear with a piece of paper, called a land title, which states the the University of California owns the land of the People's Park. Where did that piece of paper come from? What is it worth?

A long time ago the Costanoan Indians lived in the area now called Berkeley. They had no concept of land ownership. They believed that the land was under the care and guardianship of the people who used it and lived on it.

Catholic missionaries took the land away from the Indians. No agreements were made. No papers were signed. They ripped it off in the name of God.

The Mexican Government took the land away from the Church. The Mexican Government had guns and an army. God's word was not as strong.

The Mexican Government wanted to pretend that it was not the army that guaranteed them the land. They drew up some papers which said they legally owned it. No Indians signed those papers.

The Americans were not fooled by the papers. They had a stronger army than the

Mexicans. They beat them in a war and took the land. Then they wrote some papers of their own and forced the Mexicans to sign them.

The American Government sold the land to some white settlers. The Government gave the settlers a piece of paper called a land title in exchange for some money. All this time there were still some Indians around who claimed the land. The American army killed most of them.

The piece of paper saying who owned the land was passed around among rich white men. Sometimes the white men were interested in taking care of the land. Usually they were just interested in making money. Finally some very rich men, who run the University of California, bought the land.

Immediately these men destroyed the houses that had been built on the land. The land went the way of so much other land in America—it became a parking lot.

We are building a park on the land. We will take care of it and guard it, in the spirit of the Costanoan Indians. When the University comes with its land title we will tell them: "Your land title is covered with blood. We won't touch it. Your people ripped off the land from the Indians a long time ago. If you want it back now, you will have to fight for it again."

APPOINTMENT OF ASSISTANT SECRETARY FOR HEALTH

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ROGERS of Florida. Mr. Speaker, I am today calling upon the President to put aside any political considerations and proceed to name an Assistant Secretary for Health.

Congress is almost at the midpoint of the session, yet we have not had the counsel and department coordinations in the health area which an Assistant Secretary should provide.

There are more than a dozen pieces of legislation which must be considered for extension in the health area this year, yet we have no word on these very important programs, mainly because of the lack of an Assistant Secretary for Health.

There are more than 100 bills dealing with health introduced thus far in the session, indicating the high priority which members have placed on health.

The budget for health research and services is estimated at $13 billion. We have a tremendous shortage of manpower in the health field, yet we see cuts made in various areas such as manpower training without the benefit of comment on these cuts from an Assistant Secretary for Health.

On March 5, Secretary of Health, Education, and Welfare Robert Finch said it would be a few days or a week before we could expect the nomination of an Assistant Secretary for Health.

That was 96 days ago.

I think this inaction indicates to many people that our health problems may be held in lower priority than other areas, and I think this impression should be corrected immediately.

We have waited patiently. And I would not presume to suggest one candidate over another, but hopefully the qualifications of the candidates have been studied carefully.

I have every confidence that the man who will be nominated for this very important post will be eminently qualified.

But today, I urgently request that the President give this nomination his most immediate consideration. I think this is the only way to dispel the ideas of those who now feel the administration does not consider the Nation's health problems in proper priority.

INTEREST RATES

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, today's announcement of the increase in the prime interest rates by New York banks provides clear and convincing evidence that the surtax has completely failed as a useful tool to stem the tide of inflation and spiralling interest charges.

It also appears completely obvious that private institutions are dictating the course of monetary affairs in America at the expense of the American consumer. The man who needs to buy a home or an automobile is the one who is made to pay.

How much longer will the American public countenance the assignment of critical economic decisions in this irresponsible manner?

SHOE IMPORT PETITION

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, I am pleased to report that more than 235 Members of the House have thus far signed the petition to President Nixon seeking voluntary limitations by foreign nations on the volume of shoes they export to the United States.

Although the cochairman of the Special Footwear Committee, my distinguished colleague, the gentleman from Massachusetts (Mr. BATES), regrettably still is not well enough to be with us on the Hill, I have had fine cooperation of many other colleagues in obtaining signatures. There are more among the House membership who, I am sure, will want to have their names on this petition because of shoe and leather factories in their congressional districts. We are, therefore, delaying for a few more days sending our letter to the White House.

In case anyone is not now familiar with our objective, I respectfully urge the reading of the excellent report which Lloyd M. "Mike" Hampton published in the May 31 issue of Leather and Shoes magazine. Further emphasis on the plight of the American footwear industry is given by the "obituary" of a shoe firm appearing at the end of "Mike's" article and which was presented prominently in the newspapers of Lynn and Haverhill, Mass., the two largest shoe manufacturing cities in BILL BATES' district.

I wish, therefore, to quote the following from the aforementioned magazine:

[From Leather and Shoes, May 31, 1969]

HOUSE PETITION UNDERWAY: PRESIDENT NIXON'S HELP SOUGHT TO DAMPEN U.S. SHOE IMPORTS

(By Lloyd M. Hampton)

WASHINGTON.—In response to an invitation by two long-time Congressional imports foes, more than a score of U.S. lawmakers met here May 21 in order to work out footwear anti-imports strategy.

The meeting, called by Representatives William H. Bates, Republican, and James A. Burke, Democrat, both of Massachusetts, included members of the special House Committee on Footwear plus a number of other Congressmen deeply concerned about the growing imports problem.

The legislators, who were joined in their Capitol Hill discussion by domestic footwear and tanning industry representatives, moved to ask the White House for its help in curbing imports.

In initiating their latest campaign against the unrestricted flow of footgear to this country, the Congressmen launched a drive for signatures on a petition to President Nixon to negotiate with foreign nations for establishment of voluntary limitations on shoe imports.

At the same time the bipartisan gathering agreed to press for favorable action by the House Ways and Means Committee on the proposed Orderly Footwear Marketing Act of 1969, which was introduced earlier in this session of Congress by Bates and Burke who are co-chairmen of the special 15-member footwear committee.

HOPE FOR SUPPORT OF 200

According to lawmakers who took part in the initial meeting, it is hoped that more than 200 Congressmen—in whose districts shoe factories are located—will enroll in the fight against low wage-produced imports.

When the largest possible number have signed the petition, it will be presented to the President with a request for a conference. It is expected that it will be three or four weeks before the plea reaches Mr. Nixon's desk.

A draft of the petition to be sent to the Chief Executive points out that the full magnitude of the shoe imports problem and the threat which it presents "is apparent and becoming increasingly severe."

During the first six months of this year, the petition continues, "seven New England shoe factories closed, with imports an important factor in each case. Evidence indicates that there will be more."

Also, "Total imports of foreign leather shoes (non-rubber) which entered the United States in 1968 were over 36 percent greater than in 1967. Since 1960 shoe imports have increased by 600 percent. Imports equalled almost 28 percent of the total domestic production in 1968."

The formal request to be sent to the President notes that the petitioning Congressmen "have every reason to believe that, if unchecked, this rate of increase in shoe imports will continue to absorb the industry's growth in domestic footwear production and will continue to cause a loss of job opportunities for American shoe workers."

URGENCY OF SITUATION STRESSED

Further, once the petition is received at the White House, Mr. Nixon will read that "This (shoe imports) problem is of immediate and critical proportions," and he will be asked to "take steps to enter into negotiations with principal foreign supplying nations directed toward the establishment of voluntary import limitations so that now and in the future the shoe manufacturing industry of the United States may continue as a healthy and viable segment of our economy."

The petition makes it clear that no attempt is made to close our market to foreign competitors. Rather, it is observed, there is

sought some order in our marketing process that will enable supplier—both here and overseas—to share equitably in the growing demand.

Merrill A. Watson, economist for the National Footwear Manufacturers Association in New York, briefed the meeting on the current footwear imports situation and cited both Reps. Bates and Burke for their long fight to provide relief for import-beset U.S. shoe manufacturers.

STANS SEEN MORE SYMPATHETIC

During the meeting the belief was expressed that Commerce Secretary Maurice Stans appeared to be more sympathetic to the plight of the U.S. shoe worker than other top government officials in the past.

It was also emphasized that Stans already has made an attempt to convince our trading partners in both West Europe and Far East to adopt voluntary quotas in the case of textiles. This is the same approach being proposed for footwear by the special House committee.

Also attending the Washington meeting was Irving R. Glass, executive vice president of the Tanners' Council of America, Inc., who underlined the grave effects foreign shoe deliveries here are having on the domestic leather sector.

He illustrated his point by indicating that one of the largest tanning firms in the U.S.—Trostel of Milwaukee—is closing down due in large part to imports.

In pleading their case for orderly marketing, U.S. footwear manufacturers argue that industries with much greater growth, equal or better profits, and with less import penetration than footwear have received help.

For instance, the industry says, cotton and steel have voluntary bilateral quotas. Wool apparel and manmades have been promised voluntary quotas by Mr. Nixon. Dairy products, meat and oil have quota programs.

IMPORTS HAVE STOPPED EXPANSION

In the industry's view, growth of U.S. footwear manufacturing has been virtually halted by imports. Domestic footwear production for the first four months of this year is off 9.5 percent. Output for 1969 is now estimated 595 million pairs, or only 10 million pairs over 1955.

Footwear shipments to the U.S. for 1975 have been projected to reach 468 million pairs. This, it is predicted by the industry, would be 48 percent of an estimated consumption of 97 million pairs of footwear in 1975. This would come to 90 percent of an estimated domestic production of 519 million pairs of footwear in 1975.

Attending the meeting were the following members of the special House Footwear Committee: Louis C. Wyman, R-N.H.; Edwin D. Eshleman, R-Pa.; Peter N. Kyros, D-Me.; Alexander Pirnie, R-N.Y.; Richard Fulton, D-Tenn.; Leonor K. Sullivan, D-Mo.; Melvin Price, D-Ill.; William Steiger, R-Wis.; William D. Hathaway, D-Me.; Phil M. Landrum, D.-Ga.; Herman T. Schneebeli, R.-Pa.; Albert N. Quie, R-Minn.; Clement J. Zablocki, D-Wis.

Other Members of Congress on hand included Edward P. Boland (D), Silvio Conte (R), Harold D. Donohue (D), Margaret M. Heckler (R), Hastings Keith (R), and Thomas P. O'Neill, Jr. (D), all of Massachusetts; Joseph M. McDade, R-Pa.; Martin B. McKneally, R-N.Y.

OBITUARY; DAVID SHOE CO., INC.

Born in Lynn, Mass., June, 1944.

Died in Lynn., Mass., May, 1969. Cause of death—Shoe Imports: foreign shoes made in factories with low wage labor, resulting in landed prices far below local manufacturing costs.

Reason for death—lack of action and apathy on the part of federal officials.

David Shoe will be missed by the 200 loyal employees who gave it their all for many years, and by many in the local community where the $1 million of annual salaries were spent.

Conceived by the dreams and hard work of an immigrant who still believed in America, land of opportunity, and nurtured to full maturity by the healthy competitive system of free enterprise which has made this country great.

Destroyed by those who make our laws because they still believe that free enterprise should include unhindered competition from those countries where a worker earns twenty dollars for the month.

Perhaps in time our wages and theirs will be equal. The only question is, "will it be at our wage rate—*or theirs?*".

Expressions of sympathy should be made to the Congressmen of your choice.

TO CORRECT THE ENROLLMENT OF SENATE JOINT RESOLUTION 35

Mr. FRIEDEL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate concurrent resolution (S. Con. Res. 29) to correct the enrollment of Senate Joint Resolution 35.

The Clerk read the Senate concurrent resolution, as follows:

S. CON. RES. 29

Resolved by the Senate (the House of Representatives concurring), That the action of the Speaker of the House of Representatives in signing the enrolled resolution (S.J. Res. 35) to provide for the appointment of Thomas J. Watson, Junior, as Citizen Regent of the Board of Regents of the Smithsonian Institution, be rescinded, and that the Secretary of the Senate be, and he is hereby, authorized and directed to reenroll the resolution with the following change, namely, in line 6 of the enrolled resolution strike out the word "Hunsacker" and insert in lieu thereof "Hunsaker."

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

Mr. GROSS. Mr. Speaker, reserving the right to object, is this simply a correction of the spelling of a name?

Mr. FRIEDEL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Maryland.

Mr. FRIEDEL. That is all it is; the correction of the spelling of a name. As it is currently spelled it contains a "c" and if this concurrent resolution is adopted the "c" will be deleted.

Mr. GROSS. I thank the gentleman.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

AUTHORIZING THE PRINTING OF THE BOOK "OUR AMERICAN GOVERNMENT" AS A HOUSE DOCUMENT

Mr. FRIEDEL. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Concurrent Resolution 162, authorizing the printing of the book "Our American Government" as a House document, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the concurrent resolution.

The Clerk read the Senate amendments, as follows:

On page 1, line 10, strike out "one million eighty-four thousand" and insert "nine hundred twenty-nine thousand five hundred".

On page 1, lines 11 and 12, strike out "two hundred and six thousand" and insert "fifty-one thousand five hundred".

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

Mr. HANSEN of Idaho. Mr. Speaker, reserving the right to object—and I shall not object—I should like to ask the distinguished chairman of the House Administration Committee to explain the Senate amendments.

Mr. FRIEDEL. Mr. Speaker, if the gentleman will yield, House Concurrent Resolution 162, which passed the House on April 29, 1969, provides for the printing of the pamphlet entitled "Our American Government. What is it? How does it Function?" The pamphlet is to be printed as a House document with 1,084,000 additional copies, of which 206,000 shall be for the use of the Senate—2,000 per Senator—and 878,000 for the use of the House—2,000 per Member.

The Senate amendments would, first, reduce the total number of copies to be printed from 1,084,000 to 929,500; and second, reduce the Senate allotment from 206,000—2,000 copies per Senator—to 51,500—500 copies per Senator.

Mr. HANSEN of Idaho. Mr. Speaker, I thank the gentleman for his explanation.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

TO REPRINT BROCHURE ENTITLED "HOW OUR LAWS ARE MADE"

Mr. FRIEDEL. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Concurrent Resolution 192, to reprint brochure entitled "How Our Laws Are Made," with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

On page 1, after line 12, insert:

"SEC. 2. There shall be printed fifty-one thousand five hundred additional copies of the document specified in section 1 of this concurrent resolution for the use of the Senate."

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

Mr. HANSEN of Idaho. Mr. Speaker, reserving the right to object—and I shall not object—I would again like to ask the distinguished chairman of the House

Committee on House Administration to explain to the House the effect of the Senate amendment.

Mr. FRIEDEL. Mr. Speaker, if the gentleman will yield, House Concurrent Resolution 192, which passed the House on April 29, 1969, provides for the reprinting of the brochure entitled "How Our Laws Are Made." The resolution provides for printing the brochure as a House Document with 239,500 additional copies, of which 20,000 will go to the House Judiciary Committee, and the remainder shall be for the use of the House—500 copies per Member.

The Senate amendment adds 51,500 copies for the use of the Senate—500 copies per Senator.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HANSEN of Idaho. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

Do I understand that this is a pamphlet on "How Our Laws Are Made"?

Mr. FRIEDEL. The gentleman is correct.

Mr. GROSS. And this is for an increase in the number of pamphlets?

Mr. FRIEDEL. In reply to the gentleman, I would state that it is the same amount for the House as when we passed the bill on April 29. However, we did not provide any for the Senate.

Mr. GROSS. If the gentleman will yield further, I would suggest that there are not many laws being made these days.

Mr. HANSEN of Idaho. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Senate amendment was concurred in.

A motion to reconsider was laid on the table.

COMMISSIONER DECLINES TO DISCIPLINE JULIUS HOBSON FOR ADVOCATING THE VIOLENT OVERTHROW OF THE GOVERNMENT

(Mr. WAGGONNER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, last month, an employee of the Social Security Administration, one Julius Hobson, publicly advocated the overthrow of the Federal Government in an address before a gathering of university students here in Washington. He did so in the presence of newsmen who reported his statements word for word. The next day, I brought his speech to the attention of the Congress.

Immediately thereafter, I wrote Commissioner Robert M. Ball of the Social Security Administration and urged that he dismiss this man from the Federal service. I also wrote the Department of Justice and urged that action be taken to charge him with sedition and/or treason.

I am not so naive, Mr. Speaker, as to have expected the Department of Justice to actually undertake such action, but my thought was that someone had the duty to put them on notice that it should be done. As I expected, the Department declined to initiate any action against Hobson, which is in keeping with their longstanding position that criminals, seditionists, and anarchists do not and cannot exist.

I can appreciate the difficulty in this day and age of getting a conviction against anyone to stand up through Supreme Court appeals no matter what the charge. My faint hope was that, since this was the first time in my memory that a Federal Government employee ever advocated the violent overthrow of the Government with assistance from Communist China and Communist Cuba, perhaps the novelty of such a proposal might strike a responsive chord at Justice. But, as I said, I am not surprised that it did not.

I had expected better, however, from the Social Security Administration. I had honestly believed that the Commissioner would not want a man who confessed to his audience that he was "a Socialist and believes in the social-economic theories of Karl Marx" on the payroll. But I was wrong. Commissioner Ball, apparently sees nothing wrong with it.

Just to keep the record straight that I, at least, tried to get this confessed Socialist off the Federal payrolls, I would like to insert here in the RECORD the correspondence between myself and the two Departments.

Somebody owes an apology to the American people for all this and, though I am not to blame, I will extend that apology on behalf of all other Federal employees who share my view that Hobson is a disgrace to this Nation and should, properly, be allowed to remain here only if he does so in a jail cell.

My correspondence follows:

APRIL 16, 1969.

Hon. JOHN MITCHELL,
Attorney General of the United States,
Department of Justice,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: I am attaching a copy of a news item which appeared in the Wednesday, 16 April issue of the Washington *Post*.

This story alleges that Julius Hobson, employed by the Social Security Administration in the position of economist, stated before a gathering at Georgetown University on 15 April that he was "a socialist and believes in the social-economic theories of Karl Marx." He is quoted also as saying that he believes the American free-enterprise system "must be overthrown by force and violence" and, further, that assistance in this "struggle" should be obtained from Communist China and Communist Cuba.

Upon my duty as a Member of the United States House of Representatives sworn to protect and defend the United States against all enemies, foreign and domestic, I demand that this man be charged with sedition and/or treason.

I will appreciate and expect an immediate reply as to what action you cause to be taken.

Sincerely,

JOE D. WAGGONER, Jr.

DEPARTMENT OF JUSTICE,
Washington, D.C., April 24, 1969.

Hon. JOE D. WAGGONNER,
House of Representatives,
Washington, D.C.

DEAR MR. CONGRESSMAN: The Attorney General has asked me to reply to your letter of April 16, 1969, concerning a recent speech by Mr. Julius Hobson as reported in the Washington Post. In your letter you requested that Mr. Hobson be charged with sedition or treason.

Information coming to this Division concerning alleged statements advocating force and violence are of course reviewed in the light of applicable Supreme Court decisions for possible violation of federal statutes. However, in view of the First Amendment guarantee of freedom of speech, I am sure you appreciate that in the area of speech the evidence requirements necessary to establish a violation of such statutes as the Smith Act, for example, which prohibits the advocacy of overthrow of the government by force and violence, are very stringent indeed. In addition, the advocacy must be of such a nature and accompanied by circumstances such as to establish a clear and present danger within the judicial interpretation of that concept.

Although we understand that Mr. Hobson just this week began a one year leave of absence from his employment with the Social Security Administration, he is of course still on the rolls as a government employee. Section 7311 of Title 5, of the U.S. Code states in part that, "an individual may not accept or hold a position in the government of the United States or the government of the District of Columbia if he (1) advocates the overthrow of our constitutional form of government. . . ." I understand that the newspaper article in question has been brought to the attention of the Department of Health, Education, and Welfare and that that Department will consider the applicability of Section 7311 in light of all the available information.

If I can be of any further assistance to you please let me know.

Sincerely,

J. WALTER YEAGLEY,
Assistant Attorney General.

MAY 1, 1969.

Mr. J. WALTER YEAGLEY,
Assistant Attorney General,
Department of Justice, Washington, D.C.

DEAR MR. YEAGLEY: I have your letter of 24 April in response to my letter of the 16th relative to the remarks made by Julius Hobson in a recent speech.

Am I right in understanding your letter to say that the Department does not intend to investigate Mr. Hobson's remarks and does not plan to initiate any action against him?

With my thanks in advance for this clarification,

JOE D. WAGGONNER, Jr.

DEPARTMENT OF JUSTICE,
Washington, D.C., May 9, 1969.

Hon. JOE D. WAGGONNER,
House of Representatives,
Washington, D.C.

DEAR MR. CONGRESSMAN: This is in reply to your letter of May 1, 1969, requesting additional information concerning the remarks attributed to Mr. Julius Hobson in a recent speech at Georgetown University.

In response to your specific request, investigation is being conducted in an effort to secure as accurate report as possible of Mr. Hobson's statements at Georgetown University. In this connection I call your attention to a letter which Mr. Hobson wrote concerning the Washington Post article, which letter is printed in the Post of May 6 and in which Mr. Hobson takes issue with the accuracy of the earlier news article.

The Department of Health, Education, and Welfare is also reviewing the available information since Mr. Hobson is on the rolls of that Department as an employee, although he is currently on a one year leave of absence.

It is hoped that this matter can be clarified in the near future.

A copy of Mr. Hobson's letter to the Washington Post is attached for your information.

If I can be of any further assistance to you please let me know.

Sincerely,

J. WALTER YEAGLEY,
Assistant Attorney General.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, SOCIAL SECURITY ADMINISTRATION,
Washington, D.C., May 27, 1969.

HON. JOE D. WAGGONNER, JR.,
House of Representatives,
Washington, D.C.

DEAR MR. WAGGONNER: This is in further response to your letter of April 16 concerning statements attributed to one of our employees, Mr. Julius Hobson.

The Department of Health, Education, and Welfare, in conjunction with the Department of Justice and the Civil Service Commission, has made a thorough inquiry in connection with the statements attributed to Mr. Hobson. Based upon results of this inquiry, including an evaluation of admissible evidence available to us, the Secretary of Health, Education, and Welfare has concluded that the evidence is insufficient to support a disciplinary proceeding. The Secretary and I would like you to know, however, that the statutes and regulations defining the qualifications and suitability of Federal employees will be enforced against Mr. Hobson and any other employee of the Department of Health, Education, and Welfare where there is competent evidence to support such action.

Sincerely yours,

ROBERT M. BALL,
Commissioner of Social Security.

PROPOSED POSTAL SERVICE ACT OF 1969

The SPEAKER. Under a previous order of the House, the gentleman from Virginia (Mr. SCOTT) is recognized for 60 minutes.

Mr. SCOTT. Mr. Speaker, I take this time to discuss with the House the proposed Postal Service Act of 1969 now being considered by the House Committee on Post Office and Civil Service. We have before us recommendations of the present Postmaster General which are very similar to the recommendations originating with former Postmaster General O'Brien, and the Commission appointed by President Johnson on postal reform headed by Frederick Kappel.

This is not a partisan matter, but one very close to the people of the country. Most of us would agree as to the need to improve the postal service; that partisan politics should be removed from the appointment of rural carriers and postmasters, and that postal facilities and equipment should be modernized.

Of course, I am in favor of postal reform, and agree with portions of several of the bills now pending before us. However, our country has developed a civil service merit system which well may be jeopardized by the adoption of the proposals now before us.

As the Members will recall, after the assassination of President Garfield in 1881 by a disgruntled political job seeker, an effort was made to limit the spoils system insofar as possible, and so a civil service system was developed which has progressed through the years to one in which 85 percent of all Federal employees, or roughly some 2.5 million persons, are included.

This current competitive civil service merit system has been copied by many State and local governments and, while I realize it is not a perfect system, it is alarming to learn that the current proposal would eliminate more than 700,000 employees from the protection and guarantees of the present merit system.

If personnel changes are necessary or incompetent employees need to be removed, the machinery exists under present law.

This bill would substitute a body corporate known as the U.S. Postal Service for the Post Office Department. It would be headed by a nine-man Board of Directors, seven of whom would be appointed by the President for a 7-year term and who would serve part time at a salary of $5,000 per annum plus $300 for each meeting attended, and the necessary travel and subsistence expenses.

The seven appointed part-time members would select two additional members—one of whom would be the chief executive officer and the second would be the chief operational officer. I assume that these latter two would hold positions comparable to the present Postmaster General and Deputy Postmaster General and they might well be the two incumbents, although they would be selected by the seven part-time Directors.

We must determine whether removing the Postmaster General from the Cabinet will improve postal efficiency and how responsive a Corporation will be to the people of the country.

Section 209 of the proposed bill provides that laws dealing with Federal contracts, property, works, officers, employees, or foundations shall not apply to the exercise of powers of the Postal Service except insofar as set forth in the bill.

The same section thereafter enumerates the various applicable laws, most of which relate to private corporations dealing with the Federal Government. This is complemented by section 801 which states:

> Except as otherwise provided in this title such appointments and promotions shall be without regard to the provisions of the civil service laws applicable to officers and employees of the United States.

And further on states:

> The board at its discretion and at any time may remove any appointee of the board.

The same section provides for dual compensation by stating that notwithstanding any provisions of law—

> An officer, agent or employee of the United States Government is eligible to serve and receive compensation both as such officer, agent or employee and as officer, agent or employee of the postal service.

We have given a lot of consideration over the years to the problems of dual compensation and I would submit that we should look very closely to any contemplated law which would permit an employee to work both as a Government employee and as an employee of a Government corporation.

In section 803 it is provided that sick and annual leave shall be retained "until changed by the Postal Service," and any employee of the present Post Office Department will have 1 year to transfer to any open position in the Government for which he is qualified.

Of course, there is no assurance that the postal service will not change existing annual and sick leave provisions of the present law. In fact, there is no job protection of any kind provided in this bill except through the process of collective bargaining.

Section 806 indicates that—

> Compensation benefits and other terms and conditions of employment shall be determined by the Board of Directors.

Although there is the declaration of policy that compensation and benefits shall be comparable to the non-Federal sectors of the economy.

It is also interesting to note that no one can draw a salary above level 1 of the executive scale which I understand is $60,000 per year. I find nothing in the act to limit the number of persons in the supergrades or even for that matter the number who might be paid $60,000 per year.

I would certainly hope and expect that no one but the chief executive officer would receive a level 1 salary, but the act does not prevent the same pay being provided for other employees.

Congress has been hesitant about granting the power to appoint an unlimited number of people to supergrade positions, and we might consider whether we want to give unlimited power over salaries to a corporation without any right of congressional review. Is this fair to other Government employees and to the people of this country? This proposal specifically provides that the Postal Service shall have the right to hire, promote, transfer, assign, suspend, demote, discharge, or take other disciplinary action, and also to relieve employees from duties because of lack of work or for any other legitimate reason.

In my opinion, it completely destroys the civil service rights of more than 700,000 Federal employees.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I am glad to yield to the distinguished gentleman from Iowa.

Mr. GROSS. I thank the gentleman for yielding. I want to say to the gentleman from Virginia that I commend him most highly for taking this time this afternoon to speak on this subject. Hearings have started before the House Committee on Post Office and Civil Service, on this corporate idea of so-called reform in the Post Office Department. The gentleman from Virginia (Mr. SCOTT) has asked many questions concerning this, in the hearings as has the gentleman from Iowa. I will say to the Members of the House that they should take a long, hard look at the proposal as it stands before the committee before they become committed to the idea of corporate reform in the Post Office Department.

We will all admit, as I am sure the gentleman from Virginia will agree, that many things can be done in the Post

Office Department to improve the service, to improve the policymaking, the general deportment of the Department; but it is not necessary to go to a corporate idea of operation with the literally scores of unanswered questions that go along with it, such as, How is the Department going to issue $8 or $10 billion worth of bonds without the full faith and credit of the United States pledged to the backing of the bonds, and so on and so forth, up and down the line? There are scores and scores of unanswered questions, and, speaking for myself, they must be answered before I can support the corporate idea of reform in the Post Office.

I thank the gentleman for yielding.

Mr. SCOTT. Mr. Speaker, I appreciate the comments of the gentleman from Iowa. I am sure we would agree that there is a need for postal reform, but there may be disagreement as to the method by which it should be accomplished. I would agree that we should look very carefully to each portion of this bill.

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I am glad to yield to the distinguished gentleman from Alabama.

Mr. EDWARDS of Alabama. I am quite sure the gentleman in the well, as well as the gentleman from Iowa, would certainly be in the forefront of seeing that these questions are answered. I would join with both the gentlemen in the hope that the Post Office Department has the answers. I know that both gentlemen are fairminded men who have open minds, and if the answers come in, as certainly the Post Office says they will come in, that then the gentlemen will join in this proposal or some similar proposal to see that the problems of the Post Office Department are taken care of.

Mr. SCOTT. I thank the gentleman. Of course, we are interested in what is best for the people of the country as well as the present Post Office Department.

The proposal now before the committee indicates that it is the intention of the Congress that the postal service shall obtain collective bargaining agreements or settle disputes by arbitration. The arbitrators are nine in number, each of whom shall receive level 5 salaries, three to be appointed by the Federal Mediation and Conciliation Director, and three by the American Arbitration Association, and the six named shall appoint the remaining three. These arbitrators would have the right to appoint experts and assistants, subject to the civil service laws.

Frankly, I do not see why they would obtain civil service employees to assist them, when all other personnel would be non-civil-service employees. It seems to me that we can remove politics from the Post Office Service without destroying the civil service merit system. Collective bargaining may be a very fine way for the private sector of our economy to settle its differences, but labor always retains the right to strike as its ultimate weapon.

In fact, the president of the United Federation of Postal Clerks insists that, without the right to strike, postal clerks would ultimately be at the mercy of the Postal Corporation. As it is, Congress has spent more than half a century building up a merit system for Government employees in the interest of the public. I would hope that we will not, in one swoop, remove all of these rights for one-fourth of all Federal Government employees.

Chapter 10 of the proposal provides that the postal service may borrow an amount not exceeding $10 billion, pledging the full faith and credit of the Government. And, large as this is, it may well be the least controversial portion of the entire bill, because certainly we do need to have modern facilities and equipment if we are to operate an efficient postal service. In fact, I am willing to vote in favor of funds to construct modern facilities under our present leasing procedures.

Chapter 12 of the act provides for postal service at reasonable and equitable rates and fees and expresses the Congressional intent that rates and appropriations shall meet current and projected costs of the service.

We should remember that an old established agency like the Post Office provides a great number of public services at little or no cost, including alien address reporting, miscellaneous services for agencies occupying post office buildings, sale of savings bonds and stamps for the Treasury Department, sale of migratory bird hunting stamps for the Department of the Interior, civil service information for Federal jobs, and sale of documentary stamps, and numerous other matters which do not appear to be recognized in this proposal.

We might also realize that rural mail service, which serves a major portion of our citizens, never has paid its way, and under a strict profit-and-loss management, delivery of the rural mail service could be curtailed or eliminated.

Provision is made for rate commissioners with salaries at level 5 of the executive schedule, serving for a term of 6 years, with their decisions reversible by the board.

The act also provides that proposed changes in rates shall be submitted to the Congress but would be final in 60 days unless both Houses of Congress adopted a concurrent resolution disapproving a change. Frankly, I doubt that Congress would act expeditiously enough with a period of 60 days to adopt a concurrent resolution of disapproval.

In fact, if the postal service has full power to fix the wages of employees and operate the postal service, Congress would have little practical choice if higher rates were necessary to pay the cost of operating the service and the indebtedness for facilities.

There seems to be no other provision for congressional oversight.

The postal service is close to the people of the country. We are their elected representatives. In the event that mail is not delivered in an efficient manner or the rates are not to the liking of the people, they will be very prompt to let us know. I believe we have a responsibility in this field, and in the event this corporation does come into being we will have little or no control over it. If we eliminate civil service career status, give up our authority to fix salaries and postal rates, we may well have more public clamor than presently exists about postal operations.

Let us take a long look at each paragraph of this bill before any commitment is made, because certainly we do not want to kill the patient to cure the disease. Let us ask ourselves several questions. Will we be able to provide more efficient postal service to the country under the provisions of this bill? What effect will it have on postal rates and upon the welfare of the postal workers? How responsive will a corporation be to the people of the country or to their elected representatives? Will removing the Postmaster General from the Cabinet improve postal efficiency? Is this the best postal reform bill that Congress can produce?

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I am glad to yield to the distinguished gentleman from Alabama.

Mr. EDWARDS of Alabama. First, I wish to commend the gentleman for bringing this subject to the floor and for his scholarly approach to the bill which is being considered.

I certainly join with the gentleman in the view that the bill is not necessarily perfect. It needs much study and it needs much consideration by the gentleman's committee, and quite likely needs amendment.

Yet I am sure, as I said earlier, that the gentleman has an open mind about this bill. If he finds proper answers to his questions, he will give consideration to reporting the bill.

I am one of those who has joined in introducing the bill. As I have said many times, I am not wedded to every word in the bill that has been proposed, but I do feel it is something that needs consideration promptly if we are going to do something about the situation in the Post Office Department.

Why is there a need for any bill at all? I believe the answer is that the Post Office Department in many respects has just fallen apart. This is not the fault of the employees. I do not think it is necessarily the fault of the management of the Post Office Department. It is, in my opinion, the fault of the present system under which the Post Office Department operates.

The gentleman very properly suggested there can be considerable improvement with or without a Postal Corporation, such as we are talking about today. But I believe we have a duty to inquire as to whether the Postal Corporation will be a better answer than any other. We should make a searching inquiry and not write it off out of hand.

I have some considerable concern as to just what is the duty of a Congressman to his constituents. When it comes to the question of the Post Office, what is our responsibility? I am sure the gentleman would agree that our initial responsibility is to see that the citizens

of this country have a first-class postal system, that they get their mail delivered promptly and get their mail delivered in good condition.

Mr. SCOTT. Let me say to the gentleman at this point it is something like a serviceman talking with a chaplain. If the people are not satisfied with the mail delivery they are receiving they write to their Congressman.

One of my concerns is, what control will Congress have over this Postal Corporation? It appears that we would give almost unlimited power. This is a very genuine concern of mine. Of course, we can repeal the law, but we know it is easier to pass a law than it is to repeal one.

Mr. EDWARDS of Alabama. Certainly I agree with the gentleman. This is one of the things which concerns me when I look to my duty to my people back in my own district. Yet, am I not exercising my duty if I find there is a better system, perhaps a Postal Corporation, and give my people the benefit of that service?

As the gentleman has suggested, the law could be repealed the day after it is passed, or any section could be amended, yet I agree with the gentleman once a bill is passed it is hard to repeal it. It is not quite as hard to amend it, but even that presents some difficulties.

One of the things which troubles the Post Office Department, in my opinion, is the lack of continuity that we see in the Post Office Department.

I think in the last 8 years, if I am not mistaken, we have had five Postmasters General for various reasons which we shall not even argue about here. The point is that if you are going to take a Federal department which, as the Postmaster General has said, is as near to a business as any Federal department, and operate it for the benefit of the people, you need better continuity than we have seen over the last number of years.

Again I agree with the gentleman that this is not a partisan issue. The Post Office Department has gotten worse and worse and worse no matter who happened to be in the White House or who had control of Congress.

Mr. SCOTT. I agree with the gentleman on this question of continuity. I saw the Postmaster General on television yesterday. He expressed concern about this particular provision, saying very much as the gentleman has just now said. There are a number of bills which are pending before our committee that would give the Postmaster General a longer status than the present administration may be in power, in fact up to 12 years. As I understand the present bill which is being proposed, the Postmaster General is appointed and serves at the will of the seven part-time directors. There are a number of approaches that can be used which will accomplish the same thing without having what I consider to be the bad features of this present proposal.

Mr. EDWARDS of Alabama. One of the bad features of the present system, I might say, of course, is the political nature of the system which permeates the entire thing. The gentleman from Virginia made a point earlier about the spoils system, which I believe came about under President Garfield. Yet do we not find in many respects today some of that same problem existing with the Post Office? The postal employee gets his job in many cases because he happens to know one of us. This has not been my good fortune since I have been here, I might say, because he has had to know somebody on the other side of the aisle in order to be appointed.

Mr. SCOTT. I am sure that the gentleman would agree and commend the present administration for removing partisan politics from the appointment of rural mail carriers by administrative action. I hope that Congress by law will do the same thing. My only regret is that we did it so early in the new administration. If we had appointed a few Republicans and not left all of the Democrats in before we went on a nonpartisan basis, I believe it would have been better.

Mr. EDWARDS of Alabama. I agree. I have several county chairmen in my district who waited for 8 years in order to be able to name somebody to a rural route only to find at the last minute that they would not be able to get to do it. Yet, if the administration's approach to taking the Post Office out of politics is to have any credibility at all, it has to be done as we have done it, in my opinion. For example, if we went along for a year or two and put in all Republicans and then came up with a scheme to take the Post Office out of politics, I would suggest to the gentleman that the press and the party on the other side of the aisle would very rightly, I think, have a legitimate complaint that perhaps what we did was not credible. So I believe it had to be done in this way. I regret it, because I had some great people that I was going to move into the Post Office. For the good of the country, though, and perhaps for the good of the long-range political effect on our own party, this may be the thing to do. As the gentleman has suggested, much of this proposal did not necessarily originate with this administration. I do commend this administration, however, for its willingness to move forward early and forthrightly in this area.

Now, if I can draw the gentleman back to some of the problems that I see which prompted this Postal Corporation proposal.

I would like to read, if I may, just a short paragraph from the President's statement to the House of Representatives when he sent his message over here on the Postal Corporation. This is a quote from President Nixon:

> Encumbered by obsolete facilities, inadequate capital, and outdated operating practices, the Post Office Department is failing the mail user in terms of service, failing the taxpayer in terms of cost, and failing the postal worker in terms of truly rewarding employment. It is time for a change.

Well, now, it is my good fortune to serve on the Post Office Subcommittee of the Committee on Appropriations. This is my first year and I admit that I have a lot to learn about what takes place in the Post Office Department. Yet one thing that struck me right between the eyes early is that because of our budgetary problems in the Government, the facliities that are so desperately needed for the Post Office Department to come into the 20th century, are not going to be made available, cannot be made available through the funding process through which we have to go.

If my recollection is right, we came up with $170 million for new facilities in the Post Office Department bill this year. That is just not sufficient to even stay even and much less get the jump on the problems in the Post Office Department.

So, one of the aspects—and as the gentleman suggested, perhaps one of the least controversial aspects of the Postal Corporation—is the proposal to give the Corporation bonding authority up to $10 billion so that they can finance the new facilities that are needed. As the gentleman knows, serving on the committee on which he serves, the Post Office Department is developing new equipment and modern techniques and is trying to put them into practice. Yet they cannot get some of this equipment into a building because the ceiling is too low, because the doors are not large enough, or the rooms are not large enough, or the post office is downtown and you cannot get all of your employees into the area. Yet there is so much that needs to be done to make the working conditions of the employees better and to make the facilities adequate in order that they may use this modern equipment—the computerized equipment if you will—and all of the other technical developments that have come about.

One of the things that disturbs me and one of the things that has drawn me closer to the Postal Corporation is the question of how do you finance all these facilities that are needed if we are going to have an adequate modern post office system to serve the people?

Mr. SCOTT. Let me say to the gentleman at this point that there are bills pending before the committee that would set up a postal financing authority but would not provide for a corporation which would manage the entire department. The authority would have jurisdiction over the construction of new facilities and equipment for the Post Office Department, but it would remain a department within the executive branch of the Government.

Now, in my opinion this is something that our committee must consider item by item. I am not prepared at this time to say that I would favor any one bill. But the thing that is contained in this proposal which I find repulsive is the removal of the employees from civil service protection. I may be prejudiced on this because I have been a civil service employee for more than 26 years. On occasion people say that you cannot remove an incompetent employee. I do not believe that. I think you can. You can bring charges and have a hearing and you can remove anyone. Certainly I would favor removing any incompetent employee, but I do not want to take away the protection of Civil Service from one-fourth of all Government employees as this particular bill would do.

Mr. EDWARDS of Alabama. Mr. Speaker, if the gentleman will yield further, the gentleman has a very valid concern there. As I think the gentleman pointed out in his initial remarks, however, the civil service retirement provisions would still apply under the new proposal.

The post office worker would not lose ground, if you will, in his pay level or his working conditions by the proposal of the Postmaster General. The employee would then be able to sit down and bargain collectively. One of the changes that the letter carriers and the clerks and others have been pushing this year is the right to union recognition by the workers as opposed to the Executive order of the President of some years ago. This would give the employee that right, but it would go a step further—and I have had some discussion with some of my employees in my district about this—they state they want the right to bargain, but they still want to come to Congress for their pay.

What this proposal would do would very simply say that you bargain for your working conditions, your pay, and all the other questions that are properly before the bargaining process. The only place, as I see it, that it falls short of what perhaps unions generally get or like is the right to strike.

As the gentleman knows, binding arbitration is provided for. I am convinced that the procedure to settle disputes far surpasses the present procedure that the average employee in the Post Office has.

I find from talking to management, as well as the carriers and the clerks, that the procedure they presently have is not acceptable to either side. These things go on and on forever, and if one party or the other does not really want to settle it, or does not know how to come up with an answer, it hardly ever does get settled.

So this would set up a definite procedure outside of the Post Office, as I understand it, so that you can have binding arbitration and settle disputes at an earlier occasion, and let the parties go on about their job of serving the public.

Mr. SCOTT. Let me say to the gentleman from Alabama that I would favor union recognition rather than have its rights depend upon an Executive order because certainly an Executive order can be revoked at any time. But this proposal goes much further than that. Incidentally, it does say that the Board may at its discretion at any time remove any appointee of the Board. So that the Board has this power under the proposed bill, and the civil service protection would be entirely removed. But an employee would have the right to have any dispute arbitrated.

Frankly, I have some concern about a board of arbitration having the power to make a final decision. If we are talking about Government employees, in my opinion the Government should make the final decision, and not an outside group.

So while I would give them the right to be recognized by law, I would still want to preserve the final decision as to working conditions, and so forth, in the Government.

Mr. EDWARDS of Alabama. Where would the gentleman have it remain, if I may ask? Within Congress, or within a branch of the Government? What does the gentleman have in mind?

Mr. SCOTT. Frankly, I would preserve the present system insofar as the civil service laws and regulations are concerned. We have over more than half a century developed these rules. I would have Congress continue to fix the pay of employees.

Now, let me say to the gentleman that during this dialog I do not want to prejudice myself, because I am on this committee, and frankly I would prefer to hear all alternative proposals. I would hope that the committee, after hearing all sides, would work its will and make a presentation to both bodies of Congress.

This is something that we should decide after a full hearing rather than in the little discussion that we are having on the floor today. My entire purpose in bringing this up was so that the Members of the House would realize that there are some pitfalls in this bill, and would give close scrutiny to the entire proposal before pledging to support the present bill that we are discussing.

Mr. EDWARDS of Alabama. May I say to the gentleman that I will likewise reserve my option, and I would not have it understood that the discussion we are having here is an attempt to put either one of us in concrete, because I believe this is too important a subject. Yet I am sure the gentleman will agree with me that it is so important that it merits debate.

It should be debated. It should be discussed at length. The people of this country, Government officials and Members of Congress ought to have it debated and they ought to know what all the sides are, and having come to a reasonable conclusion based on what is brought out in debate, then perhaps we will come up with the best answer, whatever the best answer is.

I certainly join with the gentleman in that view and I would not want anything that has been said here today to indicate particularly that any of us are set in our position to the point where we cannot move one way or another.

Mr. SCOTT. I thank the gentleman.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to my distinguished friend, the gentleman from Missouri.

Mr. HALL. I appreciate the gentleman yielding.

Mr. Speaker, I certainly want to commend the gentleman for taking this time, and with such erudition bringing this problem to the Members in advance of what may come out in the form of a final report of the committee. Because, in this way we have the opportunity to carry on a dialog and to think and to debate on both sides of the problem, before the fact.

Therefore I have listened with interest, and I want to commend all the gentlemen who have participated in this preview, so to speak, of the postal reform bill, regardless of what may come out of the committee.

The gentleman knows that I serve on the Committee on Armed Services, and I think I take my hat off to no one in trying to protect the serviceman or veteran, and I know the gentleman in the well, the distinguished gentleman from Virginia, feels exactly the same way as does the gentleman from Alabama. We apply this equally to our dedicated and serving postal personnel.

But I do wonder, if in consideration of a new proposed bill, for postal reform, whether it will be taken into consideration in regard to the currently possible two retirement programs of the two careers, in the services, as it affects the taxpayers by double jeopardy, perhaps?

I have in mind a veteran who has served over 20 years and who retires under the current regulations, from the armed services, and he may be service connected physically disabled and therefore is tax exempt, insofar as his retirement income is concerned. Then he applies to the Post Office Department and is almost vamped into the postal service and starts another career which ends with civil service retirement in this capacity. Because of the veterans' preference he cannot be fired or reassigned, and he has certain rights over and above what management would ordinarily control.

It is a question, as the gentleman obviously realizes and we do not want to be locked in on this plan. I appreciate, having been formerly a personnel chief in the civil service as well as in the military, as to rights and tenure and so forth, but it does seem as though in allowing that extra and assured position, is bad for management and it is bad for the taxpayers in that the man has two careers, one almost automatically following the other, and he draws protected disabiliy retirement. Incentive is often poor. Then they add to that the civil service retirement in addition to that of the armed services.

I just wonder if in consideration of the new bill there would be any opportunity to review and to equate and/or justify this pressure on the Treasury, and good management.

Mr. SCOTT. Mr. Speaker, let me in response to the gentleman read a small paragraph which is in section 801 of the proposal.

It says:

> Those provisions of title 5 which were formerly known as the Veterans' Preference Act shall apply to the postal service. The provisions of section 459 of title 50, appendix (concerning reemployment rights of former military personnel), shall apply to the postal service in the same manner and to the same extent as to private employers.

Insofar as cost to the Government is concerned, as I read this proposal, we are giving complete authority to a corporation. I am not in a position to know how responsive this corporation will be. It is not accountable to Congress except that we may veto the rates. I would hope that we would have a good corporation,

a corporation that would do a good job. But I am very concerned about this Congress, which is close to the people, giving carte blanche authority to a public corporation that we have no real control over.

Mr. HALL. Mr. Speaker, if the gentleman will yield further, I think his answer to my stipulated case is exactly correct, and I full well understand that he is more concerned with the powers and the exclusions of the proposed new Corporation, the quasi-governmental Corporation, than otherwise. But would he not agree with me that perhaps, in the name of good management, whether it be in a Cabinet branch or a corporate branch, as far as handling the mail is concerned, there still must be some latitude for management to hire, to fire, to grant tenure or not grant tenure, which may be overdone in the name of a veteran's prior service and prior physical disability? It seems unaccountable to me, insofar as Congress' relation to the taxpayer is concerned, that we should insist that management hire 40-percent or the full 90-percent physically disabled veteran, take him on with all preference rights and everything else, and not be able to fire him or promote over him, and so forth, and then pass this on to a corporation, and then let him end up with two incomes, one taxable after so many additional years of Federal service, after maybe age 38 to 40 in the postal service, and continuing to treat the one that he got prior to that age, or 21 plus his service, including disability in the military service as nontaxable. One would question physical ability to perform in the severe cases.

Mr. SCOTT. I might say to the gentleman that in addition to the concern that he is expressing, this bill expressly provides that a person can be at the same time an employee of the Federal Government and an employee of the Postal Corporation, so he might well be holding two jobs and have the retirement that the gentleman is speaking about. He could be drawing retirement from the military while at the same time holding two jobs.

Mr. HALL. As the gentleman said, I do not want to be locked in on this position. I do appreciate the value of tenure, as far as getting good employees is concerned, but when there is one who is bad in management, whether it be in a Cabinet-level department of the Government, providing individual service, or whether it be a quasi-governmental organization, it cannot help the operation.

Mr. SCOTT. That would be a matter to be determined by the Congress rather than an independent corporation.

Mr. HALL. I agree with the gentleman wholeheartedly.

Mr. Speaker, I hope we will write this into the bill.

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. The gentleman has made a statement that I do not necessarily question, but it worries me still. The gentleman says that under the bill an employee could be an employee of the Federal Government as well as the Postal Corporation at the same time.

Mr. SCOTT. May I read this to the gentleman. It appears on page 59 of the Postal Service Act of 1969, and it reads this way:

> Notwithstanding Sections 5532, 5533, 5535, and 5536 of Title V, and any other provision of law, an officer, agent or employee of the United States Government is eligible to serve and receive compensation both as such officer, agent or employees and as officer, agent or employee of the Postal Service, other than as a member of the Board.

That language appears in section 801, the concluding paragraph.

Mr. EDWARDS of Alabama. May I ask the gentleman if that has come up in the hearings yet?

Mr. SCOTT. I have not heard it mentioned in the hearings.

Mr. EDWARDS of Alabama. I am not in a position to argue the point pro or con here, but I hope the gentleman will explore that to a great extent when the time comes to talk about that particular section.

Mr. SCOTT. I would hope we would explore each paragraph.

Mr. McCLURE. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to the gentleman from Idaho.

Mr. McCLURE. Mr. Speaker, I might shed some light on that particular section, because there is a provision in the bill as drafted which does repeal the prohibition against dual compensation now in the statute. This has not to my knowledge been covered in the hearings up to this point, but certainly it would be my intention to try to ascertain the reasons for the repeal of the present provisions against dual compensation.

Mr. EDWARDS of Alabama. Mr Speaker, will the gentleman yield further? I have a few more thoughts I would like to explore.

Mr. SCOTT. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Speaker, one point has to do with the panel of rate commissioners. As the gentleman has described them in his initial comments, the panel is answerable to what I suppose we might call public directors, sometimes called outside directors. This panel of rate commissioners, as I see it, gives to the Post Office an opportunity to provide a rate system to do away with subsidies as we know them in the postal system. It would not do away with the Congress appropriating money to cover such things as franking privileges and perhaps agricultural bulletins, and things that are sent out by the Federal Government. For these, money would be appropriated, and that money would be paid over to the Post Office Department, and that money plus the postal rates should in 5 years, if all goes well, keep the Post Office Department on a pay-as-you-go basis, more or less.

Mr. SCOTT. This is my understanding. For any portion of the mail that the Congress feels should be subsidized, that should not pay its own way, which we feel is a public service, whether it is the franking privilege, educational material or newspapers, or anything of this nature, as I understand the bill, the Congress can make such appropriations as it considers proper and this would reduce the cost of the mailing of anything that the Congress feels should be subsidized.

Mr. EDWARDS of Alabama. One of the big complaints over the years has been very simply that the Congress is subsidizing too much, that we have spent approximately $8 billion in the last 10 years, and it is suggested that over the next 10 years we may spend $15 to $16 billion. These are figures that have come from the Post Office Department. We have spent that in subsidizing the mails.

The argument is that the mail user should pay for his own service and the person who does not use the mails to any great extent should not have to pay the bill through taxes.

Now, assuming that this proposal goes in, we then have the rate commissioners who report to the outside directors, whose work is subject to veto by the Congress under the present proposal. Yet, does not this give a little more responsiveness to the need for setting rates? The gentleman knows very well the problems of getting a penny increase on stamps through Congress, or getting a percentage raise on rates for second- and third-class mail.

The thing that troubles me throughout all this, I suppose, is that the postal management is really not the management. They more or less administer what Congress doles out to them. They do not control their rates or their wages, and they have little or no control over the transportation.

The gentleman has heard all these arguments before. They are not original with me. But these are things that concern me as we weigh the Corporation as opposed to what we presently have.

Mr. SCOTT. Let me say that I agree with the statements the gentleman makes, and I share his concern. There are a number of measures before the committee at this time which would revise postal rates.

But there is another side of the picture. If this Corporation does come into being it will have the power to fix the rates at any level it cares to, subject only to the right of both Houses of Congress, by joint resolution within a period of 60 days, to disapprove. I have some doubt that Congress can act within 60 days, unless we would get cooperation on both sides of the aisle, from the chairmen of both the House and Senate committees and from the leadership of both the House and the Senate.

At least I would propose, and I believe others would also, that this provision be changed so that either body might veto a proposed rate increase.

It seems entirely impractical to me, if the new Corporation, as an example, should propose a 15-cent first-class mail stamp—I do not know that the time would come when it would, but suppose it did—to say we would have to get the resolution through both Houses of Con-

gress within 60 days in order to disapprove it. The people would be up in arms, and they would blame you and me and the other Members of Congress if the price of a stamp were raised to something beyond what they felt it should be.

I believe this is a provision which needs to be revised before the bill comes to the floor of the House for consideration.

Since our time is drawing close to an end, let me commend the gentleman from Alabama for his participation in this dialog. I would hope that the Members who have participated may give the other Members of the House something to contemplate before making a decision on this matter.

Mr. McCLURE. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to the gentleman from Idaho.

Mr. McCLURE. I thank the gentleman for yielding.

I just want to call the attention of the Members of the House to the great contribution the gentleman from Virginia has made in taking this special order to discuss what should be one of the most vital issues before Congress at the present time, one which will affect every man, woman, and child in this country for years to come. There is no Member on either side of the aisle in Congress or in the committee more concerned about the welfare of the employees of the Post Office Department and civil servants generally than the gentleman from Virginia, which I am sure his constituents realize. Certainly he should be highly commended for his effort in the committee and again on the floor of the House today.

Mr. SCOTT. I thank the gentleman for his kindness.

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield further?

Mr. SCOTT. I am glad to yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. I want to join my colleague in paying respect to the gentleman in the well, because there is no one in the House more genuinely dedicated to those he represents and to finding the best he can for the Federal workers. Certainly I join him in that concern. I am sure it is that concern which prompts the gentleman to come here and to enter into debate freely with others of the House on this particular subject.

I wonder if I might finish off my remarks on the gentleman's time—and I will say to the gentleman, I have more time, if we need it—by quoting again from the President's message to the House concerning the postal corporation. The President said:

> Traditions die hard and traditional institutions are difficult to abandon. But tradition is no substitute for performance, and if our postal system is to meet the expanding needs of the 1970's, we must act now.

I believe the President is right. I believe we have to act now. We have to act promptly. We have to quit this business of trying to tie up the Post Office Department with baling wire hoping to get through another year or another administration. We must get on about the business, whatever the right answer is, of rebuilding the Post Office Department, rebuilding the confidence of the people in it, giving the workers in the Post Office Department a system through which they can operate for the benefit of the entire populace of this country. Partial reform is not enough. We must have a complete overhaul.

Again I commend the gentleman for taking this time so that we can discuss in some detail the problems confronted by the Post Office Department.

Mr. SCOTT. I thank the gentleman.

Mr. HALL. Mr. Speaker, will the gentleman yield again?

Mr. SCOTT. I yield to the gentleman from Missouri.

Mr. HALL. I want to join my colleagues from Idaho and Alabama in praise and commendation of the gentleman from Virginia for all of the work that he does. Indeed, his actions speak more loudly than words can tell.

Mr. Speaker, I wish to go back to the observation that the gentleman just made about what I have often referred to during the last 3 years, in the study of the reorganization of the Congress, as a member of the joint House-Senate committee thereon. This we refer to as the "veto in reverse." If there is a rates commission to be established in the new Postal Reform Act which requires both bodies to act and veto a rate increase, it will suffer the same fate as the Members' pay raise suffered, and there will seldom be a vote on it. In addition to that, it does harm and damage to the representative system of government in a republic under a constitution, which is the kind of government that we truly are, and therefore we should never delegate to such a commission our authority to establish such rates. I hope that the committee and the distinguished gentleman and all of those who have spoken here would look into this reverse veto. The veto prerogative, of course, is established constitutionally for the executive branch of the Government over the legislative, giving the latter the right of overriding the veto. It was never intended, even for the purposes of reorganizing the executive, the legislative, or the judicial branch of the Government that the principle of the veto in reverse should apply. I think this requires a careful looking into, as it applies to postal rate reform but especially as it applies to representative government as a whole. One need but recall that in the Reorganization Act of 1949 a 90-day period was given in which either body of the Congress could vote against executive branch reorganization. Through the years that has been respectively peeled down to 60 days in which to act, and finally to 30 days in the notorious Valentine Day massacre of the taxpayers on the Members' pay increase. Now we are requiring both bodies to act in 60 days.

I agree wholeheartedly with the gentleman from Virginia that this particular portion of the proposed bill needs to be studied assiduously and changed with perception, succinctness, and firmly before it comes to the floor of the House. I appreciate his bringing it up.

Mr. SCOTT. I thank the gentleman.

I hope that the comments of the various Members of the House will be examined by the entire House before any action is taken in this field.

THE PRESIDENT'S PROPOSALS WITH RESPECT TO THE POST OFFICE DEPARTMENT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Alabama (Mr. EDWARDS) is recognized for 60 minutes.

Mr. EDWARDS of Alabama. Mr. Speaker, the purpose of my 60-minute special order today was to carry on, if necessary, the debate which we have presently entered into under the special order of the gentleman from Virginia. There is at least one other gentleman who would like to comment further, and I am happy to yield at this time to the gentleman from Idaho.

Mr. McCLURE. Mr. Speaker, I thank the gentleman for yielding.

I have only these further comments prompted by the exchange which has taken place, which I think has been very helpful and I hope constructive in dealing with the problems confronted by this House.

It was pointed out in a statement to our committee members the other day in the committee hearings that about three-fourths of the time of the committee is taken up by a consideration of relatively minor points concerning labor and management decisions involved in the operation of the Post Office Department whereas the committee ought to be spending a great proportion of its time in dealing with the large overall problems that affect all civil servants and not just those that affect the Post Office Department. Certainly I agree with the discussion that has taken place on the application of the congressional veto in the ratemaking prerogative. I think that the intention of the administration as stated by the Postmaster General was to draw a parallel between the veto power in this bill and the veto power in the Executive Reorganization Act.

As was pointed out in the committee and again here on the floor of the House, there is a difference between the language in the bill and that in the Executive Reorganization Act in that the Executive Reorganization Act requires a veto by either House rather than the concurrent resolution required by affirmative action on the part of both Houses of Congress.

Mr. Speaker, it would be my intention at the proper time in the committee to propose an amendment, if it is not proposed before that, to conform the language of the Postal Reorganization Act to that of the Executive Reorganization Act.

Members of the union have indicated to me and some of the union leaders have

indicated to me the fact that they do not desire and are not asking for the right to strike. I think this should be noted for the record. As far as I am personally concerned, I do not favor the use of binding arbitration. If we do not believe in collective bargaining, and I do, I think the parties to the dispute should have the authority and the right to utilize the tools of collective bargaining, including the right to strike in the solution of their problems.

But in view of the stated intentions and desires of the unions and in view of the fact that this is a massive organization dealing nationwide, and in view of the fact that the public interest is paramount and in view of the fact that the Corporation would be essentially if not technically a branch of the Government, I think the binding arbitration provision is a wise provision.

I further think it might be pointed out that the bill does not really in all instances require binding arbitration for either management or labor—to obtain binding arbitration as a matter of right.

I am sure that the committee will look at that provision very closely and may, indeed, before final action in the committee strengthen that provision.

I would point out that insofar as Civil Service benefits are concerned and the rights of tenure are concerned, the Kappel Commission and again the Post Office Department has been very solicitous of the rights of the employees, and in the one instance in which they deem it likely that benefits of civil service employment will exceed the benefits that might have come by collective bargaining, they have recommended that the civil service benefits be retained, and I refer to the retirement system. The civil service retirement system is probably more liberal with respect to the rights of the employees than would be the case in private collective bargaining in a private collective bargaining agreement and would, therefore, be retained.

Mr. Speaker, I question one other section of the bill which would permit the Government to negotiate for transportation contracts. The Government in its wisdom over a long period of time as have nearly all governments in all States found it necessary to regulate the transportation industry, by way of regulatory commissions through the ratemaking mechanism, the rates which should be charged and collected by those who transport as common carriers. I see no reason why the Federal Government should be exempted from the provisions of this kind of law. If it is necessary to maintain a good system of common carriers in this country that ratemaking be established, then I think the Government should be just as subject to those rates as any citizen of this country.

With respect to the cost of a particular service, let me simply state that there are a lot of different ways of trying to determine what the costs actually are. A great deal of difference can be made. As has been pointed out, in recent years the Post Office Department has been using as a test the incremental cost allocation system. This was substituted by action of Congress for the revenue foregone basis which had been used in the past.

The Post Office Department now proposes to go back to the system which was in use several years ago which would cut, in effect, more than half the deficit now attributable to second- and third-class mail.

This, I believe, is something that Congress will want to look at very closely prior to the time any enactment is made. But let me just simply underline what the gentleman from Alabama has said, and that is that the size, the scope, the magnitude, the sheer impossibility of dealing with the problem by changing minor aspects of the present organization underscore the vital necessity of massive reorganization of the Post Office Department. I believe that postal reform, to be meaningful in terms of actually dealing with the problems, can be best expressed in legislative form by the proposal of the President and the Postmaster General. It has been charged on the floor of this House and elsewhere that our present Postmaster General is politically naive, and perhaps his very naivete, if that is an accurate statement, led to his ignoring the political consequences or the political dangers of a massive reorganization of this kind. But certainly that could not be said of the President of the United States. I am certain that he is aware of the political implications of a proposal of this kind.

Mr. Speaker, I commend both the Postmaster General and the President of the United States for having the courage to assert the very positive leadership that will be necessary to get this proposal off dead center. I am hopeful the Congress will act and act expeditiously on this very important legislation.

Mr. Speaker, let me thank the gentleman from Alabama for yielding this time to me. I appreciate it. I believe the contribution the gentleman from Alabama made in the exchange with the gentleman from Virginia should be very helpful to the Members of the House.

Mr. EDWARDS of Alabama. Mr. Speaker, I thank the gentleman for his remarks. I know that the gentleman is a very able member of the Committee on Post Office and Civil Service, and that the gentleman will be giving careful attention to the proposal that is presently pending there for the postal corporation. I am sure that out of that great committee will come a wise decision.

Mr. ANDREWS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Alabama. I am happy to yield to my distinguished friend from Alabama.

Mr. ANDREWS of Alabama. Mr. Speaker, I, too, want to join in and concur with the remarks that have been made about the proposals submitted by the Postmaster General to the Congress. I have known the general all of his life. He is from my home town in Alabama. I have been very close to him. He has had a phenomenal success in the business world. He started from scratch and wound up with one of the biggest and most outstanding companies of this Nation. He has given long, hard hours of work to the drafting of the bill that has been submitted to this Congress for the reorganization of the Post Office Department. He is a courageous man, and an able man, and he has only one thought in mind, and that is to give the American people better postal service.

Mr. Speaker, I doubt that in the history of this country any man has ever recommended that he be put out of the President's Cabinet, and that is exactly what Postmaster General Blount has done. Certainly there are no politics in it as far as he is concerned. He is trying to help, and I am for him 100 percent.

Mr. Speaker, I want to say that in my opinion there never has been a finer man serving in any capacity in the Government of the United States than Winton M. Blount, Postmaster General.

Mr. SCOTT. Mr. Speaker, will the gentleman yield.

Mr. EDWARDS of Alabama. I am happy to yield to the gentleman from Virginia.

Mr. SCOTT. Mr. Speaker, I thank the gentleman for yielding, and I would reassure the gentleman, as I believe the Members of the House are well aware, that I have great respect for the present incumbent Attorney General.

Mr. ANDREWS of Alabama. The gentleman means Postmaster General.

Mr. SCOTT. I am sorry. Of course, I mean Postmaster General.

Mr. ANDREWS of Alabama. Mr. Speaker, I tried to get him to study law years ago, when he was hanging around my office, but he just wanted to be a good businessman rather than a lawyer.

Mr. SCOTT. Certainly, the present incumbent is a very able and a very fine gentleman. I am sure that nothing that has been said on the floor of the House today would indicate otherwise. I would think, however, that this is a government of laws and not of men and this is a matter that we should consider very carefully on its merits without regard to who made the proposal and ultimately determine what is in the best interest of the people of the country and in the best interest of the postal service. I am sure the distinguished gentleman would agree with these remarks.

Mr. ANDREWS of Alabama. I am sure the Congress will work its will.

I am just so sold on the ability and the integrity and courage of the Postmaster General, I know that he has at heart the best interests of the American people when he submits his proposal to the Congress. I thank the gentleman for yielding.

Mr. SCOTT. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman.

Mr. SCOTT. I would emphasize that nothing that has been said here is of a personal nature. If it was of a personal nature, I would join with the gentlemen from Alabama, the two of them, in the accolades to the present Postmaster General. But it is not to determine whether we have a fine, outstanding man serving as Postmaster General. I would concede that. I have doubts as to the wisdom of these proposals. Since I have been priv-

ileged to serve in the House, I have felt free to express my opinions on proposed legislation, and I will continue to express by own views and those of the people I represent.

Mr. EDWARDS of Alabama. Of course, the gentleman is correct. This is a government of laws rather than of men and the question is, How does this Government carry out its responsibility under the law.

I would suggest to the gentleman that there is more than one way to do it. If Congress does an adequate job in setting up a postal corporation for example with adequate safeguards, then it will have carried out its function under the law. I think that is good.

If Congress cannot come up with an adequate postal corporation that gives and has adequate protections, then it should not pass a Postal Corporation bill.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman.

Mr. HALL. I have also listened to the colloquy in this special order with a great deal of interest, particularly to the two gentlemen from Alabama.

I think time will tell that we are discussing legislation here and not personalties.

I also think the gentlemen would agree with me that there is such a thing as being apolitical or nonpartisan. There should be such a thing as having a corporation as proposed, with no politics in it. But good heaven above knows that there is also such a thing as inverse politics. Would the gentleman not agree with that last phrase?

Mr. EDWARDS of Alabama. I certainly agree with the gentleman and that is why I put great faith in the Post Office and Civil Service Committee to see that we do not end up with a deplorable situation.

Mr. McCLURE. Mr. Speaker, will the gentlemen yield?

Mr. EDWARDS of Alabama. I yield to the gentleman.

Mr. McCLURE. I thank the gentleman for yielding. I think the thing that we should look at closely is the fact that postal rates have doubled in recent years, and yet the quality of the service has declined under the existing structure and under existing law. I certainly agree with the gentleman that this situation certainly indicates and the public is demanding a change in the law which will permit improvements in the service.

Mr. EDWARDS of Alabama. Mr. Speaker, if I may close with this one comment.

I urge the Members of this body and I urge the carriers and the clerks and other postal employees, and I urge the interested citizens of this country to keep an open mind on what has been proposed by the Post Office Department in this bill.

This is a departure from what we normally consider in this Congress. We do not usually propose to do away with a department of the Government. Historically, as my colleagues know, we usually add on to the superstructure of the Government. This is a radical departure.

So I urge my colleagues not to get set in concrete on this issue. I urge the Post Office employees not to get set in concrete on this issue.

And I urge the people of this country to bear with the Congress while it tries to work out an adequate solution to the problems with which the Post Office Department is faced; and hopefully, in the wisdom of these Representatives, we will be able to come up with a system that will give the public adequate postal service.

CANADA SETS A GOOD EXAMPLE IN TRADE POLICY

The SPEAKER pro tempore (Mr. HUNGATE). Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 10 minutes.

Mr. REUSS. Mr. Speaker, many of us have from time to time risen to complain of barriers to our exports imposed by other nations. It is, therefore, all the greater pleasure to note that Canada—our major trading partner, taking over $8 billion of our exports—is lowering its trade barriers, rather than raising them.

Specifically, Canada's Finance Minister, the Honorable Edgar J. Benson, has announced that his Government has put all of Canada's Kennedy round tariff concessions—with one very minor exception—into full effect. Under the original Kennedy round agreement, Canada was to have made these tariff cuts in annual installments. The final installment would not have been due until January 1, 1972, some 2½ years from now.

Mr. Benson estimated that these accelerated tariff cuts will affect some $2 billion of Canada's imports. And the United States, which accounts for about three-quarters of Canada's imports, is bound to be the principal beneficiary.

Moreover, this kind of anti-inflationary measure sets a good example for the world. The reduction of trade barriers allows other countries to join in the beneficial effects of that nation's economic measures. It would be a great step forward in international cooperation and an improvement of the world payments system if other countries, particularly those with a balance-of-payments surplus, could emulate such actions.

I am also pleased to note that Mr. Benson also announced his Government's intention to liberalize tariff exemptions for Canadian residents returning from trips abroad and to remove the inequities in the present system.

FRAUD IN AMERICA—V

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, judging the means by the end is easy; one can justify any action so long as he can claim that he intended to do the right thing, or to achieve some good. But unfortunately it is not always possible to justify the means by the end.

The facile reaction, the facile defense to the "Hunger in America" show is that CBS meant to do a public good; namely, to arouse the public to a bad, possibly shameful situation, and create attitudes that would lead to action. Thus, defenders of the "Hunger in America" show say, "if they staged some parts of the show, and if they showed some things that were not so, then that is no reason to condemn them, because CBS intended to do good, and besides babies do die of hunger."

The problem with this reasoning is that it reserves moral judgment to the producers of television news, and not to the viewing public. That is, defenders of the show who use this reasoning are saying that if a television news producer intends to do good, then he need not worry about how accurate his actual broadcast is.

But moral judgments cannot be reserved only to the managers of the media, any more than they can be reserved to any other despot, benign, paternalistic or tyrannical. If it is wrong for a government to "manage" the news, then it is also wrong for the media to "manage" it. It is the business of a news media to report facts, and leave the moral judgment to the public, or to the editorial page. If this principle is not followed, then any news producer can fake, distort or falsify a broadcast in any way he sees fit, solely on grounds that he is doing the right thing.

The other problem with this reasoning is that it assumes that the news producer will in fact have the public interest at heart. There is no guarantee that any man has the interest of the public at heart. He may think that he does, but that does not make it so. And indeed he may not care at all about the public interest. Anyone who is willing to trust his fate to the moral judgments of persons unknown and unaccountable in the dark recesses of CBS headquarters is not willing to realize the dangers of so doing. There is no guarantee that slanted news is going to be slanted in the interest of the public, and no guarantee that moral judgments rendered by news directors are in fact sound.

Goebbels probably thought that he was acting in the behalf of the public. He made moral judgments for the people of Germany, and proved his cases with doctored and fake news. But history shows that he was a monster. Would the people of Germany have fallen into the trap had they possessed the truth, plain and undistorted, so that they could have made their own moral judgments? No one can ever know.

If we are willing to assume that the moral judgment of CBS News is always going to be sound, then we can say that "Hunger in America" was justifiable fraud. But the fact is that fraud is never justifiable.

Mr. Speaker, the business of a news director is to present facts, and to present them truthfully. It is then the business of the public to cast whatever moral judgments the fact may warrant. If we give up that public right then we have also given up the first principle of a free press and a free people—the right to know the truth. It is no accident of

history that one of the ancient maxims that has come down through the centuries so that "ye shall know the truth, and the truth shall make you free," or in another way, "knowledge is the guardian of the state." CBS has no right to assume that good intentions will wash away fraud. Only truth serves the public interest, and there is no substitute for it. You cannot make the truth more dramatic, less dramatic, more colorful, or less colorful than it is. CBS has tried, and they have done themselves and their viewers a grave injustice. Worse, they have set a precedent for destructive and corrosive malpractice, a precedent that cannot be condoned and ought not to be repeated.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. CUNNINGHAM (at the request of Mr. ARENDS), indefinitely, on account of death in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. BURLESON of Texas, tomorrow, for 30 minutes; to revise and extend his remarks and to include extraneous matter.

(The following Members (at the request of Mr. BRINKLEY) to revise and extend their remarks and to include extraneous matter to:)

Mr. REUSS, today, for 10 minutes.

Mr. GONZALEZ, today, for 10 minutes.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. JOELSON.

Mr. MADDEN in two instances.

Mr. WYATT immediately following the reading of the Journal.

(The following Members (at the request of Mr. LUJAN) and to include extraneous matter:)

Mr. PETTIS.

Mr. CLEVELAND in two instances.

Mr. POLLOCK.

Mr. MARTIN.

Mr. MCKNEALLY in two instances.

Mr. ZWACH.

Mr. HALL.

Mr. GROSS.

Mr. TAFT.

Mr. SCHWENGEL.

Mr. BROTZMAN.

Mr. STEIGER of Wisconsin.

Mr. RHODES.

Mr. MACGREGOR.

Mr. MICHEL in two instances.

Mr. BEALL of Maryland.

(The following Members (at the request of Mr. BRINKLEY) and to include extraneous matter:)

Mr. OTTINGER in two instances.

Mr. BOLLING in two instances.

Mr. ANNUNZIO in five instances.

Mr. BOLAND in two instances.

Mr. LONG of Maryland.

Mr. ANDERSON of California in two instances.

Mr. ECKHARDT.

Mr. ANDREWS of Alabama in two instances.

Mr. RARICK in three instances.

Mr. TIERNAN.

Mr. HOWARD.

Mr. LEGGETT.

Mr. HAGAN in three instances.

Mr. HUNGATE in two instances.

Mr. ST. ONGE in two instances.

Mr. BARING.

Mr. GONZALEZ in two instances.

Mr. PICKLE in two instances.

Mr. FASCELL in two instances.

Mr. OLSEN in two instances.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 3480. An act for the relief of the New Bedford Storage Warehouse Co.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on June 5, 1969, present to the President, for his approval, bills of the House of the following titles:

H.R. 684. An act to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes;

H.R. 2718. An act to extend for an additional temporary period the existing suspension of duties on certain classifications of yarn of silk;

H.R. 2940. An act for the relief of Henry E. Dooley;

H.R. 10015. An act to extend through December 31, 1970, the suspension of duty on electrodes for use in producing aluminum; and

H.R. 10016. An act to continue until the close of June 30, 1971, the existing suspension of duties for metal scrap.

ADJOURNMENT

Mr. BRINKLEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 52 minutes p.m.), the House adjourned until tomorrow, Tuesday, June 10, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

837. A letter from the Acting Secretary of Agriculture, transmitting a draft of proposed legislation to amend the Food Stamp Act of 1964, as amended; to the Committee on Agriculture.

838. A letter from the Comptroller General of the United States, transmitting a report on the opportunities for improving internal audit of civilian payroll operations in the Department of Defense; to the Committee on Government Operations.

839. A letter from the Comptroller General of the United States, transmitting a report on Federal disaster assistance to State and local governments, Office of Emergency Preparedness; to the Committee on Government Operations.

840. A letter from the Comptroller General of the United States, transmitting a report on the need for the Veterans' Administration to acquire hospital sites before developing working drawings and specifications for construction of hospitals; to the Committee on Government Operations.

841. A letter from the Deputy Assistant Secretary of the Interior, transmitting a copy of a proposed extension of two concession contracts for the provision of accommodations, facilities, and services for the public in Grand Canyon National Park (north rim), Ariz., Bryce Canyon and Zion National Parks, Utah, for a 1-year term from January 1 through December 31, 1969, pursuant to the provisions of the act of July 31, 1953 (67 Stat. 271), as amended by the act of July 14, 1956 (70 Stat. 543); to the Committee on Interior and Insular Affairs.

842. A. letter from the Executive Director, Federal Communications Commission, transmitting a report on the backlog of pending applications and hearing cases in the Fedderal Communications Commission as of April 30, 1969, pursuant to the provisions of section 5(e) of the Communications Act, as amended; to the Committee on Interstate and Foreign Commerce.

843. A letter from the Chairman, Federal Power Commission, transmitting a copy of a map entitled "Major Natural Gas Pipelines, as of December 31, 1968"; to the Committee on Interstate and Foreign Commerce.

844. A letter from the Chairman, Executive Committee, Eleanor Roosevelt Memorial Foundation, transmitting the sixth annual report for 1968 of the Foundation, pursuant to the provisions of Public Law 88-11; to the Committee on the Judiciary.

845. A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation to provide an extension of the interest equalization tax, and for other purposes; to the Committee on Ways and Means.

846. A letter from the Acting Chairman, U.S. Tariff Commission, transmitting the 19th annual report of the Commission on the operation of the trade agreements program, pursuant to the provisions of section 402(b) of the Trade Expansion Act of 1962; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. PATMAN: Committee on Banking and Currency. H.R. 7491. A bill to clarify the liability of national banks for certain taxes; with amendment (Rept. No. 91-290). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SMITH of New York: Committee on the Judiciary. H.R. 1453. A bill for the relief of Capt. Melvin A. Kaye; with amendment (Rept. No. 91-291). Referred to the Committee of the Whole House.

Mr. FLOWERS: Committee on the Judiciary. H.R. 1698. A bill for the relief of Joeck Kuncek; with amendment (Rept. No. 91–292). Referred to the Committee of the Whole House.

Mr. MANN: Committee on the Judiciary. H.R. 2037. A bill for the relief of Robert W. Barrie and Marguerite J. Barrie; with amendment (Rept. No. 91–293). Referred to the Committee of the Whole House.

Mr. HUNGATE: Committee on the Judiciary. H.R. 2209. A bill for the relief of Carlo DeMarco; with amendment (Rept. No. 91–294). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 3723. A bill for the relief of Robert G. Smith; with amendment (Rept. No. 91–295). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 3920. A bill for the relief of Beverly Medlock and Ruth Lee Medlock (Rept. No. 91–296). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 4105. A bill for the relief of Dr. Emil Bruno; with amendment (Rept. No. 91–297). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 4658. A bill for the relief of Bernard L. Coulter; with amendment (Rept. No. 91–298). Referred to the Committee of the Whole House.

Mr. HUNGATE: Committee on the Judiciary. H.R. 5337. A bill for the relief of the late Albert E. Jameson, Jr. (Rept. No. 91–299). Referred to the Committee of the Whole House.

Mr. RAILSBACK: Committee on the Judiciary. H.R. 9488. A bill for the relief of Mrs. Ruth Brunner; with amendment (Rept. No. 91–300). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BROOMFIELD:

H.R. 11921. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. BROTZMAN:

H.R. 11922. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors; to the Committee on the Judiciary.

H.R. 11923. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; to the Committee on the Judiciary.

H.R. 11924. A bill to adjust the postal revenues and to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BROWN of California:

H.R. 11925. A bill to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid for eligible veterans and persons under such chapters; to the Committee on Veterans' Affairs.

By Mr. BURTON of California:

H.R. 11926. A bill to provide for the more efficient development and improved management of national forest commercial timberlands, to establish a high-timber-yield fund, and for other purposes; to the Committee on Agriculture.

By Mr. CELLER:

H.R. 11927. A bill to reclassify certain positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mrs. CHISHOLM:

H.R. 11928. A bill to amend the act of September 5, 1962 (76 Stat. 435), providing for the establishment of the Frederick Douglass home as a part of the park system in the National Capital; to the Committee on Interior and Insular Affairs.

H.R. 11929. A bill to reclassify certain positions in the postal field service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. COHELAN:

H.R. 11930. A bill to amend title III of part I of the Foreign Assistance Act of 1961 to provide for a program of investment guarantees in Latin American countries to encourage local participation in self-help community development projects; to the Committee on Foreign Affairs.

H.R. 11931. A bill to amend the Immigration and Nationality Act to make additional immigrant visas available for immigrants from certain foreign countries, and for other purposes; to the Committee on the Judiciary.

H.R. 11932. A bill to amend the public assistance provisions of the Social Security Act to increase the Federal share of a State's expenditures under the public assistance programs (including administrative expenses) to 90 percent, to provide for the establishment of nationally uniform minimum standards for aid or assistance thereunder, and to repeal the freeze on the number of children with respect to whom Federal payments may be made under the aid to families with dependent children program; to the Committee on Ways and Means.

By Mr. CORMAN:

H.R. 11933. A bill to amend the Internal Revenue Code of 1954 to allow a deduction from gross income for social agency, legal, and related expenses incurred in connection with the adoption of a child by the taxpayer; to the Committee on Ways and Means.

By Mr. ECKHARDT (for himself, Mr. BINGHAM, Mr. BRADEMAS, Mr. BROWN, of California, Mr. BURTON of California, Mr. CONYERS, Mr. FRIEDEL, Mr. FULTON of Pennsylvania, Mr. HALPERN, Mrs. HANSEN of Washington, Mr. HUNGATE, Mr. LEGGETT, Mr. MCDONALD of Michigan, Mr. MATSUNAGA, Mr. MIKVA, Mr. MOSS, Mr. PATTEN, Mr. POWELL, Mr. REES, Mr. ST GERMAIN, Mr. SCHEUER, Mr. STOKES, Mr. THOMPSON of New Jersey, Mr. WALDIE, and Mr. WOLFF):

H.R. 11934. A bill to extend to every person classified or processed under the Selective Service Act the right to legal counsel to the end that the rights and privileges afforded under law may be known and secured; to the Committee on Armed Services.

By Mr. ECKHARDT (for himself, Mr. ADDABBO, Mr. BUTTON, Mr. CORBETT, Mr. FARBSTEIN, Mr. HASTINGS, Mr. KOCH, Mr. LOWENSTEIN, Mr. MOORHEAD, Mr. ROYBAL, and Mr. YATRON):

H.R. 11935. A bill to extend to every person classified or processed under the Selective Service Act the right to legal counsel to the end that the rights and privileges afforded under law may be known and secured; to the Committee on Armed Services.

By Mr. EDWARDS of Alabama:

H.R. 11936. A bill to restore to persons having claims against the United States their right to be represented by legal counsel of their own choosing; to the Committee on the Judiciary.

By Mr. FOLEY:

H.R. 11937. A bill to establish a national policy for the environment; to authorize the Secretary of the Interior to conduct investigations, studies, surveys, and research relating to ecological systems, natural resources, and the quality of the human environment; and to establish a Board of Environmental Quality Advisers; to the Committee on Interior and Insular Affairs.

H.R. 11938. A bill to provide for improved employee-management relations in the postal service, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. GALLAGHER:

H.R. 11939. A bill to amend the Internal Revenue Code of 1954 to extend the head-of-household benefits to unremarried widows and widowers, and individuals who have attained age 35 and who have never been married or who have been separated or divorced for 3 years or more, who maintain their own households; to the Committee on Ways and Means.

By Mr. GIBBONS:

H.R. 11940. A bill to provide full Federal financing of payments made under the public assistance provisions of the Social Security Act to recipients who do not meet the duration-of-residence requirements of the applicable State plan, where such payments must nonetheless be made because of court determinations that such requirements are unconstitutional; to the Committee on Ways and Means.

By Mrs. GREEN of Oregon (for herself, Mr. ERLENBORN, Mr. DENT, Mr. AYRES, Mr. PUCINSKI, Mr. QUIE, Mr. BELL of California, Mr. SCHERLE, Mr. DELLENBACK, Mr. ESCH, Mr. ESHLEMAN, Mr. STEIGER of Wisconsin, Mr. COLLINS, Mr. LANDGREBE, Mr. HANSEN of Idaho, and Mr. RUTH):

H.R. 11941. A bill to encourage institutions of higher education to adopt rules and regulations to govern the conduct of students and faculty, to assure the right to free expression, to assist such institutions in their efforts to prevent and control campus disorders, and to amend the Higher Education Act of 1965; to the Committee on Education and Labor.

By Mrs. GRIFFITHS:

H.R. 11942. A bill to amend the Fish and Wildlife Coordination Act to provide for the establishment of a Council on Environmental Quality, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. GUDE:

H.R. 11943. A bill to establish the Potomac National River in the States of Maryland, Virginia, West Virginia, and the District of Columbia, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HELSTOSKI:

H.R. 11944. A bill to authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs, and for other related educational purposes; to the Committee on Education and Labor.

By Mr. HOWARD:

H.R. 11945. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. MORTON (for himself, Mr. GARMATZ, Mr. GUDE, Mr. LONG of Maryland, Mr. HOGAN, and Mr. BEALL of Maryland):

H.R. 11946. A bill to amend the River and Harbor Act of 1965 to increase the authorization for the Chesapeake Bay Basin study, the construction of a hydraulic model of the Chesapeake Bay Basin and associated technical center; to the Committee on Public Works.

By Mr. OLSEN:

H.R. 11947. A bill to repeal section 372–1 of title 25, United States Code, relating to the

appointment of hearing examiners for Indian probate work, to provide tenure and status for hearing examiners performing such work, and for other purposes; to the Committee on the Judiciary.

H.R. 11948. A bill to provide that certain payments made to Indians on the Flathead Reservation in Montana by their tribal governing body shall not be treated as income or resources for purposes of any of the Federal-State public assistance programs under the Social Security Act; to the Committee on Ways and Means.

By Mr. PHILBIN:

H.R. 11949. A bill to provide relief for the clothing industry by making special immigrant visas available to certain skilled tailors; to the Committee on the Judiciary.

By Mr. PODELL (for himself, Mr. VANIK, Mr. DULSKI, Mr. BYRNE of Pennsylvania, Mr. SHIPLEY, Mr. RUPP, Mr. DERWINSKI, Mr. COLLIER, Mr. MURPHY of New York, Mr. POLLOCK, Mr. PUCINSKI, Mr. MOSS, Mr. HUNGATE, Mr. ST GERMAIN, Mr. ST. ONGE, Mr. MCDADE, Mrs. REID of Illinois, Mr. MCDONALD of Michigan, Mr. MCCLOSKEY, Mr. BEALL of Maryland, Mr. HANSEN of Idaho, Mr. EVINS of Tennessee, Mr. DONOHUE, Mr. BURTON of Utah, and Mr. ROYBAL):

H.R. 11950. A bill to amend the Legislative Reorganization Act of 1946 to provide for annual reports to the Congress by the Comptroller General concerning certain price increases in Government contracts and certain failures to meet Government contract completion dates; to the Committee on Government operations.

By Mr. REUSS:

H.R. 11951. A bill to amend title II of the Social Security Act to increase the amount of a widow's or widower's benefit from 82½ to 100 percent of the insured individual's primary insurance amount; to the Committee on Ways and Means.

By Mr. REUSS (for himself, Mr. BLATNIK, Mr. GUDE, Mr. HICKS, Mr. MCCLOSKEY, Mr. MOSS, Mr. VANDER JAGT, and Mr. WRIGHT):

H.R. 11952. A bill to reorganize the executive branch of the Government by transferring functions of various agencies relating to evaluation of the effect of certain activities upon the environment to the Environmental Quality Council, and for other purposes; to the Committee on Government Operations.

By Mr. RHODES (for himself, Mr. TEAGUE of California and Mr. KYL):

H.R. 11953. A bill to amend section 205 of the act of September 21, 1944 (58 Stat. 736), as amended; to the Committee on Agriculture.

By Mr. RUPPE:

H.R. 11954. A bill to amend title II of the Social Security Act to provide a minimum primary benefit of $100 a month (with corresponding increases in the benefits payable to certain uninsured or insufficiently insured individuals); to the Committee on Ways and Means.

By Mr. SCHWENGEL:

H.R. 11955. A bill to authorize the hiring of employees of detective agencies for other than investigative services; to the Committee on Post Office and Civil Service.

By Mr. SCOTT:

H.R. 11956. A bill to make certain changes in the control of the institutions of the District of Columbia located in Fairfax County, Va.; to the Committee on the District of Columbia.

By Mr. TEAGUE of Texas (by request):

H.R. 11957. A bill to amend chapter 17 of title 38 of the United States Code to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disabilities to veterans having service-connected disabilities; to the Committee on Veterans' Affairs.

H.R. 11958. A bill to amend title 38 of the United States Code to provide that pensioners may be furnished necessary medical services in Veterans' Administration facilities; to the Committee on Veterans' Affairs.

By Mr. TEAGUE of Texas (for himself and Mr. BROWN of California):

H.R. 11959. A bill to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance, and special training allowance paid to eligible veterans and persons under such chapters; to the Committee on Veterans' Affairs.

By Mr. THOMSON of Wisconsin:

H.R. 11960. A bill to amend the Legislative Reorganization Act of 1946 to provide for the inclusion of certain cost estimates of certain measures reported by the standing committees of the House of Representatives; to the Committee on Rules.

By Mr. WEICKER:

H.R. 11961. A bill to amend title II of the Social Security Act to permit an individual to file application for disability insurance benefits after the expiration of the regularly prescribed period for filing such application where the failure to file within such period was due to good cause; to the Committee on Ways and Means.

By Mr. WYATT:

H.R. 11962. A bill to authorize feasibility study on the Willamette River projects South Yamhill division, on the South Yamhill and Willamette Rivers; to the Committee on Interior and Insular Affairs.

By Mr. ZWACH:

H.R. 11963. A bill to increase the membership of the Advisory Commission on Intergovernmental Relations by two members who shall be elected town or township officials; to the Committee on Government Operations.

By Mr. BURTON of Utah:

H. Res. 434. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on the Environment; to the Committee on Rules.

By Mr. FISH:

H. Res. 435. Resolution to amend the Rules of the House of Representatives to create a standing committee to be known as the Committee on the Environment; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

207. By the SPEAKER: Memorial of the Legislature of the State of Louisiana, relative to ending U.S. aid to Communist countries; to the Committee on Foreign Affairs.

208. Also, memorial of the Legislature of the State of Illinois, relative to the establishment of the Lincoln Homestead National Recreation Area; to the Committee on Interior and Insular Affairs.

209. Also, memorial of the Legislature of the State of Florida, relative to a constitutional amendment relating to prayer and Bible reading in public schools and institutions; to the Committee on the Judiciary.

210. Also, memorial of the House of Representatives of the State of Delaware, relative to the 1970 census; to the Committee on Post Office and Civil Service.

211. Also, memorial of the Senate of the State of Hawaii, relative to a guaranteed annual income; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 11964. A bill for the relief of Walter Matukic; to the Committee on the Judiciary.

By Mr. BURTON of California:

H.R. 11965. A bill for the relief of Peter Yu-Ju Huang; to the Committee on the Judiciary.

By Mr. CHAMBERLAIN:

H.R. 11966. A bill for the relief of Giovanni De Felice; to the Committee on the Judiciary.

By Mr. HALEY:

H.R. 11967. A bill to authorize the vessel *Orion* to engage in the coastwise trade; to the Committee on Merchant Marine and Fisheries.

By Mr. HATHAWAY:

H.R. 11968. A bill for the relief of Maj. Louis A. Deering, U.S. Army; to the Committee on the Judiciary.

By Mr. KEITH:

H.R. 11969. A bill for the relief of Frank Travers; to the Committee on the Judiciary.

By Mr. MINSHALL:

H.R. 11970. A bill for relieving a patent applicant from forfeiture of his patent rights induced by fraud on the part of his patent lawyer; to the Committee on the Judiciary.

By Mr. MORSE:

H.R. 11971. A bill to authorize and direct the District of Columbia to convey certain real property to the Washington International School, Inc.; to the Committee on the District of Columbia.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

136. By Mr. OLSEN: Resolution requesting the initiation of legislation to cause payments by the tribal governing body to its membership to be excluded from consideration in determining eligibility for assistance in any social welfare program where Federal moneys are used; to the Committee on Ways and Means.

137. By the SPEAKER: Petition of Henry Stoner, Albany, Oreg., relative to peace; to the Committee on Foreign Affairs.

138. Also, petition of the City Council, New Orleans, La., relative to the taxation of interest on State and local governmnt bonds; to the Committee on Ways and Means.

139. Also, petition of the City Council, Trinidad, Colo., relative to the taxation of local government bonds; to the Committee on Ways and Means.

SENATE— *Monday, June 9, 1969*

The Senate met at 11 o'clock a.m., and was called to order by the Vice President.

The Reverend Dr. Martin H. Scharlemann, graduate professor of exegetical theology, Concordia Lutheran Seminary, St. Louis, Mo., and chaplain—brigadier general—U.S. Air Force Reserve, offered the following prayer:

Almighty God, You hold in Your hands the destinies of every nation, kindred and tongue, assigning to each its proper task. To us You have apportioned the burden of upholding human values against those destructive forces in our

world which threaten to shrink men into being less than Your creation.

To this our solemn task we dedicate our individual energies and our mutual resources. Grant us wisdom and courage, so that we may neither be misled nor disheartened by the complexities of our public life and the enormity of our common commitments.

Guide us to make such choices as will help to keep far from us both the night of anarchy and the terror of oppression.

We confess that, left to ourselves, we could not discover those paths which lead to healing and understanding, firmness and patience in the resolution of our perplexities.

We, therefore, take heart from Your continuing presence among us and find assurance in the certainty of Your promise, *"Blessed is the nation whose God is the Lord, and the people whom He has chosen as His heritage."*—Psalm 33: 12.

THE JOURNAL

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, June 5, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND JOINT RESOLUTIONS

Messages in writing from the President of the United States by Mr. Geisler, one of his secretaries, announced that the President had approved and signed the following acts and joint resolutions:

On May 28, 1969:

S. 256. An act to confer U.S. citizenship posthumously upon L. Cpl. Theodore Daniel Van Staveren;

S.J. Res. 99. Joint resolution to authorize the President to issue a proclamation designating the first week in June of 1969 as "Helen Keller Memorial Week"; and

S.J. Res. 104. Joint resolution to authorize the President to reappoint as Chairman of the Joint Chiefs of Staff, for an additional term of 1 year, the officer serving in that position on April 1, 1969.

On June 3, 1969:

S. 278. An act to consent to the New Hampshire-Vermont Interstate School Compact.

On June 6, 1969:

S. 408. An act to liberalize the eligibility requirements governing the grant of assistance in acquiring specially adapted housing for certain service-connected disabled veterans, to increase the amount of such grant, to raise the limit on the amount of direct housing loans made by the Veterans' Administration, and for other purposes.

On June 7, 1969:

S.J. Res. 77. Joint resolution to authorize the President to designate the period beginning June 8, 1969, and ending June 14, 1969, as "Professional Photography Week in America."

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate sundry messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

WAIVER OF CALL OF THE CALENDAR

Mr. KENNEDY. Mr. President, I ask unanimous consent that the call of the legislative calendar, under rule VIII, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

DO NOT SELL THE AMERICAN SYSTEM SHORT

Mr. SCOTT. Mr. President, the Secretary of Commerce, the Honorable Maurice H. Stans, addressed the 1969 graduating class at Grove City College, Grove City, Pa., on Saturday and received an honorary doctor of laws degree.

In his address, the Secretary gave the graduates words of advice that he summed in three short paragraphs. They were, first:

Don't downgrade the future. You can play any part you want in an unbelievably better world.

Second:

Don't sell the American system short. Before you let anyone attack it, ask him to show you something better.

Third:

Don't belittle our competitive society of industry and commerce. It has given us everything we have and it can give us everything we want.

I ask unanimous consent that the address by the Secretary be printed at this point in the RECORD, and I commend its reading to my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. MAURICE H. STANS, U.S. SECRETARY OF COMMERCE

Mr. Pew, Dr. Harker, members of the Faculty, the Graduates of 1969, ladies and gentlemen: I am doubly honored here today.

First, I have the honor to bring to you the greetings of the President of the United States. When I last saw President Nixon, he asked me to convey his high regard to Mr. Pew and Dr. Harker, and to extend his congratulations and best wishes to all the graduates of 1969.

Second, I have the high honor which this distinguished college has bestowed upon me. I shall always cherish and value your recognition and your degree—and already I find it extremely pleasant to consider myself a member of the Class of 1969.

WILL BE BRIEF

When I accepted the very welcome invitation to be here with you today, I mentioned to Dr. Harker that commencement speakers really have an unusually difficult task in this year of campus unrest.

He replied that if I thought my job was tough, I should try his. "At least you can speak and run," he said.

Dr. Harker, as a member of the Class of '69, I know that is an exaggeration! I congratulate you and the students at Grove City for their common sense in ignoring the upsets that have recently befallen some of the great educational institutions of this country.

But I do assure my classmates that I intend to speak briefly. You have been sitting on a school bench for 16 years, perhaps more, and I know you don't want to be kept sitting there much longer.

As a matter of fact one of the greatest men of our time, the late President Eisenhower, once told me something on this subject. "The only virtue that can be presented in a commencement speech" he said, "is brevity."

So with his admonition in mind, I would like to make a deal with today's graduates of Grove City College. I will talk for just about fifteen more minutes, if you will settle back from the takeoff blocks at the edge of your seats into a comfortable position and really listen for that long. In that time, there are just three things I want to say. They are a distillation of all the advice I could conceivably give you.

Don't downgrade the future. You can play any part you want in an unbelievably better world.

Don't sell the American system short. Before you let anyone attack it, ask him to show you something better.

Don't belittle our competitive society of industry and commerce. It has given us everything we have and it can give us everything we want.

If you will just remember and believe those three short messages, this will be the most successful commencement address ever made.

Because they are contrary to some of the things you read and hear today from the dissatisfied and the radical and the violent, I'm going to tell you now why I hope you will remember these three points.

THE FUTURE

First, of these three subjects, perhaps it is most difficult for you and me to see the future in the same perspective. You have more of it ahead of you than I, but I have seen more of the past than you.

Your vision today may be sharply honed by the imperfections of our time, but mine is enriched by the knowledge that the world does indeed get better with time. It always has, through history!

We all know that a virus has been spreading across our land and even throughout the world in recent years—the virus of pessimism.

Those afflicted with it see everything as being wrong, and nothing as being right. They call for change and even revolution. They would sweep aside knowledge and order and decency. They would destroy, they say, in order to rebuild.

There are some things they don't say, as they loose riot and violence through the streets of our cities and across our college campuses.

The fact is that they offer nothing in place of the world we have today. Instead of improvements, they would create a void. They propose a future going back to the primitive past—a political vacuum, economic destruction and social chaos. The pages of history are strewn with the wreckage of nations where this has happened.

GREAT PROMISE AHEAD

This will not happen here if those of you who have the future seize it with the optimism it deserves.

The next time you hear someone say conditions in the world are bad, ask him just one question: Compared to what? Compared to sixty years ago, when I was born? Compared to the world of a hundred years ago? Compared to the Dark Ages of the past?

More progress already has been made in my lifetime than in all of mankind's history before us, but we have seen only the beginning of the possible.

For a thousand years and more, men have worked and died to evolve the base that you have today just as a starting point. Every challenge that lies ahead of us now has been distilled out of challenges that once were a thousand times greater than those facing us today. Every opportunity within our grasp is infinitely greater than most men could have dreamed of even at the start of my lifetime.

Never before has so much human fulfillment been possible. On every side of us there is a burgeoning awareness of the humanities and a concern for our fellow human beings.

Incredible worlds of scientific achievement have only begun to be discovered.

And the economic abundance which most of us already have now is coming within the reach of us all.

With remarkable determination and unimaginable speed, this Nation is tearing down the walls which once imprisoned men and their opportunities in the ghettos of ignorance and poverty.

With remarkable success, we are giving ever-greater life to the American system which rewards initiative, inventiveness, vision and imagination.

In such a country and in such a time, the future is limited only by the horizon each man creates for himself. However quaint it may sound in these days of the 20th Century, opportunity is unlimited. For the young the formula is as plain and simple as it always has been: fix a goal . . . aim high . . . set out to achieve it . . . and you will!

Let me state my first point again: Don't downgrade the future. You can play any part you want in an unbelievably better world.

THE AMERICAN SYSTEM

And now a few words about the American system.

In its broadest definition, this system by which we live is woven from three principal strands—political democracy, a free private economy, and universal opportunity.

Those changes which are now taking place in our way of life—those improvements which are now taking place in our Nation—are the natural evolutions of this system.

It has always been and it is now amenable to its own improvement. For two centuries this system has assured the United States of growth and greatness, far beyond any country.

By whatever yardstick may be used to measure it against any in the world, it has proved far superior to any other way of life contrived or devised by man at any time in human history.

Ask any critic of our society for a better workable system, and his answer can only be the silence of admission or irresponsible demagoguery.

These cynics have brought political democracy and our private economy under attack, in one way or another. If we are not fully committed to the preservation of these elements of our society, we will be encouraging for ourselves the fate of other nations that have slipped into intolerance, despotism and decay.

AMERICAN STRENGTH

The fact is that our system succeeds because it is based on fundamental human instincts. It is predicated on the basic human urges—to compete and to acquire—and as long as we permit the free, orderly exercise of those instincts nothing will ever surpass it.

There is only one significant competing system in the world today, and it cannot begin to match us. Our standard of living is incredibly higher. Our freedom of thought is infinitely greater. Our spiritual strength is unshackled. We reach to the moon ready to share our discoveries with the world, we are committed to serve and protect the less fortunate, and we live with a personal freedom of movement undreamed of by the rest of mankind.

The firebrands light their torches, and they try to make us believe our country and our system are sick. America has imperfections, yes—but the mainstream you enter today is robust, and this land through which it flows is healthy.

We know we are far from perfect. It is because we are beneficiaries of the best system ever devised that we are more aware of our internal imperfections than any other people at any other time. Imbedded in our national conscience there is a deep desire to right the wrongs—to correct the inequities—to make the whole system work better.

Let us address ourselves to those problems—but in the process let's not destroy the system from which our strength flows.

Again, I'll quote my second point: Don't sell the American system short. Before you let anyone attack it, ask him to show you something better.

COMPETITIVE ENTERPRISE

And now I am at the last item I want to discuss.

One of the keystones of our incredible success as a nation is our competitive free enterprise system. The backbone of that system is the American business community.

I suggest to you that here you may find your greatest surprise and your greatest satisfaction. Recently a Gallup Poll showed that only 6 percent of today's college students expected to go into business or management. Yet American Business today is on the threshold of a new age of growth and service, and in honesty it can reach out to the bright young men and women of our time and invite them to participate.

If the goal of our times is a better world, our system of industry and commerce will build it. If the goal we seeek is comfort and security for all people, in a condition of mutual friendship and respect, free competition, with its own rewards to the able, will set the pace for progress and prosperity.

The great comforts and facilities that surround us today are the products of American enterprise. More important, the highest aspiration of people throughout the world is to achieve the standard of living that we have from the superior productive capability of the competitive American system.

PRODUCTIVITY RECORDS

Putting aside all considerations of money, politics, and ideology—reducing our judgment to the simplest common denominator—we can see the evidence of what this system means:

To buy a comparable suit of clothes in Soviet Russia takes 183 hours of work. In France it takes 75 hours; in Great Britain 40 hours; and in the United States only 24 hours of work is needed for the same item.

Or if you prefer to judge by another standard, in the United States one worker on a farm now produces enough to feed 42 people. In France, one worker can feed only approximately 6. The figure is about 5 in Italy, and it is one farm worker for only one other person in China.

These are not boastful figures. They are simple illustrations that what we have works better than what anyone else has. They show that our way delivers more for mankind than that of any other country.

Putting a man on the moon depends on industrial technology; so does providing your clothing, the facilities of this college, the transportation you'll use to go home, the communications with friends, and every object that contributes to your comfort and convenience.

Here again there are imperfections. But these can be dealt with constructively. The Nation is armed with anti-trust laws and other legal safeguards against abuses in the competitive enterprise system.

Our need today is not nearly so great for new laws as it is for new people who will see in the world of business a full potential for citizenship and service.

American business today is eager to work with the young people of the Nation, and to develop constructive change and progress out of your idealism and intellectualism.

Let me assure you that freedom will be kept alive and meaningful as long as young people like you are willing to seize these opportunities that freedom offers, and to make our competitive system work.

So this is my third point of advice to you: Don't belittle our competitive society of industry and commerce. It has given us everything we have and it can give us everything we want.

PURSUIT OF FREEDOM

Some generations before us had to risk death to achieve freedom for America.

Two generations in my time have had to fight to preserve it—for us as a nation and for each of us as an individual.

Your generation, rich in the security of freedom won, has committed itself to the next goal, the perfection of individual liberty.

You demand universal justice. You plead for equality. You curse the darkness of intolerance and dishonesty. And you seek comfort and peace.

Men have sought these goals throughout history—but never with the advantage you have today. You are strong materially. You are secure in our system of law. You have a workable society.

You have set the highest challenges for yourself. Our society encourages you to seek your goals. But we also urge you not to do anything to kill the system which makes it possible. Do not be misled by the firebrands of your own generation who would destroy the future for you.

If there is one common denominator throughout the history of mankind, it is this: Extremists are always overwhelmed in time by the common sense of those who know there is no future in destruction.

The destroyers of today will not survive any more than the witch burners of colonial New England or the book burners of Hitler's Germany. The flag burners of the 1960's will be held in history's contempt with the cross-burners of the Ku Klux Klan.

If you will deny the extremists—if you will have faith in yourself and in America's institutions—if you will work to build yourself and improve those institutions—then in the days ahead you will get the greatest possible reward from the education you have now completed and from the great opportunities which await you.

Congratulations—and my very best wishes.

THE MEETING AT MIDWAY ISLAND

Mr. YOUNG of Ohio. Mr. President, I rise to express my own feelings—and I am sure I express the feelings of many millions of Americans—in stating that I am profoundly disappointed by the news that came from Midway Island yesterday.

Late in the fall of 1968—I believe it was in New Hampshire—Richard Nixon, who at that time was a candidate for the office of President of the United States, said:

I have a plan to end the fighting in Vietnam. I have a plan to end the war in Vietnam and to bring the boys home.

In recent months, particularly in recent weeks, we have been led to expect a momentous decision from the conference at Midway Island, where our President went to meet with President Thieu of the Saigon militarist regime. Now we have a report from that meeting, and it appears that the mountain labored and brought forth a mouse. We learn that 25,000 men of our Armed Forces in Vietnam will be brought home sometime this year, according to a report made by our President to the people of the United States.

The VICE PRESIDENT. The time of the Senator has expired.

Mr. YOUNG of Ohio. I ask unanimous consent that I may proceed for 5 additional minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. YOUNG of Ohio. From 1961 to January 20, 1969, the day President Nixon entered the White House—a period of 96 months—we suffered 30,991 Americans killed in action in Vietnam and 195,601 Americans wounded in combat—a total of 226,592 Americans killed or wounded in combat during a period of 96 months.

Now, what are the facts with respect to the 4-month period from January 20, 1969, to May 31, 1969? There have been 4,800 Americans killed in combat in Vietnam, and 33,782 Americans have been wounded in combat in Vietnam. In other words, during a period of 4 months, we have suffered the loss of 14.3 percent of the total killed and wounded from 1961 to this good hour.

It seems that during that 4-month period, 4 percent of that total period from 1961 to the present, 13 percent of our combat deaths occurred. We must bear in mind, Mr. President, that of our wounded in combat, as a rule, 3 percent die of wounds.

In other words, there has been no abatement of the fighting. In fact, in the last 4 months it has been accelerated, and the loss of the finest young men in America has greatly exceeded, percentagewise, what happened in the previous 8-year period.

These brave young Americans are fighting, not for glory, not for booty, not because their own land is directly threatened, not out of passion, but because this administration refuses to admit—as did the Johnson administration—our mistake in the attempt to make South Vietnam a pro-American and an anti-Chinese Communist buffer state in Southeast Asia. More than anything else, we are fighting to avoid admitting failure. As Walter Lippmann bluntly put it, "We are fighting to save face." These GI's continue to fight in this immoral undeclared war while most of their countrymen including most of their youthful peers live the best life they have ever lived.

We had high hopes that perhaps 100,000 or 200,000 men would be brought home from Vietnam this year. Instead, we learn that 25,000 men will be brought home, a mere token number of the 545,000 American servicemen fighting in South Vietnam.

Mr. President, it is well known that of the 545,000 men over there at the present time, approximately 400,000 are in support work and are not engaged in combat activities. It might be that most of the 25,000 men would come from those doing clerical work or attending the post exchanges; or it might be that they will be 25,000 men whose terms of duty in Vietnam would expire in the next 2 or 3 months in any event.

So, unfortunately, this is a complete letdown to the American people who believed Richard Nixon during the campaign, when he said he had a plan to end the fighting. The people believed him; they elected him President of the United States.

Our losses percentagewise have been greater in the last 4 months than in the previous long period. It is evident to all that we are still supporting a militarist regime in Saigon which is not truly representative of the people of South Vietnam but, in effect, probably represents at most 20 percent of the entire population of South Vietnam.

I say that yesterday when that announcement was made and today when it was published in the newspapers of our Nation, Americans had a feeling of sadness instead of enthusiasm over the outcome of that much ballyhooed conference in Midway. The net result was stated many, many years ago by the Roman poet, Horace, who wrote: "The mountain labors and a ridiculous mouse is born."

ORDER OF BUSINESS

The VICE PRESIDENT. Is there further morning business?

Mr. SCOTT. Mr. President, I ask unanimous consent that I may proceed for 5 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

REDUCTION OF U.S. FORCES IN VIETNAM

Mr. SCOTT. Mr. President, nobody, but nobody, in any responsible position has made any suggestion about removal immediately or in the immediate future of 200,000 troops or 100,000 troops. We in this Chamber are sometimes tempted to erect fragile strawmen and then nobly knock them down with sword, armor, and mail at full gallop.

Actually to withdraw 200,000 men from Vietnam now would leave the remainder to the mercy of the enemy and subject to immense and unacceptable slaughter. Let that blood be on somebody else's hands. I would not be one to advocate it.

On May 3, in a speech at Pittsburgh, Pa., I said:

Now I suggest a bold move to flush out the intentions of the other side.

I urge the withdrawal of a substantial number of American troops from Vietnam.

I hope that the White House will announce such a move in the near future.

I make this recommendation because I believe the situation is ripe for progress. The Nixon Administration seems to have reached a new understanding with the South Vietnamese Government whose representatives now present a less rigid stance. We have gained from the leaders in Saigon considerable assurances that they are ready to assume more of the burden of the fighting.

Now we need to prod the North Vietnamese out of the sea of propaganda and onto the high ground of real bargaining sessions.

If North Vietnam responds with comparable actions of its own, we could then consider additional withdrawals.

Mr. President, I think that was a responsible statement.

I note that the critics of the President can hardly wait to draw statistical comparisons, having abided, for the most part, with some patience and some degree of good will the passage of an 8-year period during most of which time this war continued without any end in sight or without any evidence of a cessation of its ferocity.

At the beginning of this year the Communists, of course, being desirous of reinstituting the talk-fight technique they used in Korea after the armistice—and which I suspect they will not be indefinitely allowed to get away with—sought to create as much damage as they could on the allied forces in South Vietnam for the purpose of securing the best settlement they could. That was expected and anticipated, and it is part of the Communist approach at a time when they are seeking the best terms they can get during peace talks.

The President's critics have tried to shoot two arrows from a single bow at the same time. They have rushed into the media to assert they had predicted and urged all along—for a year and a half I believe one of them said—the withdrawal of some American forces, and the international supervision of elections, which now appears to be more of an actuality than ever before. They have urged in the past, they say, numerous approaches which this administration is actually putting into effect. Then, they go on to say that, having urged the withdrawal, it really does not amount to much.

I submit that even distinguished orators should not be allowed to have it both ways. If they predicted the beginning of the withdrawal of forces, they should be delighted it is beginning; and if it does not amount to much, why did they predict, urge, and advocate it in the first place?

For 27 years I have been in one or the other of these bodies and I have heard some specious reasoning here and elsewhere, but this takes the cake.

Mr. President, I submit that at a delicate time in our negotiations it serves no cause of our own for any of us to be making any more difficult the path of the President and the Commander in Chief of the United States in his effort to follow after the Biblical injunction that is, to follow after the ways that lead to peace. This is not to say that I derogate from any person's right to criticize or dissent. On the contrary, I welcome it; but I ask that it be done in a spirit which cannot be quoted in other capitals of the world

to indicate that we are a divided Nation, or to indicate that this Nation is not geared up to its fullest moral commitment to bring about the earliest possible termination of a dreadful war.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of an address which I delivered in Pittsburgh on May 3, 1969.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR SCOTT URGES SUBSTANTIAL REDUCTION OF U.S. FORCES IN VIETNAM

PITTSBURGH.—U.S. Senator Hugh Scott (R.-Pa.) last night urged "the withdrawal of a substantial number of American troops from Vietnam."

Senator Scott, Assistant Republican Leader of the Senate, said he hoped the White House would announce the move in the near future.

In a speech before the University of Pittsburgh Alumni Association at the South Hills Sheraton Motor Inn, Senator Scott said:

"The war in Vietnam has achieved all kinds of tragic superlatives. However good our motivations, however just our reaction to evil aggression, the hard facts are that this is the longest war in American history and one of the most expensive.

"We have suffered more than 34,000 dead and more than 216,000 wounded in the past eight years. Those casualties surpass our Korean War losses.

"President Nixon's number one priority is to end the war in Vietnam. He wants to end the killing to save lives. But he also wants to give us an opportunity to redirect this Nation's mighty resources toward the many domestic problems that are crying for solution.

"But a war which has been escalating for nearly a decade cannot be ended overnight. Nor can American forces be left at the mercy of an enemy without adequate protection for U.S. forces remaining committed.

"Two actions on the part of the United States have brought responses by the enemy. I am going to suggest a third.

"On March 31, 1968, President Johnson announced a partial halt in the bombing of North Vietnam. Within days the North Vietnamese agreed to send representatives to talk peace with the United States and shortly thereafter both countries agreed to meet in Paris.

"On October, 31, 1968, President Johnson announced that the bombing halt would apply to all of North Vietnam north of the Demilitarized Zone. Three months later—after some wrangling about the shape of the negotiating tables, and after the election of President Nixon—the talks were expanded to include the South Vietnamese and the Viet Cong.

"Now I suggest a bold move to flush out the intentions of the other side.

"I urge the withdrawal of a substantial number of American troops from Vietnam.

"I hope that the White House will announce such a move in the near future.

"I make this recommendation because I believe the situation is ripe for progress. The Nixon Administration seems to have reached a new understanding with the South Vietnamese Government whose representatives now present a less rigid stance. We have gained from the leaders in Saigon considerable assurances that they are ready to assume more of the burden of the fighting.

"Now we need to prod the North Vietnamese out of the sea of propaganda and onto the high ground of real bargaining sessions.

"If North Vietnam responds with comparable actions of its own, we could then consider additional withdrawals.

"Hanoi has already anticipated the possibility of a measured withdrawal of American troops and has tried to degrade our motives by saying ahead of time that we would only pull out support troops and 'ice cream vendors.'

"This indicates how little the North Vietnamese understand American character. If they knew us better, they would realize that support troops may be the last to go.

"The last American leaving Vietnam may very well be driving a beer truck. But who cares what the order of withdrawal should be, as long as it is in good faith?

"Diplomatic maneuvering is part of the necessary preliminaries, but at some point there has to be the test of action which points the way to further progress, or spells rebuff. A measured withdrawal would provide that kind of test."

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President, I ask unanimous consent that I may proceed for 1 minute.

The VICE PRESIDENT. Without objection, it is so ordered. The Senator from Illinois is recognized.

MIDWAY RESULTS

Mr. DIRKSEN. Mr. President, President Nixon has been in office less than 5 months. He has patiently pursued his own convictions on Vietnam. He returns from the Midway Island conference with the first tangible, specific immediate step to de-Americanize that struggle.

It was carefully done. His proposal has the approval of General Abrams as safe. It has the concurrence of President Thieu.

What President Nixon brings back is the first solid hope for the American people since this conflict began 6 years ago.

He deserves the thanks of all people and especially the young men who are called upon to fight this war.

DEATH OF FORMER SENATOR GUY CORDON OF OREGON

Mr. HATFIELD. Mr. President, it grieves me today to bring to this Chamber word of the death of one of our former and most distinguished colleagues, Senator Guy Cordon, of Oregon. Senator Cordon died Sunday, June 8, at Doctors Hospital, of a brain tumor, after a relatively short illness.

Guy Cordon was a tireless and hard worker for the best interests of Oregon and the best interests of the Nation.

He enjoyed the trust and the respect of his peers in the Senate and was regarded by many of his colleagues as a man whose counsel was of special value. He was a kindly man who generally shunned publicity but made his opinions and his judgments felt. He enjoyed the respect of his peers, and he also enjoyed their friendship.

Senator Guy Cordon came to this Chamber in 1944 when he was appointed to fill the unexpired term of Senator Charles McNary, who had died in office. In 1948, Senator Cordon was elected in his own right and served a full 6-year term until the end of 1954. He was a champion of many good and worthy causes but the one Oregon project which shall forever be associated with his name is the Oregon and California revested railroad lands. Senator Cordon was, in fact, the legal counsel for the Oregon and California lands for many years and spent many months in Washington representing these counties before his appointment to the Senate. Senator Cordon struggled to make sure that the Oregon and California lands formula would continue unimpaired. Funds from the sale of timber on these lands have supported public schools and other county services such as roads and parks in the 18 Oregon and California counties.

Senator Cordon sponsored and secured legislation to provide for the exchange of alternate blocks of land by the Oregon and California counties with the Interior Department and the Forest Service to make sure that the Oregon and California lands would be secure and would produce timber on a sustained yield basis. Senator Cordon also continued as legal counsel for the Oregon and California counties from 1955 until 1960.

Senator Cordon served as chairman of the Interior and Insular Affairs Committee and also as chairman of the Interior Subcommittee of the Appropriations Committee. These two posts gave him an opportunity to serve Oregon's interests especially well. He helped to formulate many Pacific Northwest public works projects which now serve the people of Oregon, Washington, Idaho, and Montana.

Senator Cordon had a fine career in Oregon behind him when he came to the Senate; he was a distinguished lawyer; he was an excellent prosecutor as district attorney of Douglas County; he was, all in all, a very highly regarded man who also possessed a fine sense of humor. He was my friend.

We shall miss Senator Cordon.

I convey prayers and most heartfelt condolences to all of the members of his family.

Mr. JORDAN of Idaho. Mr. President, I share with Senators a sense of personal loss and sorrow at the passing of former Senator Guy Cordon, of Oregon. As a man who devoted much of his lifetime to public service, Senator Cordon rightfully earned the respect and admiration of those whom he so conscientiously represented. He has left a record of which his family and his many friends can be justifiably proud.

Mrs. Jordan and I are saddened by Senator Cordon's passing and extend to his wife and son our deepest sympathy.

Guy Cordon was a faithful public servant during most of his long and successful career. After attending the public schools of his home town of Roseburg, Oreg., he went to work in the Douglas County assessor's office, advancing to the office of county assessor. He was admitted to the bar in 1920, after service in the field artillery during World War I. Three years later he was elected district attorney of Douglas County.

Appointed to fill the vacancy created by the death of Charles L. McNary, another Oregon stalwart in the Senate, Guy Cordon was appointed and later elected to represent his State in the Senate, serving from 1944 to January 3,

1955. During this time, he was a prominent member and chairman of the Committee on Interior and Insular Affairs. Here he stamped himself as a highly effective committee member and chairman, and as one who championed sound national policies of resource conservation and utilization.

Even after he left the Senate and engaged in the practice of law in Washington, D.C., Guy Cordon kept himself informed on resource problems in Oregon and the Pacific Northwest, and devoted much personal time to furthering programs of regional and national interest.

In addition to his stature as a public servant and legislator, Guy Cordon was a warm, personable man, who made friends easily and maintained friendships over the years. Some of my fond memories are of fishing trips and an occasional game of golf. He was a great leader, a fine sportsman, and a friend one could always depend on.

Guy Cordon's death is a loss to the State of Oregon, to the Senate, and to the Nation. We will miss this high-principled, well-informed, warmhearted Westerner.

WITHDRAWAL OF U.S. TROOPS FROM VIETNAM

Mr. COOPER. Mr. President, the action of the President of the United States in announcing the withdrawal of 25,000 troops from South Vietnam is a step forward and a hopeful sign. Its consequences may be very important.

I say this for several reasons. First, it is proof of the President's statement he made on May 14, that the United States is prepared to enter into a mutual withdrawal of troops. In fact, the United States will now withdraw troops before a North Vietnamese withdrawal.

Second, I believe the withdrawal of U.S. troops should serve to impress upon the Government of South Vietnam that the policy announced by the President on May 14 must be recognized by that Government—that it must increasingly bear a greater part of the burden, and the Government of South Vietnam must agree on the means for a truly free election as was proposed by the President.

There is another reason which I hope will gain acceptance if negotiations at Paris are unsuccessful. Senators will remember, that in March 1965, I urged against the commencement of the bombing of North Vietnam and then year after year urged cessation of the bombing of North Vietnam to determine if there was a possibility of entering into negotiations with North Vietnam. No one knew, of course, whether negotiations would be successful. So far, they have not been fruitful, at least that we can perceive.

I hope that the current negotiations will succeed, but in the event that they do not, perhaps this first step of withdrawing troops will be the precursor of a policy that we can undertake. It is, that, as we arm the forces of South Vietnam more effectively, we can continue a step-by-step withdrawal of all our troops, and let South Vietnam, which we have helped for almost 20 years carry on its own fight for its own country. We have done enough.

THE LUSAKA MANIFESTO AND THE PROPOSED NEW CONSTITUTION OF RHODESIA—"WHO SPEAKS FOR WESTERN MAN IN AFRICA?"

Mr. KENNEDY. Mr. President, by a curious coincidence of history, within the brief period of a few weeks in April and May of this year, two events of major significance occurred that are likely to have a strong influence on the future course of the racial crisis in southern Africa. One of these events looks toward a new day of peace and racial harmony on the continent, in which the majority and minority races in all African nations will be able to live in concord, equality, and dignity with one another. The other event looks backward to a cruel era of slavery and oppression, and carries one of Africa's most highly developed nations further into the night of racial strife that threatens to engulf it.

The event that is bright with hope occurred in April in Lusaka, Zambia, where representatives of a number of forward-looking nations met in conference. The product of that conference is a remarkable document entitled "Manifesto on Southern Africa," signed by 13 nations of East and Central Africa—Burundi, the Central African Republic, Chad, the Republic of the Congo, the Democratic Republic of the Congo, Ethiopia, Kenya, Rwanda, Somalia, Sudan, Tanzania, Uganda, and the host nation Zambia.

In their manifesto, the 13 nations have joined together in a passionately reasoned condemnation of all aspects of racism and racial segregation. They call on all African nations to govern themselves in accord with the basic principles of human dignity, equality, and national self-determination, regardless of race or other discriminatory classifications.

In clear terms, the manifesto denounces the colonialist and racist doctrines now being promulgated by governments in six separate territories of southern Africa—Mozambique, Angola, Portuguese Guinea, Rhodesia, Southwest Africa, and the Republic of South Africa. The policies of segregation and apartheid, relentlessly applied in these territories, are the antithesis of the fundamental principles of humanity. They stand universally condemned not only by the African nations who signed the manifesto, but by the United Nations and the overwhelming majority of all free nations throughout the world.

Perhaps the greatest importance of the Lusaka document is its tone as a manifesto for peaceful revolution, not violent revolution in southern Africa. Today in Africa, the ancient repressions and denials of majority rule have begun to spawn increased levels of terrorism and guerrilla violence, not only in the Portuguese colonies but in Rhodesia as well. Not even the fortress which is South Africa feels secure, and wise men fear a spark that may ignite the continent. At times such as these, a document like the Lusaka manifesto is especially significant because its emphasis throughout is on peaceful and nonviolent change as the method to improve the plight of the oppressed black majorities. It gives us hope that reason and compassion may yet prevail over the violence that now sweeps so much of the world.

In contrast to the eloquent Lusaka manifesto, there stands the new Constitution proposed in May by the Government of Rhodesia. As published, the new constitution is designed to entrench the doctrine of apartheid in Rhodesia and thereby to guarantee white domination of the country for all time. Later this month, the new Constitution will be submitted to a national referendum, in which the electorate will be overwhelmingly white. Most experts agree that the constitution is almost certain to be approved in the referendum, although there are some who hold out the bare possibility that it may yet be rejected by liberal Rhodesians.

Under the existing Constitution of Rhodesia, a number of seats in the legislature are reserved for persons of European descent and a separate number for those of African descent. In addition, there is a "common voter roll," for which members of both races become eligible when they attain certain economic and educational levels. As a result, the existing constitution holds out at least the bare prospect of initial African rule in Rhodesia.

Under the proposed new Constitution, the common voter roll would be eliminated, and a voter would be permitted to cast ballots only for members of his own race. The nation's Parliament would consist of a 23-member Senate and a 66-member House of Assembly. In the Senate, 10 seats would be allotted to whites, 10 to African chiefs, and 3 to members of any race appointed by the head of state. In the House of Assembly, 16 seats would be allotted initially to blacks and 50 to whites—in spite of the fact that the composition of the Rhodesian population as a whole is 4,300,000 blacks and 230,000 whites, or approximately 20 blacks for each white.

Eventually, in accord with special provisions of the Constitution, blacks could conceivably achieve parity of representation in the House with whites—but not majority rule. Under these provisions, black representation will be increased in proportion to the amount of income taxes paid by blacks. Thus, blacks will be entitled to 50 seats in the House when their tax payments equal half the national total. At the present time, however, payments by Africans represent less than 1 percent of the national total, and the promise of parity is little more than ephemeral.

In addition, in other sets of provisions, the new Constitution and related proposals would divide almost all of the 100 million acres of land in Rhodesia about equally into separate areas for blacks and whites. Other proposals would prohibit the holding of seats in the legislature by many of the African nationalist leaders in Rhodesia, would authorize

preventive detention in the interest of public order, and would impose sweeping new controls on newspapers and other publications.

If the new Rhodesian Constitution is approved in the coming referendum, there will be little possibility of a negotiated settlement between Rhodesia and Great Britain with respect to the basic issues raised by Rhodesia's unilateral declaration of independence in November 1965. The ruling regime in Rhodesia will no longer have any pretense whatever for the claim that it intends to move toward eventual majority rule, which is the fundamental condition laid down by Britain for settlement. Instead, under its new Constitution, Rhodesia will have moved inexorably into the South Africa mold of an apartheid republic, a nation bitterly divided between whites and blacks, controlled by a dominant white minority, and ruled by the racist principles of apartheid.

The striking juxtaposition between the proposed constitution of Rhodesia and the Lusaka Manifesto on Southern Africa raises a profound question as to who speaks for Western man in Africa today. The Lusaka Manifesto, issued by African nations governed by African majorities, is a convincing plea for the basic principles of human dignity and equality, principles long associated with the liberal tradition of the West and the noblest aspirations of man. By some cruel irony, it is South Africa and Rhodesia who today reject these honored principles of humanity, even though these two white-dominated nations are far and away the most advanced states of modern Africa, and consider themselves as the only truly civilized nations of Africa, the outposts of Western civilization on an alien continent.

Mr. President, for too long we as Americans have failed to recognize the crucial issues at stake in African development. It is entirely appropriate that we should state our position and demonstrate our sympathies on these basic issues of freedom and human dignity. The universal principles enunciated in the Lusaka Manifesto are precisely those that Americans have long accepted as the guiding principles for the evolution of our own society. However imperfect our application of these principles in practice, we remain committed to them as the fixed star of our constitutional development.

I believe, therefore, that the United States should make clear to the nations that signed the Lusaka Manifesto that we support their position and that we oppose racial discrimination in South Africa and Rhodesia and the rest of Southern Africa, just as we oppose it in the United States and wherever else it is found. We must stand firmly behind these principles and take positive action wherever it is appropriate.

Although our power may be limited, it is not negligible. To mention but two examples of immediate relevance to the recent developments I have discussed:

We should urge Great Britain, as the authority still legally responsible for the affairs of Rhodesia, to do whatever lies within its power to assure the well-being of all the people of that land.

We should renew our pledge of wholehearted support to the United Nations sanction program against Rhodesia, thereby halting the pressures now building up on the United States to agree to loopholes in the sanctions for the benefit of particular interest groups.

To be sure, as David Smock has perceptively stated in his recent article in the journal Foreign Affairs, the likelihood that we or others can affect the racist course of Rhodesia is very small. Perhaps the most unfortunate fact of the current situation is that the nations most directly involved—Britain, South Africa, Portugal, and Zambia—are either not sufficiently concerned with the plight of the black Rhodesians, or are not powerful enough to force a favorable solution.

Nevertheless, through modest steps such as those I have suggested, the United States can help to fill the existing vacuum by providing strong moral leadership for other nations, and can begin to bring significant economic pressure to bear on this repressive regime. At the very least, we can offer fresh encouragement for the aspirations of the oppressed majorities of Southern Africa and other parts of the world.

Mr. President, I believe that the Lusaka manifesto and the proposed new Rhodesian Constitution will be of interest to all of us in Congress, and I therefore ask unanimous consent that these documents be printed in the RECORD. In addition, I also ask unanimous consent that the inaugural address delivered by President Kenneth Kaunda of Zambia at the Conference of East and Central African States in Lusaka be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MANIFESTO ON SOUTHERN AFRICA

1. When the purpose and the basis of States' international policies are misunderstood, there is introduced into the world a new and unnecessary disharmony, disagreements, conflicts of interest, or different assessments of human priorities, which provoke an excess of tension in the world, and disastrously divide mankind, at a time when united action is necessary to control modern technology and put it to the service of man. It is for this reason that, discovering widespread misapprehension of our attitudes and purposes in relation to Southern Africa, we the leaders of East and Central African States meeting in Lusaka, 16th April, 1969, have agreed to issue this Manifesto.

2. By this Manifesto we wish to make clear, beyond all shadow of doubt, our acceptance of the belief that all men are equal, and have equal rights to human dignity and respect, regardless of colour, race, religion, or sex. We believe that all men have the right and the duty to participate, as equal members of society, in their own government. We do not accept that any individual or group has any right to govern any group of sane adults, without their consent, and we affirm that only the people of a society, acting together as equals, can determine what is, for them, a good society and a good social, economic, or political organisation.

3. On the basis of these beliefs we do not accept that any one group within a society has the right to rule any society without the continuing consent of all the citizens. We recognise that at any one time there will be, within every society, failures in the implementation of these ideals. We recognise that for the sake of order in human affairs, there may be transitional arrangements while a transformation from group inequalities to individual equality is being effected. But we affirm that without an acceptance of these ideals—without a commitment to these principles of human equality and self-determination—there can be no basis for peace and justice in the world.

4. None of us would claim that within our own States we have achieved that perfect social, economic and political organization which would ensure a reasonable standard of living for all our people and establish individual security against avoidable hardship or miscarriage of justice. On the contrary, we acknowledge that within our own States the struggle towards human brotherhood and unchallenged human dignity is only beginning. It is on the basis of our commitment to human equality and human dignity not on the basis of achieved perfection, that we take our stand of hostility towards the colonialism and racial discrimination which is being practised in Southern Africa. It is on the basis of their commitment to these universal principles that we appeal to other members of the human race for support.

5. If the commitment to these principles existed among the States holding power in Southern Africa, any disagreements we might have about the rate of implementation, or about isolated acts of policy, would be matters affecting only our individual relationships with the States concerned. If these commitments existed, our States would not be justified in the expressed and active hostility towards the regimes of Southern Africa such as we have proclaimed and continue to propagate.

6. The truth is, however, that in Mozambique, Angola, Rhodesia, South-West Africa, and the Union of South Africa, there is an open and continued denial of the principles of human equality and national self-determination. This is not a matter of failure in the implementation of accepted human principles. The effective Administration in all these territories are not struggling toward these difficult goals. They are fighting the principles; they are deliberately organising their societies so as to try to destroy the hold of these principles in the minds of men. It is for this reason that we believe the rest of the world must be interested. For the principle of human equality, and all that flows from it, is either universal or it does not exist. The dignity of all men is destroyed when the manhood of any human being is denied.

7. Our objectives in Southern Africa stem from our commitment to this principle of human equality. We are not hostile to the Administrations in these States because they are manned and controlled by white people. We are hostile to them because they are systems of minority control which exist as a result of, and in the pursuance of, doctrines of human inequality. What we are working for is the right of self-determination for the people of those territories. We are working for a rule in those countries which is based on the will of all the people, and an acceptance of the equality of every citizen.

8. Our stand towards Southern Africa thus involves a rejection of racialism, not a reversal of the existing racial domination. We believe that all the peoples who have made their homes in the countries of Southern Africa are Africans, regardless of colour of their skins; and we would oppose a racialist majority government which adopted a philosophy of deliberate and permanent discrimination between its citizens on grounds

of racial origin. We are not talking racialism when we reject the colonialism and apartheid policies now operating in those areas; we are demanding an opportunity for all the people of these States, working together as equal individual citizens, to work out for themselves the institutions and the system of government under which they will, by general consent, live together and work together to build a harmonious society.

9. As an aftermath of the present policies it is likely that different groups within these societies will be self-conscious and fearful. The initial political and economic organisations may well take account of these fears, and this group self-consciousness. But how this is to be done must be a matter exclusively for the peoples of the country concerned, working together. No other nation will have a right to interfere in such affairs. All that the rest of the world has a right to demand is just what we are now asserting—that the arrangements within any State which wishes to be accepted into the community of nations must be based on an acceptance of the principles of human dignity and equality.

10. To talk of the liberation of Africa is thus to say two things. First, that the peoples in the territories still under colonial rule shall be free to determine for themselves their own institutions of self-government. Secondly, that the individuals in Southern Africa shall be freed from an environment poisoned by the propaganda of racialism, and given an opportunity to be men—not white men, brown men, yellow men, or black men.

11. Thus the liberation of Africa for which we are struggling does not mean a reverse racialism. Nor is it an aspect of African Imperialism. As far as we are concerned the present boundaries of the States of Southern Africa are the boundaries of what will be free and independent African States. There is no question of our seeking or accepting any alterations to our own boundaries at the expense of these future free African nations.

12. On the objective of liberation as thus defined, we can neither surrender nor compromise. We have always preferred, and we still prefer, to achieve it without physical violence. We would prefer to negotiate rather than destroy, to talk rather than kill. We do not advocate violence; we advocate an end to the violence against human dignity which is now being perpetrated by the oppressors of Africa. If peaceful progress to emancipation were possible, or if changed circumstances were to make it possible in the future, we would urge our brothers in the resistance movements to use peaceful methods of struggle even at the cost of some compromise on the timing of change. But while peaceful progress is blocked by actions of those at present in power in the States of Southern Africa, we have no choice but to give to the peoples of those territories all the support of which we are capable in their struggle against their oppressors. This is why the signatory states participate in the movement for the liberation of Africa under the aegis of the Organization of African Unity. However, the obstacle to change is not the same in all the countries of Southern Africa, and it follows therefore, that the possibility of continuing the struggle through peaceful means varies from one country to another.

13. In *Mozambique* and *Angola*, and in the so-called *Portuguese Guinea*, the basic problem is not racialism but a pretence that Portugal exist in Africa. Portugal is situated in Europe, the fact that it is a dictatorship is a matter for the Portuguese to settle. But no decree of the Portuguese dictator, nor legislation passed by any Parliament in Portugal, can make Africa part of Europe. The only thing which could convert a part of Africa into a constituent unit in a union which also includes a European State would be the freely expressed will of the people of that part of Africa. There is no such popular will in the Portuguese colonies. On the contrary, in the absence of any opportunity to negotiate a road to freedom, the peoples of all three territories have taken up arms against the colonial power. They have done this despite the heavy odds against them, and despite the great suffering they know to be involved.

14. Portugal, as a European State, has naturally its own allies in the context of the ideological conflict between West and East. However, in our context, the effect of this is that Portugal is enabled to use her resources to pursue the most heinous war and degradation of man in Africa. The present Manifesto must, therefore, lay bare the fact that the inhuman commitment of Portugal in Africa and her ruthless subjugation of the people of Mozambique, Angola and the so-called Portuguese Guinea, is not only irrelevant to the ideological conflict of power-politics, but it is also diametrically opposed to the policies, the philosophies and the doctrines practised by her Allies in the conduct of their own affairs at home. The peoples of Mozambique, Angola and Portuguese Guinea are not interested in Communism or Capitalism; they are interested in their freedom. They are demanding an acceptance of the principles of independence on the basis of majority rule, and for many years they called for discussions on this issue. Only when their demand for talks was continually ignored did they begin to fight. Even now, if Portugal should change her policy and accept the principle of self-determination, we would urge the Liberation Movements to desist from their armed struggle and to co-operate in the mechanics of a peaceful transfer of power from Portugal to the peoples of the African territories.

15. The fact that many Portuguese citizens have immigrated to these African countries does not affect this issue. Future immigration policy will be a matter for the independent Governments when these are established. In the meantime, we would urge the Liberation Movements to reiterate their statements that all those Portuguese people who have made their homes in Mozambique, Angola or Portuguese Guinea, and who are willing to give their future loyalty to those states, will be accepted as citizens. And an independent Mozambique, Angola or Portuguese Guinea may choose to be as friendly with Portugal as Brazil is. That would be the free choice of a free people.

16. *In Rhodesia* the situation is different insofar as the metropolitan power has acknowledged the colonial status of the territory. Unfortunately, however, it has failed to take adequate measures to reassert its authority against the minority which has seized power with the declared intention of maintaining white domination. The matter cannot rest there. Rhodesia, like the rest of Africa, must be free, and its independence must be on the basis of majority rule. If the colonial power is unwilling or unable to effect such a transfer of power to the people, then the people themselves will have no alternative but to capture it as and when they can. And Africa has no alternative but to support them. The question which remains in Rhodesia is therefore whether Britain will re-assert her authority in Rhodesia and then negotiate the peaceful progress to majority rule before independence. Insofar as Britain is willing to make this second commitment, Africa will co-operate in her attempts to re-assert her authority. This is the method of progress which we would prefer; it could involve less suffering for all the peoples of Rhodesia; both black and white. But until there is some firm evidence that Britain accepts the principles of independence on the basis of majority rule, and is prepared to take whatever steps are necessary to make it a reality, then Africa has no choice but to support the struggle for the people's freedom by whatever means are open to her.

17. Just as a settlement of the Rhodesian problem with a minimum of violence is a British responsibility, so a settlement in *South West Africa* with a minimum of violence is a United Nations responsibility. By every canon of international law, and by every precedent, South West Africa should by now have been a sovereign, independent State with a Government based on majority rule. South West Africa was a German colony until 1919, just as Tanganyika, Rwanda and Burundi, Togoland and Cameroon were German colonies. It was a matter of European politics that when the Mandatory System was established after Germany had been defeated, the administration of South West Africa was given to the white minority government of South Africa, while the other ex-German colonies in Africa were put into the hands of the British, Belgian, or French Governments. After the Second World War every mandated territory except South West Africa was converted into a Trusteeship Territory and has subsequently gained independence. South Africa, on the other hand has persistently refused to honour even the international obligation it accepted in 1919, and has increasingly applied to South West Africa the inhuman doctrines and organisation of apartheid.

18. The United Nations General Assembly has ruled against this action and in 1966 terminated the Mandate under which South Africa had a legal basis for its occupation and domination of South West Africa. The General Assembly declared that the territory is now the direct responsibility of the United Nations and set up an ad hoc Committee to recommend practical means by which South West Africa would be administered, and the people enabled to exercise self-determination and to achieve independence.

19. Nothing could be clearer than this decision—which no permanent member of the Security Council voted against. Yet, since that time no effective measures have been taken to enforce it. South West Africa remains in the clutches of the most ruthless minority Government in Africa. Its people continue to be oppressed and those who advocate even peaceful progress to independence continue to be persecuted. The world has an obligation to use its strength to enforce the decision which all the countries co-operated in making. If they do this there is hope that the change can be effected without great violence. If they fail, then sooner or later the people of South West Africa will take the law into their own hands. The people have been patient beyond belief, but one day their patience will be exhausted. Africa, at least, will then be unable to deny their call for help.

20. *The Union of South Africa* is itself an independent sovereign State and a Member of the United Nations. It is more highly developed and richer than any other nation in Africa. On every legal basis its internal affairs are a matter exclusively for the people of South Africa. Yet the purpose of law is people and we assert that the actions of the South African Government are such that the rest of the world has a responsibility to take some action in defence of humanity.

21. There is one thing about South African oppression which distinguishes it from other oppressive regimes. The apartheid policy adopted by its Government, and supported to a greater or lesser extent by

almost all its white citizens, is based on a rejection of man's humanity. A position of privilege or the experience of oppression in South African society depends on the one thing which it is beyond the power of man to change. It depends upon a man's colour, his parentage, and his ancestors. If you are black you cannot escape this categorisation; nor can you escape it if you are white. If you are a black millionaire and a brilliant political scientist, you are still subject to the pass laws and still excluded from political activity. If you are white, even protests against the system and an attempt to reject segregation will lead you only to the segregated and the comparative comfort of a white jail. Beliefs, abilities and behaviour are all irrelevant to a man's status; everything depends upon race. Manhood is irrelevant. The whole system of government and society in South Africa is based on the denial of human equality. And the system is maintained by a ruthless denial of the human rights of the majority of the population—and thus, inevitably of all.

22. These things are known and are regularly condemned in the Councils of the United Nations and elsewhere. But it appears that to many countries international law takes precedence over humanity; therefore no action follows the words. Yet even if international law is held to exclude active assistance to the South African opponents of apartheid, it does not demand that the comfort and support of human and commercial intercourse should be given to a government which rejects the manhood of most of humanity. South Africa should be excluded from the United Nations Agencies, and even from the United Nations itself. It should be ostracised by the world community until it accepts the implications of man's common humanity. It should be isolated from world trade patterns and left to be self-sufficient if it can. The South African Government cannot be allowed both to reject the very concept of mankind's unity, and to benefit by the strength given through friendly international relations. And certainly Africa cannot acquiesce in the maintenance of the present policies against people of African descent.

23. The signatories of this Manifesto assert that the validity of the principles of human equality and dignity extend to the Union of South Africa just as they extend to the colonial territories of Southern Africa. Before a basis for peaceful development can be established in this continent, these principles must be acknowledged by every nation, and in every State there must be a deliberate attempt to implement them.

24. We re-affirm our commitment to these principles of human equality and human dignity, and to the doctrines of self-determination and non-racialism. We shall work for their extension within our own nations and throughout the continent of Africa.

INAUGURAL ADDRESS BY HIS EXCELLENCY THE PRESIDENT, DR. KENNETH KAUNDA

Your Imperial Majesty, Your Excellencies, Let me first of all express my great pleasure and that of the Government and the people of Zambia at having such a distinguished gathering of African leaders and Statesmen in our Republic. It is for us a historic event. We feel deeply honoured to have you with us. We very happily and sincerely welcome you all and wish you a very happy and enjoyable stay in our country.

I must hasten to add that Zambia is probably the least endowed among Eastern and Central African countries with facilities for relaxation after a hard day's work; however, I can still ask you to feel free and very much at home.

We last met in Dar es Salaam eleven months ago. These months have been very eventful.

On the debit side the tragic war between Nigeria and Biafra continues with unabated fury, unequalled in severity to anything this Continent has ever known ever since slave trade. Wars of liberation in Southern Africa continue with no sign of hope that forces of freedom will break through the high dykes of racialism and minority rule.

Still on the debit side the Middle East crisis which envelopes part of Africa still remains unresolved. It is a threat to the peace of Africa, first, because it affects part of this Continent, secondly, because it is a matter of international peace and security for which we in Africa share concern and responsibility through the United Nations and, in general, as members of the international community.

There are many problems which have plagued the world in its various regions such as the war of attrition in Vietnam for which Africa feels genuine and deep concern. I do not need to stress that here.

Finally, Mother Africa has gone through another period of painful growth full of stresses and strains in her various constituent parts.

However, on the credit side of this balance sheet we find that the story is one of progress:

—progress towards greater understanding and co-operation among neighbours—a phenomenon which we gathered here represent,

—progress towards unity for which African States have continued to work untiringly.

—progress towards building a strong economic and social base, a sound infrastructure for the attainment of African Unity, a unity of interests, a feeling of community and a common destiny.

The meetings in Nairobi, Kinshasa, Kampala, Dar es Salaam and now Lusaka form one unfolding success story. Consequently, our presence in Lusaka during these few days creates the hope that our efforts to seek unity, peace, security and development for and in Africa will continue. For the creation of greater understanding and co-operation among Eastern and Central African neighbours guarantees the successful growth of common interests and a spirit of unity among these neighbours.

The Sudan and Uganda, Kenya and Somalia, Ethiopia and Somalia, Sudan and Ethiopia, Uganda and Congo (Kinshasa), Rwanda and Burundi, among others all represent real progress in their various efforts and successes to create a better framework for understanding and co-operation in the solution of their outstanding problems on the road to unity.

I think we have made impressive efforts to inspire confidence in the future of this region and Africa as a whole. The contribution of His Imperial Majesty to the peace, security and unity of Africa requires special mention and we pay tribute to him.

We cannot pretend that there are no problems. Problems there are and they will continue to be with us but I regard these as pitfalls within a wider story of success. They are pitfalls in a continuing drama of progress which is a familiar phenomenon in any life which is growing. We are a life which is growing and we shall have our brightest days and darkest hours.

The most important thing now is that for three years the East and Central African region has engaged in genuine and concentrated efforts to create better conditions and better framework for understanding, co-operation and co-ordination for unity and progress among the Eastern and Central African countries represented here as well as in the whole Continent. There can be no better road at the moment than that which has good neighbourliness and co-operation as a starting point and foundation.

To this extent the progress we have made is plausible. Communications between member States of this region are improving. Telephone and telegraph communications are either under way, or nearing completion if not completed. International air line communications are better than they ever were; road and rail connections are being forged; shipping lines ply the coastal areas of member States with access to the sea.

With all this multi-dimensional development the 1970s should see the establishment of a network of new arteries of communications and the improvement of the present ones which together must nourish the growth of greater co-operation and co-ordination in development. This is a challenge for us all. This is the one ambition which we all share and must devote our energies to give effect to our determination.

Now, we have before us the recommendations made by our Foreign Ministers at their meeting in Dar es Salaam in February last. They cover political and economic fields. They are aimed at furthering the aims and objectives of all of us here. I am sure the Conference would wish me to pay our tribute to the Foreign Ministers for their efforts.

In the past meetings we have developed the procedure of having no formal agenda, no restrictions in our discussions. Informality and frankness have marked our deliberations. This approach has paid off very well and I would not wish to depart from it.

However, in the light of the wide field covered by discussions and recommendations made in Lusaka by Foreign Ministers in 1967 and by the Kampala and Dar es Salaam Summits in December 1967 and May 1968 respectively and the recommendations before us at this fifth Summit I think that sufficient ground has been opened for this Conference to consider.

I would only add by way of emphasis that the real problem is one of effective implementation of the recommendations so far considered where feasibility studies have been completed with satisfaction. I cannot avoid feeling a sense of urgency in the implementation of the proposals affecting economic development and social improvement in our area as this is a vital factor for the progress which we so desire in East and Central Africa.

I wish to make a brief reference to the UNCTAD Conference held in 1968 in India. The results of the Conference do not hold as much hope as we, the developing countries, had expected. We are not belittling the efforts which were made but we are underlining one key factor, i.e. the importance of self-reliance within our own individual States as well as in the region as a whole. Indeed, the purpose of this Conference would be well served if we are able to implement the various recommendations on telecommunications, on transportation, trade, economic planning and so forth. This would in a way meet one of the points already made by the Pearson Commission on International Development Aid, namely, that while finances may be made available to us we must remember that we are the primary force behind our own development and we must be responsible for giving effective direction to this development. We are aware of this responsibility and hence our emphasis on economic and technical cooperation among ourselves.

In this connection we welcome the organisation among West African countries in their effort to stimulate economic and technical co-operation to harmonise development in their own region.

The Conference will, no doubt, consider political problems in Africa. Most urgent among them is the fratricidal war which has plagued Nigeria and Biafra for the last two years. We all deeply regret this tragedy as a set-back to Africa's development.

At this time I know the Conference would wish me to express the hope that the O.A.U. Consultative Committee due to meet in Monrovia later this week will bring an end to

this war and restore peace and a spirit of brotherhood. We wish the Chairman of the Committee, His Imperial Majesty, success and God's guidance in this noble task. We pray that wisdom and love for mankind and peace may shed a beam of brightness upon the leaders of the warring parties so that hope for peace and security may filter through to the victims of war and starvation.

The Southern African situation remains critical. It is a time bomb. The developments which have occurred, have only added to our anxiety.

In Rhodesia, Mr. Wilson has moved since November, 1965 from the 1967 Constitution to the Tiger from the Tiger to the Fearless, each worse than the previous one—and still calling the result "honourable settlement."

It must be said that history has recorded not the British Government's inability to solve the problem but their utter refusal, despite the consequences, to discharge their obligations toward the four million people in Rhodesia. These millions were not a party to the Tiger or the Fearless.

To entrust the so-called six principles to diehard minority racists is to place confidence in a people who by their repeated repressive acts against the majority have shown utter disregard for fair play and justice.

On the question of Angola, Mozambique and so-called Portuguese Guinea there can be no excuse for the Portuguese Government not to grant independence. We in Africa have amply displayed the dynamic forces of development unleashed after independence. Independence had paid not only the colonised but also the colonisers in trade and investment.

Behind the thinking of the Portuguese Government may be the fear for the security and future welfare of their nationals whose lives have become so wedded to life in colonial territories. We do not need to give assurances to the Portuguese Government about security and future of their nationals in Angola, Mozambique and Portuguese Guinea.

However, if any assurance is needed we will only refer to the lessons drawn from the excellent conduct of the African independent countries towards their minorities, once their rulers. Nowhere in independent Africa has a nationalist Government taken vengeance and victimized its minority groups. Nowhere in Africa has an African Government driven or even threatened to drive a racial minority into the sea. On the contrary, African Governments, despite a history replete with hardship and oppression by these racial minorities, have, after their accession to power displayed the most humane qualities; they have immediately striven to create conditions which ensure full and equal justice, equal opportunities for all without distinction.

The Portuguese Government should also find assurance from the stories which we hear of the conduct of freedom fighters towards the Portuguese nationals who have fallen under their control.

So far as we know, Portuguese nationals in areas under the control of freedom fighters have been treated as humans. This is an indication of the human and humanist outlook even under the most difficult and tempting conditions for freedom fighters. It is an indication of the preparedness of the freedom fighters to assume full responsibility for the future of these Portuguese nationals.

Nothing demonstrates the humaneness of the African people, their patience and consideration for other human beings than their treatment of minorities after independence. This must be regarded as a proud record and a source of our strength. It is also a demonstration of the determination of independent Africa to work for a non-racial world society. For international co-operation will remain an academic exercise unless both the minorities and the majorities realize that the co-operation of each group with the other is vital to the success of the whole international society.

We welcome the recent Security Council resolution on NAMIBIA and would appeal most earnestly particularly to France and Britain to join hands with the rest of the members of the Security Council to help build an effective moral force on world scale against the defiance of South Africa. Unless we are united against the forces of injustice and oppression, I am afraid we will only allow these forces to be united against the efforts of men of goodwill to the detriment of peace and security which we seek to protect and further.

As for South Africa herself, her future is not in apartheid but in helping to foster a world community of free peoples co-operating in their endeavours to develop what nature has provided for them and sharing equitably in responsibility and in the fruits of their labour.

Apartheid is a concept whose origin is founded in fear of the unknown; whose methods are outrageous, oppressive and self-contradictory and whose end is self destruction.

Our meetings are always practical. That we are able to meet in adjacent to hostile minority regimes is a mark of progress. It is a milestone on the road to complete liberation of this Continent.

Your Imperial Majesty, Your Excellencies, Distinguished Delegates, among the problems which this Conference will wish to consider are these which I have outlined. It is my sincere hope that our deliberations will add yet to our capacity individually as nations and collectively as members of this region to contribute more effectively to economic development and social improvement and above all to the movement for African Unity.

Thank you.

Proposals for a New Constitution for Rhodesia

Introduction

The Government of Rhodesia believe that the present Constitution is no longer acceptable to the people of Rhodesia because it contains a number of objectionable features, the principal ones being that it provides for eventual African rule and, inevitably, the domination of one race by another and that it does not guarantee that government will be retained in responsible hands.

Therefore it is proposed that there should be a new Constitution which, while reproducing some of the provisions of the existing Constitution, will make certain major changes in order to remove these objectionable features.

The proposed new Constitution will ensure that government will be retained in responsible hands and will provide Africans with the right to play an increasing part in the government of Rhodesia as they earn it by increasing contributions to the national exchequer. Moreover, the new Constitution will recognize the right of the African chiefs, as the leaders of their people, to take part in the counsels of the nation.

The existing inequality in the treatment of the land rights of the races will be remedied. Provision will be made for the same protection to be given to the European Area as that given to the African Area. New Bills governing land tenure, which will replace the Land Apportionment Act [*Chapter 257*] and the provisions relating to Tribal Trust Land in the present Constitution, will be introduced into Parliament at the same time as the new Constitution. The provisions of the new Bills which are designed to protect land rights of Europeans and Africans will be entrenched in the Constitution.

Power will be vested in the Legislature to delegate to provincial or regional councils or other bodies certain functions of government as and when such delegation is considered to be appropriate.

The new Declaration of Rights will not be enforceable by the courts. The rights enshrined in the Declaration will be entrenched and will be safeguarded by the creation of a Senate and the vesting in it of power to delay legislation. In this important function the Senate will be advised by a special committee. As the Senate will be entrusted with the duty of upholding the Declaration of Rights no provision will be made for a Constitutional Council. In addition, the proposed procedure for constitutional amendments will ensure that the Senate will play a significant part in protecting the Constitution and the rights conferred by it.

This paper sets out the constitutional proposals. Part I deals with the matters which will be contained in the Constitution, Part II with the matters which will be contained in an Electoral Act and Part III with the matters which will be contained in new legislation relating to land tenure.

Any reference in this paper to a European means a person who is not an African.

Part I—Provisions of the New Constitution

Chapter I. Head of State

Appointment and Term of Office

1. If a republican form of government is adopted the Head of State will be chosen by the Executive Council. Whatever form of government is adopted the Head of State will hold office for a period of five years and, at the termination of his period of office, he will be eligible for re-election for one further period of five years.

Removal of Head of State

2. If a republican form of government is adopted the Head of State will be removable from office only on a resolution passed by two-thirds of the total membership of the House of Assembly after a committee of that House has recommended his removal on the grounds of misconduct or inability to perform efficiently the duties of his office.

Powers and Functions

3. The Head of State will have such powers and duties as are conferred or imposed upon him by the Constitution or any other law. Subject to the provisions of the Constitution, he will have the same powers by way of prerogative as are now possessed by the Officer Administering the Government. These powers will include the prerogative of mercy.

Remuneration of Head of State

4. The salary of the Head of State will be fixed by a law of the Legislature and may not be reduced during his continuance in office.

Acting and Deputy Head of State

5. The Constitution will provide for an Acting Head of State or Deputy Head of State whenever the office of the Head of State is vacant or the Head of State is absent or is unable to perform the functions of his office.

Chapter II. The Legislature

Legislature

6. The Legislature will consist of the Head of State and a Parliament comprising a Senate and a House of Assembly.

Senate

7. The Senate will consist of twenty-three senators of whom—(a) ten will be European members elected for the whole of Rhodesia by an electoral college consisting of the European members of the House of Assembly from candidates nominated by voters on the European voters roll;

(b) ten will be African chiefs elected by the Council of Chiefs, five of whom will be from Matabeleland and five from Mashonaland;

(c) three will be persons of any race appointed by the Head of State who, in making these appointments, will take into account the requirements of the Senate Legal Committee.

Senate Legal Committee

8. The Senate will elect a committee to be known as the Senate Legal Committee consisting of not less than three members. A majority of members of this committee will be senators with legal qualifications. It will be the function of the committee to examine all Bills, except Money Bills and constitutional Bills, and all statutory instruments published in the *Gazette* and to report to the Senate whether in its opinion any provisions are inconsistent with the Declaration of Rights.

House of Assembly

9. Initially there will be sixty-six members of the House of Assembly of whom—

(a) fifty will be European members elected by the Europeans registered on the rolls of voters for fifty constituencies; and

(b) sixteen will be African members—

(i) eight being elected by the Africans registered on the rolls of voters for four constituencies in Matabeleland and four constituencies in Mashonaland; and

(ii) eight being elected by four tribal electoral colleges in Matabeleland and four tribal electoral colleges in Mashonaland comprising chiefs, headmen and elected councillors of African councils in the Tribal Trust Lands.

Increase in Number of African Members

10. In principle the number of African members in the House of Assembly will be in the same proportion to the total number of members as the contribution by way of assessed income tax on income of Africans is to the total contribution by way of assessed income tax on income of Europeans and Africans until the contribution by Africans amounts to one-half of the total contribution.

Until the contribution of Africans amounts to sixteen sixty-sixths of the total contribution of Europeans and Africans the principle will not be applied and the number of African members will remain at sixteen. When the contribution of Africans exceeds sixteen sixty-sixths of the total contribution of Europeans and Africans the following procedure for increasing the number of African members will come into effect.

The number of African members will be increased two at a time being one additional member for Matabeleland and one additional member for Mashonaland, until the number of African members is equal to the number of European members.

The first increase of two African members will be allocated to the African members elected by tribal electoral colleges and the number of colleges will be increased accordingly. The second increase of two African members will be allocated to the members elected by the voters on the African rolls and the number of African constituencies will be increased accordingly. Subsequent increases will be made in a similar manner.

Every increase of two African members will be made in direct proportion to the increase in the contribution of Africans compared with the total contribution of Europeans and Africans in such a manner that when the contribution of Africans amounts to half of the total contributions of Europeans and Africans at that time the number of African members will be equal to the number of European members.

The Delimitation Commission will be charged with the duty of calculating, from evidence supplied by the Commissioner of Taxes, whether there has been an increase in the contribution of Africans as compared with the total contribution of Europeans and Africans sufficient to warrant an increase in the number of African members.

In calculating the contribution of Europeans and of Africans, income tax will be deemed to include supertax. Taxation on companies will not be taken into account.

Electoral Provisions

11. The following will be prescribed in the Electoral Act and are dealt with in Part II of this paper—

(a) the composition and functions of the Delimitation Commission;

(b) qualifications and disqualifications for enrolment on the voters rolls;

(c) qualifications and disqualifications of candidates for election or appointment as members of the Senate or for election as members of the House of Assembly;

(d) the composition and procedure of the tribal electoral colleges and the Council of Chiefs when sitting as an electoral college.

Election of Presiding Officers

12. At the beginning of each new Parliament after a general election, a President of the Senate and a Speaker of the House of Assembly will be elected from members of the Senate or the House of Assembly who are neither Ministers nor Deputy Ministers or from persons who are not members of either House. A person who is not a member of the House concerned will not be eligible for election unless he possesses the qualifications and none of the disqualifications for election as a member of the Senate or the House of Assembly, as the case may be. A member of the Senate or the House of Assembly who is elected as President of the Senate or Speaker will vacate his seat as a member of the House concerned.

Removal of Presiding Officers

13. The President of the Senate and the Speaker of the House of Assembly may be removed from office only by resolution of the House concerned passed by a two-thirds majority of its total membership.

Remuneration of Presiding Officers

14. The salaries of the President of the Senate and the Speaker of the House of Assembly will be fixed by a law of the Legislature and may not be reduced during their continuance in office.

Ministerial Right To Sit in Both Houses

15. A Minister or Deputy Minister who is a member of the Senate or the House of Assembly will have the right to sit and speak in both the Senate and the House of Assembly, but may vote only in the House of which he is a member.

Voting in Parliament

16. Except where otherwise provided in the Constitution all questions before the Senate or the House of Assembly will be determined by a majority of the votes of the members present and voting.

Language in Parliament

17. Proceedings in the House of Assembly will be conducted in the English language. Proceedings in the Senate will be conducted in English but, for the convenience of the Chiefs for an interim period, debates may be in Chishona and Sindebele as well as in English and provision will be made for the translation of any language used into the other two languages.

Power To Make Laws

18. The Legislature will be the sovereign legislative power in and over Rhodesia. It will have power to make laws for the peace, order and good government of Rhodesia and this power will include—

(a) the making of laws having extra-territorial operation; and

(b) the making of laws to create provinces and other regional divisions, to establish provincial councils and other regional bodies and to allocate functions and powers to such councils and bodies for the purpose of the administration of such provinces or regional divisions.

Initiation of Legislation

19. Any Bill may originate in either the Senate or the House of Assembly except a Money Bill or a private Bill, which may originate only in the House of Assembly.

Procedure in Regard to Bills

20. After a Bill originating in one of the Houses of Parliament has been passed by that House, it will be sent to the other House for consideration. That other House may pass the Bill with or without amendment or may reject it, provided that the Senate will not be able to amend or reject a Money Bill. If the Bill is passed without amendment, it will be presented to the Head of State for assent. If the Bill is amended, it will be returned to the House in which it originated, which House may accept or amend or reject any amendment made by the other House. After the Bill has been returned to the House in which it originated either House may by message to the other House, pursuant to a resolution, agree to any amendment or withdraw any amendment which has been made to the Bill.

Delaying Powers of Senate

21. The Senate will have the power to delay for a period of one hundred and eighty days the enactment of a Bill which has originated in the House of Assembly. After that period has expired the House of Assembly may resolve that the Bill be presented to the Head of State for assent.

Where a Bill originating in the Senate has been rejected by the Senate or has lapsed and an identical Bill is introduced into and passed by the House of Assembly, if the Senate has not passed that latter Bill within a period expiring one hundred and eighty days after the original Bill was introduced into the Senate or, if this period has expired, within eight sitting days, the House of Assembly may resolve that the Bill be presented to the Head of State for assent.

Functions of Senate Legal Committee in Regard to Bills

22. Every Bill introduced into the Senate, other than a Money Bill or a constitutional Bill, will be referred immediately to the Senate Legal Committee for examination and report as to whether any of the provisions of the Bill are inconsistent with the Declaration of Rights. The Senate Legal Committee will have a prescribed period in which to make its report during which period no further proceedings on the Bill will be taken by the Senate. When the report is tabled the Senate may accept or reject the findings of the Senate Legal Committee. If the Senate resolves that any provision of the Bill is inconsistent with the Declaration of Rights it may—

(a) amend the provision to remove the inconsistency; or

(b) reject the Bill; or

(c) pass the Bill notwithstanding the inconsistency if it is satisfied that the provision is necessary in the national interest.

If the Senate resolves that a provision of a Bill is inconsistent with the Declaration of Rights and that such provision is not necessarily in the national interest, the Bill will be returned to the House of Assembly which may remove the inconsistency or, after a period of one hundred and eighty days has elapsed from the date on which the Bill was introduced into the Senate, resolve that the Bill be sent to the Head of State for assent notwithstanding such inconsistency.

Functions of Senate Legal Committee in Regard to Subsidiary Legislation

23. Every statutory instrument published in the *Gazette* will be referred to the Senate Legal Committee for consideration and report as to whether any of the provisions of the statutory instrument are inconsistent with the Declaration of Rights. The report will be tabled in the Senate which may accept or re-

ject the findings of the Senate Legal Committee. If the Senate resolves that the provision reported upon is inconsistent with the Declaration of Rights and is not necessary in the national interest, that provision will be annulled unless—

(a) it is revoked or amended by the issuing authority; or

(b) the House of Assembly passes a resolution confirming the provision, in which case it will remain in force.

Where a provision has been annulled the House of Assembly may, after the expiry of one hundred and eighty days, resolve that the provision shall be reintroduced, in which case the provision after publication in the *Gazette* will be of full force and effect and will not be referred to the Sentate Legal Committee.

Certificate of Urgency

24. A Bill, other than a constitutional Bill, which has originated in and been passed by the House of Assembly may be given a certificate of urgency by the Prime Minister on the ground that it is so urgent that it is not in the public interest to delay its enactment. Where the Senate has not passed an urgent Bill within eight sitting days after its introduction into the Senate, the House of Assembly may at any time thereafter resolve that the Bill be sent to the Head of State for assent. If the Senate thereafter resolves that any provision of that Bill is inconsistent with the Declaration of Rights and is not necessary in the national interest, that provision will be annulled after the expiry of eight sitting days unless the House of Assembly within that period resolves that the provision should remain in force. If the resolution of the House of Assembly is passed—

(a) by a two-thirds majority of the total membership of the House, the provision will continue in force until repealed;

(b) by more than one-half but less than two-thirds of the total membership of the House, the provision will continue in force for a period of two hundred and seventy days from the date on which that provision became law.

Money Bills

25. If a Money Bill which has been passed by the House of Assembly has not been dealt with by the Senate within a period of eight sitting days, the House of Assembly may at any time thereafter resolve that such Bill be sent to the Head of State for assent. The Senate will have no power to amend or reject a Money Bill but may recommend amendments.

Summoning, Prorogation and Dissolution of Parliament

26. The Head of State may at any time summon or prorogue Parliament save that a session of Parliament will begin in every calendar year and not more than twelve months will intervene between the last sitting of Parliament in one session and the first sitting of Parliament in the next.

The Head of State will be required at the expiry of five years to issue a proclamation dissolving Parliament and he may at any time by proclamation dissolve Parliament on the advice of the Prime Minister or, in certain special circumstances governed by convention, in his discretion, in which case he will act in accordance with convention. The proclamation dissolving Parliament will fix a date for a general election within a period of four months of the date of the issue of the proclamation. Parliament will be dissolved on the day preceding the date fixed in that proclamation for the holding of a general election.

Chapter III. The executive

Executive Powers

27. The executive government of Rhodesia will be vested in the Head of State. He will act on the advice of the Executive Council or the Prime Minister or a Minister, as the case may require, except where the Constitution or any other law otherwise requires.

Appointment of Prime Minister

28. The Head of State will appoint the Prime Minister and in doing so will appoint the person whom, in his discretion, he considers to be best able to command the support of the majority of the members of the House of Assembly.

Appointment and Tenure of Office of Ministers

29. The Head of State, acting on the advice of the Prime Minister, will appoint Ministers and Deputy Ministers who will hold office during the pleasure of the Head of State and may be removed from office by the Head of State acting on the advice of the Prime Minister. A Minister or Deputy Minister who is not a member of the Senate or of the House of Assembly may hold office for not longer than four months unless he becomes a member of either House.

Executive Council

30. There will be an Executive Council to advise the Head of State. It will consist of the Prime Minister and such other Ministers as the Head of State, acting on the advice of the Prime Minister, may appoint.

State of Emergency

31. The Head of State may at any time declare that a state of public emergency exists. Unless such a declaration is approved by a resolution passed by the House of Assembly it will cease to have effect—

(a) if Parliament is sitting, at the expiry of seven days after the declaration;

(b) if Parliament is not sitting, at the expiry of thirty days after the declaration.

A declaration if so approved will continue in force for not longer than twelve months and may be renewed from time to time by resolution of the House of Assembly. The House of Assembly may authorize a declaration for a shorter period and may at any time resolve that a declaration should be revoked.

Chapter IV. The judicature

High Court of Rhodesia

32. The judicial authority of Rhodesia will be vested in a High Court consisting of such divisions and having such jurisdiction as will be prescribed by law.

Appointment of Chief Justice and Other Judges

33. The Chief Justice and other judges of the High Court will be appointed by the Head of State on the advice of the Prime Minister who will be required to consult with the Chief Justice in the case of any appointment other than to the office of Chief Justice.

Qualification of Judges

34. A person will not be qualified for appointment as a judge unless he is or has been a judge in a country in which the common law is Roman-Dutch and English is an official language or he has been qualified to practise as an advocate for not less than ten years in Rhodesia or in a country in which the common law is Roman-Dutch and English is an official language.

Removal of Judges

35. A judge may be removed from office by the Head of State only for inability to discharge the functions of his office or for misbehavior and may not be so removed unless an independent tribunal has recommended that the judge be removed on one of these grounds. In considering whether a tribunal should be appointed to inquire into such inability or misbehaviour of a judge, the Head of State will, in the case of the Chief Justice, act in his discretion and will, in the case of any other judge, act on the advice of the Chief Justice.

The tribunal will consist of not less than three members selected by the Head of State from the following—

(a) the Speaker of the House of Assembly;

(b) retired judges of the High Court;

(c) judges or retired judges of a country, other than Rhodesia, in which the common law is Roman-Dutch and English is an official language;

(d) an advocate of not less than ten years' standing from a panel nominated by the association representing advocates;

(e) an attorney of not less than ten years' standing from a panel nominated by the association representing attorneys.

Remuneration of Judges

36. The salary of a judge of the High Court will be fixed by a law of the Legislature and may not be reduced during his continuance in office.

Law To Be Administered

37. The law to be administered by the courts in Rhodesia will be the law in force in the Colony of the Cape of Good Hope on the 10th of June, 1891, as modified by subsequent legislation having in Rhodesia the force of law.

Chapter V. Declaration of rights

Declaration of Rights To Be Non-justiciable

38. No court will have the right to inquire into or pronounce upon the validity of any law on the ground that it is inconsistent with the Declaration of Rights.

Content of Declaration of Rights

39. The new Declaration of Rights will follow the general pattern of the existing Declaration. It will be in a form which is more appropriate to a non-justiciable Declaration. The more important changes which are proposed are as follows:—

Preamble

(1) The preamble will state that it is desirable to ensure that every person in Rhodesia enjoys fundamental rights and freedoms but will point out that there are responsibilities and duties expected of an individual who receives the protection of the State. The duty to respect the rights and freedoms of others and the public interest and to abide by the Constitution and the law and, in the case of citizens, to be loyal to Rhodesia will be included.

Right to Life

(2) The existing exceptions to this right will be extended to permit the use of force where it is reasonably justifiable in the circumstances for the purpose of suppressing terrorism.

Right to Personal Liberty

(3) In order to cure an omission in the existing Declaration the exceptions to this right will be extended to cover arrests ordered by statutory tribunals, quasi-judicial authorities and commissions of inquiry in appropriate circumstances.

Preventive detention and restriction will be authorized in the interests of national defence, public safety or public order. An impartial tribunal will be established with at least one member who holds or has held judicial office or who has been entitled to practise as an advocate for at least ten years. This tribunal will review the case of a detainee within a period of three months of his detention, if he so requests, and in any case at intervals of not less than twelve months. The responsible Minister will be obliged to act in accordance with a recommendation by the tribunal that the detainee should be released unless the Head of State directs otherwise.

An accused person will not be entitled as of right to be released on bail before and during his trial.

Protection From Slavery and Forced Labour

(4) This right will be retained.

Protection From Inhuman Treatment

(5) The existing provision will be retained.

Protection From Deprivation of Property

(6) The existing provisions will be redrafted to provide that no person shall be deprived of his property unless such deprivation is authorized by law. As at present compulsory acquisition of property by the Government in circumstances where no compensation is payable will be restricted, but provision will be made for the compulsory acquisition of property by the Government in any circumstances so long as adequate compensation is paid.

Protection From Search and Entry

(7) The existing provisions will be retained save that it will be specifically provided that a law may authorize the search of a person or the entry into or search of a dwelling-house in circumstances where there are reasonable grounds for believing that the entry or search is necessary for the prevention or detection of a criminal offence or for the lawful arrest of a person.

Protection of Law

(8) The existing provision will be retained except that the requirement that a person shall not be compelled to give evidence at his trial will be omitted. This requirement is, in any case, contained in the criminal law and should be subject to regulation by ordinary legislation to reflect current trends in criminal procedure.

Freedom of Conscience

(9) This freedom will be retained.

Freedom of Expression and of Assembly and Association

(10) For convenience these two freedoms which are set out separately in the existing Declaration will be combined. The existing provision permitting laws made for the purpose of regulating telephony, telegraphy, posts, wireless broadcasting and other matters will be extended to permit laws for the regulation of newspapers and other publications.

Freedom From Discrimination

(11) The existing provisions relating to freedom from discrimination will be revised. Every person will be entitled to the enjoyment of the rights and freedoms in the new Declaration of Rights without unjust discrimination on the grounds of race, tribe, political opinion, colour or creed. Specific provision will be made permitting laws relating to African customary law, jurisdiction of tribal courts and restrictions on the ownership, occupation or use of land.

The existing provisions relating to freedom from discriminatory executive or administrative acts will be omitted from the new Declaration. The Senate and its legal committee will be concerned only with laws.

Savings for Periods of Public Emergencies and Disciplinary Laws

(12) As in the existing Declaration provision will be made that laws authorizing the taking of justifiable measures during a period of public emergency and disciplinary laws may contain provisions which are inconsistent with certain rights in the Declaration.

Chapter VI. Miscellaneous matters

Official Language

40. The English language will be the only official language of Rhodesia.

Oath of Loyalty

41. If a republican form of government is adopted persons required under the Constitution to take an oath of loyalty will take an oath to be faithful and bear true allegiance to Rhodesia.

Chapter VII. Amendment of the constitution and entrenchment of certain provisions of electoral and land tenure laws

Amendment of Ordinary Provisions of the Constitution

42. A Bill to amend the Constitution will require to be passed by the affirmative votes of two-thirds of the total membership of the House of Assembly and two-thirds of the total membership of the Senate:

Provided that, if such a Bill does not receive the required majority in the Senate, it may be reintroduced into the Senate after a period of one hundred and eighty days, whereupon it may be sent to the Head of State for assent if it has received the affirmative votes of more than one-half of the total membership of the Senate.

Amendments of Specially Entrenched Provisions of the Constitution

43. The procedure to amend the ordinary provisions of the Constitution will be followed in the case of specially entrenched provisions, save that, if the Bill does not receive the affirmative votes of two-thirds of the total membership of the Senate, the Bill will lapse.

Provisions of the Constitution To Be Specially Entrenched

44. The following will be specially entrenched under the Constitution—

(a) the composition of the Senate and the House of Assembly;

(b) the judicature;

(c) the official language;

(d) the Declaration of Rights;

(e) the procedure for amending the Constitution and the provisions of the laws referred to in section 45 of this paper.

However, in the case of a Bill to amend the Constitution so as to increase the number of members of the Senate or the House of Assembly, the procedure to amend the ordinary provisions of the Constitution may be followed if the proportion of African members to European members in the Senate or the House of Assembly, as the case may be, immediately before the increase is maintained.

Certain Provisions of Electoral and Land Tenure Laws To Be Entrenched

45. Provision will be made that those parts of the Electoral Act referred to in section 74 of Part III of this paper can only be amended by following the procedure for amending the ordinary provisions of the Constitution. Provision will also be made that those parts of the law relating to land tenure referred to in section 87 of Part III of this paper can only be amended by following the procedure for amending the specially entrenched provisions of the Constitution.

PART II—ELECTORAL PROVISIONS

Chapter I. Delimitation Commission

Appointment of Delimitation Commission

46. Provisions relating to the appointment and composition of the Delimitation Commission similar to those contained in the present Constitution will be reproduced.

Functions of Delimitation Commission

47. The functions of the Delimitation Commission will be—

(a) to divide Rhodesia into fifty European roll constituencies;

(b) to divide each of Matabeleland and Mashonaland into four African roll constituencies or, if the number of Africal roll members has been increased in accordance with section 10 of Part I of this paper, into the appropriate number of African roll constituencies;

(c) to calculate in accordance with section 10 of Part I of this paper whether any increase in the number of African roll members is justified;

(d) to determine the adjustments to the boundaries of areas of the tribal electoral colleges when the number of such colleges is increased in accordance with section 10 of Part I of this paper.

In dividing Rhodesia into European roll constituencies and Matabeleland and Mashonaland into African roll constituencies the Delimitation Commission will observe the same directions and give due consideration to the same factors as are specfied in the present Constitution say that, in the case of the African roll constituencies, a minimum number of rural constituencies will not be required.

Chapter II. Voters rolls and qualifications of voters for House of Assembly

Voters Rolls

48. The Registrar-General of Voters will maintain a European roll of all European voters in each European constituency and an African roll of all African voters in each African constituency. Suitably qualified persons will be entitled to enrollment on their respective rolls.

General Qualifications of Voters

49. The qualifications as to citizenship, residence, knowledge of English and ability to complete the prescribed application form for enrollment as a voter on any roll will remain as at present. An applicant must be twenty-one years of age or over.

Disqualification of Voters

50. The existing grounds for disqualification as a voter will remain. In addition, a person who is restricted or detained for more than six months will be disqualified for the period of his restriction or detention and for five years after his release.

Means and Educational Qualifications for European Voters

51. A European who poses the general qualifications and is not disqualified will be entitled to enrolment as a voter if he—

(a) has an income of not less than £900 during each of the two years preceding the claim for enrolment or owns immovable property in Rhodesia valued at not less than £1,800; or

(b) has an income of not less than £600 during each of the two years preceding the claim for enrolment or owns immovable property in Rhodesia valued at not less than £1,200 and, in addition to the income or property qualifications, has completed four years' secondary education of a prescribed standard.

Means and Educational Qualifications for African Voters

52. An African who possesses the general qualifications and is not disqualified will be entitled to enrolment as a voter if he—

(a) has an income of not less than £300 during each of the two years preceding the claim for enrolment or owns immovable property in Rhodesia valued at not less than £600; or

(b) has an income of not less than £200 during each of the two years preceding the claim for enrolment or owns immovable property in Rhodesia valued at not less than £400 and, in addition to the income or property qualifications, has completed two years' secondary education of a prescribed standard.

Value of Immovable Property

53. For the purpose of calculating the value of immovable property to qualify for enrolment the value will be the market value of the property less any capital charges in respect of, and amounts secured by mortgage on, that property.

Means Qualifications of Married Women

54. The existing provisions relating to the means qualifications of married women will remain.

Means Qualifications of Ministers and Members of Religious Orders

55. A minister of a prescribed religious order or a member of a prescribed religious order under vows of poverty will be deemed to possess the necessary means qualifications for enrolment on the European roll or the African roll.

Variation of Means and Educational Qualifications for African Voters

56. The Head of State, acting on the recommendation of a commission appointed for

the purpose, will be empowered to vary by proclamation from time to time the means and educational qualifications for the African roll in order that the differences between the qualifications for the European roll and the qualifications for the African roll are progressively reduced and eventually eliminated when the number of African seats equals the number of European seats in the House of Assembly.

Transfer of Voters to the European Roll or the African Roll

57. Voters on the existing "A" or "B" rolls will be automatically transferred, in the case of Europeans, to the European roll and, in the case of Africans, to the African roll.

Chapter III. Elections for European roll and African roll seats in the House of Assembly

Nomination of Candidates

58. The existing procedure will be retained save that a European will not be eligible for nomination for an African roll seat and an African will not be eligible for nomination for a European roll seat.

Qualifications of Candidates

59. A candidate will be qualified for nomination if he—

(a) is enrolled as a voter; and

(b) has resided in Rhodesia for five years during the seven years immediately preceding his nomination; and

(c) is not disqualified.

Disqualification of Candidates

60. The existing grounds for disqualification from nomination will be retained. In addition, a candidate will be disqualified if he has been restricted or detained for a period of more than six months, for the period of his restriction or detention and for a further period of five years after his release.

Chapter IV. Tribal electoral colleges

Establishment of Tribal Electoral Colleges

61. Initially four tribal electoral colleges will be established for Matabeleland and four will be established for Mashonaland. Each college will be required to elect one African member to the House of Assembly.

The areas of tribal electoral colleges will be fixed in such a manner that the boundaries coincide with the boundaries of administrative districts and so far as is possible—

(a) representation is based on tribal interests; and

(b) a reasonably even distribution of tribal population between the tribal electoral college areas in Matabeleland and between those areas in Mashonaland, respectively, is achieved.

Composition of Tribal Electoral Colleges

62. A tribal electoral college will consist of chiefs and headmen residing in the area of the tribal electoral college and elected councillors of African councils situated in that area.

Procedure of Tribal Electoral Colleges

63. Candidates may address the college and members of the college may put questions to candidates. Each member of the college will have one vote and the voting will be by secret ballot. If at the first count the candidate with the most votes does not obtain more than half of the votes cast, the candidate who has the fewest votes will be eliminated and a fresh vote taken. If necessary this procedure will be repeated until one candidate has an over-all majority of votes.

Nomination of Candidates

64. The nomination paper of a candidate for election must be signed by at least one chief, two kraal heads and seven tribesmen resident in the area of the college.

Qualifications of Candidates

65. A person will be qualified for nomination as a candidate if he—

(a) is a citizen of Rhodesia; and

(b) is a tribesman of twenty-one years of age or over; and

(c) has resided continuously in the area of the college for a period of five years during the seven years immediately preceding his nomination; and

(d) possesses a prescribed qualification sufficient to enable him, if elected, to contribute to and understand proceedings in the House of Assembly.

Disqualification of Candidates

66. A person will be disqualified from nomination as a candidate on any of the grounds of disqualification relating to candidates for the European or African roll seats in the House of Assembly.

Chapter V. Election and appointment of Members of the Senate

Nomination of European Senators

67. The procedure for the nomination of European senators will be similar to that for the nomination of candidates for election to the European seats in the House of Assembly save that a candidate will have to be nominated by not more than fifty or less than thirty persons enrolled on the European voters roll.

Qualifications of Europeans for Election to Senate

68. A candidate for election as a European senator must possess the qualifications and none of the disqualifications for nomination as a candidate for a European roll seat in the House of Assembly save that he shall—

(a) be not less than forty years of age; and

(b) have resided in Rhodesia for ten years during the fifteen years immediately preceding his nomination.

Procedure for Election of European Senators

69. The electoral college will be composed of the European members of the House of Assembly. Each member of the electoral college will be entitled to one vote for every vacant seat of a European senator and may not cast more than one vote for any one candidate. The ballot will be secret.

Nomination of Chiefs for Election to Senate

70. The Council of Chiefs will sit as an electoral college for the purpose of nominating and electing chiefs to the Senate. Candidates for election to the five seats reserved for Matabeleland chiefs will be nominated by members of the Council from Matabeleland and candidates for election to the five seats reserved for Mashonaland chiefs will be nominated by members of the Council from Mashonaland.

Qualifications of Chiefs for Election to Senate

71. A candidate for election must—

(a) be a duly appointed chief; and

(b) reside in Matabeleland, in the case of a seat reserved for chiefs from Matabeleland, or in Mashonaland, in the case of a seat reserved for chiefs from Mashonaland; and

(c) not possess any of the disqualifications applicable to candidates for European or African roll seats in the House of Assembly.

Procedure for Election of Chiefs

72. The electoral college will be composed of the members of the Council of Chiefs. Each member of the electoral college will be entitled to one vote for every vacant seat of a chief for Matabeleland or Mashonaland, as the case may be, and may not cast more than one vote for any one candidate. The ballot will be secret.

Appointment of Senators

73. The three senators appointed by the Head of State shall—

(a) be not less than forty years of age; and

(b) have resided in Rhodesia for ten years during the fifteen years immediately preceding their appointment; and

(c) be enrolled as voters on the European roll or African roll; and

(d) possess none of the disqualifications applicable to candidates for European or African roll seats in the House of Assembly.

Chapter VI. Entrenchment of certain provisions of the Electoral Act

Procedure for Amendment

74. The procedure for amending the ordinary provisions of the Constitution will be followed for any amendment of the Electoral Act which would vary—

(a) the qualifications and disqualifications for the franchise;

(b) the procedure for varying the means and educational qualifications for the African roll described in section 56 of this paper;

(c) the qualifications and disqualifications of candidates for the Senate or House of Assembly.

PART III—LAND TENURE PROVISIONS

Chapter I. Classification of land

Categories of Land

75. All land in Rhodesia will be classified as—

(a) the European Area; or

(b) the African Area; or

(c) National Land.

The total area of all the land in the European Area and the total area of all the land in the African Area will at all times be equal, save that in each Area a variation of two *per centum* from half of the acreage of these two combined Areas will be permissible to facilitate the initial classification of, and future exchanges and transfers between, the three categories. The area of National Land will be fixed subject to a two *per centum* variation from its initial acreage to enable these exchanges to be made.

In order to achieve this equality the existing European and African Areas will be adjusted by the addition of all the existing Unreserved Land, which will cease to be a separate category, and some areas of National Land. In addition, various small "islands" of land owned by persons of one race within the Area of the other race will be eliminated but the rights of present owners will be safeguarded. It has been calculated that this adjustment will result in the following acreages being allocated to the three categories of land—

(a) 44.9 million acres in the European Area;

(b) 45.2 million acres in the African Area;

(c) 6.4 million acres of National Land.

As some areas of Rhodesia have not been accurately surveyed, slight adjustment of the acreages of these areas may become necessary when such surveys are carried out.

Exchanges of Land

76. A board of trustees for each of the European Area and the African Area will be established and entrusted with the functions of determining such transfers and exchanges of land between the land categories as may be desirable to meet changing circumstances and of ensuring that the permitted variations in the area of the respective categories are not exceeded.

Chapter II. European and African areas

Fundamental Principles

77. The European Area shall be deemed to be an area in which European interests are paramount and the African Area shall be deemed to be an area in which African interests are paramount. The rights of Europeans and the restrictions on Africans in the European Area will be on a reciprocal basis to the rights of Africans and the restrictions on Europeans in the African Area.

Composition of European and African Areas

78. The European Area and the African Area will consist of the following land—

(a) privately owned land;

(b) State land which may include—

(i) forest areas;

(ii) national parks;

(iii) wild life areas;
and will include, in the case of the African Area, Tribal Trust Land.

Ownership of Land

79. (1) Land in the European Area may not be privately owned by an African and land in the African Area may not be privately owned by a European, save for the exceptions referred to in this Part and for the case of property which has been acquired in terms of a mortgage bond thereon and which will be subject to the restriction that it may not be so owned for more than five years.

(2) State land will vest in the Head of State.

(3) Since Tribal Trust Land will vest in the Head of State the present Board of Trustees will be abolished. The principal responsibilities at present cast on that Board will be transferred to the Head of State.

Nonracial Residential Areas

80. The responsible Minister will have the power to declare any area of land zoned for residential purposes to be a non-racial residential area where persons of either race may own and occupy land for residential purposes. If the proposed non-racial residential area is within a local authority area the Minister can act only after an application by or consultation with the local authority.

European and African Townships

81. The responsible Minister will have the power to declare any portion of land in the European Area to be an African township and any portion of land in the African Area to be a European township. If the proposed township is within a local authority area the Minister can act only after an application by or consultation with the local authority. Persons of the race for which a township is provided may own, lease or occupy land within that township. If a township ceases to be a declared township the rights of ownership by Africans in African townships and Europeans in European townships will cease, subject to the payment of such compensation as may be agreed or fixed by arbitration.

Mining Rights

82. Any person may occupy land in the Area of the other race if he is granted a right under the mining laws and such occupation is for the purpose of exercising that right.

Special Provisions Relating to Occupation by Africans of Certain Mission Lands

83. Certain rights acquired by Africans in respect of the occupation of mission land in the European Area which have been in existence for many years will be subject to registration and review and will lapse on the death of the holders.

Participation in Local Government

84. Ownership or occupation of land by persons of one race in the Area of the other race will confer no voting rights on such owners or occupiers for the purposes of participation in local authority elections in that Area, but residents of townships set aside for a particular race and of non-racial residential areas may take part in elections in respect of local bodies established to administer local services for such townships or residential areas.

Chapter III. National land

Ownership

85. National Land will vest in the Head of State and will be inalientable but leasehold rights for periods not exceeding ninety-nine years may be granted to persons of either race.

Occupation

86. National Land may be occupied by persons of all races but the use of such facilities as may be provided may be regulated according to the race of the user.

Chapter IV. Entrenchment of certain provisions relating to land tenure

Entrenched Provisions Relating to Land Tenure

87. A Bill to amend any of the following will be subject to the same procedure as that for amending a specially entrenched provision of the Constitution—

(a) the classification of land into European Area, African Area and National Land and the acreages thereof, subject to the permitted variation of two *per centum;*

(b) the procedure for exchanging land and the establishment and functions of the boards of trustees;

(c) the basic rights of, and restrictions on, persons of either race in relation to the three categories of land;

(d) the principle that rights of ownership or occupation by a person of one race in the Area of the other race will not confer voting rights in local authority elections;

(e) the area of Tribal Trust Land and the rights of tribesmen.

GRADUATION APOLOGY

Mr. McCLELLAN. Mr. President, an editorial written in a somewhat facetious vein, but packed with commonsense advice to the 1969 graduates, was published in the Arkansas Democrat on May 30. It carries a message that is worthy of emphasis.

The editorial, "Graduation Apology," presents the idea that the older generation should be sorry because the youngsters were given everything except discipline. At a time when students are rioting and creating disorders on the campus, this editorial suggests that parents have not been faultless in rearing the young people.

It is obvious that the graduates soon will come face to face with problems, the solution to which requires self-discipline and responsibility—qualities which have not yet made any notable impact on a number of the group. Graduates also will begin to recognize the value of conforming to rules of conduct which society has ordered for the benefit of all.

Although the older generation may indeed have cause to apologize, the younger set is still confronted with the task of becoming established in the community as responsible adults. It is this serious but exciting challenge which is the main issue for the graduates. The manner in which they meet this challenge will be judged not only by the older generation but by their contemporaries as well.

Mr. President, I request that the editorial "Graduation Apology," be inserted in the RECORD at this point:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRADUATION APOLOGY

It occurs to us that what you 1969 graduates deserve is more of an apology than an address.

If we were going to do the speaking as a representative of the older generation we would say we were sorry because most of us reared you by giving you everything we could except discipline. And now you need it if you are going to be able to make a living on your own.

The majority of you are about to discover abruptly that in the outside world a certain amount of discipline is not only expected but demanded. For example, most places of business frown on weird clothes, or long hair. You won't be forced to conform, of course—only if you want to eat. In every office there are almost always some rules, and it's wise to follow all of them—including the ones you don't like—even though you didn't have a hand in making them. The company will be pleased if you can improve its methods of doing things or devise shortcuts—but only after you have mastered the old systems. As a rule of thumb, it is best not to interrupt the boss with your ideas while he is giving you his, even if you think he is square, reactionary, or as dumb as your father. You might feel like telling him to get up against the wall, but you better not do it unless you want to go out the front door. Unlike what you might have experienced around your house, you will find that your boss and your colleagues will expect you to do your share of the work. You'll get more money in the outside world not by asking for it, or demanding it, or doing just what's expected of you, but by doing more than your share, or doing it better. Sometimes you'll even have to work when you don't feel like it, or when you have something better to do. That no one else is being made to do it won't matter with your boss; in fact, he won't even be interested in a debate on the subject.

Making these adjustments will be tough. We adults realize—or we are beginning to—how much we have short-changed you youngsters these past 20 years or so. We are now a bit abashed that we have created a society that blames the large number of auto thefts on people who leave their keys in their cars rather than the people who steal them. Somehow it doesn't seem right that our schools are about to eliminate final exams and grades because students are upset by them when they do badly. We are a bit sorry that we made some of you go to college; the front page of any newspaper tells us that many of you don't like it, and, in fact, are trying to destroy it. And we are surprised at the pride expressed by school maintenance people in Detroit, Atlanta, Columbus, Syracuse and Denver in their solution of the multi-million dollar problems of kids breaking out school windows: Install plastic windows.

So if we were speaking at commencement we would apologize and then ask you to discipline yourself at this late date since we have failed to do it. This is really good advice. After all, most of you will be starting a family soon, and you wouldn't want your kids to one day get the shock that most of you are about to get.

ORGANIZED CRIME EVIDENCE

Mr. McCLELLAN. Mr. President, on May 29 I introduced S. 2292, a bill designed to prevent unnecessary delay and dangerous disclosure of Government files in connection with litigation of claims that evidence is fruit of the poisonous tree, by placing a statute of limitations on such claims and by requiring judges to screen the files for likely relevancy. I spoke then at some length on the U.S. Supreme Court case of Alderman against United States, decided March 10, 1969, which prompted the introduction of that bill. The Alderman case had laid down a flat, fantastic requirement that the Government open its files to any criminal who had ever been subjected to unlawful electronic surveillance, to help him argue that the evidence in any case against him was derived from the surveillance, no matter

how clear it was to the judge in a given case that the product of the surveillance was entirely irrelevant.

That ruling created and aggravated several problems now faced by law-enforcement agencies. One of the principal problems, which I discussed in my May 29 remarks, is the harm which such unnecessary disclosure to the defendant and his attorney can do. Life magazine, on pages 45 through 47 of its May 30 issue, has now published an article consisting primarily of excerpts from verbatim transcripts of conversations overheard in 1961 and 1962 through FBI electronic bugs installed in Cosa Nostra meeting places in the Chicago and Miami areas. In my view that article demonstrates, beyond the power of skepticism or naïveté to deny, the terrible and unjustified threat posed by the disclosure requirement.

Assistant Attorney General Will Wilson, Chief of the Justice Department's Criminal Division, had warned me in a letter of April 11, which was printed in the RECORD at the conclusion of my May 29 remarks, that the Alderman disclosure requirement might "result in the revelation of overheard conversations which unjustly reflect upon the integrity of persons discussed therein." Mr. Wilson's prediction is regrettably fulfilled in the Life article. Frank Sinatra and another singer called "Dean," two named Chicago city aldermen, and three judges—it is not clear if they are Federal, State, or local, trial or appellate—are referred to in overheard conversations reported verbatim to the public, and the references are far from flattering. Life omitted the names of the judges, protecting their personal reputations and the concept of orderly procedure for reviewing judicial conduct, but we can take small comfort from that: Some journals might act less responsibly than Life did in this regard. Yet, as it is, four prominent individuals and a segment of the judiciary have suffered serious harm to their reputations—harm which does not discriminate between guilty and innocent, or between factual statement and false, bragging hearsay. Not one of the individuals so harmed was overheard by the bug, at least in the excerpts published. They could have been protected by the judiciary; they ought to be protected by effective legislation; their reputations should not be at the mercy of irresponsible hoodlums or rest in the discretion of Life magazine—or any other publisher.

Mr. Wilson's April 11 letter also noted that, in the past, hearings relating to alleged "fruit of the poisonous tree" have led to "disclosure of facts which have been pieced together by defendants in such a way as to enable them to identify sensitively placed and extremely valuable Government informants, with resultant danger to the informants' lives." It is chilling indeed to realize that Felix Alderisio, a codefendant in the Alderman case itself, was given these transcripts although he neither participated nor was mentioned in any of the conversations. Life describes Alderisio as "a gangster's gangster," and I pointed out when I introduced S. 2292 that he has been identified as a Cosa Nostra "enforcer" and in 1962 was arrested in a car specially equipped for murder. Obviously, to give him this new information, and to let the parties to the overheard conversations learn exactly what law enforcement agencies know about them, was very dangerous. In the published conversations, the gangsters planned an ax murder and reminisced about three murders one or another of them had committed previously. We must find ways to avoid giving sensitive Government files to men who utter such inhuman words as these:

> We'll hit him with an [obscenity] ax or something. He won't get away from us. . . .
>
> Well, we got that knife and he's got to move with us jabbing him with that knife. . . .
>
> We can't let any blood show. We got to keep the guy alive untill we're in a good, safe spot. . . .
>
> • • • • •
>
> Joe [Accardo] says: "Is the guy dead?" And I said: "Sure, because when I nailed him, his head went like that, you know?". . . .
>
> I remember we had to hit him in the belly, then we had to burn him. . . .

The Solicitor General of the United States has explained that under the Alderman decision the alternative to giving our files to such people is to give them "immunity from prosecution for all crimes past, present, or future." I submit that where people like Alderisio and those other butchers are involved, those are not viable alternatives; our only course is to enact effective legislation to improve our courts' handling of this problem.

Protective court orders forbidding defendants to disclose the files they see simply are not the answer. The Life article, purportedly based on information obtained despite such an order, appears to confirm Assistant Attorney General Wilson's report:

> Our experience has shown that protective orders have not been effective.

I cannot assume that Life obtained the transcripts from the defendant or his attorney, Edward Bennett Williams. Indeed, one reason protective orders are inadequate is that all criminal defense lawyers do not share Mr. Williams' reputation for high professional and ethical standards. Nor can I assume the transcripts were obtained from the Government. No, the central problem is not the source of the leak, but the fact that the leak did occur. Since at least 1962 these transcripts had been, as Life remarked, "restricted to use as background intelligence only and had remained deep in Government files, with access to them tightly controlled." Yet not until May 5, 1969, when by U.S. Supreme Court decision the transcripts were "delivered to Williams," were they "shaken loose as a result of his tactic" into the hands of Life magazine. As on the occasion when wiretap information about Bobby Baker, likewise represented by Attorney Williams, appeared in Drew Pearson's column despite a protective order, the source and motivation for the leak are obscure. Baker was on trial here in the district court. Logs of electornic surveillance were disclosed, under protective order, on November 11, 1966. On December 2, 1966, Pearson revealed that national security surveillance had been conducted on the Dominican Embassy and that Baker was overheard. In the Baker case the disclosures placed the Government in a bad light by indicating electronic surveillance of an embassy, while the published Alderisio excerpts impugn only the gangsters, so we cannot even assume that the two leaks had a single source, in the Government, the court, or the defense. But the essential point is not to assess blame. It is to realize that the very difficulty of tracing a leak makes one very likely to occur, that leaks will occur, and that each one can do untold damage. To enforce a protective order, it is necessary to learn who violated it, and this may be as difficult as obtaining evidence in any organized crime or security case. Note, too, that we cannot expect deterrence—fear of the penalty to be applied for a violation of the order—to have much effect. Those involved within the Government can hide behind anonymity and numbers, while those outside, apart from the lawyers involved, who are not always reputable, have, in all likelihood, already demonstrated their lack of fear by committing the crime at issue in the trial.

Let me make here, too, another vital point. Ostensibly, the purpose of seeking disclosure is to prepare a defense on the merits. Nevertheless, is not this defense purpose equally realized if the Government refuses disclosure and dismisses the case? What I am suggesting is that it is in the defendant's best interest to breach the protective order, so that the Government will find such disclosures so distasteful that they will dismiss cases rather than make disclosures in the future. We must not forget that these defendants are not in isolated litigation in a single case with the Government. By definition, in organized crime and security cases, there is an interrelationship from case to case.

What is worse, moreover, the Life article shows the senseless futility of requiring the Government to make automatic disclosure. Just as the trial judge had found in Alderisio's case, concerning extortion committed in Colorado 2 to 3 years before the Life conversations were overheard, the transcripts neither mention Alderisio nor have any possible relevance to that prosecution. Disclosure in this case has done a great deal of harm and no good whatsoever, and that will be the usual result under the Alderman decision.

The Life article is a tragic but compelling demonstration that organized criminals no less than foreign spies are a mortal threat to our lives and values, and that the Alderman rule is empty and unrealistic as a means of providing fair trials while preventing invasions of privacy, assassinations of personal reputation, and murders of witnesses. Where the need for legislation such as S. 2292 has been made so painfully clear and immediate, let us join together to enact it. By every other proper means at our disposal, let us enter combat with these depraved bosses and their hired killers, and

prove again that the American people resist and overcome tyranny in whatever form, from without or from within our Nation.

I ask unanimous consent to have the full text of the Life magazine article and the column of Drew Pearson appear in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Life Magazine, May 3, 1969]

THE MOB

For sheer candor, a hidden microphone can't be beat. Law breakers and law enforcers know this better than anyone else. At one time or another during a six-year period beginning in 1959, federal agents had a microphone planted somewhere amid the tomato paste and olive oil cans in a back room of the Armory Lounge restaurant in Forest Park, Ill., headquarters of Momo (also known as Moe, Sam, Mooney) Giancana, Boss of the Chicago Mob. They had another bug at a Michigan Avenue tailor shop which served as a meeting place for major Chicago hoodlums. There were two more bugs in a mortgage firm and a merchantile company, where a Giancana lieutenant named Felix (Philly) Alderisio had a piece of the action.

Logs of conversations picked up by these microphones were restricted to use as background intelligence only and have remained deep in government files, with access to them tightly controlled. They performed a highly useful function. In 1959, for example, four years before Joe Valachi turned government informant, the tailor shop bug recorded Moe Giancana and his Mob Boss predecessor, Tony Accardo, reciting a roll call of the Mafia's High Commission, a lineup which until that time had been purely a matter of speculation among enforcement officers. To the anguish of the gangsters, other information contained in the logs is now beginning to bubble to the surface, as an ironic result of the efforts of one of their own to stay out of prison.

Philly Alderisio—at least until recently—has always been known as a gangster's gangster—a swaggerer, but an organization man. In 1965, however, he was sentenced to 4½ years in prison for trying to shake down the Denver oil promoter. (He had approached the man with this introduction: "I'm Phil Alderisio. I'm here to kill you.") Philly isn't one of the major intellects of the Chicago Mob, but he was smart enough and rich enough to hire a topnotch defense attorney, Edward Bennett Williams.

To date, Williams has done well by Alderisio. The mobster has served no time on the extortion conviction, as a result of appeals based on Williams' effort to show that the government's evidence was tainted by illegal electronic surveillance. The U.S. Supreme Court ruled that Alderisio and his counsel are entitled to examine the government's eavesdropping files where Alderisio was a participant, and on May 5, the Justice Department delivered to Williams partial transcripts of conversations logged on four FBI bugs in Philly's Chicago haunts. This makes a lot of people, by no means all of them gangsters, very nervous about the possibility of disclosure in open court of what the government overheard in the Armory and other places. (Among the other places, it is known for example that a federal bug was located for a considerable stretch of time smack across the street from City Hall in the First Ward Democratic Headquarters, which functions as a link between the Mob and Mayor Daley's political machine and police force.)

Philly Alderisio may not have thought up this maneuver for staying out of prison, and in the end he may be no happier with it than some of his rough-riding buddies are. In any event, the contents of the government logs which have been shaken loose as a result of his tactic present as direct and startling a picture of Mob life as has yet been seen—gamey, gossipy, authentic, and in some cases terrifying. Excerpts appear on the following pages.

(NOTE: In the following conversations, * * * indicates that an obscenity has been omitted.)

Time: Oct. 10, 1961.

Place: Armory Lounge.

Cast: Moe Giancana; John Formosa, Giancana's Nevada courier.

Subject: A Nevada gambling casino and its principal owner at the time, Frank Sinatra.

FORMOSA—Sam, I think you gotta start . . . giving them orders: "This is it, Frank," and that's how you got to start. Aren't you going to be tied up with Cal-Neva?

GIANCANA—Who gives a * * * about Cal-Neva? * * * him. Don't worry about it. And I'm gonna wind up with half of the joint with no money.

FORMOSA— . . . He was real nice to me. . . . I had a chance to quiz him. I said: "Frankie, can I ask one question?" He says: "Johnny, I took Sam's [Giancana's] name, and wrote it down, and told Bobby Kennedy: 'This is my buddy, this is what I want you to know, Bob.'" Between you and I, Frank saw Joe Kennedy three different times—Joe Kennedy, the father.

What, if anything, Frank told the late Robert F. Kennedy, then U.S. Attorney General, bore little fruit for Giancana. Kennedy put his name on the top of the list of Justice Department targets in Chicago.

GIANCANA—In other words . . . if I even get a speeding ticket, none of those * * * would know me.

FORMOSA—You told that right, buddy. And I'm for you 100%, for that. * * * He [Frank] says he's got an idea that you're mad at him. I says: "That, I wouldn't know."

GIANCANA—He must have a guilty conscience. I never said nothing. . . .

FORMOSA—He [Frank] says he wrote your name down.

GIANCANA—Well, one minute he tells me this and then he tells me that. * * * One minute he says he talked to Robert and the next minute he says he hasn't talked to him. So, he never did talk to him. It's a lot of * * *. Why lie to me? I haven't got that coming.

FORMOSA—I can imagine . . . tsk, tsk, tsk . . . **** . . . if he can't deliver, I want him to tell me: "John, the load's too heavy."

GIANCANA—That's all right, at least then you know how to work. You won't let your guard down then, know what I mean?

FORMOSA—Why don't you talk to him?

GIANCANA—When he says he's gonna do a guy a little favor, I don't give a * * * how long it takes. He's got to give you a little favor.

A long silence, then the talk turned briefly to Giancana's exasperation over the intensive government surveillance on him.

GIANCANA—I got more **** on my **** than any other **** in the country! Believe me when I tell you.

FORMOSA—I know it, Sam.

GIANCANA—I was on the road with that broad. There must have been, up there, at least 20 guys. They were next door, upstairs, downstairs, surrounded, all the way around. Get in a car somebody picks you up. I lose that tail, boom, I get picked up someplace else. Four or five cars, with intercoms, back and forth, back and forth.

FORMOSA—This was in Europe, right?

GIANCANA—Right here, in Russia—Chicago, New York, Phoenix.

The talk wanders to other areas, then returns to the affairs of the two entertainers, and the difficulties in booking one of them into a Giancana-favored nightclub.

FORMOSA—Dean and Frank, they made a deal, you know. It's a club now, or something.

GIANCANA—Yeah, I know. Them ****. . . . You see Dean, you tell him I want ten days out of him.

FORMOSA—Ten days?

GIANCANA—In other words, you get two weekends in.

FORMOSA—What if he says he's booked?

GIANCANA—Find out when he ain't booked.

FORMOSA—I'll tell him this is a must, right? Tell him you said it. Tell him: "Hey, Dean, this is a must. Sam wants you for ten days."

Giancana—Don't make a special trip. Call him.

FORMOSA—That **** prima donna. You can't call him. I gotta go there and lay the law down to him. So he knows I mean business.

GIANCANA—It seems like they don't believe us. Well, we'll give them a little headache, you know? . . . All I do is send two guys there and just tell them what they're workin' at. . . . Bang, you crack them and that's it. Just lay them up. If he ever hit the guy, you'll break his jaw. Then he can't sing.

Time: Oct. 11, 1961.

Place: Armory Lounge.

Cast: Giancana and a man named Pete.

Subject: Tony Accardo's court troubles. He had been convicted in federal court on Nov. 11, 1960 of income tax fraud. On Jan. 5, 1962 a U.S. Circuit Court of Appeals would grant him a new trial, and he would be acquitted Chicago's First Ward contains Giancana's political machinery. Here he can pull levers in both the Democratic and Republican parties. The Republican ward committeeman is Peter J. Granata. The Democratic committeeman is John D'Arco. Until Giancana ordered him to get out of the city, D'Arco was the First Ward alderman. Vito Marzullo is an alderman from the West Side 25th Ward.

PETE—I got a call the other night, last night . . . Joe B's [Joe Batters, nickname of Tony Accardo] . . .

GIANCANA—Don't worry about Joe B's . . .

PETE—One of the judges said: "Heavy water coming from the north. . . ." There's only one Republican out of this three. . . . I've got three. . . . I think we ought to get a hold of D'Arco, Marzullo, and we'll talk to ---- [a judge].

GIANCANA—I'll tell you, Pete, you call me and I'll work on it personal. I'll come down to D'Arco.

PETE—Let D'Arco get a hold of Judge ----, he's a Democrat.

GIANCANA—And then what? What do you expect him to do?

PETE—Tell him, what the hell. See, we got these guys [naming two other judges] . . . they said all right. But who the hell gets it, see? I'll get a report on it in a day or two.

GIANCANA—It'll take a couple of weeks. Tell D'Arco to get a hold of a judge -----.

PETE—Yeah, and I got another guy talking to----[the judge].

Time: Evening of Dec. 7, 1961.

Place: Armory Lounge.

Cast: Giancana; Bernie Glickman, boxing manager.

Subject: The management of Charles (Sonny) Liston, the boxer, which involves Tony Accardo (here referred to by his nickname "Joe Batters").

GLICKMAN—Yesterday, you were very, very nice and everything.

GIANCANA—Yeah?

GLICKMAN—I asked you if I should say anything to Joe and you said "No." I must tell him [Accardo] . . . I must say something.

GIANCANA—Well, if he asks you, you can tell him, that's all. If he don't ask you, forget about it.

GLICKMAN.—That I will do. I just wanted your permission. So, I want you to know. I won't say a word. Liston knows what he has to do. . . . [Liston] has assured me that no matter what happens when he's champion, I'll be with him. He doesn't trust a human being, except me. He needs somebody with him. . . . If this fight [with Floyd Patterson] comes off, it's gonna be in excess of a million dollars. That's gonna be his purse. . . . Liston . . . was mine from the can [prison] on. . . . Do you think I should go through with our thing? Or drop it? I don't want to start anything that's gonna be a reflection on you. I don't want no troubles.

GIANCANA—You don't be in no trouble. Come on, don't worry about it.

GLICKMAN—O.K.

Time: Oct. 11, 1961.

Place: Armory Lounge.

Cast: Giancana; Lou Brady, a Florida hustler.

Subject: The cancellation of a murder contract the gang issued for Brady. To avoid the killers, Brady had fled to Texas. Now he has emerged from hiding and is trying to convince Giancana that he had not made off with that $90,000 from the sale of the Florida home of another Chicago gangster, Paul DeLucia. Brady hopes to return to Florida without being killed if Giancana can be induced to put in a good word for him with the Florida branch of Cosa Nostra.

BRADY—I took and went to Texas . . . like a **** hermit, like the middle of Siberia, where you got to send away to get a **** pound of macaroni. Sam, all you got to do is make a phone call. Just make one call and say: "You know that fella [Brady], he's with me."

GIANCANA—I don't make telephone calls.

BRADY—All right, write a note, put it in an envelope, seal it and give it to me. I'll deliver it.

GIANCANA—That's all right. I'm going down there [to Miami] in a month anyway.

BRADY—What's the matter, Sam? You wouldn't write a note for me to carry?

GIANCANA—What the hell. All I have to do is go there.

No word has been heard from Brady in recent years. He was last reported seen headed out to sea on a boat with Florida Cosa Nostra Boss Santo Trafficante.

Time: Feb. 11, 1962.

Place: A Miami cottage rented by John (Jackie) Cerone, a sidekick of Accardo and an Alderisio associate.

Cast: Jackie Cerone; Davie Yaras, Miami chargé d'affaires for the Chicago gang; Fiore (Fifi) Buccieri, leader of Giancana's assassination squads; and Jimmy Torello, one of Buccieri's killers.

Subject: The proposed kidnaping and killing of Chicago Union boss Frank Esposito. He is being stalked but has been inconveniently spending most of his time basking with John D'Arco. The killers have no love for D'Arco but he presents logistic problems.

Cerone—They . . . lay there and watch, but that **** [Esposito] never left his **** porch. All he would do all day long is walk to the * * * front and then walk to the back. He walked three or four miles every day, but that * * * * never left his porch.

Yaras—I wish **** we were hitting him [Esposito] now, right now. We could have hit him the other night. We want to prowl the house . . . there was just Philly and he.

Cerone—Yeah, that would have been a perfect spot to rub him out.

. . . Well, if we don't score by the end of the week . . . then we got to take a broad and invite him here.

Yaras—Leave it to us. As soon as he walks in the **** door, boom! We'll hit him with an **** ax or something. He won't get away from us.

Buccieri— . . . Now if he [Esposito] comes with D'Arco . . . we do everybody a favor. We would do everybody a favor if this **** D'Arco went [was killed] with him [Esposito].

Cerone—The only thing, he [D'Arco] weighs 300 **** pounds.

(Later, same conversation)

Cerone—Get the boat tomorrow.

Yaras—I'll get the boat and everything else.

Cerone—We'll get him on the boat if he takes a walk—then it's nothing for me to call him.

Yaras—Yeah, then you can say: "Hey, Frank, what are you doing here?" You know what I figured we could do? Early in the morning we could go there in bathing suits. When we got him in the car, we don't have to do nothing to him in the car.

CERONE—All right. Here's what we do. Monday, we work. We start. Skippie (Frank Cerone, a kinsman of Jackie's) and Davie (Yaras) will work on it. Next morning we go out there and we do it all over again. Even I can go out there one morning. We can take turns. The guy must take a ride. Maybe he won't do it in a week, maybe the 10th or 11th day, he might take a ride alone. We can pull our car right alongside . . . we can all step in . . . even if it's daytime. One guy grabs the wheel, throws him in, let him holler.

BUCCIERI—Well, we got that knife and he's got to move, with us jabbing him with that knife.

CERONE—We'll put him on the floor and away we go. We can ride around with him. Before we do it.

BUCCIERI—Well, we got him * * * after we get him in. We'll drive slow.

CERONE—Yeah, we can drive around and then we can find a prairie. We can have everything with us, the ax and everything.

BUCCIERI—We can't let any blood show. We got to keep the guy alive until we're in a good, safe spot.

CERONE—Oh, no, you can't touch the guy until we get to the car.

BUCCIERI—Yeah, we keep him alive until we're ready.

CERONE—Yeah, you can't afford to have a man dead on your hands. I got the contract (the murder assignment). Did you know that?

BUCCIERI—Yeah.

Esposito's life was spared when the FBI notified Florida authorities of the murder plan. As they sat around Cerone's living room, planning to chop up Esposito, the gangsters talked of other jobs in other times, chatty and giggly as schoolgirls. Cerone recalled his attempt to murder Jim (Big Jim) Martin, a policy betting king, a job botched because Cerone was using outdated ammunition.

CERONE—So when I banged the guy, I called him with a full load . . . but it had to go through a Cadillac. I blasted him twice. Joe (Accardo) says: "Is the guy dead?" And I said: "Sure, because when I nailed him, his head went like that, you know?" The next morning, the headlines are in the paper. The guy is still living . . . this double o (double-o buckshort, a shotgun load) was 10 years old . . . it wasn't fresh, so the guy lived.

YARAS—That's one thing, when I use that double o, I got to use fresh ones (shells).

CERONE—The guy [Martin] was a big nigger. He left the country and went to Mexico. That's what we wanted anyway. We wound up with all his policy [lottery] games. The next day, I'm on the corner [where Martin was shot]. I went to the place all dressed up. The squads [police] and the cars are all around. I'm right there. And everybody is talking and I say: "Oh, that's terrible. But them * * * niggers, they're always fighting one another, you know."

Cerone always boasted that few people outside The Mob knew he was a triggerman.

CERONE—I wasn't known for a long time. I kept away. I wasn't seen with nobody, never mixed. I was always hidden, for many years.

Cerone chuckled about that. Then another killing crossed his mind.

CERONE—I remember one time we was on this guy for a week. You know, you get close and you blow it and then you try again. So this one night, we pull up on the guy and he's with his wife. So he [Cerone's partner in the crime] said: "What the * * *, I'll get him." So I grabbed the wheel and he jumped out and chased the * * * a half a block, but he nailed him. Remember that time you popped that guy and you rolled him over a couple of times and he lived?

YARAS—I didn't do that. * * * Oh, yeah, now I remember. I did that with Johnny. I'm gonna tell you a funny story. You know, I think that * * * tried to hit me the same time I hit him. I swear. Because he put a shot right through the windshield.

It was Buccieri's turn, then, to reminisce about a victim he called Polecat.

BUCCIERI. I remember we had to hit him in the belly, then we had to burn him. We couldn't even get the handcuffs on him.

Cerone put a question to Yaras.

CERONE—All these * * * years, Davie, why didn't you move in on some of these * * * guys down here [in Miami]?

YARAS—First of all, down here they got the lights on [law enforcement pressure and publicity]. You hate to be connected. But these New York * * * in Miami * * * I'll tell you something. You think we got some bad guys? These [New York] guys are real * * *. They want to knock their heads around. You don't like to be with them.

CERONE—If I was down here all these years, Davie, I would have moved into those guys.

YARAS—Yeah, but with some of these guys, you couldn't do nothing with them. You should see some of these guys. They won't even let nobody else on the track. You'd have to hit them.

CERONE—Have to hit them all.

[From the Washington Post, Dec. 2, 1966]

FBI EMBASSY "BUG" EMBARRASSES UNITED STATES

(By Drew Pearson and Jack Anderson)

The Federal Bureau of Investigation, it has now been revealed, has been tapping the wires of the Dominican Embassy.

A foreign embassy in the United States is extraterritorial ground with privileges reserved to that country only. The United States may not intrude on embassy territory, even if murder is committed inside. This is international law which the United States has insisted upon abroad and which we adhere to in this country.

The State Department therefore is very red-faced to find that the FBI placed taps on the wires of the Dominican Embassy in 1961 shortly after the assassination of Dictator Trujillo.

This was disclosed as a result of the Justice Department's prosecution of Bobby Baker, the former Senate Secretary, some of whose conversations were bugged and wiretapped. As a result of this FBI eavesdropping it may be that the Baker indictments will be thrown out of court. The matter is now being heard before U.S. Judge Oliver Gasch in pre-trial motions.

The Justice Department, in admitting that some of Baker's conversation had been bugged, submitted conversations he had had with the Dominican Embassy. He had placed several phone calls to the Embassy around May 1961, usually speaking to the financial counselor Oscar Ginebra, about the prospects of Joaquin Balaguer then provisional president, becoming permanent president.

RUSK ASKS SUPPRESSION

Balaguer resumed the presidency this year after defeating leftwing candidate Juan Bosch in the post-revolution election. It won't help Dominican-American relations for Balaguer now to discover that his em-

bassy phones were tapped the last time he headed the Dominican government.

Secretary of State Dean Rusk was so alarmed over the eavesdropping that he sent an anguished appeal to the courts to suppress the evidence, and directed Baker and his attorneys not to mention the embassy wire taps.

Oscar Ginebra, reached by this column at the Inter-American Development Bank where he is now a section chief, recalls receiving a number of phone calls from Baker in the late spring of 1961. However, he claimed he couldn't remember what was discussed.

It isn't known how long the FBI continued to monitor the Embassy's phones. However, FBI agents were listening in on the conversations of prominent Dominicans as late as this year.

The FBI tapped the phones of another Bobby Baker intimate, Jose Benitez, in Puerto Rico, while Juan Bosch lived in Benitez's apartment. The FBI wanted to know what Bosch was saying during the civil strife in the Dominican Republic. On one occasion he received a phone call from Santo Domingo reporting that one of the rebel leaders had been shot.

"See that he is shot in the back and then announce to the press that the Americans shot him," Bosch ordered over the phone.

Meanwhile, the story of FBI wire tapping continues to deepen.

HEROES WITHOUT HEADLINES

Congratulations to the Madera Tribune for exposing the law fees received by California State Sen. James M. Cobey from two irrigation districts at the same time Cobey was chairman of the California Senate's Water Resources Committee. It was this conflict of interest which chiefly contributed to Cobey's defeat . . . Congratulations to Sherwood Ross of radio station WOL for taking on Washington, D.C., landlords in the "war on slums" in the Nation's Capital. Despite tenants' fear of eviction, they reported housing violations to Ross, who, working with D.C. inspectors has reported 3000 violations. An estimated 900 dwelling units have been cleaned up in Washington . . . Congratulations to Marvin Sosna, editor of the Thousand Oaks News-Chronicle in California, for exposing shoddy building practices in the San Francisco Bay area. County inspectors have been wobbly and real estate interests have tried to boycott the News-Chronicle, but editor Sosna is putting up a courageous battle against them.

Congratulations to the Teamsters Union for launching a massive $2 million project to train 1800 people, in Southern California, in truck driving, auto mechanics and passenger-car driving. The Teamsters are working with UCLA's Institute of Industrial Relations and are trying to help school dropouts.

Armistead L. Boothe, Alexandria, Va.—Thanks for calling our attention to the fact that the 1924 lawsuit against Rep. Howard Smith of Virginia and William P. Woolls was dismissed by the Supreme Court of Appeals in Virginia. The main point of our column was to refute Rep. Smith's statement that his integrity had never been questioned prior to our earlier column. It had been questioned in this lawsuit, even though in the end he won.

WHAT INDIAN ELECTRIC COOPERATIVE MEANS TO OUR COMMUNITY—ESSAY BY SHEILA BOWEN, MANNFORD, OKLA.

Mr. HARRIS. Mr. President, this morning I had the privilege of breakfasting with an outstanding group of young people who were members of the sixth annual youth tour sponsored by the Oklahoma Association of Electric Cooperatives.

As usual, this was a most enjoyable occasion for me and for the members of the Oklahoma congressional delegation. As I told the group, they represent at least three things I like very much: The spirit of optimism and progress of Oklahoma; the principle of cooperation and what people can do by banding together to help themselves; and the youth of America—the most dedicated, the best prepared, and best educated generation of young people this country has ever produced.

Sheila Bowen of Mannford, Okla., represented all 63 Oklahoma young people present when she read to the group her essay entitled "What Indian Electric Cooperative Means to Our Community." She was an excellent spokesman for the group. Her essay was excellent and it was delivered with unusual ability and charm. I ask unanimous consent that the essay may be printed in full at this point in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHAT INDIAN ELECTRIC COOPERATIVE MEANS TO OUR COMMUNITY

(By Sheila Bowen, Mannford, Okla.)

What Indian Electric Cooperative means to our community is probably somewhat different than in the communities served, directly by Indian Electric. However, I would like to tell you the many ways our community has benefited, both directly and indirectly.

As a teenager, I have always lived in the Golden Age of electricity and have pretty much taken it for granted. I do realize, however, that if our forefathers had not met the challenge of electrifying rural communities our nation would not be what it is today.

I am sure that the small group of farmers and oil men that met in the Scrappin' Ridge School house back in 1939 did not realize just how much their action on rural electrification would mean to so many communities—both rural and urban. If it had not been for some farsighted and civic minded people at the Cleveland Chamber of Commerce, rural electrification in this area might not have been possible. These good people stepped in to aid in obtaining a loan from the REA in Washington, D.C. The Chamber of Commerce realized that rural electricity would give birth to new local enterprises, expand existing ones and in general increase the economic welfare of the entire community.

The loan was obtained and work was started in 1940. The first 189 miles of line was completed and energized on May 7, 1941. This was just the beginning of a continually growing and expanding cooperative.

The first home of Indian Electric Cooperative was the former Fidelity State Bank in Cleveland. The cooperative soon outgrew this building and in 1949 moved to the present location at Broadway and Delaware. This location is now giving way to progress and in the very near future the Indian Electric Cooperative family of employees will be moving into their new offices and warehouse at the southeast edge of Cleveland.

Since that humble start in 1941 with 189 miles of line and 227 members, the Indian Electric Cooperative has grown steadily. Each year it has added approximately 84 miles of line and 291 new members. The cooperative now has 2,459 miles of line and 8,093 members.

Indian Electric Cooperative is not concerned only with keeping electrical power running through its lines and giving members the best possible service. I also see a very warm human factor—concern for the people of these communities, especially the youth. Realizing that the youth of today will be the leaders of tomorrow, Indian Electric Cooperative is helping by supporting and sponsoring many worthwhile projects like the FFA, FHA, and 4-H clubs. These organizations are all built on a foundation of leadership, character, development, sportsmanship, scholarship, community service, citizenship, and patriotism. If these qualities are instilled in the youth of today, it will be of great value in the years to come. Some of these young people of today will probably grow up to be employees or even members of the Board of Directors of this same Cooperative.

Indian Electric Cooperative has contributed many civic and church leaders to Cleveland and the surrounding communities. Of the various employees and board members I am acquainted with, several are very active leaders in churches and civic clubs such as Rotary, Kiwanis, Chamber of Commerce and Lions Club. One of the past Indian Electric Cooperative board members, and a valued friend of my family, the late I. C. (Billy) Rayborn, was a good example. Even though he didn't live in our town, he served as the President of our local Lions Club. He was a great leader in every way and I am sure Indian Electric Cooperative was proud to have him as a board member.

Our school has benefited in several ways from the cooperative. In 1968 alone, Indian Electric paid over $44,000.00 in school taxes with my school getting its share according to the amount of line in our district. However, I feel the leadership and scholarships offered to the students by Indian Electric are equally important. We at Mannford High School felt very fortunate last year that two of our top students were awarded these scholarships. They are now at Oklahoma universities doing very well. The winner, enrolled at Oklahoma State University, is maintaining a 4.0 grade average. I also think contests such as the tour to Washington are very good for youth. It has been a challenge to me to really think about one of our most valuable commodities—electricity—and what the people behind it has done for us.

It would be hard to estimate how much the Indian Electric Cooperative means to the lake area. If it were not for rural electrification, I'm sure the area surrounding Keystone Lake would be sparsely settled. People will just not do without electricity and all the conveniences and necessities it makes possible. With the Indian Electric Cooperative already in the area, any new resident just by filling out an application and paying a small membership fee, can have all the electrical advantages of the cities plus the beauty and serenity of living in the country.

Ever since Lake Keystone has been built, sub-divisions have popped up all over the shorelines. There are now approximately 80 sub-divisions in the Lake area; all being served by Indian Electric Cooperative. Just driving around at night seeing all the mercury vapor night lights twinkling over the countryside is quite a sight. There are 19 public use areas on the Lake and all but one are served by Indian Electric Cooperative. We have four marinas and nine special use areas such as two Boy Scouts of America Councils, Camp Fire Girls, Oklahoma State University Park, several town parks and church groups that are served by Indian Electric Cooperative. When you think about how important these facilities are, you begin to realize the many ways Indian Electric Cooperative helps our community.

The town in which I live is not served directly by Indian Electric, but works very closely with it. Indian Electric serves the area surrounding the City of Manford and in some cases inside the city limits. In one area within the city, directly across the arm of Salt Creek, the city requested that Indian Electric serve this area since it already had power lines in the area, and also the cost to the city to expand its lines into this territory wasn't economically feasible. This area would have possibly been without electricity for some time had it not been for Indian Electric.

In another case the city was met with the task of getting power to our new water treatment plant located about one mile south of town. Again we called on Indian Electric Cooperative which had power lines nearby and once more it came through to help. This has saved our community money by not having to duplicate power facilities in the same area. This water plant serves the City of Mannford and Creek County Water District #5 which serves about 200 rural customers in the surrounding area.

Our small city, like many other cities of today, is faced with many problems, but we find our problems multiplied by the accelerated growth of our new town now located on a large lake and within 20 miles of a large metropolitan city. The financial problems are difficult for a small new community to cope with, but through careful planning and some excellent advice from our friends at Indian Electric, the city has recently secured a loan from REA to upgrade its present facilities and expand its electric distribution facilities into newly developed sub-divisions within the city limits. I was informed by my father, a member of the Mannford Board of Trustees, that this will be the first time that REA has financed a loan of this type to a municipality. Without the low interest rates and long term financing that is provided by REA, the present system would be in danger of being overloaded and the rate of growth of our town slowed down considerably.

Without readily available electricity, small towns such as ours would deteriorate or fade away into larger cities. A small town cannot exist without the people in the surrounding areas, and they would not live there without rural electricity.

I think it is a great challenge to the young people of today to be able to contribute something very worthwhile to the people of the next generations and perhaps help them as much as Indian Electric Cooperative has helped us. I am thankful to live in an age when we can enjoy one of the greatest discoveries in history—electricity—and even more thankful for rural electricity as provided by Indian Electric Cooperative. I am grateful to Indian for what it has done for our community, and for the things it has done for me. The Indian Electric Cooperative has brought a wealth of conveniences and opportunities to the members of our community.

DEPLOYMENT OF THE SAFEGUARD ABM SYSTEM

Mr. BAKER. Mr. President, on June 1, in the course of a nationally broadcast television panel discussion, a respected Member of the Senate challenged the Department of Defense to declassify a single chart that had been shown in executive session to the members of the Committee on Armed Services. Declassification of this chart, according to our distinguished colleague, would in his judgment end the argument over deployment of the Safeguard ABM system once and for all.

Mr. President, it would be a welcome relief to this Senator, and I expect to others in this Chamber, if any single chart or document, or series of documents, could put an end to the controversy over the deployment of the highly complex Safeguard ABM system.

I was impressed with the urgency of examining such a secret document, and I took it upon myself to ask the Department of Defense to produce that document so that I could examine it, classified though it was, to determine in my own judgment whether it would end the controversy over the deployment of the ABM system.

I can report that I have seen the chart. I have examined it in detail. I find that, contrary to ending the argument over the deployment of the ABM system, or in any way acting in derogation of the logic which supports the deployment of the Safeguard ABM system, it conversely is entirely in keeping with and supports the proposal made by President Nixon for the deployment of the Safeguard system.

Mr. DOMINICK. Mr. President, will the Senator yield for one comment?

Mr. BAKER. I have only 3 minutes.

Mr. DOMINICK. I merely want to congratulate the Senator on his initiative. I have seen the same chart, and I totally agree with him.

Mr. BAKER. I thank the Senator.

I must say, having examined the chart, that I firmly believe that it should not be declassified. It is not classified because it either supports or does not support the Safeguard proposal. It does give us statistical evaluation on how many Russian missiles it would take to overwhelm the defenses of the United States, the Minuteman system and the Safeguard system, or any other system.

Very frankly, Mr. President, I am not inclined to give that information to the Russians, nor do I believe any member of this Government should be so accommodating to the Russians.

I rise to make this point simply because there is at least an implication that the Department of Defense, or this administration, is selectively declassifying information, and that, as implied by the senior Senator from Missouri, declassifying this single chart would have destroyed the arguments in favor of the ABM system.

I have examined it, and I say once again, it does not in any way detract from the validity or the attractiveness of converting the posture of this Nation to defense instead of offense. I believe, Mr. President, that it is incumbent upon me to give this body the benefit of my appraisal of that classified document, which I believe should remain classified.

NOMINATION OF CARL J. GILBERT, OF MASSACHUSETTS, TO BE SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS

Mr. LONG. Mr. President, there is on the Executive Calendar today the nomination of Carl J. Gilbert, of Massachusetts, to be Special Representative for Trade Negotiations, with the rank of Ambassador Extraordinary and Plenipotentiary.

I explained last Friday, as shown at pages 14823 through 14827 of the RECORD, together with a number of articles that I put in the RECORD explaining my position, why that name is being objected to and held on the calendar, the principal fact being that the committee that reported the nomination does not have primary jurisdiction over it, and that this is a very serious matter, and should be considered by the committee that does have primary jurisdiction.

I have no objection to the Committee on Foreign Relations, though less directly concerned about that nominee, taking jurisdiction of a job created by the Committee on Finance, with regard to which the nominee would have to work with the Finance Committee, a job involving powers that have expired under legislation enacted at the behest of the Committee on Finance. And such legislation would have to be renewed under legislation that would have to emanate from the Committee on Finance if the nominee is to do much.

I repeat, I made it clear on Friday last week that while I did not object to the Committee on Foreign Relations having jurisdiction over this nominee, and proceeding to exercise it, I felt that in due course the nomination should be referred to the committee that created the job and has the problem; and that that Committee on Finance should have the opportunity to consider the nomination.

The chairman of the Committee on Foreign Relations, I thought, with a quorum present in the Finance Committee room, agreed that the Finance Committee should share jurisdiction of this nomination. Subsequently, he did not seem to think that that was quite the commitment he had made, and felt that there should be some assurance that we would report the nomination.

I stated to the distinguished chairman that I would be willing to agree to that. The matter remains in limbo. I have communicated to the leadership, at least to the majority leader, what my attitude was about the matter, and so far as I know, it has not been resolved. But it seems to me someone should contact the chairman of the Committee on Foreign Relations, and see if he is still satisfied that this matter should be referred to the Committee on Finance; or, if not, why not, and that before we take up the nomination, we resolve the jurisdictional question as to which committee should have had the nomination before it.

As I say, it is all right with me for some other committee to conduct hearings on a nominee for a job our committee created. Our committee is willing to go along with that; but we do think, in view of the serious problems involved, that eventually we ought to have a look at the man who is to occupy the job, his predecessor in which created a great number of problems during his term.

The matter could perhaps have been resolved by coming to some understanding at the beginning. I simply want to make it clear that I am not the Senator who is holding the matter up. The nomination should be referred to the Committee on Finance, and that committee should have a look at it. When we complete communications, to find out if there is any objection to the name going to the committee, we will then know whether the committee that created the job will have an opportunity to have the name before it or not. If the committee is not to be afforded that opportunity, then we will find some other way to obtain the information we need.

LAKE SUPERIOR CONFERENCE

Mr. MUSKIE. Mr. President, Lake Superior is one of the most valuable and scenic bodies of water in the world. It is

blessed with 2,976 miles of shoreline shared by three States and Canada and exceptionally high water quality.

Left to its own devices, this immense lake would remain pure for thousands of years; but there are already ominous signs that Lake Superior could become seriously polluted, as have Lake Michigan, Lake Erie, and hundreds of other large and small lakes in the United States.

Fortunately, if warnings are heeded now and appropriate preventive action taken, Lake Superior could be protected in its unpolluted state for future generations.

The Senator from Wisconsin (Mr. NELSON) has for several years been urging a Federal-State enforcement conference to plan and enforce such a program to protect this lake. Last January, a conference was called by former Secretary of the Interior Stewart Udall. Its first session was held May 13, in Duluth, Minn.

Senator NELSON'S speech for that first session is a forthright statement of how Lake Superior is threatened and what he believes must be done to protect it. Moreover, Senator NELSON also cites important principles in meeting the challenge of long-range environmental management which apply to many situations across the country.

I commend Senator NELSON'S excellent speech and ask unanimous consent that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR GAYLORD NELSON TO LAKE SUPERIOR CONFERENCE, DULUTH, MINN., WEDNESDAY, MAY 14, 1969

One of the most serious and pervasive "by-products" of American progress has been the pollution of almost every major body of water in this country by wastes of all kinds, colors, shapes, and smells.

We have polluted rivers in our urban areas so badly that in some cases they are fire traps. But we have also polluted waters in the most remote areas of the country—this is exactly what is threatening now in some portions of the Boundary Waters Canoe Area.

For decades, we have hidden our eyes and hoped the growing pollution problem would go away. But in recent years, it has become too obvious and too gross to ignore. In fact, water pollution has generated a national concern that with each succeeding year is more insistent on immediate and effective action.

In our own region, we've seen the voters of both Wisconsin and Michigan support bonding issues in the hundreds of millions of dollars to fund pollution cleanup. And we have all see the intense citizen interest in Minnesota, Wisconsin and Michigan over the fate of Lake Superior. Since its formation in February, 780 people have joined the Save Lake Superior Association.

It has been gratifying to see the results when the people really speak out, as they have on the pollution issue. Under precedent-setting federal acts, water quality standards have been set and federal-state enforcement conferences have been held all over the country, in a national effort to stem the tide of pollution.

Already, 45 federal-state conferences have been held to abate the pollution of interstate waters, from Boston Harbor, the Potomac River and Lake Erie in the east, to Lake Michigan and part of the Upper Mississippi River in our region, to Puget Sound and the Snake River in the west.

But perhaps the most important enforcement conference yet is the one we are undertaking here this week to abate and prevent pollution of Lake Superior. The conference was called by former Secretary of the Interior Stewart Udall after I had for several years been urging such action either by the governors or by the Secretary.

It is no small question, no minor concern. The dimensions and the values of this natural resource are almost without parallel.

Let me describe Lake Superior in terms of what it means not only to us, but to this country, and to the world.

By volume, it is the third largest body of fresh water on earth—almost 3,000 cubic miles. Only Lake Baikal of Russia and Lake Tanganyka of Africa are larger.

The shoreline of the lake stretches 2,976 miles, and is perhaps Lake Superior's most precious asset. The three states share 1,427 miles of the shore; Ontario, Canada, has 1,549 miles, making it truly an international lake.

The Federal report does a good job of describing the sweep of the shoreline: "The wide sand beaches of Whitefish Bay—the great parched dunes near Grand Marais—the sheer cliffs of the Pictured Rocks—the remoteness of the Huron Mountains—the Apostle Islands—Split Rock Lighthouse—Isle Royale National Park—and all the many miles of primeval wilderness constitute a most valuable recreation and aesthetic resource."

But words aren't adequate for the feeling one has standing on that ancient shore, sensing the whole history of the earth unreel in the rocks, the cold waters, the fog of even a summer morning. One gains an impression then, rather humbly, of the forces that created man—the same forces that can just as easily sweep him away.

Lake Superior is pure as well. So pure, one can see a trout at depths of up to five fathoms. So pure, the National Water Quality Laboratory was located near Duluth in good part because this is one of the few places where they would not have to import water clean enough for their baseline work.

I should add parenthetically that the North Shore is an especially fitting location for this national fresh water laboratory for another reason: It is in the district of Congressman John Blatnik, who has been one of the most ardent and effective advocates for clean water in this country. No one in the Congress has been more dedicated and effective in the cause of protecting the quality of our public waters than John Blatnik, and we owe a great deal to him for the very federal statutes which authorize conferences such as these.

On the North American continent, there is simply no body of water to compare with this lake—in volume—in purity—in value.

And left to its own devices, with its small drainage basin and infertile rock, Lake Superior would remain pure for thousands of years—unchanged—almost ageless.

Yet experience has shown us that there is little reason for comfort about the future of any resource in the world, especially in this age of expanding population—cities—industry—and technology.

Lake Baikal, almost twice the volume of Superior, has pollution problems, primarily from the wastes of several big industries.

We are even on the way now to polluting the oceans. Our progress is marked by the newspaper reports about oil spills, red tides, poisoned shellfish, and Antarctic penguins with DDT in their bodies.

Call the roll of lesser but still impressive bodies of water: Switzerland's Lake Zurich, Wisconsin's Lake Mendota and Lake Menona, New York's Lake Cayuga and Lake George, Florida's Lake Okeechobee—

Or of the hundreds of inland lakes in the Upper Midwest and nationwide that are often so thick with algae they're like pea soup. They're severely polluted, and it will take decades and millions of dollars to restore them—

Or the Great Lakes. Less than two centuries ago, explorers and settlers of this region found the lakes remarkably crystal clear and pure. In effect, five Lake Superiors.

But gross pollution is winding its way rapidly up the chain.

Lake Erie is a dying lake. Game fish are on the way out. Municipal and industrial wastes have closed bathing beaches from Detroit to Cleveland. The stench from rotting algae can be smelled for miles around.

Lake Michigan is on the way. Severe pollution is occurring in the southern end, in the Green Bay area, and along the shoreline. The lake's fishery has suffered the scourge of the lamprey and the alewife, both introduced form the sea by man's action. Now the pesticides DDT and Dieldrin have concentrated in the lake to such high levels that they threaten sports and commercial fishing.

Lake Ontario is suffering the same destruction as Lake Erie, where it gets 85 percent of its water.

Trouble spots have shown up on Lake Huron, especially near heavily populated areas.

These Great Lakes, once a magnificent example of the works of nature, are now a sad monument to the follies of man.

And it can happen on Lake Superior.

The Federal report points out the delicacy of this body of water: Its clarity is extremely susceptible to being reduced by pollutants—Addition of a few parts per billion of heavy metals will have lasting deleterious effects on the lake—Sedimentation will damage fish spawning areas, which are already limited by the nature of the lake—The deep blue color, valuable aesthetically and for tourists, can be changed by tiny particles in suspension.

"The quality of Lake Superior is so high compared to other lakes that the early signs of damage may go undetected or may be excused as being insignificant," the report says.

Small changes wrought by man will set off a chain of events that could change this lake beyond present recognition. In more ways than one, it is clear that this giant of a lake has an Achilles Heel. It is a Goliath that can be slain by a David, though I doubt the event would be remembered as one of our heroic feats.

Maybe it would qualify, though, for Ripley's "Believe it or not."

Or maybe we could say: "We've finally moved this region into the mainstream of progress. We've polluted Lake Superior." Not too long ago in America, that was the attitude, and it was once tolerated.

We haven't by any means polluted this lake yet. But the danger flags are up:

—Municipal wastes are being discharged directly into the lake or into the drainage basin from 93 cities, towns and districts. In many cases, treatment is at the outmoded primary level, or is nonexistent, although pollution control programs of the three states are underway and, if followed, will improve treatment.

Industrial wastes are being discharged from 61 industries. In many cases, control is nonexistent or completely inadequate, and for some sources, abatement schedules have not yet been set by the states. I urge that such schedules be set as quickly as possible, so pollution from these sources can be eliminated.

Wastes are also being discharged from federal installations and facilities. Here again, controls are in instances completely inadequate, and it is critical to the integrity of the federal program that the pollution be stopped.

Erosion in northwestern Wisconsin's red clay area has damaged valuable trout and recreational streams, discolored Lake Superior waters off the south shore of the lake, and is damaging the lake's aquatic life. I

urge state and federal officials to initiate a major program of soil conservation and streambank stabilization on south shore streams and watersheds, based on recommendations of the Red Clay Committee. I will reintroduce legislation shortly which would aid in this effort.

Hundreds of commercial, sports, and federal vessels are dumping untreated wastes directly into the lake.

The U.S. Army Corps of Engineers continues to contribute to pollution by dumping its harbor dredgings into the lake. Last year, the Corps dredged one million cubic yards from harbors in Lake Superior and dumped most of it in open water. It is urgent that current Corps studies and hearings produce results shortly.

As in any other major shipping or industrial area, Lake Superior faces the continued danger of disastrous oil leaks and spills, the effects of which we saw recently at Santa Barbara.

On the Canadian side, there are indications that both American owned and Canadian paper mills are discharging untreated effluent directly into the lake. Effective protection of Lake Superior will require international cooperation, and perhaps international agreements, which I hope this conference will study and recommend.

For pollution sources on the American side, the Federal report makes 20 recommendations. Most are excellent, and some are precedent-setting in their acknowledgement that Lake Superior is a priceless national heritage not only for us, but for future generations.

For instance, the report recommends some of the strictest interstate water quality standards in the history of the national program.

With two exceptions, I concur wholeheartedly with this and the other recommendations of the report, and urge their adoption and immediate implementation by the conferees.

The exceptions are important ones.

First, I urge that upgraded standards as strict as those proposed by the report for Lake Superior itself eventually be set throughout the entire drainage basin. The conferees should adopt long-range timetables to accomplish this.

I don't believe any other course will assure long-term protection of the unique water quality of the lake.

In some instances, lower quality standards, such as "limited body contact," are being set for portions of rivers entering the lake. Examples of this are sections of the Montreal and St. Louis rivers. This means that improved, but still lower quality waters will continue to be fed into the open lake, possibly setting off the kind of chain reaction which could seriously alter the ecology of Lake Superior.

The upgraded standards should require that in time, wastes discharged anywhere in the basin must be first treated to the highest degree technology will reasonably permit, or be disposed of elsewhere.

Further, such standards should as a general rule prohibit the discharge of significant new volumes or kinds of wastes into the basin.

Only in this way can we assure that the new industries and the new or expanded communities which are legitimate parties in the sharing of this resource will not, with existing users, damage it beyond use for all.

If we hesitate on such standards, it is inevitable that as the population of this region increases, we will be faced over the years ahead not with a trickle of pollutants, but with a deluge.

A sample is the gaseous diffusion plant which has been discussed for a location 20 miles from here near the Lake Superior shore. In producing fuel for nuclear power reactors, this massive plant reportedly would use more than two billion gallons of Lake Superior water a day, and return it heated to the lake.

Thermal pollution has become a national issue, as we learn more about the serious effects of heating our lakes and streams.

Nowhere is there greater cause for concern than in this region. On Lake Michigan alone, six nuclear power generating plants will be in operation by 1973. If power industry growth continues at its present rate, the result will be an increase by several degrees in the temperature of the entire lake. Not one of the plants is installing systems to cool the water before it is discharged back into the lake, or is planning to ship away all liquid radioactive wastes.

No nuclear power facility of any sort, including the gaseous diffusion plant, should be allowed to operate on Lake Superior or in the drainage basin unless it eliminates all heat and radioactive discharges that technology will permit. A nuclear power generating plant in Sacramento, California, is being designed to discharge no heat and no radioactivity into the water.

Standards such as these are not without precedent. The state of New Jersey has set similar ones on several of its valuable fresh water lakes. And there is a total prohibition against discharge of any wastes into Lake Tahoe.

Second, it is a matter of serious concern that the Federal report does not make firm recommendations for action now regarding Reserve Mining Company's discharge of taconite tailings at Silver Bay.

I think there is ample evidence that action in this matter is justified and necessary for protection of Lake Superior.

Since 1956, more than 190 million tons—or 380 billion pounds—of taconite wastes have been put into the lake.

One year of Reserve's tailings discharge nearly equals 30 years of natural discharge of sediments by all United States tributaries to Lake Superior.

If as scheduled, the plant operates at current levels for the next 40 years, it will put into the lake 1 trillion, 881 billion, 600 million pounds.

If as is possible with Reserve's ore body, the plant operates for the next 90 years, the total tailings going into Lake Superior from Silver Bay would reach 4 trillion, 233 billion, 600 million pounds.

In northern Wisconsin, we have taconite ore reserves on the Gogebic Range which a gross estimate shows reach 1,000 million tons for the first 100 feet. This means we could discharge one or two trillion more pounds of taconite tailings into Lake Superior from the Wisconsin side, if a similar plant were built there.

Where would it end?

I believe this artificial discharge of massive amounts of material into the lake is a pollutant, and is bound to have serious and possibly catastrophic long-range consequences.

For instance, one of the specific conclusions of the Federal report is that the tailings are already damaging the ecology of a portion of the lake.

The report also accepts conclusions of an earlier Interior Department task force report which found that the tailings are affecting critical lake values, such as the low mineral content, extreme clarity, limited fish spawning grounds, and the deep blue color of the water.

Furthermore, the report contains evidence found just last month that tailings are now present in the drinking water supplies of Beaver Bay and Two Harbors, and in Duluth, some 50 miles downshore from the Silver Bay plant.

Not only does this raise public health questions, but it makes it almost inevitable that the tailings have moved to the Wisconsin side.

If there isn't adequate authority for action to properly control this massive tailings discharge, I will ask that Congress amend the pollution control laws.

However, there are a number of authorities already available to the conferees, and with the full support of the governors of all three states, there appears to be little question that appropriate state and federal action could be taken where necessary.

First, the Minnesota permit for the Reserve operation states that tailings outside a nine square mile zone in front of the plant should not cloud or discolor the water, affect fish life or public water supplies, interfere with navigation, or cause any public nuisance. I believe the discharge has exceeded terms of this permit.

Second, the Lake Superior water quality standards of both Minnesota and Wisconsin prohibit artificial discharges which will cause nuisance conditions. The standards also cover toxic and other damaging materials, and involve both state and federal authorities.

Third, by interdepartmental agreement, the Army Corps of Engineers' permit for the Reserve operation must consider pollution, and the permit is now under review pending the recommendations of this conference.

It would be unfortunate if, with the evidence, and with the authorities available, the conferees were to accept a recommendation calling only for continued surveillance.

Alternative means for disposal of the tailings must be extensively explored, and an early report must be made back to the conferees for their consideration and decision in the near future.

The same technological ingenuity which produced the marvel of the taconite process must be put to work to prevent pollution by the taconite wastes.

Substantial costs will be involved.

But to cite just one example, United States Steel Corporation has spent $235 million since 1950 for air and water pollution control at its facilities around the country, including its Iron Range plant. U.S. Steel currently is spending $50 million a year on these problems, and just two weeks ago announced major new control steps.

When costs are considered, the conferees should also look at what society will pay in damages to the recreational asset Lake Superior offers for the entire nation, and in damages to the commercial fishing industry.

The damages will also be charged against Lake Superior's great potential as a source of clean water for the mid-United States, which faces some water shortages for all uses in the next few decades.

But even more than this, American society would be losing a natural resource that is a treasure and a heritage for all time. The quality of life for all Americans would be diminished by it. The difficulty in putting a price tag on this loss does not diminish its importance at all.

I believe it is time this nation established a policy that says pollution control must be a part of doing business.

This is an ethic which I believe the American people strongly support, and which business must accept, and in fact, is accepting.

It is time we said: No one has a right to pollute the air, the water, the land. It belongs to us all, and must not be used for the special benefit of any community, or company, or individual. There is no better place to start than on this lake, which is uniquely well qualified for the very best protection we can give it.

THE UNIVERSITIES OF BRAZIL

Mr. FULBRIGHT. Mr. President, I recently received a letter from a distinguished professor at the University of Indiana enclosing a clipping from Scientific

Research relative to the situation in the universities of Brazil. My informant states that he believes that many of the principal universities have been completely closed, although the article does not specifically state that. It is a most serious development in the great country of Brazil, and I extend my deepest sympathy to the people of that country in view of these developments. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

K.O. BLOW HITS BRAZILIAN SCIENCE

Brazilian science was dealt a crushing blow in the last week in April from which it may take many years to recover. Some 70 professors at the Federal University in Rio de Janeiro and at the University of Sao Paulo were summarily "retired" by order of the Brazilian military dictator, President Arthur Costa e Silva.

Among the professors—many of whom had taught in the U.S.—are the president of the University of Sao Paulo and several heads of departments at both universities. Two of the professors also directed research foundations. The 70 men, who were all dedicated to university reform, received no warning, and learned of their fate over the radio. They have not been charged with any offense, and no arrests have been made.

Worst hit at the universities are physics and sociology, but biochemistry has also suffered. One scientist predicts it will take 20 years to rebuild the shattered Brazilian research capability.

The reasons for the sudden compulsory retirement are confusing and even ironic. Brazilian university organization is based on the European model of several years ago. Each professor rules his roost with an iron hand and holds his chair for life.

For the last five years, several Brazilian academics—among them the 70 recently forced out—have been trying to reform the universities. They seemed to have been presented an opportunity to do this when Costa e Silva swept into power last year and ordered a reform of the universities.

The man who has carried out the "reform," however, and was a target of the reformers himself, appears to have turned the tables on them. He is Minister of Justice Gama e Silva, on leave of absence from his job as president of Sao Paulo University. He drew up the order retiring the 70.

Among those purged was Helio Louvenco de Oliveira, Gama e Silva's replacement at Sao Paulo.

PROPOSED EXPANSION OF U.S. ROUTE 219 IN PENNSYLVANIA

Mr. SCOTT. Mr. President, on June 2, 1969, my colleague from Pennsylvania (Mr. SCHWEIKER) and I submitted Senate Concurrent Resolution 28, urging the Department of Transportation to provide funds for the expansion of U.S. Route 219. This scenic highway crosses the beautiful west-central Pennsylvania counties of Somerset, Cambria, Clearfield, Jefferson, Elk, and McKean.

A modern four-lane expressway would provide additional commercial and tourist access for the 700,000 people already served by Route 219 and thousands of interstate travelers. I am pleased to sponsor this concurrent resolution that would provide so much benefit for the Commonwealth of Pennsylvania.

AMERICAN FREEDOM AND THE NEW ISOLATIONISM

Mr. DODD. Mr. President, last Friday, June 6, it was my privilege to address a gathering in New London, Conn., marking the 50th anniversary of the establishment of the John Coleman Prince Post of the American Legion. This year also marks the 50th anniversary of the founding of the American Legion; and, by a remarkable coincidence, the date of the anniversary also marked the 25th anniversary of the Normandy invasion.

An enthusiastic crowd of more than 500 turned out for the observance, including some of New London's most distinguished citizens.

For the theme of the address I was asked to make, I chose "American Freedom and the New Isolationism," because it seemed to me that the spread of the new isolationism has become one of the most critical problems confronting our country. I ask unanimous consent that the text of my address be printed in the RECORD at the conclusion of my remarks.

I pay tribute to Mr. David Carlson, Mr. Harvey Mallove, and the other directors of the John Coleman Prince Post for the exemplary manner in which they organized the observance of the 50th anniversary of the founding of the post.

I also express my gratitude to the members of the post for a truly inspiring evening. It was the kind of audience and the kind of evening that encourages one to believe again that the heart of America is still solid.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN FREEDOM AND THE NEW ISOLATIONISM

(Speech by Senator THOMAS J. DODD, before the John Coleman Prince Post of the American Legion, New London, Conn., June 6, 1969)

Friends and fellow citizens, it is always a pleasure to address an American Legion audience because of what the American Legion stands for.

Over the fifty years that have elapsed since its establishment, your organization has encouraged citizen concern with our major problems of foreign policy and has given its uncompromising support to those policies which advance our national security and protect the peace.

That this is so is not surprising, because there are no more passionate advocates of peace than those who, like the members of the American Legion, know the meaning of war.

The members of the American Legion know well that peace cannot be protected by appeasement and that aggression cannot simply be wished away. You know that peace can only be protected through strength, and that freedom can only be protected if we are willing to pledge to its defense "our lives, our fortunes, and our sacred honor."

You know that isolationism is a fool's paradise, that all the talk about retreating into a "fortress America" is a prescription for certain disaster, that the ramparts of our own freedom lie in Europe and Vietnam and wherever free men are threatened by the forces of communist aggression.

You stand for honor, for decency, for patriotism, for service to country, and for enlightened internationalism.

This is to me what the American Legion stands for. And this is why I consider it a very special privilege to be able to address this gathering, which marks the 50th anniversary of the establishment of your Post, the 50th anniversary of the founding of the American Legion, and the 25th anniversary of the Normandy invasion.

The John Coleman Prince Post of the American Legion was named after the first New London veteran killed in World War I. The world has changed in many dramatic ways since John Coleman Prince gave his life for freedom.

In World War I, the most remarkable technological innovations were the tank and chlorine gas, while the airplane was still a slow and flimsy canvas-covered craft with a hand-operated machine gun.

But today the technological revolution has piled miracle on miracle.

Today we have jet craft capable of flying 2,000 miles per hour; missiles that can fly for 5,000 miles and drop with pinpoint accuracy on their intended targets; nuclear warheads capable of wiping out at a single blow the greatest cities in the world; space satellites capable of photographing trucks on the ground at any point in the world; nuclear submarines that can travel around the world without surfacing and which can, from submerged positions, fire nuclear missiles, each equal to one million tons of TNT, at distant targets.

Today our astronauts have already circled the moon at close quarters; and, in little more than a month, if all goes well, the Apollo 11 will land the first mortals on the surface of the moon.

It is a far, far cry from the miraculous technology of today to the primitive military technology of World War I. But despite the technological revolution, the world of international politics has changed remarkably little over the course of the century.

Today, as in World War I and World War II and the Korean War, we have aggressive powers that seek to subjugate other countries and to bend the rest of the world to their will.

Today, as in World War I, America finds itself fighting on distant ramparts in defense of its freedom and the freedom of other nations.

Today, as in our previous wars, our commitments are assailed by pacifists and isolationists, by the disappointed and by the frustrated.

In his speech last Wednesday before the Air Force Academy, President Nixon warned against the dangers of "the new isolationism" and unilateral disarmament. He also warned against the unrestrained anti-militarism which has become fashionable in so many quarters, saying that the situation has degenerated into an "open season on the armed forces".

The President is right and I am glad he is telling the American people the facts.

"The new isolationism" has become much more rampant and more reckless in recent years. But the development of this phenomenon really goes back to the mid-sixties. It is a matter which has greatly concerned me because, in my opinion, "the new isolationism" is potentially more dangerous than the major external problems that confront us.

If, for example, we should lose the Vietnam war, it will not be because our soldiers have failed in the battlefield; it will only be because our neo-isolationists have so succeeded in eroding the morale of the home front.

What is the essential nature of the "new isolationism"?

The basic premise of the new isolationism is that the United States is overextended in its attempt to resist communist aggression around the world, overcommitted to the defense of distant outposts, and overinvolved

in the murky and unintelligible affairs of remote areas.

The corollaries of the new isolationism are many.

It is contended that we should de-emphasize the cold war and reverse our national priorities in favor of domestic improvements; that we should withdraw from South Vietnam; that our military establishment and our CIA, organizations that seem particularly suspect because they are symbols of worldwide involvement; should be humbled and "cut down to size" and stripped of their influence in foreign policy questions; that the ROTC should be abolished; that the tremendous research facilities of our universities should be barred from participating in research related to national defense; that we should ignore the menacing build-up of Soviet arms and devote our resources, instead, to the improvement of our own society.

We would all, of course, prefer to live in a world in which it were possible for us to have no commitments, a world in which we could devote all of our energies to the task of perfecting our society at home and enriching the lives of our people.

But we must face the world as it is. And the basic fact of our world is that Western civilization, itself terribly rent and divided, both politically and philosophically, has been forced into a twilight war of survival by a relentless and remorseless enemy.

We must face the fact, too, that the Soviet Union has been expanding its military forces, its nuclear forces in particular, at a dizzying rate, and that it has a military research and development program far bigger and more costly than our own. According to the best estimates, it has already reached, or almost reached the point of nuclear parity with the United States.

In 1966, the United States had 1,054 ICBM's and the Soviet Union had 250.

Today, the United States still has 1,054 ICBM's because that is the level at which we arbitrarily froze our force. But, according to a statement which Secretary of Defense Laird made on April 25, the Soviet ICBM force over the past three years has grown to a total of 1,140 ICBM's, in place or under construction. Assuming that the Soviet ICBM's will continue to roll off the assembly line at the rate of the past three years, Secretary Laird predicted that by the early 70's the Soviets might have a force of 2,500 ICBM's.

These are the official estimates of our intelligence community. They are estimates, moreover, based on "hard" intelligence provided by countless aerial photographs taken by our reconnaissance satellites.

There are some people, I know, who are disposed to question any such estimates put out by the intelligence community, pointing out that there was a serious overestimate of Soviet missile strength in the mid-fifties. What they do not understand is that until the era of reconnaissance satellites we had to rely entirely on what the experts call "soft" intelligence, that is, on fragmentary reports by observers and informers in various parts of the Soviet Union. This kind of intelligence is notoriously unreliable, as the members of the intelligence community are the first to admit.

I am told by experts for whom I have respect, that the current estimates, if anything, are probably underestimates because they count only those missiles revealed by satellite reconnaissance, and we cannot exclude the possibility that there are still more missiles in hidden sites that have not yet been discovered by our satellite cameras.

Confronted with the incontestable figures of Soviet superiority in ICBM's, there are those who will tell us that we still have nothing to worry about because of our marked superiority in Polaris submarines and long-range bombers.

What these Pollyanna estimates ignore is that the Soviets already have some 550 submarine launched missiles which are not of the Polaris type; and they have been building a Polaris submarine fleet on a crash basis. According to Deputy Defense Secretary Packard, they may exceed us in Polaris capabilities by 1971.

They also ignore the fact that the Soviet Union has far more medium-range missiles than the United States, and far more medium-range bombers than the United States, capable, with mid-air refueling, of making the trip to the United States, and that, in terms of total megotonnage, the Soviet Union is already far far ahead of the United States.

Finally, they ignore the heavy and ominous emphasis which all Soviet military experts place on "winning" and on surprise attack in their doctrinal writing.

We are now heading into the most perilous period in the history of our Republic.

Clearly, we must do everything in our power to prevent the ultimate disaster of nuclear war.

We must use all of our diplomatic resources to persuade the Soviet Union and the other Communist states to desist from their policy of subversion and aggression in the interest of common survival.

We must also do everything we can to de-escalate the arms race by seeking limited and verifiable agreements on arms control with the Soviets.

But the growing Soviet military strength, combined with the proliferation of crisis situations in the Far East and Africa and elsewhere in the undeveloped world, suggests that we are in for a difficult and stormy period, despite the best our diplomats will be able to do.

If we do all those things that must be done, if we maintain our military strength, and if we remain faithful to our alliances and our commitments, I am confident that we shall survive the coming stormy period, and that freedom will in the long run prevail over tyranny.

But if we succumb to the neo-isolationism and anti-militarism that have become so prevalent in our society, if we appear to lack the will to defend ourselves or our allies, then I truly fear for the future.

More effort, more sacrifice, not less, is the need of our time. And I speak as one who does not disparage the need or the importance of domestic improvements. My record in this area is too well known to need defending.

But I say to you that if our foreign affairs are going badly, no aspect of internal welfare is secure or stable. And if we cope successfully with the great problem of terminating the cold war, no internal problem will long defy solution.

Our first national priority is and must be the survival of our country and our freedom. And if the 20th century has taught men anything, it is that survival and freedom cannot be purchased on the cheap, in a discount store or a bargain basement.

Twenty-five years ago today the mightiest invasion armada in history set out under cover of dark for the coast of Normandy with the assignment of liberating Europe from the merciless rule of Adolf Hitler.

The young men who secured Omaha Beach in Normandy, yard by bloody yard, did not question the fact that each man was doing his simple duty for his country. Nor were they bitter because they fought and suffered. They understood that the security of their own nation and the hopes and aspirations of all mankind rode on their shoulders. And they accepted their historic responsibility with a sense of pride.

Their story is one that deserves to be told and retold. And I wish that some bard of modern time would appear who could tell this story with such power and eloquence that the confused would again begin to understand the meaning of freedom and of patriotism, and the falterers would be inspired to raise their heads and carry on.

In closing, I want to congratulate the members of your Post and the citizens of this historic community on their initiative on organizing this observance.

It is not just that it is appropriate to commemorate the sacrifices which countless thousands of Americans have made for their country in previous wars. The act of commemoration also has a profound significance for the future because it inspires every one of us to shoulder the burdens and accept the sacrifices that the continuing defense of freedom places on our own generation.

DOT OFFICIAL NOTES VITAL ROLE OF TRANSPORTATION IN RURAL DEVELOPMENT

Mr. PEARSON. Mr. President, on May 21 and 22 the Committee on Finance held hearings on the use of tax incentives to encourage new job-creating industries to locate in rural areas, with a particular emphasis on the Rural Job Development Act (S. 15) which I, the Senator from Oklahoma (Mr. HARRIS), and 36 other Senators introduced earlier this year. The hearings were most useful and established an extremely valuable and important record.

One of the principal values of the hearings was that they helped to focus further attention on the question of rural development. For example, Walter L. Mazan, Assistant Secretary for Public Affairs, Department of Transportation, devoted considerable attention to S. 15 and the committee hearings in his remarks before the National Seminar on Human Habitation at the University of Tennessee on May 22.

Mr. Mazan has demonstrated a keen awareness of the national importance of rural development and a solid understanding of the vital relationship between rural development goals and transportation policies. I think Mr. Mazan's statement is most significant and worthwhile, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REMARKS PREPARED FOR DELIVERY BY ASSISTANT SECRETARY FOR PUBLIC AFFAIRS, WALTER L. MAZAN, BEFORE THE UNIVERSITY OF TENNESSEE NATIONAL SEMINAR ON HUMAN HABITATION, ON THURSDAY, MAY 22, 1969, IN TULAHOMA, TENN.

Gentlemen, I am more than happy today to be representing the Department of Transportation at your excellent Seminar on Human Habitation. It was with a deep sense of pride and satisfaction that I accepted your kind invitation to meet with you on the Department's role in rural development.

As Artemus Ward always used to say, it's easy to have a winner, especially if there are no other entries in the race. Although we hope to develop winners in our efforts to recast transportation systems in this nation, we nevertheless must have other entries in the race if we ever expect to be successful and achieve what Secretary Volpe has charged us to do. John Volpe, as you know, is the former three-term Governor of Massachusetts and definitely is a doer and a winner. With his remarkable background of success in Massachusetts he has given us our direction in the Department and has told us to proceed with "responsible audacity."

We have assigned priorities within the Department as well as within the Nixon admin-

istration. Because of the tremendous strain being placed on transportation systems in the urban areas, our studies are concentrating on the larger cities. Our plans call for upgrading and restoring a depreciating transportation system.

Don't misunderstand our motives. . . .

Even though urban transportation and the safety of the airways have been given the publicity and green light by the Department and the administration, there is no less demand for good, reliable transportation in rural areas. The Department at this time has several projects underway in the different administrations where we are working on ways to aid and abet the rural areas.

Since the time of the American Revolution, this nation has done a complete 180 degree turn in the makeup of population. At the time of the revolution, 90 percent of the Nation's population were farmers, today, 90 percent of the Nation earns its living by other means.

It is because of this complete reversal in economics that some of our emphasis must be redirected today.

There is nevertheless, much activity in Congress to bolster the status of rural areas by promoting rural industrial development. This week, hearings are being held in the Senate on a new proposal called the Rural Job Development Act of 1969. The Bill was introduced by Senator James B. Pearson of Kansas. This Bill, although much like some predecessors, has the future of the rural areas prominently in view.

The Pearson proposal would provide a series of tax incentives for industrial enterprises. This inclusion was injected primarily to overcome factors such as higher transportation costs and limited public services which often discourage industrial investment in smaller towns and cities.

The transportation factor looms large in this bill. The Department feels that much can be done about transportation crises in rural areas. Some of our planners are suggesting that abandoned railroad trackage be studied for possible use by the new articulated buses for which we recently released experimental contracts to individual contractors.

These articulated buses have the capability for rail travel as well as highway travel and could speed up the delivery of freight into an area as well as commodities out of an area. Their usefulness in bringing people from remote rural regions to new centers of industrial activity outside of heavily populated and industrial urban centers could reap incalculable benefits for rural regions.

This Bill to add new stimulation into rural areas I think, has considerable bearing on what your seminar is discussing today. If the trend continues to the larger cities, the depopulation of rural areas will have reached a point where only ghost towns remain in places that today have some population but who are in desperate need for job advantages.

I submit gentlemen, that the refurbishing and rejuvenating of the rural areas is every bit as important as finding jobs for all the unemployed partially skilled workers in major urban areas. I would not for a moment be accused of disregarding the plight of the unemployed city dweller, but I think if we do not work on a double-pronged attack on poverty in both rural as well as urban areas, we are simply opening ourselves up to a chaotic rural situation within a short number of years.

A significant but sometimes overlooked barometer of business in the heavily populated areas of the country is the help wanted advertising sections of major newspapers. The National Industrial Conference Board periodically checks the help wanted advertising section of 52 major newspapers across the country. The most recent survey showed that help wanted advertising set a record for the month of March when more lines of help wanted advertising were run in these 52 test newspapers than any equivalent March since 1957.

Meanwhile, the Bureau of Labor Statistics unemployment rate for the Nation was 3.4 percent of the labor force in March, down from 3.7 percent in the comparable month of 1968.

President Nixon's promise to the Nation that he would maintain progress and at the same time control the Nation's accelerating inflation is being borne out by such important employment figures as these.

As a matter of fact, the latest figures on the flight from the farm show a slight drop from previous rates.

During the decade between 1950 and 1960 a million people a year left the farm but from 1960 to 1968, the figure amounted to 750,000. These are the latest figures from the Bureau of Labor Statistics released last week in Atlanta.

Although some slowing may be noted in the eight year period just past, the decline is taking place and albeit slowed, it still is fast paced enough to be considered critical.

Within the Department of Transportation, studies are underway which we expect will indicate what direction will be best for the Department to take in suggesting alternatives to declining availability of transportation in rural areas.

The Bureau of Public Roads at the present time is cooperating with the Office of Economic Opportunity in a survey in Raleigh County, West Virginia. OEO is conducting their survey to determine the possible usefulness of small bus transportation in rural areas. The project chose Raleigh County because it was more closely identified with rural poor than any other area of similar size and population. The Bureau of Public Roads' Office of Research and Development is interested in this study because we hope it will tell us some of the social and economic impacts of highways in rural areas. If the highways are being used only for buses and not primarily for automobiles, then is the highway producing maximum benefit for the community. These are things we want to know. And these are things upon which we are working and studying.

The Department of Transportation has long recognized that transportation is an important factor in the process of economic development and in the effective utilization of national resources.

The Urban Mass Transportation Administration is one of the key administrations within the Department of Transportation charged with developing new transportation systems and possibilities. Their task is to work not only in urban centers but also in rural areas.

I have already mentioned the articulated bus as a possible element to aid in rural areas where there are abandoned rail lines. The Urban Mass Transportation people, however, are also working in other areas where they feel some of the urban developed systems may apply to the rural areas.

One such development, which incidentally now is under study for eventual prototype experimentation is the "dial-a-bus" program. UMTA originally developed this for sections of urban centers that had no nearby mass transportation system nor any taxi service of any value.

The "dial-a-bus" program could be used in the sparsely populated areas of rural America and give rural dwellers an opportunity to commute to their jobs or factories with almost the same as door to door cab service.

This project in many ways resembles a mini-bus with radio controlled units being dispatched to pick up passengers in remote areas. The passengers can call and make telephone appointments for the bus. The mini-bus then would either take the passengers to a main bus route, or in the case of rural use, carry them directly to their factory or whatever job they might have within the proximity of their home.

The possibility is there and we hope to apply the idea to rural areas during our study this year.

The reasons for introducing the Rural Development Bill for 1969 gives us some idea of the startling and critical things existing in our rural areas today. Its emphasis on giving tax incentives to industry to locate in rural areas because of the ancillary transportation problems is a clear-cut warning that we must consider rural transportation in context with tincreased industrial activity in the future. If not, the rural areas will become ghost towns and paved deserts.

As you gentlemen know, the Department of Transportation is the nerve center of the Federal government for all programs involving transportation in this country. The Department is responsible for the development of policies and programs conducive of the provision of fast, safe, efficient, and convenient transportation at the lowest cost consistent with the National objectives.

This is our charge and our challenge and we intend to carry it out for all sectors of the American economy.

President Nixon has assigned the Department of Transportation the task of developing a national transportation policy within the next six months. Secretary Volpe has said that what has not been done in the past fifty years must be done in the next six months. I am confident we will produce the policy and submit it to the President this year because we feel this is one of the areas in which we can effectively attack the present patchwork system that is not integrated and is far from being well balanced.

President Nixon is moving fast in his new administration. He has given transportation the go-ahead for more planning and more expansion. But more importantly, in the first 118 days of his administration he has chalked up accomplishments which mark him as a man who knows how to face the challenges of today and keep the Nation's economy viable. President Nixon has re-oriented the Federal government apparatus to make it more responsive to the popular will. He is fighting inflation with a huge four billion dollar cut in Federal spending. He has proposed new ways to fight the heinous power of criminal syndicates. He is taking the Post Office out of politics, and I might add, not without some loud explosions in sensitive areas. Above all, he is patiently seeking an honorable peace in Vietnam.

The President is being tough in his approach to the problems of the Nation. This is giving us our leadership. As John Volpe said last week in Baltimore, we certainly intend to be tough and practical on the great policy questions in transportation which must be answered during the next few months.

Gentlemen, I want to assure you that the Department of Transportation does not intend to overlook rural America and its attendant problems in transportation.

It has truly been a distinct pleasure being with you today and although I have indulged in a little prophesying about the future of rural transportation with certain approaches that are under study at this time, I might close with that famous quote from Josh Billings who said: "Don't ever prophesy; for if you prophesy wrong, nobody will forget it; and if you prophesy right, nobody will remember it."

Thank you.

CONFLICT OF INTEREST

Mr. YOUNG of Ohio. Mr. President, recently the newspaper Newsday published an informative article written by Clayton Fritchey, one of the Nation's outstanding columnists. In his article Mr.

Fritchey detailed the facts regarding a possible conflict of interests in a case involving the former law firm of the Assistant Attorney General in charge of the Antitrust Division of the Justice Department. Since the case concerns the effort to gain control of one of the Nation's largest manufacturing firms, the B. F. Goodrich Co., I believe these facts should be brought to the attention of all Members of Congress. Therefore, I ask unanimous consent that Mr. Fritchey's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON.—While one branch of the Justice Department was investigating conflict of interest charges against Supreme Court Justice Abe Fortas, another branch (Anti-Trust) was already enmeshing itself in a conflict of interest situation of its own.

The case centers on Richard McLaren, President Nixon's Assistant Attorney General in charge of the Government's anti-trust operations. McLaren has officially intervened in a multi-million dollar merger fight in a way that has decisively benefitted a large corporation represented by the law firm from which he only recently resigned.

The struggle revolves around the efforts of Northwest Industries (one of the nation's largest conglomerate holding companies, with sales of $700 million a year) to gain control of another business giant, B. F. Goodrich, the billion-dollar tire company.

The essential facts are these:

On Jan. 21, the day after President Nixon's inauguration, McLaren was chosen to head up the Anti-Trust Division. He then resigned as a partner in the Chicago law firm of Chadwell, Keck, Kayser, Ruggles and McLaren. On Feb. 1 he was sworn in as Assistant Attorney General. A few days later Goodrich, which is strenuously opposing the efforts of Northwest to take it over, signed up McLaren's old firm to help it in its fight with Northwest.

John Chadwell, the senior partner of McLaren's former firm, then came to Washington to confer with his old colleague and enlist his help. The end result was the intervention of the Government against Northwest Industries. On May 21, the Justice Department petitioned the Federal District Court in Chicago for a temporary injunction (on antitrust grounds) to restrain Northwest from proceeding with its plan to buy out the stockholders of Goodrich.

The court issued a temporary restraining order, and is presently taking testimony to determine whether to grant the injunction requested by McLaren. Because of the magnitude of the proposed deal, and even more because it is regarded as an effort to broaden the Government's anti-trust powers, the outcome is being watched with close interest throughout the business community.

Several ethical questions have been raised by the chain of events, notably the propriety of McLaren handling the case personally, instead of disqualifying himself because of his past associations.

His failure to remove himself is in sharp contrast with the standard set by his superior, Attorney General John Mitchell, in another recent anti-trust case involving International Telephone and Telegraph and Automatic Canteen. Because Mitchell's old law firm, in which he and President Nixon were partners, had represented an IT&T subsidiary, the new Attorney General personally disqualified himself when the Justice Department filed a law suit against the merger of IT&T and Automatic Canteen.

Before McLaren became Assistant Attorney General, Goodrich's regular counsel was (and still is) the New York law firm of White and Case, one of whose partners is Edgar Barton, who has been Vice Chairman of the American Bar Association's anti-trust section.

Barton has continued to act for Goodrich, along with John Chadwell. Barton, in fact, was with Chadwell when they conferred jointly with McLaren at the Justice Department on Feb. 26, a few weeks after McLaren was sworn in.

Subsequently, McLaren met with lawyers for Northwest Industries, and it now transpires that the Assistant Attorney General kept his old friends informed of developments by sending them carbon copies of his correspondence with Northwest.

On April 18, McLaren under his own signature wrote Northwest a letter saying it would be advised in advance of a Northwest shareholders' meeting scheduled for May 13 as to whether Justice would bring an anti-trust suit to block the proposed take-over bid for Goodrich. Copies of the letter were received by both Chadwell and Barton.

McLaren declines to comment on the case, but a Justice Department spokesman says that Chadwell and Barton were classmates at the University of Illinois, and have previously worked together on lawsuits. The spokesman further says that when lawyers for Northwest met with McLaren they did not raise any questions about his connection with his old firm.

Finally, the spokesman, in commenting on Attorney General Mitchell's action in disqualifying himself in the IT&T case, and McLaren's failure to do so in the Goodrich case, thought it should be noted that IT&T was already a client of Mitchell's firm at the time he jointed the Government, whereas Goodrich hired McLaren's former firm after he went to Washington.

POLICIES OF POSTMASTER GENERAL BLOUNT

Mr. BAKER. Mr. President, on June 4 the Memphis Commercial Appeal published an editorial in strong support of the new policies of Postmaster General Blount. The views expressed in the editorial closely parallel my own. I therefore ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOUNT SPEAKS BLUNTLY

Postmaster General Winton M. Blount has started at the front end of his administration in plugging away for removal of the Post Office Department from political patronage. It's high time that this approach was used. President Johnson's postmaster general, Lawrence O'Brien, promoted the same idea—but only in the waning months of the LBJ administration.

Mr. Blount has not won much popularity among members of Congress, especially those representing essentially rural or small-town areas. But two Tennessee Republicans, Senator Howard Baker and Representative Dan Kuykendall, are conspicuous in their support of Blount and the Nixon administration plan to convert the postal service into a TVA-like operation.

The postmaster general came to Memphis Monday to receive an honorary doctorate from Southwestern. However, he used the opportunity to speak out strongly on a plan to make the Post Office self-sufficient. The billion dollars a year that adds to the federal deficit, he noted, represents money which could be used to solve poverty problems. And any move to decrease federal debt service is commendable.

Archaic patronage practices have led to a creaking, squeaking, broken-down postal service which costs the mail users more every year, and still can't pay its own way. Taxpayers, in fact, bear a burden which should rest only on the shoulders of persons and business firms who fill the mailboxes.

Mr. Blount pointed out while in Memphis that fights over congressional patronage had led to indecision and breakdowns in morale. For instance, he said, as of January there were 2,000 post offices trying to conduct their work with temporary postmasters.

While citizens give growing support to the premise of a corporation-type postal service, it is Congress which resists, clinging to patronage.

But, as The National Observer puts it so succinctly this week, "members of Congress may find it difficult, indeed, to explain, in franked (free) mailings to their angry constituents, why the United States postal service continues to deteriorate in an age of travel to the moon."

TRIBUTE TO PAUL CARDINAL YU-PIN

Mr. DODD. Mr. President, recently an article about the newly elevated Paul Cardinal Yu-pin, exiled archbishop of Nanking, was distributed by Religious News Service and published in many religious newspapers throughout the country. Because I consider Cardinal Yu-pin one of the most remarkable men it has been my privilege to know, I ask unanimous consent that the text of this article be printed in the RECORD at the conclusion of my remarks.

Over the years I have met and talked with Cardinal Yu-pin on some half-dozen occasions, both in the Far East and in Washington.

Cardinal Yu-pin is a giant of a man, physically, intellectually, and spiritually. I have, in my time, met a limited number of churchmen whom I would be prepared to qualify as saintly. But I have met no one who conveys a greater or more immediate impression of intractable strength and spiritual serenity.

When Cardinal Yu-pin was asked by the correspondent who interviewed him whether he hopes to return to Nanking, he replied:

There is absolutely no secret about it. I have every intention of returning, and I think that the day of Communism's downfall is drawing nearer and nearer.

Because Cardinal Yu-pin is the kind of man who inspires faith and confidence, I, for one, have no doubts about the ultimate fulfillment of the Cardinal's prediction.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXILED CHINESE CARDINAL HOPES FOR RETURN
